extent, the legitimate positions, needs, philosophies, and fears of all parties involved.

I would like to stress that this has all been done without jeopardizing the protection of small investors. In fact, I am sure that the bill before us is more in the interest of the investing public than was last year's proposal.

In this legislation, we are dealing with an industry which has been successful far beyond any predictions that could have been made only a few years ago. Mutual fund company assets have grown from about \$450 million in 1940 to about \$50 billion today. I contend that any industry which increases in size by more than 100 times in a quarter of a century, through voluntary investment is indeed fulfilling an important place in our economy. It has demonstrated that it enjoys public confidence and has maintained that confidence through its performance and relative freedom from abuses.

Most of the more than 4 million shareholders appear to be satisfied with the results which are being accomplished by the industry. I believe that a majority of the shareholders, including large pension funds, profit sharing plans, educational institutions, religious bodies, and so forth, whose shareholdings run into millions of dollars, as well as individuals who invest only small amounts monthly, know what they are paying for sales commissions when they purchase their funds and know what it is costing them for management. If this were not true, I doubt seriously that the industry would have experienced such phenomenal growth.

To be sure, there have been some complaints as can be expected with any industry. Where there are problems, we have a responsibility to seek out solutions. Where complaints are justified, we should seek to eliminate the cause if we can.

In seeking answers and in trying to solve problems, however, we must to the greatest extent possible, be sure that in solving one problem, we do not bring about side effects creating greater problems or diminishing the ability of the industry to perform. In an industry whose markets are as complex and sensitive as the securities markets are, especially great care must be taken to avoid undesirable effects.

I believe that in this bill we have tried to consider the industry as a whole, its ability to perform, and the need for protection of unsophisticated investors and have struck an acceptable balance.

What I consider to be the major provision of the bill, the section dealing with management fees, is based on the existence of a somewhat different corporate structure in the mutual fund industry. An investment company is in actuality nothing more than a method of selling investment advice of professionals to single investors who otherwise may not be able to afford this service. Generally this is accomplished by the establishment of an investment company in corporate form, which has a contractual arrangement with the investment adviser to furnish the necessary advice, and sometimes to provide all of the bookkeep-

ing functions of the fund also. In almost every instance, the investment adviser has from its inception been inextricably associated with the investment company. Often he created it. The public, in purchasing shares of the investment company, is in reality purchasing the judgment and ability of the investment adviser, as revealed by his reputation and record.

Although the mutual fund itself has directors and the contract with the investment adviser must be approved annually either by the shareholders of the fund or a majority of the directors who are unaffiliated with the adviser, it has been argued that the agreement between the fund and the adviser is in reality not one which is determined by arm's length bargaining. It has also been argued that investment advisers do not compete with each other for contracts with mutual funds. There is truth in both of these arguments, but since a person purchasing shares in the mutual fund is really buying investment advice, it is difficult to imagine the directors of the fund changing its investment adviser so long as his performance is satisfactory.

The fee charged by advisers is generally a percentage of the assets of the fund which they are managing, and though the ratio of advisory fees to average net assets ranges from a low of one-tenth of 1 percent to a high of just over 1 percent, and some funds base their fees entirely on performance, most firms in the industry charge a fee of about one-half of 1 percent.

It has been argued that as the size of the fund increases, the management fee as a percentage of assets should decline. Some funds have reduced their management fees as a percentage of assets as they increased in size, and others have not.

Last year's bill would have required that the fees should be reasonable, and no one disagreed. Under that bill, the question of whether a fee was or was not reasonable would have been determined by the Securities and Exchange Commission and the Federal courts. While the goal of reasonableness was accepted by all, the method of reaching that goal was offensive to many. It was offensive, because never before had the Federal Government undertaken to determine management compensation in an industry in which there was freedom of entry and competition among many firms. Despite the recognition that many shareholders are passive when it comes to management decisions and thus corporate democracy may not be a perfect form of management control, never before had the Federal Government rejected the basic representational structure of the corporate form by which this Nation's business corporations have been managed for two centuries. Never before in a competitive industry had the Federal Government set up such a fee-setting mechanism to supersede the actions of the management, the board of directors, and the shareholders of the business.

I could not support such a Federal intrusion. Instead, I offered an alternative which would have preserved the basic principles of corporate responsibility.

That position, supported by the minority last year, would have increased the

number of directors who could not be affiliated with the investment adviser and would have charged them specifically with the responsibility of approving only fees that were reasonable and in the interest of shareholders. The courts could then have adjudicated whether or not these independent directors had discharged their responsibility as fiduciaries. Directors would have been subject to lawsuits involving the reasonableness of their actions in approving a fee that might be considered by some to be too high.

The management fee provisions of the bill now before us meet the objections which I had to the management section of last year's bill.

We have now deleted the entire management section from last year's bill and in its place added a subsection specifying that the investment adviser himself has a fiduciary duty with respect to the compensation he receives for services provided to the fund. As a fiduciary, the adviser and others who may receive compensation from the adviser's fee, are subject to lawsuits which may be instigated by shareholders or the Securities and Exchange Commission in the event that the fee received is claimed to be so excessive as to constitute a breach of fiduciary duty. Directors of the fund will, of course, continue to have a fiduciary responsibility with respect to their own compensation and for the overall operation of the fund. In determining whether the adviser has met his responsibility to the fund shareholders, the court must give appropriate weight to shareholder ratification of the management fee or its approval by directors.

This provision, instead of being an intrusion by the Federal Government, is in accordance with the traditional function of the courts to enforce fiduciary duties.

I turn now to the consideration of another problem, that of the front-end load.

Another provision in last year's bill with which I was unhappy was the ceiling of 20 percent which the bill put on the amount that could be deducted from the first year's payments made by an investor in a contractual plan, to cover the salesman's commission. Contractual plans are often sold to people with limited means who are not sophisticated investors. I believe that it is desirable for these individuals to be given an opportunity to invest in equities, and to give them that chance requires a selling effort. In refusing to eliminate contractual plans as the SEC proposed, the committee had agreed that such plans perform a service in introducing investors who lack accumulated capital to the concept of systematic investment in equity securities through mutual funds. It also recognized that some concentration of sales charges at the beginning of such a long-term program was an economic necessity if sponsor companies and salesmen were to be able to meet the costs incurred in serving the market through this investment medium. Having made such a decision—to reduce its first year's "load" to 20 percent—I felt that it was the responsibility of the committee to investigate not only the effect of any such action it took on the investor, but also what the effect

would be on the distribution of these securities. Industry representatives claimed that the decision of the committee to limit the first year sales load to 20 percent would make it difficult if not impossible for particularly the small mutual fund contractual plan sponsors to attract or retain good salesmen to distribute their shares. Certainly, compensation levels paid to salesmen in other front-end load industries support their contention. For example, some types of life insurance which compete directly with contractual plans both for the installment investor's savings dollar and for the services of trained salesmen provide as much as a 100-percent front-end load for sales commissions or twice the amount now allowed for contractual plans under present law, and five times as much as would be allowed if there were no alternative to the 20 percent restriction. To reduce the sales commission allowable in the first year by 60 percent without a full investigation of its effect, could have been disastrous to the contractual plan industry.

On the other hand, the committee had to consider the fact that because of the front-end load provision of the contractual plan, an investor who was unable or unwilling to continue his plan and cashed in his investment during the early years of the plan before the investment had time to grow sufficiently to offset the sales charge, would be subject to a disproportionate sales charge and would suffer a loss. Both the SEC and industry statistics indicate that this has happened to about 15 percent of the nearly 2 million contractual plan investors in the past, although the remaining 85 percent of all planholders achieved profits. It was the committee's responsibility to strike a proper balance between protecting the relatively few investors who lose money and yet provide sufficient compensation to salesmen to allow the proper distribution of these securities. After considerable thought on this problem, it seemed to me that it should be possible to provide the same level of compensation now allowed and yet protect those who may have to withdraw from their plan. This could be accomplished through preserving the present first year 50 percent front-end load provided the mutual fund would be willing to offer a refund to those who redeemed their underlying securities early in the plan. After studying various alternative assumptions, I determined that if the plan sponsor were required to refund the sales load paid by the investor in excess of 15 percent of his total payment if he withdrew any time during the first 3 years, he would be better off than if he had been required to pay the 20-percent load provided in last year's bill. This advantage to the person who might decide to withdraw includes a computation for the increase which would have occurred in both cases as the result of the differences under the two alternatives of the amounts of money actually invested and working for him. It seemed to me, therefore, that such a proposal would meet our objectives of protecting the consumer from undue loss and at the same time providing an opportunity to properly compensate salesmen. The proposal also would

have some beneficial side effects. It has been argued that contractual plans are sometimes sold to people who should never buy them and that after the sales commission is collected, the salesman does not care whether the person continues in the plan or not. I suspect that this may happen in some cases, although it certainly cannot be considered widespread throughout the industry. This refund provision will provide a monetary incentive for contractual plan sponsors to see to it that their salesmen do not "oversell" because such sales will likely result in refunds. The net result should be an upgrading, if necessary, of the sales forces of any company which operates under its provisions.

When the committee reconsidered the contractual plan industry this year, it decided to allow companies to offer contractual plans under the two alternatives. Either the company would be limited in the amount which it could deduct for sales charges during the first 3 years of the plan to 20 percent, or it would be permitted deductions as allowed under present law but would be required to refund part of the sales charge if the investor elects to redeem his shares any time during the first 3 years of the plan. As part of the latter alternative, the Securities and Exchange Commission is granted authority to require sponsors and underwriters to maintain reserves sufficient to meet the contingent liability which may occur under the refund provision. The reserve requirement must be reasonably flexible under the net capital rule, if this is to be a viable alternative. I should probably add, Mr. President, that the sponsors of contractual plans have not supported either of the alternatives offered in this bill. I cannot be critical of their lack of support, however, because they do not know what the effect of either will be, and both alternatives might possibly seriously disrupt their operations.

I, too, have some reservations concerning both alternatives, but I feel that we have now made a real effort to provide an opportunity for these firms to continue offering contractual plans to prospective investors; contractual plans which despite their shortcomings have proven highly profitable to a great majority of those who have systematically invested in them.

Mr. President, I have discussed only the management provision and the contractual plan provisions in the bill before us, because these were the two provisions which gave me great concern in last year's bill. I could discuss other provisions of the bill, some of which we have changed from what they were last year, particularly those dealing with the entry of banks, insurance companies, mutual savings banks, and savings and loan associations into the mutual fund industry, but the chairman of our committee (Mr. SPARKMAN) has already provided the Senate with a general description of those provisions in his remarks.

Mr. President, I have an amendment which I wish to offer for consideration at this time.

I send the amendment to the desk and ask that it be stated.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk read as follows:

On page 63, line 24, strike the words "the Securities Exchange Act of 1934."

Mr. BENNETT. Mr. President, I am offering this amendment to section 29 of the bill which would remove legal liabilities arising with respect to variable annuity and other contracts providing for varying benefits based on the fluctuating value of a pool of securities issued by insurance companies prior to the decision in *Securities and Exchange Commission v. Variable Annuity Life Insurance Company*, 359 U.S. 65 (1959). In that case, the Supreme Court held that variable annuities were investment contracts required to be registered under the Securities Act and that the company issuing them was an investment company required to be registered under the Investment Company Act.

It should be noted, however, Mr. President, that the proposed section 29 of the bill as presently written would apparently insulate any insurance company which sold a contract, fitting the description in the section prior to March 23, 1959, from the antifraud provisions of the Federal securities laws, as well as from the registration and other regulatory provisions of such laws. I believe that the action taken by the committee was taken without knowledge of its full effect. I have discussed this with the staff and the chairman of the Securities and Exchange Commission and find that while it is my understanding that they feel there may be a basis for insulating insurance companies from liability for failure to register certain investment contracts under the Federal securities laws prior to March 23, 1959, the date on which it was first judicially established that such registration was required as a matter of national policy, they do not think it would be advisable for Congress to insulate sellers of the types of investment contracts described in the section from liability for misrepresentation and other fraudulent selling practices.

I have discussed this with the chairman of the committee (Mr. SPARKMAN), and he agrees that it was certainly not his intent to provide an exemption from provisions of the securities laws dealing with misrepresentation or fraudulent selling practices. He has, therefore, expressed his support of this amendment.

I am advised that the Senator from New Hampshire (Mr. MCINTYRE) is empowered to accept the amendment I have offered.

Mr. MCINTYRE. Mr. President, I understand the Senator from Utah (Mr. BENNETT) and the chairman of the Committee on Banking and Currency have discussed the amendment and the chairman of the committee is in agreement. Therefore, we have no objection and the amendment may be accepted.

The PRESIDING OFFICER. The question is on agreeing to the amendment offered by the Senator from Utah.

The amendment was agreed to.

Mr. MCINTYRE. Mr. President, in view of what I expect will be said this afternoon dealing with section 3(b)(5)

of the bill before us, which deals with oil and gas mutual funds, I believe that the RECORD should show the background, the history, and the reasoning behind the Banking and Currency Committee's action in recommending this provision this year as it did last year.

As Senators know, that period of American economic history extending up to the early 1930's was marked by a series of dramatic securities frauds perpetrated upon unsophisticated investors.

The Congress, recognizing the need for action by the Federal Government on behalf of small, unsophisticated investors, adopted the principle of adequate disclosure of relevant information to investors as the cornerstone of Federal regulation under the Securities Act of 1933.

The 1933 act, together with the provisions of the Securities Exchange Act of 1934, accomplished its purpose well. Stock frauds, once almost a routine event, vanished to the point where the American securities market today can invite investor confidence as a basic foundation of our system of capitalism.

The Congress, however, together with the Securities and Exchange Commission, soon learned that, while disclosure was an adequate Federal regulatory procedure for most securities, it still did not put an end to frauds against small, unsophisticated investors who invested in one specific type of security—the investment company.

An investment company, in lay terms, is a company financed by many contributions from individual investors, who turn their money over to the company to obtain the benefits of professional management and diversification. This particular form of financial arrangement lends itself to unique abuses in the areas of self-dealing, excessive costs, and insufficient information being delivered to investors.

Accordingly, the Congress enacted the Investment Company Act of 1940, to go beyond disclosure in establishing administrative protections for small, unsophisticated investors purchasing the securities of most investment companies. I say "most" investment companies, because in 1940 the Congress did exclude a few categories of investment companies from coverage under the act.

Most of the excluded companies fell in categories which were already subject to Federal regulation under other statutes—such as public utility holding companies—already subject to SEC regulation—and bank holding companies regulated by the Federal Reserve Board. In addition, the Congress excluded those investment companies who invested their receipts from securities holders in oil and gas leases.

The reason for the oil and gas exclusion is stated quite simply in the report of the Banking and Currency Committee. In 1940, "the risk inherent in such investments made them attractive only to wealthy investors whose income would allow a tax writeoff should the venture prove unproductive." These clearly were not the small, unsophisticated investors whom the 1940 act was designed to protect.

For several years after 1940, the situa-

tion remained unchanged. Most oil and gas mutual funds continued to be investment vehicles for wealthy, sophisticated investors. On the other hand, there were funds appealing to a particular wildcatter's friends and neighbors for small contributions to finance a single well typically were distributed to fewer participants than the 100 required for coverage under the act. Thus, removal of the oil and gas exclusion in the 1940's or 1950's would not have served the purposes of the act at all.

In recent years, however, the picture has changed dramatically. For one thing, as American investors became accustomed to mutual funds of the open end or contractual plan variety, more and more oil and gas funds began using the regular mutual fund merchandising techniques in selling their securities. Even more important, there was a substantial increase in the dollar volume and number of funds, and many of these funds pitched their appeal directly at the small, unsophisticated investors most in need of protection under the 1940 act.

Thus, in 1966, the Securities and Exchange Commission recommended to the Congress that the oil and gas exclusion be eliminated for those oil and gas investment companies offering redeemable securities, periodic payment plans, or face amount certificates of the installment type. When the Chairman of the Securities and Exchange Commission appeared before our committee the following year, he repeated the Commission's recommendation that these funds be covered. The Commission had justified its request on the grounds that, in recent years, several companies had actively sought to capitalize on the popularity of mutual funds by appealing to unsophisticated investors of modest means.

This subject was also discussed in a committee print published by the Committee on Banking and Currency in May 1967, in which the oil and gas exclusion was analyzed by the SEC staff.

The following year, the committee reported out a bill embodying the Commission's recommendations with respect to oil and gas. The committee report repeated the reasons for the committee's action. On the floor, however, the bill's managers accepted an amendment to retain the full oil and gas exclusion.

This year, the committee has again voted to eliminate the exclusion for those oil and gas funds which are structured along the lines of convention mutual funds.

It is my contention that circumstances have dramatically changed in the past year in a way which makes it imperative that the committee's decision be upheld by the full Senate.

The statistics tell the story well. These statistics, I might add, have been compiled by the Oil and Gas Section of the Securities and Exchange Commission, which handles the registration of oil and gas funds under the Securities Act of 1933.

Up through the end of 1967, the dollar amount of new registrations was relatively low, ranging in the 4 years ending in 1967 from \$83 million to about \$230 million. In 1968, the year the Senate decided to continue the exclusion,

the dollar amount of registrations jumped to \$695 million. This year, it is estimated that the dollar amount will be about \$1 billion. This industry has become perhaps the fastest growing segment of the financial community.

At the same time that the dollar amount grew, the number of registrations also jumped. Down to 29 registrations in each of 1965 and 1966, the number increased to 46 in 1967 and more than doubled in 1968, to 97 registrations. What is particularly interesting is that some of these recent registrations have been enormous in size. In 1964, the largest registrations were funds in the \$5 to \$10 million class. Not until 1967 was there a single registration of over 25 million, and last year, when the Congress continued the exclusion from regulation, there were actually two funds registering amounts of \$100 million a piece or more.

A particularly revealing statistic is the one concerning the use of underwriters. The claim has been made that the typical oil and gas fund is a small operation, appealing to friends and neighbors in oil territory. As we have seen, the dollar volume no longer can be considered to represent small operations. At the same time, funds have relied heavily on underwriters to bring their securities to the attention of investors far removed from any contact with the oil industry.

In 1964, for example, only 12 funds made any use of underwriters. At the same time, 12 funds did not make use of underwriters.

In 1968, however, when we continued the exclusion, the figures showed a dramatic change. Once again, 12 funds did not make use of underwriters. The dramatic growth was in the number of funds using them, which expanded from the 12 of 1964 to the staggering figure of 85 in 1968. The message is clear, the growth in these funds has come in the area of wide appeal to investors who may have no personal knowledge of the fund's promoters or prospects.

There are other statistics showing the change which has occurred since our floor action of last year. In the 4 years ending in 1967, an average of 19 funds per year made participations available at figures low enough to appeal to unsophisticated investors. Last year, 58 funds, over half of those registered that year, could be bought for less than \$10,000 each.

Now I would point out, Mr. President, that the language reported by the committee will still continue the exclusion for those oil and gas funds which do not issue redeemable securities, periodic payment plans, or face amount certificates of the installment type.

But Senators may ask, why should even these funds be covered? Why are the problems which have been discovered which indicate that small, unsophisticated investors cannot understand what they are getting into?

I can best illustrate the situation which can face an unsophisticated investor by referring to one particular fund. This fund, which I have selected for discussion, is typical of the new breed of oil and gas funds in that it is large—its current registration statement is for \$63 million—and it is available to investors

on a monthly payment plan for as little as \$50 a month after a \$150 initial payment.

Let us look, for example, at the various expenses of this particular fund. The securities are distributed by members of the National Association of Securities Dealers, a nationwide organization including almost all securities brokers and dealers. Dealers selling these securities in single payment plans receive a 7½-percent commission. If they sell monthly plans, they receive the same 7½ percent plus a "plan opening bonus" ranging from 3 percent of the monthly payment on small plans to no extra bonus on large plans.

In addition, dealers receive a "plan maintenance fee" of 1 percent of the reinvested net cash receipts of the fund. Now, of course, all of the money to pay the dealers comes out of the pockets, through one fee or another, of the securities holders.

In addition, the managers of the fund receive a fee for their services for the supervision of cash investments. This fee amounts to 5 percent of the net cash receipts available for reinvestment.

In addition, the management company receives a separate fee for its management services. This fee is computed by adding the direct expenses of management, the fund's share of indirect expenses such as the salaries of the promoter and all the officers, plus 25 percent of something called "net operating profits." This term is not what you or I would ever call net operating profits, since it is computed without any deduction for such normal oil expenses as depletion, depreciation, and certain rental expenses.

Oh yes, Mr. President, the management fee also includes the interest on such funds which the company has idle awaiting investment. That interest is taken by the management company, unless, of course, it is making loans to itself, which it does on an interest-free basis.

What is particularly interesting about this company, Mr. President, is the way in which it provides for the effective redemption of its securities during the 10 year life of a plan. The underwriter stands ready to repurchase the securities at something called a cash surrender value, which is computed as follows:

A determination is made of the pro rata share of the security holder's interest in cash on hand, oil leases, and other property. The security holder can recover 95 percent of his own share of the cash on hand. This is somewhat unusual.

He can recover only 80 percent of the value of all others assets, excluding oil properties. This is more unusual.

He can recover only 66⅔ percent of the value of his oil and gas properties. And those properties, Mr. President, are evaluated in the final analysis by the management of the fund, which reserves the right to overrule the decisions of outside engineers.

Mr. President, the information on this particular fund was put together by an attorney who is experienced in reading prospectuses, and who does have a rather sophisticated knowledge of securities together with a knowledge of oil financing.

And it took him the better part of 2 days. It is clear that a small, unsophisticated investor would have a great deal of trouble understanding what he was getting into.

Now, Mr. President, the fund specifically states that it will not give its security holders information on which they may make their own decisions about the value of their own shares. Unlike most companies which we may be familiar with, this company will not give its shareholders even an annual report listing the fund's investments. This is clearly one way in which the Investment Company Act should be promptly applied. I am hopeful that the Senate will support the decision of the Banking and Currency Committee that these funds be brought back under the Investment Company Act.

Mr. BENNETT. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER (Mr. EAGLETON in the chair). The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. BENNETT. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. TOWER. Mr. President, I send to the desk an amendment and ask that it be stated.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk read as follows:

On page 7, strike out lines 5 through 14, inclusive.

On page 7, line 15, strike out "(6)" and insert in lieu thereof "(5)".

On page 8, immediately after line 4, insert the following new subsection:

"(c) the Securities and Exchange Commission shall, no later than January 31, 1970, submit a report to the Senate and House of Representatives concerning paragraph 11 (redesignated paragraph 9(b) section 3b(2) of this act) of section 3c of the Investment Company Act of 1940 (15 U.S.C. 80a-3c(1)), including, but not necessarily limited to, its suggested methods to deal with adequate disclosure of assets and identification of other mineral holdings, and the redemption rights of investors therein of such companies investing in securities consisting of interests in oil, gas and other mineral rights."

Mr. TOWER. Mr. President, there is a continual conflict between the need to regulate and the need to operate freely. The history of Federal regulation of private industry has been punctuated with instances when poorly prepared and inadequately administered guidelines have so involved private industry in redtape and endless bureaucratic forms that industry has lost its greatest asset—the ability to function quickly and efficiently.

However, history also contains examples of incidents when unregulated business activity has resulted in significant harm to the American economy. In the financial world, Congress found it necessary to develop the Securities Exchange Act of 1934 and the Investment Company Act of 1940 to deal with these problems. They were developed after careful thought and as the result of detailed study. Congress realized that it

is important to avoid destroying a needed segment of our economy just to correct the inequities which existed.

As a result of this careful consideration and detailed analysis, the Congress decided to exempt companies investing in securities consisting of interests in oil, gas and other mineral rights from coverage under the 1940 act. I feel that that decision was eminently correct.

However, there are those who argue that times have changed since 1939 and that we must now eliminate this exemption. They would remove it without study, without opportunity for the industry to be regulated to testify, and without an explanation from the regulating body as to just how it plans to apply the Investment Company Act of 1940.

Mr. President, that is not a very sound way to legislate. The problems involved in the regulation of financial institutions are too complex to be legislated in the dark. We must carefully analyze the effect of this regulation activity before we allow it.

Therefore, I introduce an amendment which will provide for this needed study. My amendment directs the Securities Exchange Commission to study the problems associated with the regulation of companies dealing strictly in oil and gas interests and to report the results of that study to us no later than January 31, 1970. It is a simple amendment but one which is necessary if we are to legislate from knowledge and study rather than from reaction and emotion.

Mr. President, I am aware that my amendment is a compromise. As I stated, I for one do not think that the exemption to the Investment Act of 1940 should be eliminated. However, I will not insist on an immediate decision by my colleagues, particularly when they have not had the benefit of study or of committee hearings. This is only fair and just. I urge my colleagues to accept this amendment.

Mr. MCINTYRE. Mr. President, I should like to reply to my good friend from Texas and say, first, that I have discussed this matter with the Senator from Texas, and with other Senators and would like to clarify the RECORD.

First of all, this matter made its appearance back in 1966 when the Securities and Exchange Commission recommended that the gas and oil mutual funds be placed under the regulations of the 1940 act.

In 1967, this exemption was removed in the bill introduced in the Senate.

I might say to my good friend from Texas that in 1967 the industry did not choose to appear and present its case before our committee which was considering mutual fund legislation. However, as he well knows, it was deleted. I think, in fairness to the chairman, the Senator from Alabama, and myself, I would say that it was deleted on the floor mainly because we were pursuing the objective of passing mutual fund legislation for the first time and we did not want to get involved in a long dispute with the former Senator from Oklahoma, Mr. Monroney.

Now, I think we recognize that there are some unique features of the oil and gas mutual fund. We feel, I feel, that

the Securities and Exchange Commission has enough exemptive powers today so that it can negotiate with the industry to come up with a satisfactory solution.

I also want to say that I do feel a little bit on the defensive here, in view of the fact that we have not had, as I think the Senator from Texas stated in his remarks, the extensive type of hearings we all would always like to have. But I think there is no doubt of the history of Securities and Exchange Commission's recommendations of Mr. Cohen's own personal recommendations to the committee in 1967, and the growing fact, as the Senator from Texas well knows, that the oil and gas people are now expanding their securities sales upward of \$1 billion, so that there is no doubt they do need to have some form of regulation.

I also have been informed that many areas of this industry would like and would welcome some form of regulation, because they feel that their greatest enemies today are some of the flimflam outfits which are operating in this area at the expense of the unsophisticated investor.

In order to meet the objection of the Senator from Texas to the bill as it now stands, we are prepared to offer another amendment if, at the same time, the Senator from Texas will withdraw his amendment. The extent of this amendment will simply be to postpone the effective date of the section of the bill that deals with the oil and gas mutual funds to 18 months from date of enactment.

If the Senator from Texas is agreeable and will withdraw his amendment, I will then be happy to offer my amendment and move its adoption.

Mr. TOWER. I thank the distinguished Senator from New Hampshire. I might say that I am aware that the Securities and Exchange Commission has proposed that the industry be regulated. My amendment actually would, in effect, implement that desire on their part by asking them to devise a plan for us and submit it to us so that we could consider it.

But with the assurance of the Senator from New Hampshire that he recognizes the unique character of funds of this kind that do engage in the business of owning and holding gas and mineral securities, and if it is the Senator's understanding that it would be our intention for the Securities and Exchange Commission to get together with the industry and work with it on working out the unique problems involved, and working out an equitable arrangement for regulation that would protect and safeguard the consumer, and would not impose an unreasonable burden on the industry, then I would be prepared to accept the amendment offered by the Senator from New Hampshire.

Mr. MCINTYRE. I understand the Senator from Texas has withdrawn the amendment which he presently has at the desk.

Mr. TOWER. Yes.

The PRESIDING OFFICER. Does the Senator withdraw his amendment?

Mr. TOWER. As I say, I would be prepared to, but I wanted to get some response from the Senator, if that is his understanding.

Mr. SPARKMAN. Mr. President, will the Senator yield to me?

Mr. TOWER. I yield to the Senator from Alabama.

Mr. SPARKMAN. I merely wish to point out that the Senator from Texas knows that is exactly how we have considered this legislation. It was worked out between the industry and the Securities and Exchange Commission, as well as with members of our committee, of which the Senator from Texas is a very valued member. We will certainly continue to follow that same pattern. The Senator from New Hampshire (Mr. McIntyre) has offered an amendment. Of course, I leave it up to him, but I presume it would exactly follow that same pattern.

Mr. TOWER. I am trying to make legislative history as to our intent.

Mr. SPARKMAN. It is to get the Securities and Exchange Commission and the industry together to work out a satisfactory solution.

Mr. TOWER. With that understanding, I am delighted to withdraw my amendment in favor of the amendment offered by the Senator from New Hampshire.

Mr. ALLOTT. Mr. President, will the Senator yield?

Mr. TOWER. I yield to my distinguished colleague from Colorado.

Mr. ALLOTT. Mr. President, while we are all on the floor, I would like to ask the distinguished Senator from Texas to answer a question, because I want to be sure that I understand the effect of the proposed amendment. If it means what I think it does, it will certainly be satisfactory to the Senator from Colorado. It is my understanding that during the 18-month interim the proposed application of the rules that now apply to mutual investment funds across the board would be studied, and that this portion of the industry and the Securities and Exchange Commission would get together for perhaps a twofold purpose: first, to determine what regulations might be necessary in light of the unique characteristics of the oil and gas industry, and then to implement regulations which would apply to this particular type of company. Is that the understanding?

Mr. McIntyre. That is essentially the understanding that the Senator from Texas, I, and the chairman of the committee have. We recognize that there are certain unique features of the oil and gas industry. One, of course, is valuation, which poses quite a question for some of these companies. As I said in my remarks, the Securities and Exchange Commission has certain discretionary and exemptive powers, so that when the industry sits down with the SEC to apply the test of placing them under the 1940 act as amended, a reasonable solution to the problems can be put together. That is the assurance I want to give to the Senator from Texas and also to the Senator from Colorado.

Mr. ALLOTT. Mr. President, will the Senator yield further?

Mr. TOWER. I yield.

Mr. ALLOTT. One thing that bothers me is there is a requirement of reports which are inapplicable. For instance, I refer to real estate transactions. The oil and gas industry make many transac-

tions every day of this particular nature. Perhaps they do not engage in these transactions every day, but on some days they may make 50 or 100. It seems to me, if such disclosure were required, the disclosure could, from the standpoint of the legal descriptions alone, run into hundreds of pages. That, however, would be, not as in a mutual fund, but in the normal course of business and would mean very little to the investor.

I think the Senator is entirely right that this area needs to be looked at, and perhaps looked at very closely.

As I said when the matter was before the Senate last year while we were discussing S. 3724, various sections of the Securities Act of 1933, under which these companies are formed apply. They do register and they must make disclosures to the Securities and Exchange Commission.

I really feel that there is a unique aspect about these companies which does not fall within the pattern of the usual mutual fund as the Senator from New Hampshire ordinarily thinks of it and as I think of it. I just want to be sure that there is adequate time and an opportunity for the Securities and Exchange Commission to take a hard look at the problem, with representation being made by the companies themselves, so that, in the event unique and different kinds of regulations are needed as distinguished from the mutual funds, they might be applied.

I understand that is the purpose of both the Senator from Texas and the Senator from New Hampshire.

Mr. McIntyre. That is substantially the purpose of the Senator from New Hampshire. There are certain areas, such as reporting, that we would want the SEC to take a hard look at. I referred to this problem in my earlier statement. The difficulty arises because the oil and gas mutual funds, for lack of a better name, are utilizing the merchandising techniques of the mutual fund industry and in doing so are getting the benefit of that merchandising and salesmanship, and yet fall outside the purview of some reasonable regulation which they should be under today. As the Senator knows, they are selling at \$150 down and \$50 a month. That is for the small investor. That is not the way this segment of the industry got going in 1940, as the Senator knows.

Mr. President, I send my amendment to the desk and ask that it be stated.

The PRESIDING OFFICER. The amendment offered by the Senator from New Hampshire will be stated.

The ASSISTANT LEGISLATIVE CLERK. It is proposed, on page 65, line 8, after "(4)", to insert "section 3(b)(5) and".

The PRESIDING OFFICER. The question is on the adoption of the amendment of the Senator from New Hampshire.

The amendment was agreed to.

The PRESIDING OFFICER. The bill is open to further amendment.

Mr. McIntyre. Mr. President, I have certain uncontroversial technical amendments to the Investment Company Amendments Act. These amendments were the subject of a thorough review which I placed in the Record last Friday.

The amendments have been cleared on both sides of the aisle.

I send my amendments to the desk.

The PRESIDING OFFICER. The amendments will be stated.

The assistant legislative clerk proceeded to read the amendments.

Mr. McIntyre. I ask unanimous consent that further reading of the amendments be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. McIntyre's amendments are as follows:

On page 8 after line 4 insert the following: "Sec. 3(c)(1) Section 8(b)(2) of such Act (15 U.S.C. 80a-8(b)(2)) is amended to read as follows:

"(2) a recital of all investment policies of the registrant, not enumerated in paragraph (1), which are changeable only if authorized by shareholder vote;

"(2) Paragraphs (3) and (4) are redesignated as paragraphs (4) and (5), respectively.

"(3) A new paragraph is inserted immediately after paragraph (2) to read as follows:

"(3) a recital of all policies of the registrant, not enumerated in paragraphs (1) and (2), in respect to matters which the registrant deems matters of fundamental policy;

"(d) Section 13(a)(3) of such Act (15 U.S.C. 80a-13(a)(3)) is amended to read as follows:

"(3) deviate from its policy in respect of concentration of investments in any particular industry or group of industries as recited in its registration statement, deviate from any investment policy which is changeable only if authorized by shareholder vote, or deviate from any policy recited in its registration statement pursuant to Section 8(b)(3);"

On page 30, line 23, insert "(a)" after "SEC. 13."

On page 31, after line 23, insert:

"(b) Section 24 of such Act (15 U.S.C. 80a-24) is further amended by adding at the end thereof a new subsection to read as follows:

"(f) In the case of securities issued by a face-amount certificate company or redeemable securities issued by an open-end management company or unit investment trust, which are sold in an amount in excess of the number of securities included in an effective registration statement of any such company, such company may, in accordance with such rules and regulations as the Commission shall adopt as it deems necessary or appropriate in the public interest or for the protection of investors, elect to have the registration of such securities deemed effective as of the time of their sale, upon payment to the Commission, within six months after any such sale, of a registration fee of three times the amount of the fee which would have otherwise been applicable to such securities. Upon any such election and payment, the registration statement of such company shall be considered to have been in effect with respect to such shares. The Commission may also adopt rules and regulations as it deems necessary or appropriate in the public interest or for the protection of investors to permit the registration of an indefinite number of the securities issued by a face-amount certificate company or redeemable securities issued by an open-end management company or unit investment trust."

On page 28, line 10, insert "to registered investment companies and" after "applicable".

The PRESIDING OFFICER. The question is on agreeing to the amendments of the Senator from New Hampshire.

The amendments were agreed to.

Mr. PROXMIRE. Mr. President, I believe the committee has done an excel-

lent job in reporting a fair and equitable mutual fund bill. I particularly want to compliment the chairman in the patience and leadership he has shown in bringing the SEC and the industry together on this most complicated and far-reaching legislation. While there are no doubt still differences of opinions on different sections of the bill, by and large it is a good bill; it is a bill which will give the investor substantially more protection than he is getting today; and it is a bill which is fair to the mutual fund industry.

Although I do support the overall bill, I strongly believe that the bill is sadly lacking in one particular instance. I am referring to the section dealing with face-amount certificates. In voting to continue the front-end load on face-amount certificates, in my opinion, the committee perpetuates the sale of a financial instrument which borders on the unconscionable. The small investor is entitled to better protection in this area, and I am disappointed that the committee did not see fit to give it to him.

A face-amount certificate is essentially a fixed income savings instrument which is frequently sold on the installment plan. By fixed income, I mean that it has a fixed rate of return. There is no possibility of capital appreciation such as in the case of a mutual fund or other equity investment.

The largest face-amount certificate company is a wholly owned subsidiary of Investor Diversified Services, Inc., the largest mutual fund in the country. The subsidiary, which is called Investors Syndicate of America—ISA—is currently selling a 15-year and a 22-year certificate. The 15-year certificate would require monthly payments of \$5. If these payments are made over the full 15 years, the certificate would mature to its full face-amount, which would be \$1,100. The 22-year certificate involving monthly payments of \$5 would mature to a value of \$1,875. The maturing value of all outstanding ISA certificates exceeds \$2 billion, which represents about 95 percent of the total issued by all companies.

If all of the monthly payments were made to maturity on the 15-year certificate it would, according to the ISA prospectus, have a guaranteed minimum yield of 2.52 percent. By the same token, if all of the payments were completed on the 22-year certificate, the investor would be rewarded with a yield of 3.01 percent.

I should stress that these are guaranteed minimum yields. The company can in its discretion pay a higher rate from time to time, if it believes economic conditions warrant. At the present time, the company is paying an additional dividend credit of 1 percent per year.

Thus, if the individual makes payments on the certificate for the full 22-year period, he might enjoy a 4-percent yield; and because of the tax deferral privileges of face-amount certificates the effective yield might even approach 4½ percent. However, the investor only gets this yield if he makes all the payments over a 22-year period. If he cashes the certificate in during the first 8 years, he will suffer a loss of part of his original invested capital. If he redeems after 8

years but prior to the 22-year maturity date, his yield will be substantially lower.

One might well ask, "How many people cash these instruments in during the first 8 years?" A study by the Securities and Exchange Commission covering the period from 1941 through 1961 shed some light on this question. According to the SEC study, 55 percent of face-amount certificates are redeemed by investors during the first 8 years. If this redemption rate holds up for the certificates currently being sold, it means that a majority of the people who are unwise enough to invest in these dubious instruments will actually lose money.

The reason investors will lose money during the first 8 years is that the Investment Company Act and the committee bill permits a maximum sales charge of 9 percent. Moreover, under the committee bill, up to 20 percent of the annual payments during each of the first 3 years can be allocated to the company in the form of a sales commission.

In effect, the company grabs its commission during the first few years rather than spreading it out evenly over the life of the certificate. Thus, because of the front-end load, the investor who redeems a certificate during the first 8 years will suffer a substantial loss.

In the case of a mutual fund, this loss is partially compensated for by the possibility of capital appreciation. If the stock market continues an upward trend, those who invest in mutual funds on the contractual plan will generally break even during the first 2 or 3 years despite the front-end load because of the increase in value of the mutual fund shares. This, of course, is not possible with a face-amount certificate since it is a fixed income investment as opposed to an equity investment.

The committee justified the continuation of a modified front-end load on mutual funds on the grounds that it was in the public interest to encourage greater investment in equities on the part of the small investor as a hedge against inflation. But surely this rationale does not extend to a fixed income, low-yield investment such as a face amount certificate. What public purpose is served by encouraging this dubious investment?

Even if the investor should make all of the scheduled payments to maturity, he still could have achieved a better yield on other comparable fixed income investments. For example, on page 189 of the hearings, a table prepared by the Library of Congress shows that an investor would be substantially better off investing in shares of a savings and loan association at 4¼ percent even after taking into account the tax deferral advantages and extra dividend credit currently offered by face-amount certificates.

Not only does the investor obtain a higher yield if he puts his money in a savings and loan association, he also enjoys Federal deposit insurance and complete liquidity. He can withdraw his funds at any time without suffering a loss. One wonders why any rational investor would buy a face amount certificate.

I point out that \$2 billion of these certificates have been sold and are now held by American investors.

Prof. Henry Wallich, of Yale, in testimony before our committee, had the same question when he observed:

It seems hard to believe in today's market where one can buy bonds at six and seven percent that those things could be sold other than by pure force of salesmanship.

Thus, it would appear that virtually no one benefits from purchasing a face-amount certificate, and as shown by the SEC study, a majority of people actually lose money due to the front-end load.

Because of the pernicious effects of the front-end load, the Securities and Exchange Commission in its report entitled, "Public Policy Implications of Investment Company Growth" has concluded:

There is no justification for front-end loads in the sale of face-amount certificates.

This recommendation was included in the original legislation submitted by the SEC in 1967. Unfortunately, the committee saw fit to modify the Commission's recommendations and to permit the continuation of charging a front-end load on these certificates. If the aim of the mutual fund bill is to protect the investor, I do not see how the committee can recommend the continuation of the front-end load on face-amount certificates, when the figures show that a majority of the people who buy these certificates will lose money. I am sorry to say that the committee provision on face-amount certificates makes a mockery of investor protection.

During the executive session on the mutual fund bill, I offered an amendment to S. 34 which would have abolished the front-end load on face-amount certificates in keeping with the SEC's original recommendation. Despite the fact that the proposed abolition of the front-end load on face-amount certificates has been before the committee for at least 2 years; and despite the fact that it was discussed on many occasions during the hearings; and despite the fact that it has been the subject of intensive investigation by the SEC, the committee felt that "further study" was needed before the front-end load on such certificates can be abolished.

Mr. President, I had intended to offer an amendment to the bill to prohibit the front-end load for face-amount certificates. However, I shall not press that amendment, because there is still a feeling on the part of some members of the committee that this subject ought to be studied more carefully before we act on it.

I say that we already have had substantial study. In the words of the SEC study of nearly 3 years ago:

There is no justification for front-end loads in the sale of face-amount certificates.

I believe we should abolish the front-end load today so that the thousands of investors who invest in these instruments will not suffer the financial losses they have suffered in the past.

However, the matter does represent a substantial financial interest for one big company. For that reason, instead of offering my amendment—and I have discussed this matter with the distinguished chairman of the committee, and also with

the distinguished Senator from Minnesota (Mr. MONDALE), who of course represents the State where this large fund is domiciled—I ask the distinguished chairman of the committee (Mr. SPARKMAN) if it would be satisfactory with him for the committee to request the Securities and Exchange Commission to make a study of the face-amount certificates, and to report back within 3 months, the study to include the following elements:

First, current redemption rates;

Second, percentage of persons losing money;

Third, manner in which such certificates are sold;

Fourth, after-tax yields obtainable on alternative investments;

Fifth, economic impact on industry of abolishing front-end load; and

Sixth, recommendations as to whether front-end load should be continued.

Mr. SPARKMAN. Mr. President, in reply to the question of the distinguished Senator from Wisconsin, I should certainly be glad to go along with the views that he has expressed, in asking the Securities and Exchange Commission to supply such information to our committee.

The Senator knows that when the amendment was voted down in the committee, it was on that basis that we did not have sufficient information. I still think that is correct, and I think that by making the specific request of the Securities and Exchange Commission, we may get a great deal more information than we have now. If it is then found necessary, we could enact additional legislation.

Mr. PROXMIER. Mr. President, I thank the distinguished chairman of the committee, and I shall not offer my amendment, on the understanding that there will be such a study requested by the committee of the SEC.

Mr. SPARKMAN. That is correct.

Mr. BENNETT. Mr. President, as the ranking minority member of the committee, I wish to state that I support the chairman and the distinguished Senator from Wisconsin.

Mr. PERCY. Mr. President, I believe the bill before us today—S. 2224—will insure the continued growth and prosperity of the mutual fund industry as well as provide basic safeguards to the American investor who has put his savings into the purchase of mutual funds.

For almost 3 years, the Banking and Currency Committee has been striving to obtain a bill that would protect the consumer interest of the 5 million Americans with savings in mutual funds and at the same time update the Nation's securities laws to reflect the growing mutual fund industry and help the industry maintain its healthy growth. Updating of the securities laws is necessary as the last revisions took place in 1940 when the industry had only \$450 million in assets. Today the industry has assets of over \$50 billion.

I opposed last year's bill as it gave jurisdiction to the courts to determine what were reasonable management fees. After further hearings this year and consultation between the SEC and the industry a new test for determining

whether management fees are reasonable has been devised. The proposed legislation from the committee holds that a mutual fund investment adviser has a specific fiduciary duty in respect to management fee compensation.

Jurisdiction in enforcing this fiduciary standard is placed in the courts. Either the SEC or mutual fund stockholders can sue in order to have a determination as to whether the investment adviser has fulfilled his fiduciary duty to the mutual fund shareholders in determining the fee. This is a fair and reasonable compromise for the problem of management fees, and I support this version as worked out by the committee.

Another sound compromise has been worked out regarding front-end loads and for this I must give ample credit to Senator BENNETT, ranking Republican on the committee. This proposal gives mutual fund companies the option of limiting the amount that could be deducted for sales charges to 20 percent of the investors payments during the first 3 years, or would permit the company to retain the current front-end load but provides for redemption privileges during the first 3 years that would reduce the investors sales load to 15 percent of total payments made under the plan. These provisions discourage overselling of plans to investors unable to undertake such commitments and encourage selling to investors who will persist in their plan payments.

In general the committee is proposing a fair and reasonable bill. I am particularly pleased with the increasing cooperation between the SEC and the mutual fund industry that has evolved during consideration of this bill. It is a good sign when the industry and the government sit down to mutually resolve problems and, if nothing else, I feel we have a better basis for cooperation between the two in the future.

I hope the Senate will give favorable consideration to this bill.

Mr. BROOKE. Mr. President, I rise today to offer my support of Senate bill 2224, the Investment Company Amendments Act of 1969. This bill amends certain sections of the Investment Company Act of 1940 which pertain to investment company management fees, mutual funds sales commissions, and contractual plan sales commissions. The bill also amends certain provisions of the Federal securities laws to permit banks and savings and loan associations to operate collective funds in competition with mutual funds. Finally, the bill includes a number of technical amendments to the Investment Company Act of 1940 and the Investment Advisers Act of 1940 which would facilitate and improve the administration of these acts.

S. 2224 represents a significant improvement over the provisions contained in S. 3724 which was passed by the Senate last year and which I did not support. There are, however, a number of issues which must still be addressed in future legislation after adequate studies have been completed.

The most controversial provision contained in last year's bill dealt with the reasonableness of investment company management fees. Mutual funds are nor-

mally organized, promoted, and managed by external organizations which are referred to as "investment advisers." These organizations are usually large investment companies which manage the fund's portfolio in exchange for management or advisory fees. These fees are calculated as a percentage of the fund's net assets and fluctuate with the value of the fund's investment portfolio.

Since fund shares are often purchased by investors in reliance upon the investment adviser's management competence, a mutual fund is not in a position to sever its relationship with the adviser and, therefore, often does not deal with the adviser on an arm's-length basis. Thus, this relationship has given rise to problems; namely, the economies of scale which have been realized in the industry as a whole as a result of its phenomenal growth have not been shared with investors. This observation is made not to chastise an industry which has contributed significantly to the welfare of the investing public; but to point out that even the most praiseworthy industries are subject to shortcomings which require legislative solutions.

Last year's bill—S. 3724—contained a provision stating that management fees should be "reasonable." Jurisdiction was vested in the courts to determine what constituted a reasonable fee. I and several of my colleagues on the Banking and Currency Committee objected to this provision on the ground that courts would be setting management fees.

S. 2224 represents a substantial change in emphasis from the provisions contained in last year's bill. As a matter of Federal law, the investment adviser will be subjected to a fiduciary duty to mutual fund share holders with respect to management fee compensation. Similar fiduciary duties will be owed by certain other persons with respect to their compensation from the fund. The doctrine of "corporate waste" will no longer prevent shareholder suits where management fee contracts have been ratified by shareholder votes. Thus, the established corporate law concept of fiduciary duty will be applied to management compensation contracts and suits grounded on a breach of this fiduciary duty can be brought by mutual fund shareholders or the SEC.

This, in my judgment, represents a significant improvement over last year's bill in that unconscionable management fee contracts can be challenged; however, the judiciary does not assume the role of a "rate fixer." While the ultimate responsibility for determining whether the investment adviser's fiduciary duty has been breached rests with the courts, approval of management fee contracts by the directors and the shareholders will be given adequate consideration.

It should be emphasized that the committee in its report to the Senate on S. 2224 does not make any finding that the present level of management fees is too high. S. 2224 does, however, provide a mechanism by which the fairness of management compensation contracts can be tested where shareholder recourse has hitherto been noticeably absent. Adequate compensation and incentives

must be provided to companies and individuals which advise the fund on its investments and market fund shares; however, individual investors must share equitably in the economies of scale available as a result of tremendous growth in this industry.

Recognizing the need to balance adequate compensation for the industry with adequate investor returns—consistent with market fluctuations—I am pleased to see that a compromise has been reached with respect to the establishment of a commission rate structure for mutual fund sales loads. Under this compromise, the industry would provide self-regulation with oversight by the SEC. The SEC would be empowered to alter or supplement industry rules. This solution is preferable to that involved with eliminating the resale price maintenance provisions contained in section 22(d) of the Investment Company Act of 1940. Expert testimony delivered before the Banking and Currency Committee indicated that elimination of section 22(d) could have adverse consequences on the industry which are not foreseeable at this time. The SEC has been requested to review the consequences of such a proposal on both the investing public and mutual funds sales organizations. I believe that this study is the *sine qua non* of further action in this area.

With respect to front-end loads paid by investors who participate in contractual plans, many of the problems which existed in S. 3724 have been resolved. The original SEC recommendation that front-end loads be prohibited was rejected by the committee. On the other hand, the committee felt that the front-end load—or prepayment of sales charges on contractual plans—detrimentally affected investors who withdrew from the plans at an early date unless the stock market had risen rapidly. Accordingly, I am pleased to note that a compromise has been reached whereby either the front-end load is reduced considerably or investors are able to receive refunds if withdrawal takes place at an early date. More specifically, salesmen would be given the option of employing a "spread load" whereby the front-end load would be extended over a 4-year period with no more than 20 percent of any one year's payments deducted for sales loads. The total deduction allowable during the first 4 years would be limited to 64 percent. This contrasts greatly with present provisions which allow for a 50-percent front-end load that can be deducted in the first year of the plan. Thus, the investor would have more money actually invested in underlying securities during the first years of the plan and the possibility of loss in the event that he redeemed during this period would be substantially decreased.

Under the second alternative the 50-percent front-end load presently authorized could be retained provided that if the investor elected for any reason to redeem his underlying shares for cash during the first 3 years, he would be entitled to receive a refund of the amount by which all sales charges paid exceed 15 percent of the total payments made under the plan. Thus, the investor would also have more money actually

invested under this alternative than under present provisions and his possibility of loss in this first few years would be decreased substantially.

Although I believe the front-end load provisions contained in S. 2224 are an improvement over the provisions contained in last year's bill, I have also been impressed with the fact that several States prohibit front-end loads entirely—for example, California—and nevertheless have a thriving mutual fund industry. Thus, there appears to be reason for considering whether additional improvements might be made in the front-end load provisions without seriously jeopardizing the mutual fund industry sales forces. I withhold amendments in this area until additional study can be given to the experiences found in "no-load" States with respect to the composition of industry sales forces and the nature of the sales activity involved.

S. 2224 also contains provisions dealing with sales charges for "face amount certificates." These instruments are debt securities that provide for periodic payments over a number of years. The investor is paid a fixed sum of money upon the maturity of the certificate and lesser sums if the certificate is surrendered prior to maturity. These lesser sums reflect the deduction from investors' payments of front-end load sales charges. S. 2224 provides a 20-percent front-end load limitation on these instruments. My very able colleague, Senator PROXMIRE, has expressed reservations as to whether the fact amount certificate provisions in this bill are adequate. I support the present provisions pending further study as to the consequences of eliminating the front-end load provisions entirely.

The bill which is now under consideration contains additional provisions which would permit banks to engage in equity investments by offering their investment services to individuals through the use of collective investment funds. I am cognizant of the fact that the banking provisions of this bill conflict with certain provisions contained in the Banking Act of 1933—commonly known as the Glass-Steagall Act—which precludes banks from entering the securities business.

I believe that adequate evidence exists to justify the entry of banks and savings and loan associations into the mutual fund field and the increased activity of insurance companies. The American investor will be the benefactor of such activities since he will be provided with a wider choice among different equity investment funds. While I believe that there is some justification for the argument that any expansion of the banking industry into this new field of endeavor should be considered as part of the larger "one-bank holding company" issue, I do feel that the subject has received adequate consideration before the Banking and Currency Committee and it has chosen to consider the issue in this context. I believe that decision is justified.

In conclusion, I would like to commend S. 2224 to my colleagues in the Senate. I believe it represents a significant contribution to the law in this field. While there are issues which remain unresolved, we must not postpone the enactment of legislation which will have a

significant bearing on the growth of this important industry. I urge that S. 2224 be adopted.

The PRESIDING OFFICER. The bill is open to further amendment. If there be no further amendment to be proposed, the question is on the engrossment and third reading of the bill.

The bill (S. 2224) was ordered to be engrossed for a third reading, was read the third time, and passed, as follows:

S. 2224

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Investment Company Amendments Act of 1969".

Sec. 2. Section 2(a) of the Investment Company Act of 1940 (15 U.S.C. 80a-2(a)) is amended as follows:

(1) Paragraph (5) is amended by striking out "under section 11(k) of the Federal Reserve Act, as amended" and inserting in lieu thereof "under the authority of the Comptroller of the Currency".

(2) Paragraphs (19) through (35) are redesignated as paragraphs (20) through (36), respectively, and paragraphs (36) through (42) are redesignated as paragraphs (38) through (44), respectively.

(3) A new paragraph is inserted immediately after paragraph (18) to read as follows:

"(19) 'Interested person' of another person means—

"(A) when used with respect to an investment company—

"(i) any affiliated person of such company.

"(ii) any member of the immediate family of any natural person who is an affiliated person of such company.

"(iii) any interested person of any investment adviser of or principal underwriter for such company.

"(iv) any person or partner or employee of any person who at any time since the beginning of the last two fiscal years of such company has acted as legal counsel for such company.

"(v) any broker or dealer registered under the Securities Exchange Act of 1934 or any affiliated person of such a broker or dealer, and

"(vi) any natural person whom the Commission by order shall have determined to be an interested person by reason of having had, at any time since the beginning of the last two fiscal years of such company, a material business or professional relationship with such company or with the principal executive officer of such company or with any other investment company having the same investment adviser or principal underwriter or with the principal executive officer of such other investment company:

Provided, That no person shall be deemed to be an interested person of an investment company solely by reason of (aa) his being a member of its board of directors or advisory board or an owner of its securities, or (bb) his membership in the immediate family of any person specified in clause (ee) of this proviso; and

"(B) when used with respect to an investment adviser of or principal underwriter for any investment company—

"(i) any affiliated person of such investment adviser or principal underwriter,

"(ii) any member of the immediate family of any natural person who is an affiliated person of such investment adviser or principal underwriter,

"(iii) any person who knowingly has any direct or indirect beneficial interest in, or who is designated as trustee, executor, or guardian of any legal interest in, any security issued either by such investment adviser or principal underwriter or by a con-

trolling person of such investment adviser or principal underwriter.

"(i) any person or partner or employee of any person who at any time since the beginning of the last two fiscal years of such investment company has acted as legal counsel for such investment adviser or principal underwriter.

"(v) any broker or dealer registered under the Securities Exchange Act of 1934 or any affiliated person of such a broker or dealer, and

"(vi) any natural person whom the Commission by order shall have determined to be an interested person by reason of having had at any time since the beginning of the last two fiscal years of such investment company a material business or professional relationship with such investment adviser or principal underwriter or with the principal executive officer or any controlling person of such investment adviser or principal underwriter.

For the purposes of this paragraph (19), 'member of the immediate family' means any parent, spouse of a parent, child, spouse of a child, spouse, brother or sister, and includes step and adoptive relationships. The Commission may modify or revoke any order issued under clause (vi) of subparagraph (A) or (B) of this paragraph whenever it finds that such order is no longer consistent with the facts. No order issued pursuant to clause (vi) of subparagraph (A) or (B) of this paragraph shall become effective until at least sixty days after the entry thereof, and no such order shall affect the status of any person for the purposes of this title or for any other purpose for any period prior to the effective date of such order."

(4) A new paragraph is inserted immediately after redesignated paragraph (36) (formerly paragraph (35)) as follows:

"(37) 'Separate account' means an account established and maintained by an insurance company pursuant to the laws of any State or territory of the United States, or of Canada or any province thereof, under which income, gains and losses, whether or not realized, from assets allocated to such account, are, in accordance with the applicable contract, credited to or charged against such account without regard to other income, gains, or losses of the insurance company."

(5) A new paragraph is inserted immediately after redesignated paragraph (44) (formerly paragraph (42)) as follows:

"(45) 'Savings and loan association' means a saving and loan association, building and loan association, cooperative bank, home-stead association, or similar institution, which is supervised and examined by State or Federal authority having supervision over any such institution, and a receiver, conservator, or other liquidating agent of any such institution."

Sec. 3. (a) The second sentence of paragraph (2) of section 3(b) of the Investment Company Act of 1940 (15 U.S.C. 80a-3(b)) is amended by inserting "in good faith" after "paragraph".

(b) Section 3(c) of such Act (15 U.S.C. 80a-3(c)) is amended as follows:

(1) The material preceding paragraph (1) is amended to read as follows:

"(c) Notwithstanding subsection (a), none of the following persons is an investment company within the meaning of this title:"

(2) Strike paragraphs (4) and (8) and redesignated paragraphs (5) through (15) as paragraphs (4) through (13), respectively.

(3) Redesignated paragraph (5) (formerly paragraph (6)) is amended by inserting "redeemable securities," before "face-amount certificates".

(4) Redesignated paragraph (8) (formerly paragraph (10)) is amended to read as follows:

"(8) Any company subject to regulation under the Public Utility Holding Company Act of 1935."

(5) Redesignated paragraph (9) (formerly paragraph (11)) is amended to read as follows:

"(9) Any person who is not engaged in the business of issuing redeemable securities, face-amount certificates of the installment type, or periodic payment plan certificates, and substantially all of whose business consists of owning or holding oil, gas, or other mineral royalties or leases, or fractional interests therein, or certificates of interest or participation in or investment contracts relative to such royalties, leases, or fractional interests."

(6) Redesignated paragraph (11) (formerly paragraph (13)) is amended to read as follows:

"(11) Any employees' stock bonus, pension, or profit-sharing trust which meets the requirements for qualification under section 401 of the Internal Revenue Code of 1954; or any collective trust fund maintained by a bank consisting solely of assets of such trusts; or any separate account the assets of which are derived solely from (A) contributions under pension or profit-sharing plans which meet the requirements of such section or the requirements for deduction of the employer's contribution under section 404(a)(2) of such Code, and (B) advances made by an insurance company in connection with the operation of such separate account."

3(c) (1) Section 8(b) (2) of such Act (15 U.S.C. 80a-8(b)(2)) is amended to read as follows:

"(2) a recital of all investment policies of the registrant, not enumerated in paragraph (1), which are changeable only if authorized by shareholder vote;"

(2) Paragraphs (3) and (4) are redesignated as paragraphs (4) and (5), respectively.

(3) A new paragraph is inserted immediately after paragraph (2) to read as follows:

"(3) a recital of all policies of the registrant, not enumerated in paragraphs (1) and (2), in respect of matters which the registrant deems matters of fundamental policy;"

(d) Section 13(a)(3) of such Act (15 U.S.C. 80a-13(a)(3)) is amended to read as follows:

"(3) deviate from its policy in respect of concentration of investments in any particular industry or group of industries as recited in its registration statement, deviate from any investment policy which is changeable only if authorized by shareholder vote, or deviate from any policy recited in its registration statement pursuant to Section 8(b) (3);"

Sec. 4. (a) That part of section 9(a) of the Investment Company Act of 1940 (15 U.S.C. 80a-9(a)) which precedes paragraph (1) is amended by inserting "employee," before "officer".

(b) Section 9 of such Act (15 U.S.C. 80a-9) is further amended by redesignating subsection (b) as subsection (c) and inserting immediately after subsection (a) a new subsection to read as follows:

"(b) The Commission may, after notice and opportunity for hearing, by order prohibit, conditionally or unconditionally, either permanently or for such period of time as it in its discretion shall deem appropriate in the public interest, any person from serving or acting as an employee, officer, director, member of an advisory board, investment adviser or depositor of, or principal underwriter for, a registered investment company or affiliated person of such investment adviser, depositor, or principal underwriter, if such person—

"(1) has willfully made or caused to be made in any registration statement, application or report filed with the Commission under this title any statement which was at the time and in the light of the circumstances under which it was made false or misleading with respect to any material fact,

or has omitted to state in any such registration statement, application, or report any material fact which was required to be stated therein; or

"(2) has willfully violated any provision of the Securities Act of 1933, or of the Securities Exchange Act of 1934, or of title II of this Act, or of this title, or of any rule or regulation under any of such statutes; or

"(3) has willfully aided, abetted, counseled, commanded, induced, or procured the violation by any other person of the Securities Act of 1933, or of the Securities Exchange Act of 1934, or of title II of this Act, or of this title, or of any rule or regulation under any of such statutes."

Sec. 5. (a) Section 10(a) of the Investment Company Act of 1940 (15 U.S.C. 80a-10(a)) is amended to read as follows:

"(a) No registered investment company shall have a board of directors more than 60 per centum of the members of which are persons who are interested persons of such registered company."

(b) Section 10(b) of such Act (15 U.S.C. 80a-10(b)) is amended—

(1) by striking out "After one year from the effective date of this title, no" and inserting in lieu thereof "No"; and

(2) by striking out "affiliated", each place it appears in paragraph (2) and inserting in lieu thereof "interested".

(c) Section 10(c) of such Act (15 U.S.C. 80a-10(c)) is amended to read as follows:

"(c) No registered investment company shall have a majority of its board of directors consisting of persons who are officers, directors, or employees of any one bank, except that, if on March 15, 1940, any registered investment company had a majority of its directors consisting of persons who are directors, officers, or employees of any one bank, such company may continue to have the same percentage of its board of directors consisting of persons who are directors, officers, or employees of such bank."

(d) Section 10(d) of such Act (15 U.S.C. 80a-10(d)) is amended to read as follows:

"(d) Notwithstanding subsections (a) and (b) (2) of this section, and, in the case of a registered investment company which is a collective or other pooled fund maintained by a bank for the collective investment and reinvestment of assets contributed thereto by such bank in its capacity as managing agent, notwithstanding subsections (b) (3) and (c) of this section, a registered investment company may have a board of directors all the members of which, except one, are interested persons of the investment adviser of such company, or are officers or employees of such company, if—

"(1) such investment company is an open-end company;

"(2) such investment adviser (A) is registered under title II of this Act and is engaged principally in the business of rendering investment supervisory services as defined in title II, or (B) is a bank;

"(3) no sales load is charged on securities issued by such investment company;

"(4) any premium over net asset value charged by such company upon the issuance of any such security, plus any discount from net asset value charged on redemption thereof, shall not in the aggregate exceed 2 per centum;

"(5) no sales or promotion expenses are incurred by such registered company; but expenses incurred in complying with laws regulating the issue or sale of securities shall not be deemed sales or promotion expenses;

"(6) such investment adviser is the only investment adviser to such investment company, and such investment adviser does not receive a management fee exceeding 1 per centum per annum of the value of such company's net assets averaged over the year or taken as of a definite date or dates within the year;

"(7) all executive salaries and executive expenses and office rent of such investment

company are paid by such investment adviser; and

"(8) such investment company has only one class of securities outstanding, each unit of which has equal voting rights with every other unit."

(e) Section 10 of such Act (15 U.S.C. 80a-10) is further amended by adding at the end thereof a new subsection as follows:

"(1) Notwithstanding any other provision of law, any director of a member bank of the Federal Reserve System may serve as a director of a registered investment company, if no sales load is charged on securities issued by such company."

Sec. 6. Section 11(b) of the Investment Company Act of 1940 (15 U.S.C. 80a-11(b)) is amended to read as follows:

"(b) The provisions of this section shall not apply to any offer made pursuant to any plan of reorganization, which is submitted to and requires the approval of the holders of at least a majority of the outstanding shares of the class or series to which the security owned by the offeree belongs."

Sec. 7. Section 12(d) of the Investment Company Act of 1940 (15 U.S.C. 80a-12(d)) is amended to read as follows:

"(d) (1) (A) It shall be unlawful for any registered investment company (the 'acquiring company') and any company or companies controlled by such acquiring company to purchase or otherwise acquire any security issued by any other investment company (the 'acquired company') and for any investment company (the 'acquiring company') and any company or companies controlled by such acquiring company to purchase or otherwise acquire any security issued by any registered investment company (the 'acquired company'), if the acquiring company and any company or companies controlled by it immediately after such purchase or acquisition own in the aggregate—

"(i) more than 3 per centum of the total outstanding voting stock of the acquired company;

"(ii) securities issued by the acquired company having an aggregate value in excess of 5 per centum of the value of the total assets of the acquiring company; or

"(iii) securities issued by the acquired company and all other investment companies (other than Treasury stock of the acquiring company) having an aggregate value in excess of 10 per centum of the value of the total assets of the acquiring company.

"(B) It shall be unlawful for any registered open-end investment company (the 'acquired company'), any principal underwriter therefor, or any broker or dealer registered under the Securities Exchange Act of 1934, knowingly to sell or otherwise dispose of any security issued by the acquired company to any other investment company (the 'acquiring company') or any company or companies controlled by the acquiring company, if immediately after such sale or disposition—

"(i) more than 3 per centum of the total outstanding voting stock of the acquired company is owned by the acquiring company and any company or companies controlled by it; or

"(ii) more than 10 per centum of the total outstanding voting stock of the acquired company is owned by the acquiring company and other investment companies and companies controlled by them.

"(C) It shall be unlawful for any investment company (the 'acquiring company') and any company or companies controlled by the acquiring company to purchase or otherwise acquire any security issued by a registered closed-end investment company, if immediately after such purchase or acquisition the acquiring company, other investment companies having the same investment adviser, and companies controlled by such

investment companies, own more than 10 per centum of the total outstanding voting stock of such closed-end company.

"(D) The provisions of this paragraph (1) shall not apply to a security received as a dividend or as a result of an offer of exchange approved pursuant to section 11 or of a plan of reorganization of any company (other than a plan devised for the purpose of evading the foregoing provisions).

"(E) The provisions of this paragraph (1) shall not apply to a security purchased or acquired by an investment company if—

"(i) the depositor of, or principal underwriter for, such investment company is a broker or dealer registered under the Securities Exchange Act of 1934, or a person controlled by such a broker or dealer;

"(ii) such security is the only investment security held by such investment company; and

"(iii) in the event such investment company is not a registered investment company, the purchase or acquisition is made pursuant to an arrangement with the issuer of, or principal underwriter for, the issuer of the security whereby such investment company is obligated—

"(aa) either to seek instructions from its security holders with regard to the voting of all proxies with respect to such security and to vote such proxies only in accordance with such instructions, or to vote the shares held by it in the same proportion as the vote of all other holders of such security; and

"(bb) to refrain from substituting such security unless the Commission shall have approved such substitution in the manner provided in section 26 of this Act.

"(F) The provisions of this paragraph (1) shall not apply to securities purchased or otherwise acquired by a registered investment company if—

"(i) immediately after such purchase or acquisition not more than 3 per centum of the total outstanding stock of such issuer is owned by such registered investment company and all affiliated persons of such registered investment company; and

"(ii) such registered investment company has not offered or sold after July 1, 1970, and is not proposing to offer or sell any security issued by it through a principal underwriter or otherwise at a public offering price which includes a sales load of more than 1½ per centum.

No issuer of any security purchased or acquired by a registered investment company pursuant to this subparagraph shall be obligated to redeem such security in an amount exceeding 1 per centum of such issuer's total outstanding securities during any period of less than thirty days. Such investment company shall exercise voting rights by proxy or otherwise with respect to any security purchased or acquired pursuant to this subparagraph in the manner prescribed by subparagraph (E) of this subsection."

"(G) For the purposes of this paragraph (1), the value of an investment company's total assets shall be computed as of the time of a purchase or acquisition or as closely thereto as is reasonably possible.

"(H) In any action brought to enforce the provisions of this paragraph (1), the Commission may join as a party the issuer of any security purchased or otherwise acquired in violation of this paragraph (1), and the court may issue any order with respect to such issuer as may be necessary or appropriate for the enforcement of the provisions of this paragraph (1).

"(2) It shall be unlawful for any registered investment company and any company or companies controlled by such registered investment company to purchase or otherwise acquire any security (except a security received as a dividend or as a result of a plan of reorganization of any company, other than

a plan devised for the purpose of evading the provisions of this paragraph) issued by any insurance company of which such registered investment company and any company or companies controlled by such registered company do not, at the time of such purchase or acquisition, own in the aggregate at least 25 per centum of the total outstanding voting stock, if such registered company and any company or companies controlled by its own in the aggregate, or as a result of such purchase or acquisition will own in the aggregate, more than 10 per centum of the total outstanding voting stock of such insurance company.

"(3) It shall be unlawful for any registered investment company and any company or companies controlled by such registered investment company to purchase or otherwise acquire any security issued by or any other interest in the business of any person who is a broker, a dealer, is engaged in the business of underwriting, or is either an investment adviser of an investment company or an investment adviser registered under title II of this Act, unless (A) such person is a corporation all the outstanding securities of which (other than short-term paper, securities representing bank loans, and directors' qualifying shares) are, or after such acquisition will be, owned by one or more registered investment companies; and (B) such person is primarily engaged in the business of underwriting and distributing securities issued by other persons, selling securities to customers, or any one or more of such or related activities, and the gross income of such person normally is derived principally from such business or related activities."

Sec. 8. (a) Section 15(a) of the Investment Company Act of 1940 (15 U.S.C. 80a-15(a)) is amended to read as follows:

"(a) It shall be unlawful for any person to serve or act as investment adviser of a registered investment company, except pursuant to a written contract, which contract, whether with such registered company or with an investment adviser of such registered company, has been approved by the vote of a majority of the outstanding voting securities of such registered company, and—

"(1) precisely describes all compensation to be paid thereunder;

"(2) shall continue in effect for a period more than two years from the date of its execution, only so long as such continuance is specifically approved at least annually by the board of directors or by vote of a majority of the outstanding voting securities of such company;

"(3) provides, in substance, that it may be terminated at any time, without the payment of any penalty, by the board of directors of such registered company or by vote of a majority of the outstanding voting securities of such company on not more than sixty days' written notice to the investment adviser; and

"(4) provides, in substance, for its automatic termination in the event of its assignment."

(b) Section 15(b) of such Act (15 U.S.C. 80a-15(b)) is amended to read as follows:

"(b) It shall be unlawful for any principal underwriter for a registered open-end company to offer for sale, sell, or deliver after sale any security of which such company is the issuer, except pursuant to a written contract with such company, which contract—

"(1) shall continue in effect for a period, more than two years from the date of its execution, only so long as such continuance is specifically approved at least annually by the board of directors or by vote of a majority of the outstanding voting securities of such company; and

"(2) provides, in substance, for its automatic termination in the event of its assignment."

(c) Section 15(c) of such Act (15 U.S.C. 80a-15(c)) is amended to read as follows:

"(c) In addition to the requirements of subsections (a) and (b) of this section, it shall be unlawful for any registered investment company having a board of directors to enter into, renew, or perform any contract or agreement, written or oral, whereby a person undertakes regularly to serve or act as investment adviser of or principal underwriter for such company, unless the terms of such contract or agreement and any renewal thereof have been approved by the vote of a majority of directors, who are not parties to such contract or agreement or interested persons of any such party, cast in person at a meeting called for the purpose of voting on such approval. It shall be the duty of the directors of a registered investment company to request and evaluate, and the duty of an investment adviser to such company to furnish, such information as may reasonably be necessary to evaluate the terms of any contract whereby a person undertakes regularly to serve or act as investment adviser of such company."

(d) Section 15 of such Act (15 U.S.C. 80a-15) is amended by striking out subsection (d) and redesignating subsections (e) and (f) as subsections (d) and (e), respectively.

SEC. 9. (a) Section 17(f) of the Investment Company Act of 1940 (15 U.S.C. 80a-17 (f)) is amended to read as follows:

"(f) Every registered management company shall place and maintain its securities and similar investments in the custody of (1) a bank (including in the case of a registered investment company which is a collective fund maintained by a bank, the bank maintaining such fund) or banks having the qualifications prescribed in paragraph (1) of section 26(a) of this title for the trustees of unit investment trusts; or (2) a company which is a member of a national securities exchange as defined in the Securities Exchange Act of 1934, subject to such rules and regulations as the Commission may from time to time prescribe for the protection of investors; or (3) such registered company, but only in accordance with such rules and regulations or orders as the Commission may from time to time prescribe for the protection of investors. Rules, regulations, and orders of the Commission under this subsection, among other things, may make appropriate provision with respect to such matters as the earmarking, segregation, and hypothecation of such securities and investments, and may provide for or require periodic or other inspections by any or all of the following: Independent public accountants, employees and agents of the Commission, and such other persons as the Commission may designate. No such member which trades in securities for its own account may act as custodian except in accordance with rules and regulations prescribed by the Commission for the protection of investors. If a registered company maintains its securities and similar investments in the custody of a qualified bank or banks, the cash proceeds from the sale of such securities and similar investments and other cash assets of the company shall likewise be kept in the custody of such a bank or banks, or in accordance with such rules and regulations or orders as the Commission may from time to time prescribe for the protection of investors, except that such a registered company may maintain a checking account in a bank or banks having the qualifications prescribed in paragraph (1) of section 26(a) of this title for the trustees of unit investment trusts with the balance of such account or the aggregate balances of such accounts at no time in excess of the amount of the fidelity bond, maintained pursuant to section 17(g) of this title, covering the officers or employees authorized to draw on such account or accounts."

(b) Section 17(g) of such Act (15 U.S.C. 80a-17(g)) is amended to read as follows:

"(g) The Commission is authorized to

require by rules and regulations or orders for the protection of investors that any officer or employee of a registered management investment company who may singly, or jointly with others, have access to securities or funds of any registered company, either directly or through authority to draw upon such funds or to direct generally the disposition of such securities (unless the officer or employee has such access solely through his position as an officer or employee of a bank) be bonded by a reputable fidelity insurance company against larceny and embezzlement in such reasonable minimum amounts as the Commission may prescribe."

(c) Section 17 of such Act (15 U.S.C. 80a-17) is further amended by adding at the end thereof a new subsection as follows:

"(j) It shall be unlawful for any affiliated person of or principal underwriter for a registered investment company or any affiliated person of an investment adviser of or principal underwriter for a registered investment company, to engage in any act, practice, or course of business in connection with the purchase or sale, directly or indirectly, by such person of any security held or to be acquired by such registered investment company in contravention of such rules and regulations as the Commission may adopt to define, and prescribe means reasonably necessary to prevent, such acts, practices, or courses of business as are fraudulent, deceptive or manipulative. Such rules and regulations may include requirements for the adoption of codes of ethics by registered investment companies and investment advisers of, and principal underwriters for, such investment companies establishing such standards as are reasonably necessary to prevent such acts, practices, or courses of business."

SEC. 10. Section 18(f) (2) of the Investment Company Act of 1940 (15 U.S.C. 80a-18(f) (2)) is amended to read as follows:

"(2) 'Senior security' shall not, in the case of a registered open-end company, include a class or classes or a number of series of preferred or special stock each of which is preferred over all other classes or series in respect of assets specifically allocated to that class or series: *Provided*, That (A) such company has outstanding no class or series of stock which is not so preferred over all other classes or series, or (B) the only other outstanding class of the issuer's stock consists of a common stock upon which no dividend (other than a liquidating dividend) is permitted to be paid and which in the aggregate represents not more than one-half of 1 per centum of the issuer's outstanding voting securities. For the purpose of insuring fair and equitable treatment of the holders of the outstanding voting securities of each class or series of stock of such company, the Commission may by rule, regulation, or order direct that any matter required to be submitted to the holders of the outstanding voting securities of such company shall not be deemed to have been effectively acted upon unless approved by the holders of such percentage (not exceeding a majority) of the outstanding voting securities of each class or series of stock affected by such matter as shall be prescribed in such rule, regulation, or order."

SEC. 11. Section 19 of the Investment Company Act of 1940 (15 U.S.C. 80a-19) is amended by inserting "(a)" after "Sec. 19.", and by adding at the end thereof a new subsection as follows:

"(b) It shall be unlawful in contravention of such rules, regulations, or orders as the Commission may prescribe as necessary or appropriate in the public interest or for the protection of investors for any registered investment company to distribute long-term capital gains, as defined in the Internal Revenue Code of 1954, more often than once every twelve months."

SEC. 12. (a) Section 22(b) of the Invest-

ment Company Act of 1940 (15 U.S.C. 80a-22(b)) is amended to read as follows:

"(b) (1) Such a securities association may also, by rules adopted and in effect in accordance with said section 15A, and notwithstanding the provisions of subsection (b) (8) thereof but subject to all other provisions of said section applicable to the rules of such an association, prohibit its members from purchasing, in connection with a primary distribution of redeemable securities of which any registered investment company is the issuer, any such security from the issuer or from any principal underwriter except at a price equal to the price at which such security is then offered to the public less a commission, discount, or spread which is computed in conformity with a method or methods, and within such limitations as to the relation thereof to said public offering price, as such rules may prescribe in order that the price at which such security is offered or sold to the public shall not include an excessive sales load but shall allow for reasonable compensation for sales personnel, broker-dealers, and underwriters, and for reasonable sales loads to investors."

"(2) At any time after the expiration of eighteen months from the date of enactment of the Investment Company Amendments Act of 1969, or after a securities association has adopted rules as contemplated by this subsection, the Commission may make such rules and regulations pursuant to section 15(b) (10) of the Securities Exchange Act of 1934 as are appropriate to effectuate the purpose of this subsection with respect to sales of shares of a registered investment company by broker-dealers subject to regulation under section 15(b) (8) of that Act: *Provided*, That the underwriter of such shares may file with the Commission at any time a notice of election to comply with the rules prescribed pursuant to this subsection by a national securities association specified in such notice, and thereafter the sales load shall not exceed that prescribed by such rules of such association, and the rules of the Commission as hereinabove authorized shall thereafter be inapplicable to such sales."

"(3) At any time after the expiration of eighteen months from the date of enactment of the Investment Company Amendments Act of 1969, the Commission may alter or supplement the rules of any securities association as may be necessary to effectuate the purposes of this subsection in the manner provided by section 15A(k) (2) of the Securities Exchange Act of 1934."

"(4) If any provision of this subsection is in conflict with any provision of any law of the United States in effect on the date this subsection takes effect, the provisions of this subsection shall prevail."

(b) Section 22(c) of such Act (15 U.S.C. 80a-22(c)) is amended to read as follows:

"(c) The Commission may make rules and regulations applicable to registered investment companies and to principal underwriters of, and dealers in, the redeemable securities of any registered investment company, whether or not members of any securities association, to the same extent, covering the same subject matter, and for the accomplishment of the same ends as are prescribed in subsection (a) of this section in respect of the rules which may be made by a registered securities association governing its members. Any rules and regulations so made by the Commission, to the extent that they may be inconsistent with the rules of any such association, shall so long as they remain in force supersede the rules of the association and be binding upon its members as well as all other underwriters and dealers to whom they may be applicable."

(c) Section 22(d) of such Act (15 U.S.C. 80a-22(d)) is amended to read as follows:

"(d) No registered investment company shall sell any redeemable security issued by

it to any person except either to or through a principal underwriter for distribution or at a current public offering price described in the prospectus, and, if such class of security is being currently offered to the public by or through an underwriter, no principal underwriter of such security and no dealer shall sell any such security to any person except a dealer, a principal underwriter, or the issuer, except at a current public offering price described in the prospectus. Nothing in this subsection shall prevent a sale made (i) pursuant to an offer of exchange permitted by section 11 including any offer made pursuant to section 11 (b); (ii) pursuant to an offer made solely to all registered holders of the securities, or of a particular class or series of securities issued by the company proportionate to their holdings or proportionate to any cash distribution made to them by the company (subject to appropriate qualifications designed solely to avoid issuance of fractional securities); or (iii) in accordance with rules and regulations of the Commission made pursuant to subsection (b) of section 12."

(d) Section 22 of such Act (15 U.S.C. 80a-22) is further amended by adding a new subsection at the end thereof as follows:

"(h) No provision of law shall be deemed to prohibit—

"(1) the creation or operation of a registered investment company, or a collective trust fund exempt from the definition of 'investment company' under section 3(c) (11) of this title, which is maintained by a bank or banks in compliance with any applicable regulations of the Comptroller of the Currency, or which is maintained by a savings and loan association or savings and loan associations in compliance with any applicable regulations of the Federal Home Loan Bank Board, or

"(2) the underwriting, distribution, or sale by a bank, or by a savings and loan association of securities issued by a registered investment company which issues such securities only for distribution and sale by banks or by savings and loan associations,

if such securities issued by such investment company are sold at a public offering price which does not include a sales load, and are sold only by officers and employees of banks and savings and loan associations who meet such standards with respect to training and experience as the Comptroller of the Currency and the Federal Home Loan Bank Board shall prescribe by regulations which are consistent with the rules and regulations promulgated by the Securities and Exchange Commission under the Securities Exchange Act of 1934."

Sec. 13. (a) Section 24(d) of the Investment Company Act of 1940 (U.S.C. 80a-24(d)) is amended to read as follows:

"(d) The exemption provided by paragraph (8) of section 3(a) of the Securities Act of 1933 shall not apply to any security of which an investment company is the issuer. The exemption provided by paragraph (11) of said section 3(a) shall not apply to any security of which a registered investment company is the issuer, except a security sold or disposed of by the issuer or bona fide offered to the public prior to the effective date of this title, and with respect to a security so sold, disposed of, or offered, shall not apply to any new offering thereof on or after the effective date of this title. The exemption provided by section 4(3) of the Securities Act of 1933 shall not apply to any transaction in a security issued by a face-amount certificate company or in a redeemable security issued by an open-end management company or unit investment trust if any other security of the same class is currently being offered or sold by the issuer or by or through an underwriter in a distribution which is not exempted from section 5 of said Act, except to such extent and subject to such terms and conditions as the

Commission, having due regard for the public interest and the protection of investors, may prescribe by rules or regulations with respect to any class of persons, securities, or transactions."

(b) Section 24 of such Act (15 U.S.C. 80a-24) is further amended by adding at the end thereof a new subsection to read as follows:

"(f) In the case of securities issued by a face-amount certificate company or redeemable securities issued by an open-end management company or unit investment trust, which are sold in an amount in excess of the number of securities included in an effective registration statement of any such company, such company may, in accordance with such rules and regulations as the Commission shall adopt as it deems necessary or appropriate in the public interest or for the protection of investors, elect to have the registration of such securities deemed effective as of the time of their sale, upon payment to the Commission, within six months after any such sale, of a registration fee of three times the amount of the fee which would have otherwise been applicable to such securities. Upon any such election and payment, the registration statement of such company shall be considered to have been in effect with respect to such shares. The Commission may also adopt rules and regulations as it deems necessary or appropriate in the public interest or for the protection of investors to permit the registration of an indefinite number of the securities issued by a face-amount certificate company or redeemable securities issued by an open-end management company or unit investment trust."

Sec. 14. Section 25(c) of the Investment Company Act of 1940 (15 U.S.C. 80a-25(c)) is amended to read as follows:

"(c) Any district court of the United States in the State of incorporation of a registered investment company, or any such court for the district in which such company maintains its principal place of business, is authorized to enjoin the consummation of any plan of reorganization of such registered investment company upon proceedings instituted by the Commission which is authorized so to proceed upon behalf of security holders of such registered company, or any class thereof, if such court shall determine that any such plan is not fair and equitable to all security holders."

Sec. 15. (a) Section 26 of the Investment Company Act of 1940 (15 U.S.C. 80a-26) is amended by redesignating subsection (b) and (c) thereof as subsections (c) and (d), respectively, and by inserting immediately after subsection (a) a new subsection as follows:

"(b) It shall be unlawful for any depositor or trustee of a registered unit investment trust holding the security of a single issuer to substitute another security for such security unless the Commission shall have approved such substitution. The Commission shall issue an order approving such substitution if the evidence established that it is consistent with the protection of investors and the purposes fairly intended by the policy and provisions of this title."

(b) Redesignated subsection (c) (formerly subsection (b)) of section 26 of such Act is amended to read as follows:

"(c) In the event that a trust indenture, agreement of custodianship, or other instrument pursuant to which securities of a registered unit investment trust are issued does not comply with the requirements of subsection (a) of this section, such instrument will be deemed to meet such requirements if a written contract or agreement binding on the parties and embodying such requirements has been executed by the depositor on the one part and the trustee or custodian on the other part, and three copies of such contract or agreement have been filed with the Commission."

Sec. 16. (a) Section 27 of the Investment Company Act of 1940 (15 U.S.C. 80a-27) is amended by striking out subsection (b) and redesignating subsection (c) as subsection (b).

(b) Section 27 of such Act is further amended by adding at the end thereof the following new subsections:

"(c) Notwithstanding subsection (a) of this section, it shall be unlawful for any registered investment company issuing periodic payment plan certificates, or for any depositor of or underwriter for such company, to sell any such certificate unless the certificate provides that the holder thereof may surrender the certificate at any time within the first three years after the issuance of the certificate and receive in payment thereof, in cash, the sum of (1) the value of his account, and (2) an amount, from such underwriter or depositor, equal to that part of the excess paid for sales loading which is over 15 per centum of the gross payments made by the certificate holder. The Commission may make rules and regulations applicable to such underwriters and depositors specifying such reserve requirements as it deems necessary or appropriate in order for such underwriters and depositors to carry out the obligations to refund sales charges required by this subsection."

"(d) With respect to any periodic payment plan certificate sold subject to the provisions of subsection (c) of this section, the registered investment company issuing such periodic payment plan certificate, or any depositor of or underwriter for such company, shall in writing (1) Inform each certificate holder who has missed three payments or more, within thirty days following the expiration of two years and six months after the issuance of the certificate, or, if any such holder has missed three payments or more after such period of two years and six months but prior to the expiration of three years after the issuance of the certificate, at any time prior to the expiration of such three-year period, of his right to surrender his certificate as specified in subsection (c) of this section, and (2) inform the certificate holder of (i) the value of the holder's account as of the time the written notice was given to such holder, and (ii) the amount to which he is entitled as specified in subsection (c) of this section. The Commission may make rules specifying the method, form, and contents of the notice required by this subsection."

"(e) With respect to any periodic payment plan, the custodian bank for such plan shall mail to each certificate holder within sixty days after the issuance of the certificate, a statement of charges to be deducted from the projected payments on the certificate and a notice of his right of withdrawal as specified in this section. The Commission may make rules specifying the method, form, and contents of the notice required by this subsection. The certificate holder may within sixty days of the mailing of the notice specified in this subsection surrender his certificate and receive in payment thereof, in cash, the sum of (1) the value of his account, and (2) an amount, from the underwriter or depositor, equal to the difference between the gross payments made and the net amount invested. The Commission may make rules and regulations applicable to underwriters and depositors of companies issuing any such certificates specifying such reserve requirements as it deems necessary or appropriate in order for such underwriters and depositors to carry out the obligations to refund sales charges required by this subsection."

"(f) Notwithstanding the provisions of subsections (a) and (c), a registered investment company issuing periodic payment plan certificates may elect, by written notice to the Commission, to be governed by the provisions of subsection (g) rather than the

provisions of subsections (a) and (c) of this section.

"(g) Upon making the election specified in subsection (f), it shall be unlawful for any such electing registered investment company issuing periodic payment plan certificates, or for any depositor of or underwriter for such company, to sell any such certificate, if—

"(1) the sales load on such certificate exceeds 9 per centum of the total payments to be made thereon;

"(2) more than 20 per centum of any payment thereon is deducted for sales load, or any average of more than 16 per centum is deducted for sales load from the first forty-eight monthly payments thereon, or their equivalent;

"(3) the amount of sales load deducted from any one of the first twelve monthly payments, the thirteenth through twenty-fourth monthly payments, the twenty-fifth through thirty-sixth monthly payments, or the thirty-seventh through forty-eighth monthly payments, or their equivalents, respectively, exceeds proportionately the amount deducted from any other such payment, or the amount deducted from any subsequent payment exceeds proportionately the amount deducted from any other subsequent payment;

"(4) the deduction for sales load on the excess of the payment or payments in any month over the minimum monthly payment, or its equivalent, to be made on the certificate exceeds the sales load applicable to payments subsequent to the first forty-eight monthly payments or their equivalent;

"(5) the first payment on such certificate is less than \$20, or any subsequent payment is less than \$10;

"(6) if such registered company is a management company, the proceeds of such certificate or the securities in which such proceeds are invested are subject to management fees (other than fees for administrative services of the character described in clause (C) of paragraph (2) of section 26(a)) exceeding such reasonable amount as the Commission may prescribe, whether such fees are payable to such company or to investment advisers thereof; or

"(7) if such registered company is a unit investment trust the assets of which are securities issued by a management company, the depositor or principal underwriter for such trust, or any affiliated person of such depositor or underwriter, is to receive from such management company or any affiliated person thereof any fee or payment on account of payments on such certificate exceeding such reasonable amount as the Commission may prescribe."

Sec. 17. Section 28 of the Investment Company Act of 1940 (15 U.S.C. 80a-28) is amended by adding at the end thereof a new subsection as follows:

"(1) The foregoing provisions of this section shall apply to all face-amount certificates issued prior to the effective date of this subsection; to the collection or acceptance of any payment on such certificates; to the issuance of face-amount certificates to the holders of such certificates pursuant to an obligation expressed or implied in such certificates; to the provisions of such certificates; to the minimum certificate reserves and deposits maintained with respect thereto; and to the assets that the issuer of such certificate was and is required to have with respect to such certificates. With respect to all face-amount certificates issued after the effective date of this subsection, the provisions of this section shall apply except as hereinafter provided.

"(1) Notwithstanding subparagraph (A) of paragraph (2) of subsection (a), the reserves for each certificate of the installment type shall be based on assumed annual, semi-annual, quarterly, or monthly reserve payments according to the manner in which gross payments for any certificate year are made by the holder, which reserve payments

shall be sufficient in amount, as and when accumulated at a rate not to exceed $3\frac{1}{2}$ per centum per annum compounded annually, to provide the minimum maturity or face amount of the certificate when due. Such reserve payments may be graduated according to certificate years so that the reserve payment or payments for the first three certificate years shall amount to at least 80 per centum of the required gross annual payment for such years; the reserve payment or payments for the fourth certificate year shall amount to at least 90 per centum of such year's required gross annual payment; the reserve payment or payments for the fifth certificate year shall amount to at least 93 per centum of such year's gross annual payment; and for the sixth and each subsequent certificate year the reserve payment or payments shall amount to at least 96 per centum of each such year's required gross annual payment: *Provided*, That such aggregate reserve payments shall amount to at least 93 per centum of the aggregate gross annual payments required to be made by the holder to obtain the maturity of the certificate. The company may at its option take as loading from the gross payment or payments for a certificate year, as and when made by the certificate holder, an amount or amounts equal in the aggregate for such year to not more than the excess, if any, of the gross payment or payments required to be made by the holder for such year, over and above the percentage of the gross annual payment required herein for such year for reserve purposes. Such loading may be taken by the company prior to or after the setting up of the reserve payment or payments for such year and the reserve payment or payments for such year may be graduated and adjusted to correspond with the amount of the gross payment or payments made by the certificate holder for such year less the loading so taken.

"(2) Notwithstanding paragraphs (1) and (2) of subsection (d), (A) in respect of any certificate of the installment type, during the first certificate year, the holder of the certificate, upon surrender thereof, shall be entitled to a value payable in cash not less than 80 per centum of the amount of the gross payments made on the certificate; and (B) in respect of any certificate of the installment type, at any time after the expiration of the first certificate year and prior to maturity, the holder of the certificate, upon surrender thereof, shall be entitled to a value payable in cash not less than the then amount of the reserve for such certificate required by clauses (1) and (2) of subparagraph (D) of paragraph (2) of subsection (a), less a surrender charge that shall not exceed 2 per centum of the face or maturity amount of the certificate, or 15 per centum of the amount of such reserve, whichever is the lesser, but in no event shall such value be less than 80 per centum of the gross payments made on the certificate. The amount of the surrender value for the end of each certificate year shall be set out in the certificate."

Sec. 18. Section 32(a) of the Investment Company Act of 1940 (15 U.S.C. 80a-31(a)) is amended to read as follows:

"(a) It shall be unlawful for any registered management company or registered face-amount certificate company to file with the Commission any financial statement signed or certified by an independent public accountant, unless—

"(1) such accountant shall have been selected at a meeting held within thirty days before or after the beginning of the fiscal year or before the annual meeting of stockholders in that year by the vote, cast in person, of a majority of those members of the board of directors who are not interested persons of such registered company;

"(2) such selection shall have been submitted for ratification or rejection at the next succeeding annual meeting of stock-

holders if such meeting be held, except that any vacancy occurring between annual meetings, due to the death or resignation of the accountant, may be filled by the vote of a majority of those members of the board of directors who are not interested persons of such registered company, cast in person at a meeting called for the purpose of voting on such action;

"(3) the employment of such accountant shall have been conditioned upon the right of the company by vote of a majority of the outstanding voting securities at any meeting called for the purpose to terminate such employment forthwith without any penalty; and

"(4) such certificate or report of such accountant shall be addressed both to the board of directors of such registered company and to the security holders thereof. If the selection of an accountant has been rejected pursuant to paragraph (2) or his employment terminated pursuant to paragraph (3), the vacancy so occurring may be filled by a vote of a majority of the outstanding voting securities, either at the meeting at which the rejection or termination occurred or, if not so filed, at a subsequent meeting which shall be called for the purpose. In the case of a common-law trust of the character described in section 16(b), no ratification of the employment of such accountant shall be required but such employment may be terminated and such accountant removed by action of the holders of record of a majority of the outstanding shares of beneficial interest in such trust in the same manner as is provided in section 16(b) in respect of the removal of a trustee, and all the provisions therein contained as to the calling of a meeting shall be applicable. In the event of such termination and removal, the vacancy so occurring may be filled by action of the holders of record of a majority of the shares of beneficial interest either at the meeting, if any, at which such termination and removal occurs, or by instruments in writing filed with the custodian, or if not so filed within a reasonable time then at a subsequent meeting which shall be called by the trustees for the purpose. The provisions of paragraph (42) of section 2(a) as to a majority shall be applicable to the vote cast at any meeting of the shareholders of such a trust held pursuant to this subsection."

Sec. 19. Section 33 of the Investment Company Act of 1940 (15 U.S.C. 80a-32) is amended to read as follows:

"FILING OF DOCUMENTS WITH COMMISSION IN CIVIL ACTIONS"

"Sec. 33. Every registered investment company which is a party and every affiliated person of such company who is a party defendant to any action or claim by a registered investment company or a security holder thereof in a derivative or representative capacity against an officer, director, investment adviser, trustee, or depositor of such company, shall file with the Commission, unless already so filed, (1) a copy of all pleadings, verdicts, or judgments filed with the court or served in connection with such action or claim, (2) a copy of any proposed settlement, compromise, or discontinuance of such action, and (3) a copy of such motions, transcripts, or other documents filed in or issued by the court or served in connection with such action or claim as may be requested in writing by the Commission. If any document referred to in clause (1) or (2)—

"(A) is delivered to such company or party defendant, such document shall be filed with the Commission not later than five days after the receipt thereof; or

"(B) is filed in such court or delivered by such company or party defendant, such document shall be filed with the Commis-

sion not later than two days after such filing or delivery."

SEC. 20. Section 36 of the Investment Company Act of 1940 (15 U.S.C. 80a-35) is amended to read as follows:

"BREACH OF FIDUCIARY DUTY

"Sec. 36. (a) The Commission is authorized to bring an action in the proper district court of the United States, or in the United States court of any territory or other place subject to the jurisdiction of the United States, alleging that a person serving or acting in one or more of the following capacities has engaged within five years of the commencement of the action or is about to engage in any act or practice constituting a breach of fiduciary duty involving personal misconduct in respect of any registered investment company for which such person so serves or acts—

"(1) as officer, director, member of any advisory board, investment adviser, or depositor; or

"(2) as principal underwriter, if such registered company is an open-end company, unit investment trust, or face-amount certificate company.

If such allegations are established, the court may enjoin such person from acting in any or all such capacities either permanently or temporarily and award such injunctive or other relief against such person as it in its discretion deems appropriate in the circumstances, having due regard to the protection of investors and to the effectuation of the policies declared in section 1(b) of this title.

"(b) For the purposes of this subsection, the investment adviser of a registered investment company shall be deemed to have a fiduciary duty with respect to the receipt of compensation for services, or of payments of a material nature, paid by such registered investment company, or by the security holders thereof, to such investment adviser or any affiliated person of such investment adviser. An action may be brought under this subsection by the Commission, or by a security holder of such registered investment company on behalf of such company, against such investment adviser, or any affiliated person of such investment adviser, or any other person enumerated in subsection (a) of this section who has a fiduciary duty concerning such compensation or payments, for breach of fiduciary duty in respect of such compensation or payments paid by such registered investment company or by the security holders thereof to such investment adviser or person. With respect to any such action the following provisions shall apply:

"(1) It shall not be necessary to allege or prove that any defendant engaged in personal misconduct, and the plaintiff shall have the burden of proving a breach of fiduciary duty.

"(2) In any such action approval by the board of directors of such investment company of such compensation or payments, or of contracts or other arrangements providing for such compensation or payments, and ratification or approval of such compensation or payments, or of contracts or other arrangements providing for such compensation or payments, by the shareholders of such investment company, shall be given such consideration by the court as is deemed appropriate under all the circumstances.

"(3) No such action shall be brought or maintained against any person other than the recipient of such compensation or payments, and no damages or other relief shall be granted against any person other than the recipient of such compensation or payments. No award of damages shall be recoverable for any period prior to one year before the action was instituted. Any award of damages against such recipient shall be limited to the actual damages resulting from the breach of fiduciary duty and shall

in no event exceed the amount of compensation or payments received from such investment company, or the security holders thereof, by such recipient.

"(4) This subsection shall not apply to compensation or payments made in connection with transactions subject to section 17 of this title, or rules, regulations, or orders thereunder, or to sales loads for the acquisition of any security issued by a registered investment company.

"(5) Any action pursuant to this subsection may be brought only in an appropriate district court of the United States.

"(6) No finding by a court with respect to a breach of fiduciary duty under this subsection shall be made a basis (A) for a finding of a violation of this title for the purposes of sections 9 and 49 of this title, section 15 of the Securities Exchange Act of 1934, or section 203 of title II of this Act, or (B) for an injunction to prohibit any person from serving in any of the capacities enumerated in subsection (a) of this section."

SEC. 21. The last sentence of section 43(a) of the Investment Company Act of 1940 (15 U.S.C. 80a-42(a)) is amended by striking out "sections 239 and 240 of the Judicial Code, as amended" and inserting in lieu thereof "section 1254 of title 28, United States Code."

SEC. 22. Section 44 of the Investment Company Act of 1940 (15 U.S.C. 80a-43) is amended—

(1) by striking out the next to the last sentence and inserting in lieu thereof "Judgments and decrees so rendered shall be subject to review as provided in sections 1254, 1291, 1292, and 1294 of title 28, United States Code."; and

(2) by adding at the end thereof a new sentence as follows: "The Commission may intervene as a party in any action or suit to enforce any liability or duty created by, or to enjoy any noncompliance with, section 36(b) of this title at any stage of such action or suit prior to final judgment therein."

SEC. 23. Section 202(a) of the Investment Advisers Act of 1940 (15 U.S.C. 80b-2(a)) is amended by redesignating paragraphs (17) through (20) as paragraphs (18) through (21), respectively, and inserting immediately after paragraph (16) a new paragraph as follows:

"(17) The term 'person associated with an investment adviser' means any partner, officer, or director of such investment adviser (or any performing similar functions), or any person directly or indirectly controlling or controlled by such investment adviser, including any employee of such investment adviser, except that for the purposes of section 203 of this title (other than subsection (f) thereof), persons associated with an investment adviser whose functions are clerical or ministerial shall not be included in the meaning of such term. The Commission may by rules and regulations classify, for the purposes of any portion or portions of this title, persons, including employees controlled by an investment adviser."

SEC. 24. (a) Section 203(b) of the Investment Advisers Act of 1940 (15 U.S.C. 80b-3(b)) is amended to read as follows:

"(b) The provisions of subsection (a) shall not apply to—

"(1) any investment adviser all of whose clients are residents of the State within which such investment adviser maintains his or its principal office and place of business, and who does not furnish advice or issue analyses or reports with respect to securities listed or admitted to unlisted trading privileges on any national securities exchange;

"(2) any investment adviser whose only clients are insurance companies; or

"(3) any investment adviser who during the course of the preceding twelve months has had fewer than fifteen clients and who neither holds himself out generally to the

public as an investment adviser nor acts as an investment adviser to any investment company registered under title I of this Act."

(b) Section 203(c) of such Act (15 U.S.C. 80b-3(c)) is amended by striking out subparagraph (F) and inserting in lieu thereof the following:

"(F) whether such investment adviser, or any person associated with such investment adviser, is subject to any disqualification which would be a basis for denial, suspension, or revocation of registration of such investment adviser under the provisions of subsection (e), and"

(c) Section 203 of such Act (15 U.S.C. 80b-3) is further amended by redesignating subsection (d) as subsection (e), redesignating subsection (e) as subsection (g), and inserting after subsection (c) a new subsection as follows:

"(d) Any provision of this title (other than subsection (a) of this section) which prohibits any act, practice, or course of business if the mails or any means or instrumentality of interstate commerce are used in connection therewith shall also prohibit any such act, practice, or course of business by any investment adviser registered pursuant to this section or any person acting on behalf of such an investment adviser, irrespective of any use of the mails or any means or instrumentality of interstate commerce in connection therewith."

(d) Redesignated subsection (e) (formerly subsection (d) of section 203 of such Act) (15 U.S.C. 80b-3(d)) is amended to read as follows:

"(e) The Commission shall, after appropriate notice and opportunity for hearing, by order censure, deny registration to, or suspend for a period not exceeding twelve months, or revoke the registration of, an investment adviser, if it finds that such censure, denial, suspension, or revocation is in the public interest and that such investment adviser or any person associated with such investment adviser, whether prior to or subsequent to becoming such—

"(1) has willfully made or caused to be made in any application for registration or report filed with the Commission under this title, or in any proceeding before the Commission with respect to registration, any statement which was at the time and in the light of the circumstances under which it was made false or misleading with respect to any material fact, or who has omitted to state in any such application or report any material fact which is required to be stated therein; or

"(2) has been convicted within ten years preceding the filing of the application or at any time thereafter of any felony or misdemeanor which the Commission finds (A) involves the purchase or sale of any security, (B) arises out of the conduct of the business of a broker, dealer, or investment adviser, (C) involves embezzlement, fraudulent conversion, or misappropriation of funds or securities, or (D) involves the violation of section 1341, 1342, or 1343 of title 18, United States Code; or

"(3) is permanently or temporarily enjoined by order, judgment, or decree of any court of competent jurisdiction from acting as an investment adviser, underwriter, broker, or dealer, or an affiliated person or employee of any investment company, bank, or insurance company, or from engaging in or continuing any conduct or practice in connection with any such activity, or in connection with the purchase or sale of any security; or

"(4) has willfully violated any provision of the Securities Act of 1933, or of the Securities Exchange Act of 1934, or of title I of this Act, or of this title, or of any rule or regulation under any of such statutes; or

"(5) has aided, abetted, counseled, commanded, induced, or procured the violation by any other person of the Securities Act of

1933, or the Securities Exchange Act of 1934, or of title I of this Act, or of this title, or of any rule or regulation under any of such statutes or has failed reasonably to supervise, with a view to preventing violations of such statutes, rules, and regulations, another person who commits such a violation, if such other person is subject to his supervision: *Provided*, That, for the purposes of this paragraph (5), no person shall be deemed to have failed reasonably to supervise any person, if—

"(A) there have been established procedures, and a system for applying such procedures, which would reasonably be expected to prevent and detect, insofar as practicable, any such violation by such other person; and

"(B) such person has reasonably discharged the duties and obligations incumbent upon him by reason of such procedures and system without reasonable cause to believe that such procedures and system were not being complied with; or

"(6) is subject to an order of the Commission entered pursuant to subsection (f) of this section barring or suspending the right of such person to be associated with an investment adviser, which order is in effect with respect to such person."

(e) Section 203 of such Act (15 U.S.C. 80b-3) is further amended by redesignating subsections (f) and (g) as subsections (h) and (i), respectively, and inserting after redesignated subsection (e) a new subsection as follows:

"(f) The Commission may, after appropriate notice and opportunity for hearing, by order censure any person or bar or suspend for a period not exceeding twelve months any person from being associated with an investment adviser, if the Commission finds that such censure, barring, or suspension is in the public interest and that such person had committed or omitted any act or omission enumerated in paragraph (1), (4), or (5) of subsection (e) of this section, or has been convicted of any offense specified in paragraph (2) of subsection (e) within ten years of the commencement of the proceedings under this subsection, or is enjoined from any action, conduct, or practice specified in paragraph (3) of subsection (e). It shall be unlawful for any person as to whom such an order barring or suspending him from being associated with an investment adviser is in effect, willfully to become, or to be, associated with an investment adviser, without the consent of the Commission, and it shall be unlawful for any investment adviser to permit such a person to become, or remain, a person associated with such investment adviser without the consent of the Commission, if such investment adviser knew, or in the exercise of reasonable care should have known of such order."

Sec. 25. Section 205 of the Investment Advisers Act of 1940 (15 U.S.C. 80b-5) is amended to read as follows:

"INVESTMENT ADVISORY CONTRACTS"

"Sec. 205. No investment adviser, unless exempt from registration pursuant to section 203(b), shall make use of the mails or any means or instrumentality of interstate commerce, directly or indirectly, to enter into, extend, or renew any investment advisory contract, or in any way to perform any investment advisory contract entered into, extended, or renewed on or after the effective date of this title, if such contract—

"(1) provides for compensation to the investment adviser on the basis of a share of capital gains upon or capital appreciation of the funds or any portion of the funds of the client;

"(2) fails to provide, in substance, that no assignment of such contract shall be made by the investment adviser without the consent of the other party to the contract; or

"(3) fails to provide, in substance, that the investment adviser, if a partnership, will notify the other party to the contract of any

change in the membership of such partnership within a reasonable time after such change.

Paragraph (1) of this section shall not (A) be construed to prohibit an investment advisory contract which provides for compensation based upon the total value of a fund averaged over a definite period, or as of a definite date, or taken as of a definite date, or (B) apply to an investment advisory contract with an investment company registered under title I of this Act which provides for compensation based on the asset value of the company averaged over a specified period and increasing and decreasing proportionately with the investment performance of the company over a specified period in relation to the investment record of an appropriate index of securities prices or such other measure of investment performance as the Commission by rule, regulation, or order may specify. For purposes of clause (B) of the preceding sentence, an index of securities prices shall be deemed appropriate unless the Commission by order shall determine otherwise. As used in paragraphs (2) and (3) of this section, 'investment advisory contract' means any contract or agreement whereby a person agrees to act as investment adviser or to manage any investment or trading account of another person other than an investment company registered under title I of this Act."

Sec. 26. The Investment Advisers Act of 1940 (15 U.S.C. 80b-1-21) is further amended by inserting immediately after section 206 a new section as follows:

"EXEMPTIONS"

"Sec. 206A. The Commission, by rules and regulations, upon its own motion, or by order upon application, may conditionally or unconditionally exempt any person or transaction, or any class or classes of person, or transactions, from any provision or provisions of this title or of any rule or regulation thereunder, if and to the extent that such exemption is necessary or appropriate in the public interest and consistent with the protection of investors and the purposes fairly intended by the policy and provisions of this title."

Sec. 27. (a) Section 2 of the Securities Act of 1933 (15 U.S.C. 77b) is amended by adding at the end thereof two new paragraphs as follows:

"(13) The term 'insurance company' means a company which is organized as an insurance company, whose primary and predominant business activity is the writing of insurance or the reinsuring of risks underwritten by insurance companies, and which is subject to supervision by the insurance commissioner, or a similar official or agency, of a State or territory or the District of Columbia; or any receiver or similar official, or any liquidating agent for such company, in his capacity as such.

"(14) The term 'separate account' means an account established and maintained by an insurance company pursuant to the laws of any State or territory of the United States, the District of Columbia, or of Canada or any province thereof, under which income, gains and losses, whether or not realized, from assets allocated to such account, are, in accordance with the applicable contract, credited to or charged against such account without regard to other income, gains, or losses of the insurance company."

(b) Section 3(a)(2) of such Act (15 U.S.C. 77c(a)(2)) is amended to read as follows:

"(2) Any security issued or guaranteed by the United States or any territory thereof, or by the District of Columbia, or by any State of the United States, or by any political subdivision of a State or territory, or by any public instrumentality of one or more States or territories, or by any person controlled or supervised by and acting as an instrumentality of the Government of the United States pursuant to authority granted by the Con-

gress of the United States; or any certificate of deposit for any of the foregoing; or any security issued or guaranteed by any bank; or any security issued by or representing an interest in or a direct obligation of a Federal Reserve bank; or any interest or participation in any common trust fund or similar fund maintained by a bank exclusively for the collective investment and reinvestment of assets contributed thereto by such bank in its capacity as trustee, executor, administrator, or guardian; or any interest or participation in a collective trust fund maintained by a bank or in a separate account maintained by an insurance company which interest or participation is issued in connection with (A) a stock bonus, pension, or profit-sharing plan which meets the requirements for qualification under section 401 of the Internal Revenue Code of 1954, or (B) an annuity plan which meets the requirements for the deduction of the employer's contribution under section 404(a)(2) of such Code, other than any plan described in clause (A) or (B) of this paragraph and which covers employees, some or all of whom are employees within the meaning of section 401(c)(1) of such Code. The Commission, by rules and regulations or order, shall exempt from the provisions of section 5 of this title any interest or participation issued in connection with a stock bonus, pension, profit-sharing, or annuity plan which covers employees, some or all of whom are employees within the meaning of section 401(c)(1) of the Internal Revenue Code of 1954, if and to the extent that the Commission determines this to be necessary or appropriate in the public interest and consistent with the protection of investors and the purposes fairly intended by the policy and provisions of this title. For the purposes of this paragraph, a security issued or guaranteed by a bank shall not include any interest or participation in any collective trust fund maintained by a bank; and the term 'bank' means any national bank, or any banking institution organized under the laws of any State, territory, or the District of Columbia, the business of which is substantially confined to banking and is supervised by the State or territorial banking commission or similar official; except that in the case of a common trust fund or similar fund, or a collective trust fund, the term 'bank' has the same meaning as the Investment Company Act of 1940."

(c) Section 3(a)(5) of such Act (15 U.S.C. 77c(a)(5)) is amended to read as follows:

"(5) Any security issued (A) by a savings and loan association, building and loan association, cooperative bank, homestead association, or similar institution, which is supervised and examined by State or Federal authority having supervision over any such institution, except that the foregoing exemption shall not apply with respect to any such security where the issuer takes from the total amount paid or deposited by the purchaser, by way of any fee, cash value or other device whatsoever, either upon termination of the investment at maturity or before maturity, an aggregate amount in excess of 3 per centum of the face value of such security; or (B) by (i) a farmer's cooperative organization exempt from tax under section 521 of the Internal Revenue Code of 1954, (ii) a corporation described in section 501(c)(16) of such Code and exempt from tax under section 501(a) of such Code, or (iii) a corporation described in section 501(c)(2) of such Code which is exempt from tax under section 501(a) of such Code and is organized for the exclusive purpose of holding title to property, collecting income therefrom, and turning over the entire amount thereof, less expenses, to an organization or corporation described in clause (i) or (ii);"

Sec. 28. (a) Section 3(a)(12) of the Securities Exchange Act of 1934 (15 U.S.C. 78c(a)(12)) is amended to read as follows:

"(12) The term 'exempted security' or 'ex-

empted securities' includes securities which are direct obligations of or obligations guaranteed as to principal or interest by the United States; such securities issued or guaranteed by corporations in which the United States has a direct or indirect interest as shall be designated for exemption by the Secretary of the Treasury as necessary or appropriate in the public interest or for the protection of investors; securities which are direct obligations of or obligations guaranteed as to principal or interest by a State or any political subdivision thereof, or by any agency or instrumentality of a State or any political subdivision thereof, or by any municipal corporation instrumentality of one or more States; any interest or participation in any common trust fund or similar fund maintained by a bank exclusively for the collective investment and reinvestment of assets contributed thereto by such bank in its capacity as trustee, executor, administrator, or guardian; any interest or participation in a collective trust fund maintained by a bank or in a separate account maintained by an insurance company which interest or participation is issued in connection with (A) a stock-bonus, pension, or profit-sharing plan which meets the requirements for qualification under section 401 of the Internal Revenue Code of 1954, or (B) an annuity plan which meets the requirements for the deduction of the employer's contribution under section 404(a)(2) of such Code, other than any plan described in clause (A) or (B) of this paragraph which covers employees some or all of whom are employees within the meaning of section 401(c)(1) of such Code; and such other securities (which may include, among others, unregistered securities the market in which is predominantly intrastate) as the Commission may, by such rules and regulations as it deems necessary or appropriate in the public interest or for the protection of investors, either unconditionally or upon specified terms and conditions or for stated periods, exempt from the operation of any one or more provisions of this title which by their terms do not apply to an 'exempted security' or to 'exempted securities'."

(b) Section 3(a)(19) of such Act (15 U.S.C. 78(a)(19)) is amended to read as follows:

"(19) The terms 'investment company', 'affiliated person', 'insurance company', and 'separate account' have the same meanings as in the Investment Company Act of 1940."

(c) Section 12(g)(2) of such Act (15 U.S.C. 781(g)(2)) is amended by adding at the end thereof a new subparagraph as follows:

"(H) any interest or participation in any collective trust funds maintained by a bank or in a separate account maintained by an insurance company which interest or participation is issued in connection with (i) a stock-bonus, pension, or profit-sharing plan which meets the requirements for qualification under section 401 of the Internal Revenue Code of 1954, or (ii) an annuity plan which meets the requirements for deduction of the employer's contribution under section 404(a)(2) of such Code, other than any plan described in clause (i) or (ii) of this paragraph which covers employees some or all of whom are employees within the meaning of section 401(c)(1) of such Code."

SEC. 29. The provisions of the Securities Act of 1933 and the Investment Company Act of 1940 shall not apply, except for purposes of definition of terms used in this section, to any interest or participation (including any separate account or other fund providing for the sharing of income or gains and losses, and any interest or participation in such account or fund) in any contract, certificate, or policy providing for life insurance benefits which was issued prior to March 23, 1959, by an insurance company, if (1) the form of such contract, certificate, or

policy was approved by the insurance commissioner, or similar official or agency, of a State, territory, or the District of Columbia, and (2) under such contract, certificate, or policy not to exceed 49 per centum of the gross premiums or other consideration paid was to be allocated to a separate account or other fund providing for the sharing of income or gains and losses.

SEC. 30. This Act shall take effect on the date of its enactment, except that—

(1) sections 5 (a), (b), and (c); 9(a); 11; 18; 24(a); and 25 (amending sections 10 (a), (b), and (c); 17(f); 19; and 32(a) of the Investment Company Act of 1940; and sections 203(b) and 205 (of the Investment Advisers Act of 1940, respectively) shall take effect upon the expiration of one year after the date of enactment of this Act;

(2) that part of section 5(d) which substitutes "interested persons" for "affiliated persons" in section 10(d) of the Investment Company Act of 1940 shall take effect upon the expiration of one year after the date of enactment of this Act;

(3) sections 16 and 17 (amending sections 27 and 28 of the Investment Company Act of 1940) shall take effect upon the expiration of six months after date of enactment of this Act; and

(4) section 3(b)(5) and that part of section 20 which adds a subsection (b) to section 36 of the Investment Company Act of 1940 shall take effect upon the expiration of eighteen months after the date of enactment of this Act.

Mr. SPARKMAN. Mr. President, I move to reconsider the vote by which the bill passed.

Mr. BYRD of West Virginia. Mr. President, I move to lay that motion on the table.

The motion was agreed to.

Mr. KENNEDY. Mr. President, I ask unanimous consent that the Secretary of the Senate be authorized to make certain technical corrections in the engrossment of S. 2224.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MANSFIELD. Mr. President, with the passage of this measure, the distinguished senior Senator from Alabama (Mr. SPARKMAN) has added another outstanding achievement to his already abundant record of public service. The effectiveness of Senator SPARKMAN is exhibited always by the manner in which he handles legislative proposals. He has truly excelled as the chairman of the Committee on Banking and Currency.

His strong advocacy, his forthright explanation, and his selfless cooperative efforts assured the unanimous approval of this highly important measure. The qualities, I might add, are applied to all measures that gain his endorsement.

We are grateful also for the fine contributions of the Senator from Utah (Mr. BENNETT)—the ranking minority member of the committee—and of the Senator from New Hampshire (Mr. MCINTYRE). Their efforts enabled the prompt approval that was enjoyed by this measure; and for their part, also, I would like to thank the distinguished Senator from Texas (Mr. TOWER) and the distinguished Senator from Wisconsin (Mr. PROXMIER). Their cooperation and assistance are always welcome. Their efforts made it possible to dispose of this matter efficiently and expeditiously, yet with full regard for the views of every Senator.

ELIGIBILITY REQUIREMENTS GOVERNING A GRANT OF ASSISTANCE IN ACQUIRING SPECIALLY ADAPTED HOUSING

Mr. SPARKMAN. Mr. President, I ask unanimous consent that the action taken by the Senate on May 23, 1969, in concurring in the amendments of the House to the bill (S. 408) to modify eligibility requirements governing the grant of assistance in acquiring specially adapted housing to include loss or loss of use of a lower extremity and other service-connected neurological or orthopedic disability which impairs locomotion to the extent that a wheelchair is regularly required, with certain amendments be rescinded.

The PRESIDING OFFICER. Without objection, the previous action of the Senate is rescinded.

Mr. SPARKMAN. Mr. President, I move that the Senate concur in the amendments of the House with the following Senate amendments, which I ask to have stated.

The PRESIDING OFFICER. The clerk will state the amendments.

The assistant legislative clerk read the amendments, of the Senate to the amendments of the House, as follows:

(1) In the fourth line of the House amendment to the text of the bill, strike out "\$15,000" and insert "\$12,500".

(2) Strike out lines 5 through 12 of the House amendment to the text of the bill and insert in lieu thereof the following:

"Sec. 3. Section 1811(d) of title 38, United States Code, is amended by striking out '\$17,500' each place where it appears therein and inserting in lieu thereof in each such place '\$21,000'."

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Alabama that the Senate concur in the House amendments with amendments.

The motion was agreed to.

FARM LABOR SHORTAGE

Mr. HOLLAND. Mr. President, I do not believe there is one among us who is not interested in seeing that everything possible is done to eliminate hunger and malnutrition in our Nation. It is the approach to this problem where some of us may differ.

I have taken the floor on previous occasions to point up the need for a program that would disseminate information as to proper foods necessary to obtain well balanced nutritional meals. I have also strongly supported the food stamp program, the school lunch program, and I am in full sympathy with providing those in need with the necessities to sustain life.

But, Mr. President, I must call to the attention of the Senate a situation that exists, whether we like it or not, that contributes to the malnutrition, and perhaps to hunger at times, in the migrant labor area that is caused entirely by the migrants themselves. I say this, speaking of the migrant labor in Florida, which I have the honor to represent, where there is ample work for those interested in employment. As an example of this, I wish to place in the Record a letter I have

received from a longtime friend and member of a family which has been producing fruits and vegetables since the 1880's—a family which is one of our larger growers of citrus and vegetables. This man, Hon. Randall Chase, has the high respect of all our people.

Mr. President, I ask unanimous consent to have the letter printed at this point in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

SANFORD, FLA., May 22, 1969.
Senator SPESSARD L. HOLLAND,
Washington, D.C.

DEAR SENATOR: Your news letter No. 9 of May 18th was most interesting, informative, and we certainly go along most heartily with the position you express.

The paragraph on the top of page 2, Farm Labor Bill, is most interesting and somewhat heartening. There is a real shortage of labor for harvesting crops in the State, both citrus and vegetables. In the Glades, contract labor, mostly migrant, is making from \$40 to \$55 a day. The turnover is about 70% daily. The high wages, of course, are the main reason for the turnover. There is lots of labor there but they only work a day or two and then they don't want any more or need any more until they have used up what they have made. The same remarks apply to other commodities, probably to a lesser degree, but it is still excessive.

Yesterday we closed down our packing house although we have 30-40,000 more boxes of oranges to gather. We have 6 crews in the field but we cannot get enough fruit picked to warrant holding the packing house crew there to handle it when it comes in, so we are going direct to the processing plant. Being primarily fresh fruit people, we dislike this tremendously, but when it costs so much to get fruit to the house and then it is costly to put it up, somewhere along the line you reach a point of no return on costs and we have just about gotten to that point for fresh fruit.

All this is known to you but I am simply writing now just as a matter of record and emphasis on the current situation.

Should there be some constructive plan we could follow during the few months ahead before we start over again on the crops, it might be some reasonable plan could be arrived at which would be helpful to the farmers, protect the public, and actually it would help some of the migrant labor, if help is possible to them. More money is not what they need.

With expressions of regard and best wishes.
Sincerely,

RANDALL CHASE.

Mr. HOLLAND. Mr. President, as Mr. Chase stated, farm labor can earn \$40 to \$55 a day and yet there is a daily 70-percent turnover since so many migrant workers, once being paid off at this high rate, will not work again until their money runs out.

Mr. President, as I have said before I feel it is necessary for us to help those in these United States that cannot help themselves. There are many in this category—just as there are many willing to do what they can to help themselves and endeavor to be self-sufficient. There are too many others, however, such as those referred to in Mr. Chase's letter, who lack the initiative to become self-sufficient or who prefer to "let Joe do it"—and sit back and accept the dole of the local, State, and Federal Governments so long as it is available—working only long enough to provide those extras not ob-

tainable through the dole system. Mr. President, it is this group of people which worries me. The taxpayer—the people who must maintain steady employment—are being drained to a point of rebellion—particularly when they realize that their tax dollars are being used to support those who can help themselves but are not willing to do so.

I believe, Mr. President, it is high time that the Federal Government review the overall welfare programs, and to devise a plan whereby those who need assistance can obtain it and those who shirk their responsibilities are put on notice once and for all that they will not continue to be a drain on the taxpayer who must foot the bill.

Mr. President, another indication of what is happening to agriculture producers is shown by an article appearing in the Gainesville Sun, Thursday, May 22, 1969, entitled "Labor Shortage Bringing Watermelon Harvest Crisis." I ask unanimous consent that this article be inserted in the RECORD at this point.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LABOR SHORTAGE BRINGING WATERMELON HARVEST CRISIS

LAKELAND.—Florida, the nation's leading producer of watermelons, has reached the peak of harvest faced with a critical labor shortage in the Immokalee area although pay scales had skyrocketed.

A plea for help went out from the headquarters of the Florida Watermelon Growers and Distributors Association.

"If we aren't able to get labor into Immokalee this week, hundreds of acres of watermelons will be burned up," said Lester Faulhaber, association president.

Labor for harvesting has been progressively harder to get for the past several years, an association spokesman said, but this year brought a crisis.

Pay for the unskilled labor was increased from \$2.25 to \$4 an hour, the spokesman said. Florida produces an annual average harvest of 100 million watermelons. This week is the peak of the harvest.

"Normally farmers will have 12 hours a day of harvesting," Faulhaber said, "but they have been limited to between three and four hours this season because of the severe labor shortage."

The association fired off telegrams seeking help from Agriculture Commissioner Doyle Conner and the farm labor division of the Florida State Employment Service.

Telegrams arriving at the association headquarters here described the situation in Immokalee as deplorable and critical.

One farmer reportedly gave up attempting to harvest with only 25 per cent of the melons out of the fields, an association spokesman said.

TRIBUTE TO CHIEF JUSTICE WARREN

Mr. TYDINGS. Mr. President, last week an eminent journalist and editorial writer for the New York Times, James Reston, published an editorial essay entitled "Nixon's Burger and Republican Symbols." The article deals primarily with Judge Warren Earl Burger.

With the majority of the article, I find myself in agreement. However, unfortunately in the middle of his editorial column Mr. Reston made a very unfair statement. He commented upon the general disarray of the Federal judiciary

today and the failure of the Federal courts to utilize modern management techniques.

I will read verbatim the paragraph to which I shall direct my remarks. Mr. Reston in referring to the Supreme Court of the United States and the Federal judicial system, states:

It is sadly in need of orderly administration. Whatever else Justice Warren was, he was not the best administrator in the history of the republic. The services of the federal courts are woefully inadequate. They have been short-changed. They are in need of marshals, probation officers, court reporters and all the modern administrative techniques of computers, which can speed up the administration of justice.

I find myself in complete agreement with every sentence in that paragraph with the exception of the sentence in which he mentions Chief Justice Warren. Unfortunately, I think that Mr. Reston, as frequently happens with top editorialists, got into an area in which he did not have the facts, or perhaps listened to someone who did not have the facts.

Mr. Reston made a most unfair insinuation. That insinuation is that Mr. Chief Justice Warren has not been a good administrator. Mr. President, I have great respect for Mr. Reston. I am sure that today he is considered one of the eminent national editorial writers. However, his unfair comment about the present Chief Justice does not have a factual foundation.

It has been my responsibility in the 5 years I have been a Member of the U.S. Senate to be chairman of the Subcommittee on Improvements in Judicial Machinery. Our responsibility has been to oversee the Federal judicial system and, indeed, to stimulate judicial reform within that system. During that period of time I have perhaps held more hearings and done as much work as any of my colleagues in that field in recent years.

I would like to comment on Mr. Reston's inference that Chief Justice Warren has not been a good administrator.

It is widely known within the Federal judicial system and among those who are interested in its reform that, with the exception of Chief Justice William Howard Taft, there has been no Chief Justice in the last half century who has made the efforts or had the success in stimulating a rather conservative body, the Federal judiciary, in the area of court reform that the Chief Justice presently sitting has, Chief Justice Earl Warren of California. Indeed, many students of the court, myself included, feel that one of the great contributions Chief Justice Warren has made has been in his leadership in trying to move the Federal judicial system toward more orderly administrative practices and techniques.

Let me enumerate for the benefit of the RECORD a few of the areas in which the Chief Justice has effectively led in the administrative operation of the Federal courts.

He has stimulated the American Law Institute to become a meaningful and powerful institution for court reform in this country.

He has made the Judicial Conferences

which were held by each U.S. circuit an important element for promoting progressive court reforms, rule changes, and modern institutional procedures within the Federal judiciary. Before Justice Warren's leadership, the conferences were primarily social meetings.

He has pioneered in the reorganization and adoption of new Federal rules of civil procedure, criminal procedure, and admiralty rules.

He has provided leadership in making the judicial councils of the circuits more effective institutions for administrative leadership than they ever were before.

It was his leadership that provided the acceleration for the Federal Judicial Center which has now been created by an act of Congress of which I was a co-sponsor—the first research and development branch of the judicial system in the history of our Republic—a center which is going to save the taxpayers of this country, in my judgment, hundreds of thousands of dollars in the years to come, by the stimulation and creation of new administrative procedures to speed the processes of justice.

In short, Mr. President, I think every person interested in improving judicial administration knows the really fine contribution of Chief Justice Warren.

I might point out that Mr. Chief Justice Warren has done more to promote the organization and development of new law schools than any other justice in the history of the Supreme Court. As a matter of fact, many years ago, when he first became Chief Justice, in meeting with university leaders across the country and urging more and better law schools, he made a promise that he would dedicate any law school built during his tenure as Chief Justice; and he has faithfully carried out that promise.

All in all, if it had not been for the leadership of Chief Justice Earl Warren in the administrative field, I shudder to think what the position of the Federal judiciary, vis-a-vis backlog and other administrative problems, would be today.

Mr. Reston commented that we are in need of marshals, probation officers, and court reporters. I might point out to him that the fault has not been with the courts; it has been in Congress. The power of the purse rests with Congress and any failure to appropriate funds for the necessary court supporting personnel must be laid at our doorstep. It cannot be blamed on the Chief Justice.

I might also point out to Mr. Reston that, inherently, it is very difficult to initiate new systems of procedures in anything so tradition-bound as a judicial system.

But wherever the fault has been, it has not been in the administration of Mr. Chief Justice Earl Warren. I do not know what kind of response Mr. Reston will make to the Chief Justice, but he owes him an apology; and Mr. Reston owes his reading public the responsibility of better checking out his facts before making an off-hand statement which is completely unsupported by facts, as he did in the editorial column which he wrote about the appointment of Mr. Nixon's new Chief Justice.

MESSAGE FROM THE HOUSE—ENROLLED JOINT RESOLUTION SIGNED

A message from the House of Representatives by Mr. Hackney, one of its reading clerks, announced that the Speaker had affixed his signature to the enrolled joint resolution (S.J. Res. 99) to authorize the President to issue a proclamation designating the first week in June 1969 as "Helen Keller Memorial Week."

FBI DIRECTOR J. EDGAR HOOVER

Mr. THURMOND. Mr. President, earlier this month, certain individuals began spreading the word that Mr. J. Edgar Hoover would retire on the occasion of his 45th anniversary as Director of the Federal Bureau of Investigation. In many cases these prognostications were made with no small degree of wishful anticipation by those who would stand to gain by the loss of this dedicated American to Government service.

The only thing these individuals proved by their baseless reports of Mr. Hoover's impending retirement was how little they understand this man. J. Edgar Hoover is a man of dedication and determination; a man who has fought to protect the best interests of the American people for 45 years and does not intend to stop fighting now merely because some few would wish it so.

Mr. Hoover enjoys good health and is a man of tremendous vigor. He has publicly announced his intention to continue as Director of the FBI; and in doing so, he has engendered a sigh of relief from the great majority of Americans while bringing disappointment and consternation to extremists and subversives of every ilk.

Many newspapers across the country have recently published fitting tributes to Mr. Hoover.

Mr. President, I ask unanimous consent that the following editorials be printed in the CONGRESSIONAL RECORD at the conclusion of my remarks: "Hoover Marches On" from the State Journal, Lansing, Mich., May 9, 1969; "Mr. Hoover Stays On" from the Paterson News, Paterson, N.J., May 9, 1969; "Bad News for Communists: J. Edgar Hoover To Stay On" from Orlando Sentinel, Orlando Fla., May 12, 1969; "A Remarkable Man" from the Napa Register, Napa, Calif., May 8, 1969; and "Forty-Five Years of Great Service" from the Globe Democrat, St. Louis, Mo., May 12, 1969.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the State Journal, Lansing (Mich.), May 9, 1969]

HOOVER MARCHES ON

Charles de Gaulle has passed from the world scene, astronauts have been to the moon and back, militant students are challenging university administrators and international communism is split down the middle in this fast changing world.

Through it all the almost legendary figure of J. Edgar Hoover has remained like a solid oak tree in spite of frequent prophecies that the aging director of the FBI would soon be put out to pasture.

Just to make sure the prophets get the picture, Hoover announced Thursday he has no intention of retiring and looks forward to many more years in office to "meet the crisis" in American society.

In these days when anarchy and lawlessness are on the upsurge, it's a reassuring thought that the old warrior will still be around for a while.

[From the Paterson (N.J.) News, May 9, 1969]

MR. HOOVER STAYS ON

FBI Director J. Edgar Hoover has given the country the best piece of news it has had in these months of turmoil and turbulence and for it we all have much to be grateful for.

Perhaps with the wish the father of the thought, it has been "rumored" in certain circles that since on Saturday he will mark his 45th anniversary as head of the Federal Bureau of Investigation, he will use the day to announce his retirement.

The thought of retirement is the furthest from Mr. Hoover's mind and he let it be known with characteristic vigor that he does not only not contemplate retirement but that he looks forward to many more years of service "to meet the crisis in American society."

There is unquestionably a strong element in the United States which would like to see Hoover out of the picture. He knows the culprits, he knows the arch-conspirators and they know he knows which increases their hatred for him and their desire to see him go.

America cannot now afford the loss of Mr. Hoover, especially in the dangerous circumstance of an apparent central conspiracy to build rebellion around campus upheavals. And while the liberal purists will accuse those who feel this is true of seeing mystic bad men under the university bed, it is gospel truth and must be so regarded, earnestly and relentlessly.

[From the Orlando (Fla.) Sentinel, May 12, 1969]

BAD NEWS FOR COMMUNISTS: J. EDGAR HOOVER TO STAY ON

J. Edgar Hoover, 74, has squashed rumors he is stepping down as director of the Federal Bureau of Investigation.

And few can find fault with this, because, even at 74, his mind remains lucid, his knowledge of communism in America unparalleled, his philosophies of law and order a national ideal, and his genius for keeping the FBI beyond reproach as ample as ever.

These are reasons why Presidents Johnson and Nixon have allowed him to remain past the mandatory retirement age of 70 for federal employees.

In the coming months, his knowledge of communism may become particularly invaluable.

Warnings about communism in America lost a great deal of their punch after the downfall of the late Sen. Joe McCarthy, but Hoover's voice never wavered. Five years ago he predicted a Communist youth movement in America.

In recent times, this appeared a bit far-fetched to many. Communism's kingpins, Russia and Red China were exchanging insults. The Communist bloc was shaken by Russia's invasion of Czechoslovakia. Communism hadn't rebuilt Cuba. Red upheavals in South America waned. A bitter split rent the American Communist party.

Then, out of the blue, came the campus riots, and America discovered a militant "New Left" among its youth, firebrand activists who knew Marx better than Jefferson, the Communist Manifesto better than the U.S. Constitution.

The Communist party wasn't agog long over the unexpected windfall, and has moved fast, Hoover said.

"Although virtually devoid of an effective youth arm of its own, the Communist Party has succeeded in penetrating and influencing a number of militant youth organizations—particularly those of the so-called New Left. The party considers the field to be so fertile at this time, in fact, that it presently is making plans to start a new youth organization this fall."

Communism sees an easy target in the misguided segment of our youth, and we need J. Edgar Hoover to help hold damage to a minimum until the militants grow up and come face-to-face with the realities of life.

[From the Napa (Calif.) Register, May 8, 1969]

A REMARKABLE MAN

This Saturday is a very special occasion for a very special American.

John Edgar Hoover marks his 45th anniversary as director of the Federal Bureau of Investigation.

The FBI had been established in 1908, but when Mr. Hoover took over command of the agency on May 10, 1924, a complete transformation of the organization was carried out.

A fingerprint division was established (which now includes a file of millions of fingerprints) and numerous functions within the FBI were altered to provide the most up-to-date, flexible operation possible.

A part of the Department of Justice, the FBI has the responsibility of investigating espionage, sabotage, treason and other matters pertaining to internal security. The agency also makes investigations under the Selective Service and Training Act.

Mr. Hoover was a law graduate of George Washington University in 1916. He went to work for the Department of Justice the following year.

Since his initial appointment as FBI director, he has been re-appointed to the post by every president of the United States. He has done an effective job and the "automatic" determination of the nation's leaders to have him continue in that post is a fine tribute to this most remarkable man.

Actually, though, Mr. Hoover is not admired by all people. There are many who are associated with the world of crime who dislike the FBI and its leader—and with good reason. Federal agents have waged a continuing war against crime. U.S. prisons are filled with those who felt they could outsmart the FBI. Communist agents in this country do not appreciate the efforts of Mr. Hoover and his organization, just as Nazi agents functioning in the United States in the days of World War II found that their efforts were destined for failure because of FBI vigilance.

For the average American, there may be little opportunity to have any personal contact with the FBI, except perhaps some routine check for a federal appointment or job, or via a television program or movie portrayal of the agents at work.

But for those who flout federal laws, there will be good reason to have contact with FBI agents.

The FBI has provided tremendous assistance to other law enforcement agencies throughout the nation—and to agencies in other nations.

When the Federal Bureau of Investigation is considered by those in law enforcement, it is in the highest of terms.

During these past 45 years Mr. Hoover has done a magnificent job. This Saturday, as he observes a most significant anniversary, it may be hoped that he can reflect with great satisfaction the idea that he has been one of the nation's most outstanding citizens,

doing something of great value to preserve the American way of life.

[From the St. Louis (Mo.) Globe Democrat, May 12, 1969]

FORTY-FIVE YEARS OF GREAT SERVICE

The American left wing, which dislike FBI Director J. Edgar Hoover's tough stand on law enforcement, is beside itself because it can't find any genuine grounds for demanding his replacement.

In desperation ultra liberals have been calling for Mr. Hoover's resignation because of his age, though he is still in good health and performing his duties as effectively as ever.

We are happy to note that Mr. Hoover, who is 74, has announced that he has many plans for the future, but "none of them includes retirement." The respected FBI chief marked his 45th anniversary this last weekend, as head of the Federal Bureau of Investigation.

Instead of back-biting references to Hoover's age, he deserves a solid vote of thanks from the nation for his effective and courageous performance year after year.

Director Hoover is a man of great integrity. If and when he feels his health is slipping, he will be the first to recognize the fact and submit his resignation.

We would much prefer to have a 74-year-old J. Edgar Hoover directing the FBI than a young man half his age with the view of a Ramsey Clark.

ORDER OF BUSINESS

Mr. BYRD of West Virginia. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER (Mr. ALLEN in the chair). The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. PELL. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

THE INCARCERATION OF MOISE TSHOMBE

Mr. PELL. Mr. President, it is past time for us in this Chamber—and, indeed, for people everywhere—to remember a forgotten man whose name not only has disappeared from the pages of the world's newspapers but also whose exact whereabouts have become something of a mystery. I am referring to the long and unjustified incarceration of Moise Tshombe, former Premier of the Democratic Republic of the Congo, as that nation is formally if euphemistically styled.

Almost 2 years have gone by since Mr. Tshombe's private plane was hijacked and forced to land in Algiers. He was quickly taken into custody and has presumably been imprisoned ever since that time—although no one seems to be able to inform us as to the location of his place of confinement. In view of the current controversy about Mr. Tshombe's supposed conspiratorial activities, we should recall that his private plane was traveling from an island just off the coast of Spain to the city of Palma on Majorca in the Balearic Islands—a place certainly more renowned as a vacation spot than as a hotbed of international conspiracy. Let us also recall that Mr.

Tshombe, in March of 1967, in absentia, had been sentenced to death for high treason by a special military court convened in the Congolese capital of Kinshasa.

Because of this latter fact, it may be suggested that the Government of Algeria deserves some approbation because it has not turned former Premier Tshombe over to the Congolese Government for execution. I suggest, however, that Algiers would have truly earned such approbation if its political prisoner had been promptly returned to Spanish jurisdiction.

To the contrary, the Algerian Government, ever since the end of June 1967, has kept Mr. Tshombe under its control. Even this unjustified action would not seem so intolerable if the outside world had some assurance that he was being treated humanely and with the minimum courtesy owed to a former prime minister, regardless of his controversial status. But the fact is that we just do not know anything whatsoever about the conditions which Mr. Tshombe is experiencing. I believe most, if not all, of my colleagues will agree that this treatment accorded Mr. Tshombe is more worthy of the Barbary pirates, who were once the scourge of the North African coast, than of the present Algerian Government, which claims to be a modern and civilized 20th-century power.

Now, let me make it clear that in raising this subject I have no stimulus other than a humanitarian concern for the fate of a man who, whatever his political beliefs and his activities, was a vigorous and talented leader with some support among his people. Indeed, I was a strong and persistent advocate of the United Nations policy adopted toward the Congo after 1960, a policy which in large measure was designed to defeat the aims then held by Mr. Tshombe. Moreover, as evidenced by my protests against the behavior of the current military dictatorship in Greece, I hold no brief for right-wing regimes in any area of the world. At the same time, I refuse to condone injustices perpetrated by any government regardless of its political complexion. Any government, whether marked by rightist, leftist, or centerist philosophies, cannot escape condemnation if it acts as cruelly toward a distinguished political refugee as the Algerian Government has behaved toward Moise Tshombe.

Obviously, I do not believe that any words of mine will bring any dramatic change in their wake. Since I am quite sympathetic to the efforts of the government in Algiers to bring Algeria out of the long twilight of colonial control into the modern world and to promote stability and economic development, it might seem paradoxical for me to reproach that government for its actions in the Tshombe case. Yet, it is because I am sympathetic to the aspirations of a country emerging from colonial rule that I wish its reputation to be unclouded by any reversion to the barbarities of the past. Furthermore, I hope that by raising this issue I shall be able to focus attention upon it and at the very least to stimulate the Algerian Government to

reveal information about Mr. Tshombe's position and perhaps to bring the issue to international adjudication. No matter what former Premier Tshombe's sins—real or imagined—neither he nor any other man should be placed in limbo while on earth. At an absolute minimum, the Algerian Government owes the world the knowledge whether Mr. Tshombe is dead or alive.

Mr. President, we are accustomed to citing with approval the famous lines of John Donne to the effect that any man's death diminishes each of us. As forcefully as I can, I would like to say that Mr. Tshombe's status in a kind of living death equally diminishes all of us as individuals and the Algerian Government as an entity.

Mr. COOPER. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR ADJOURNMENT UNTIL TOMORROW

Mr. KENNEDY. Mr. President, I ask unanimous consent that when the Senate completes its business today it stand in adjournment until noon tomorrow.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. KENNEDY. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. COOPER. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

FEDERAL COAL MINE HEALTH AND SAFETY ACT OF 1969—AMENDMENT

AMENDMENT NO. 23

Mr. COOPER. Mr. President, when the administration bill, S. 1300, was introduced on March 4 of this year by the distinguished ranking minority leader (Mr. JAVRS) I was very happy to be a cosponsor. I stated on the floor of the Senate then that I had reviewed the President's proposals and I considered them to be strong and comprehensive measures for dealing with and meeting the increasing problems of health and safety in our coal mines. At the same time, I indicated that I reserved my right to offer amendments and, based on my own experience in this field, to call to the committee's attention and to the attention of the Senate particular suggestions that I believe would promote greater safety in our coal mines. In concluding my remarks at the time of the bill's introduction, I stated that I wished "to express

firmly that the new hazardous conditions in our coal mines require new remedies if we are to provide for the health and safety of our workers. I shall work and vote for such a bill."

I am interested in this legislation because the State of Kentucky is the second largest coal-producing State in the Nation providing employment and economic livelihood to a large segment of its citizens, and I am interested in the health and safety of those who work in coal mines.

In western Kentucky some five counties are engaged in coal mining. These mines are mostly strip mines with some shaft mines.

In eastern Kentucky there are 17 counties that depend on the coal industry for their economic existence. In Harlan County—the second largest producer of coal from underground mines in Kentucky—there is no other industry and all who are employed are either directly or indirectly affected by the prosperity of the coal industry. Some 12,000 of Harlan County citizens alone will be affected directly or indirectly by any legislation pertaining to coal mining.

Coal mine safety legislation has been under consideration by the Congress over the past 11 years. In 1958, and 1959, as a member of the Senate Labor and Public Welfare Committee, I participated in the consideration of coal mine safety bills before that committee and I had a hand in drafting the bill reported by the committee in 1960 and which passed the Senate. The House failed to act.

When the Senate and House committees considered amendments to the Federal Coal Mine Safety Act in 1965, I testified before both committees. Again in 1966 when the Senate Labor Subcommittee was marking up H.R. 5384, I was invited by the chairman of the subcommittee, former Senator Morse, to meet with the subcommittee in executive session to present my views. And when the bill was considered on the floor, I helped to establish legislative history in the course of which Senator Morse stated that the bill, as amended, provided a more effective measure in promoting the interest of coal mine safety.

I mention this background to indicate my longstanding interest in the subject of coal mine safety legislation.

I have followed closely the hearings held by the distinguished chairman of the Subcommittee on Labor (Mr. WILLIAMS) on the administration bill, S. 1300, and related bills, S. 355, S. 467, S. 1094, S. 1178, S. 1907, and recently Senator RANDOLPH's bill, S. 2118. I know that the subcommittee's hearings have been thorough and have produced informed and helpful testimony.

Based on my study of the provisions of these bills and my review of the committee's testimony, I shall propose three amendments to S. 1300 for the committee's consideration. I introduce the first of these amendments today.

The greatest danger to the safety of miners in the operations of a coal mine—whether that mine be classed

gassy or nongassy—stems from roof falls. Falls of roof, rib and face, according to the Bureau of Mines, are the No. 1 killer in bituminous coal mines. Roof falls are the cause of over 50 percent of all underground fatalities.

During the time I served on the Senate Labor and Public Welfare Committee when that committee was considering amendments to the Federal Coal Mine Safety Act, it was my view based on the committee's hearings that more attention should be given to the problem of roof falls and the need for legislation to lessen this No. 1 miner's hazard. In 1959, I introduced a bill, S. 1562, to amend the Federal Coal Mine Safety Act. One of the provisions of that bill would require the Bureau of Mines to make a study of the incidence and causes of roof and rib falls, to recommend measures to reduce and prevent such roof and rib falls, and to study existing educational and training programs in mine safety and reads as follows:

SEC. 301(c). The Bureau of Mines will in conjunction with State mine safety agencies, make a study of (1) the incidence and causes of roof and rib falls, and measures which it recommends to reduce and prevent such rib and roof falls; and (2) educational training programs. The findings and recommendations of the Bureau shall be submitted to the appropriate State officials and to the appropriate committees of the Congress.

Mr. President, I ask unanimous consent that a statement I made on the floor March 25, 1959, introducing S. 1562 be included in the RECORD at this point.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF SENATOR JOHN SHERMAN COOPER UPON INTRODUCTION OF MINE SAFETY LEGISLATION IN THE U.S. SENATE, MARCH 25, 1959

Mr. President, on behalf of myself, the senior Senator from Virginia (Mr. Byrd) the junior Senator from Virginia (Mr. Robertson) and my colleague from Kentucky (Mr. Morton) I introduced a bill to amend the Federal Coal Mine Safety Act.

Section I of the bill would make applicable to all coal mines—regardless of the number of employees—the provisions of the Federal Coal Mine Safety Act, which authorizes a Federal mine inspector to order the withdrawal of all miners from a mine when he finds "danger that a mine explosion, mine fire, mine inundation, or man-trip or man-hoist accident will occur in such mine immediately or before the imminence of such danger can be eliminated," and to prohibit their re-entering the mine until the danger has been eliminated.

Such power to withdraw miners and to keep a mine closed cannot today be exercised by a Federal mine inspector in mines employing 14 or less persons, even though imminent danger exists—danger which could cause injury or death to miners.

According to the table submitted in the course of hearings last year by the Honorable Marling J. Ankeny, Director, U.S. Bureau of Mines, there were in 1957, 7,659 mines employing 14 or less persons; and thousands of miners are employed in such mines. Section I of my bill would extend to these miners the protection against imminent danger that the Federal Coal Mine Safety Act now extends to larger mines—those employing more than 14 persons.

Questions always arise as to procedure by which a mine may be reopened and its miners returned to work, after it has been closed because of conditions which create imminent danger.

Under the Mine Safety Act, unless the State has a safety plan which has been approved by the Bureau of Mines, exclusive jurisdiction and power to reopen a mine or to order it to remain closed is maintained by the Federal Government through the Bureau of Mines, subject to review by the courts.

In all such cases, a mine owner and miners who had taken steps to correct the dangerous conditions, and who believed the mine safe for reopening, would be compelled to present their case, if reopening was denied by a Federal inspector, through a difficult and expensive chain of procedures. In many instances the small mine owner would be unable to undertake this very complicated procedure.

The bill I introduce provides a speedy and fair procedure for determining whether conditions of imminent danger in a closed mine have been corrected, and whether the mine is ready for reopening. It is the exact procedure now provided in the Federal Mine Safety Act for mines employing over 14 persons, when the State has a mine safety plan that has been approved by the Bureau of Mines.

I shall explain this procedure by referring to the language used by the Committee on Labor and Public Welfare in Senate Report No. 1968, dated July 25, 1958, which states that presently, under section 203(e) of the act, if a State has a State plan that has been approved by the Bureau of Mines, the operator of a mine that has been closed because of danger of imminent disaster may request an inspection of the mine by a State inspector. If the State inspector does not concur in the closing order, the mine must remain closed; but the owner of the mine may make application to the chief judge of the U.S. District Court for the district in which the mine is located for the appointment of an independent inspector to inspect the closed mine. Unless the appointed inspector concurs in the closing order, it ceases to be effective and the mine may be reopened. The committee amendment marks this review procedure applicable to presently exempted mines ordered closed under the provisions of the amendment, without requiring, as a condition of resorting to this procedure, that the State in which the mine is located have or adopt a State plan approved by the Bureau of Mines.

Section II of the bill I now introduce is very clear. It would direct the Bureau of Mines to make a study of safety conditions for all mines, regardless of the number of miners employed. Hearings would be held in the major coal-producing States so that State mine-safety officials, miners, unions representing miners and mine operators in each of said States would have the opportunity to testify about conditions in the mines of their State, and to make recommendations to improve mine safety.

In addition, this bill would direct the Bureau of Mines to conduct a study of mine safety, with special emphasis on the major cause of mine accidents—namely, roof and rib falls. It would also require a study of educational and training programs for mine employees on safety measures.

During the hearings last year on amendments to the Federal Mine Safety Act, one amendment proposed would have applied all the provisions of the Federal Mine Safety Act to every mine. Small mine owners testified that many of these provisions were not applicable to small mines, and that they would not increase safety. They testified that to require by law small mines to undertake unnecessary expenditures would put many small

mines out of business and would throw thousands of miners out of work.

I cannot say definitely that this would be the case; but I believe that the Congress should not take drastic action without knowing whether it is necessary to improve mine safety. Unemployment, hunger, and every other element of want and distress prevail today in the coal-mining areas of Kentucky and other States. If before we obtain the facts, other mines are closed unnecessarily by our action, we shall contribute to this distress, and we may deny to the States an opportunity of recovering their natural wealth in coal.

Mr. President, I do not believe that any responsible Member of this Chamber or, indeed, any other responsible person in the United States does not honestly and sincerely support the principle of increased mine safety. Only last year the Committee on Labor and Public Welfare found that there was a lack of reliable and convincing statistics upon which to base constructive legislation on this very important and vital subject. We concluded that it would be most useful—in fact essential—to have the Bureau of Mines conduct hearings in the States with the Nation's heaviest concentration of coal mines, and to report its findings, in order that we might legislate intelligently on the matter. We recognized, however, that the Federal inspectors should not be hindered when, in their judgment, there was a danger of serious disaster in permitting operation of any mine—without regard to its number of employees.

Mr. President, that was why we included the provision to enable a Federal inspector to close a mine whenever a condition of imminent danger was found to exist. I am sorry that provision was not enacted. If it had been, some of the disasters which recently have occurred might have been prevented.

Only a few days ago there occurred in Tennessee a mine disaster in which eight or nine lives were lost. I cannot say that if the bill we reported last year had been enacted, that accident would have been prevented; but I can say that the enactment of that bill or the enactment of a similar bill will help prevent similar accidents in the future.

Mr. President, the problem of amending the Coal Mine Safety Act was before the Committee on Labor and Public Welfare in the last session of Congress and was thoroughly debated and considered. The Committee concluded, on the basis of its study that the steps outlined above were essential and it reported to the Senate a bill identical to the one I have introduced today. The sole change that has been made is in the date by which the Bureau of Mines must conclude its study and must report to the Congress. Whereas the bill reported last year called for a report to be submitted by February 15, 1959, our bill requires a report within 6 months after enactment.

I am proud to sponsor this proposed legislation which, when enacted, will improve and make safer the conditions under which the Nation's miners work, and will authorize the best and the quickest study possible, in order to make further improvements in mine safety.

Mr. COOPER. Mr. President, I note that beginning in 1958 the Bureau of Mines has collected and analyzed statistics on the causes of roof falls. However, I do not believe that the Bureau of Mines has initiated as yet an adequate educational and training program for mine employees to reduce the number of accidents due to roof falls.

Mr. President, I ask unanimous consent to have placed in the Record at this point in my remarks the most re-

cent summary prepared by the Bureau of Mines concerning statistics on roof falls for the period of 1958–68.

There being no objection the summary was ordered to be placed in the Record as follows:

SUMMARY ON FALLS, OF ROOF, RIB, AND FACE—THE NO. 1 KILLER IN BITUMINOUS COAL MINES IN 1968

During 1968, the continuing attack against the No. 1 killer—falls of roof, face and rib does not show improvement over 1967 according to statistics prepared by the Bureau of Mines, Department of the Interior. The frequency of such fatalities increased from 0.62 per million man-hours worked underground in 1967 to 0.66 in 1968.

Bureau statistics also show that of the 3,519 underground bituminous coal-mines active during 1968, 3,430 or 97.47 percent, were operated without a rock- or coal-fall fatality. Fatal injuries from falls of roof, face, and ribs occurred in 86 (2.44 percent) of the active mines and caused 98 of the deaths charged to underground employment in 1968 as compared with 94 such fatalities experienced in 1967.

During 1968, approximately 545,000,000 tons of bituminous coal was produced in the United States from 3,519 underground, 1,244 strip and 365 auger mines or a total of 5,128 mines. During that period the bituminous-coal industry suffered 305 fatal injuries, 267 of which occurred underground, 12 in various surface operations, 20 at strip mines and 6 at auger mines. This is an increase of 94 from the 211 fatal injuries that occurred in 1967 when approximately 552,626,000 tons of coal was mined.

The following tabulation shows the number, percent, and frequency of rock-and-coal-fall fatalities for the 11 year period, 1958 through 1968:

TABLE 1.—FATALITIES FROM FALLS OF ROCK AND COAL, 1958-68

Year	Bituminous roof-fall fatalities	Percent of underground fatalities	Roof-fall fatalities per million man-hours worked underground
1958	157	54.3	0.80
1959	135	64.3	.76
1960	145	58.9	.85
1961	135	55.8	.88
1962	105	46.5	.71
1963	123	56.4	.82
1964	114	60.6	.75
1965	126	58.6	.82
1966	110	58.2	.74
1967 ¹	94	57.0	.62
1968 ¹	98	36.7	.66

¹ Preliminary.

Mr. COOPER. Mr. President, not only nationwide but in my own State, roof falls have been the major cause annually of Kentucky's coal mining fatalities. Let me emphasize that for the period 1953–68 there have been no fatalities in Kentucky's nongassy mines resulting from gas ignitions or explosions. However, during this period the Kentucky Department of Mines and Minerals reports for all coal mines a total of 493 fatalities resulting from roof falls representing more than 60 percent of all Kentucky coal mine fatalities.

Mr. President, I ask unanimous consent that this report be included in the Record at this point.

There being no objection, the report was ordered to be printed in the Record, as follows:

KENTUCKY DEPARTMENT OF MINES AND MINERALS—COAL MINE FATALITY RECORD 1948-68

Year	Fatal accidents, all causes	Total production	Tons per fatal accident	Fatals due to roof falls	Tons per fatality due to roof falls	Percent due to roof falls
1948	134	82,579,453	616,250	79	1,045,309	59
1949	66	73,997,676	1,121,177	41	1,804,821	62
1950	81	82,176,693	1,014,527	53	1,550,503	65
1951	106	73,951,266	697,653	65	1,137,711	61
1952	74	64,515,091	871,827	63	1,697,765	51
1953	59	63,535,507	1,076,573	39	1,629,115	66
1954	54	58,621,115	1,085,576	35	1,674,889	65
1955	57	68,900,744	1,208,785	33	2,087,901	58
1956	75	75,934,180	1,012,456	47	1,615,621	63
1957	61	75,775,936	1,242,228	40	1,894,398	66
1958	49	67,809,271	1,383,863	29	2,338,215	59
1959	43	64,990,298	1,511,402	26	2,499,627	60
1960	57	67,067,740	1,176,628	32	2,095,867	56
1961	55	65,345,255	1,189,005	43	1,520,820	78
1962	41	70,049,075	1,708,524	19	3,686,793	46
1963	33	78,139,040	2,367,850	25	3,125,562	76
1964	47	83,283,504	1,771,989	31	2,686,565	60
1965	39	87,207,039	2,236,077	25	3,484,241	64
1966	40	93,240,675	2,331,017	22	4,238,212	55
1967	50	100,106,241	2,002,124	25	4,004,248	50
1968	56	1102,500,000	11,830,357	22	4,659,090	39

¹ Estimated.

Note: The year 1968 was the 16th consecutive year in which the Kentucky coal mining industry produced more than 1,000,000 tons of coal per fatal accident. There have been only 18 such years in the 89-year history of the department. Advance tonnage estimates indicate it is the best year in history from the standpoint of tonnage per roof-fall fatality and the 4th best year from a tonnage per fatality standpoint. Advance estimates also predict that 1968 will be the highest coal production year of the Commonwealth.

Mr. COOPER. Mr. President, section 209(c) of the present law concerns itself with the problem of roof falls as follows:

Roof Support—the roof and ribs of all active underground roadways and travelways in a mine shall be adequately supported to protect persons from falls of roofs or ribs.

The administration bill, S. 1300, amends this provision as follows:

Sec. 303. The roof and ribs of all active underground roadways, travelways, and working places shall be supported or otherwise controlled adequately to protect persons from falls of the roof or ribs. A roof-control plan and revisions thereof suitable to the roof conditions and mining system of each mine and approved by the Secretary shall be adopted and set out in printed form within a reasonable period to be established after the operative date of this title by the Secretary by regulation. The plan shall show the

type and spacing of supports approved by the Secretary. No person shall proceed beyond the last permanent support unless adequate temporary support is provided or unless such temporary support is not required under the approved roof-control plan. A copy of the plan shall be furnished the Secretary or his authorized representative upon request.

In my view the administration's amendment is inadequate to meet the problem of roof-fall accidents.

The amendment, which I now send to the desk, would provide greater protection for all miners in underground coal mines from falls of roof, rib or face. The thrust of my amendment is based on the following analysis:

In its 1968 report, at table 6, the Bureau of Mines lists the primary causes of roof-fall accidents as follows:

TABLE 6.—ROOF-FALL ACCIDENTS BY PRIMARY CAUSES

Primary causes	1960	1961	1962	1963	1964	1965	1966	1967	1968
Failure to take down or secure loose roof, face, or rib	58	39	39	23	17	7	15	5	12
Failure to examine roof or incorrect analysis of such examination	12	12	18	22	9	22	10	11	16
Failure to comply with adopted support system or lack of a support plan	20	25	10	57	41	56	41	34	35
Failure to use temporary support or enough	11	10	5	3	18	17	15	12	17
Failure to follow company rules or instructions, to heed warnings, or to take ordinary precautions	13	8	4	0	0	4	0	1	2
Failure to replace dislodged or remove support	13	8	5	3	3	5	2	0	0
Failure to abandon workings when known to be imminently dangerous	1	2	2	2	4	5	5	3	3
Failure of conventional support system	16	15	18	5	12	3	5	12	5
Failure to follow roof-bolting plan	0	4	2	0	2	4	10	6	0
Failure of mining system	1	12	2	6	5	3	7	10	8
Other	0	0	0	2	3	0	0	0	0
Total	145	135	105	123	114	126	110	94	8

Mr. COOPER. Mr. President, you will note that the largest number of fatalities in 1968—35—were due to a failure to comply with an adopted support system or lack of a support plan. My amendment would require that within 60 days after the effective date a roof-control plan "shall show the type and spacing of supports approved by the Secretary and such plan shall be reviewed periodically and at least every 6 months by the Secretary taking into consideration any accidents from falls of roof or ribs or inadequacy of support of roof or ribs and such revisions of said plan shall be made to improve the control of roof and rib of said mine."

Second, the Bureau of Mines' report attributes a failure to use temporary supports as causing 17 fatalities. My amendment prohibits all persons from proceeding beyond the last permanent support unless adequate temporary support is provided and requires that—

At all times safety posts, jacks or temporary cross bars shall be set close to the face before other operations are begun and as needed thereafter, if men go in by the last permanent roof support.

A further provision would make mandatory the use of safety posts or jacks to protect the workmen when roof material is to be taken down, cross bars are being installed, roof bolt holes are

being drilled or when roof bolts are being installed.

I urge the committee to give its attention to this very serious problem of roof falls. Any statutory improvements in existing law are bound to result in a saving of lives.

Mr. President, I wish to add briefly to my prepared statement and comment on the amendment I am submitting.

Several bills dealing with coal mine safety and health are pending before Congress. Most of these bills deal with fatalities and injuries which arise from ignitions and explosions in underground coal mines caused by gas, and also with fatalities and permanent disabilities, caused by pulmonary diseases resulting from coal dust.

Over the past 11 years, amendments have been proposed to the Federal Coal Mine Safety Act. The last amendments were adopted in 1965.

The Committee on Labor and Public Welfare considered amendments in 1958 and 1959 when I was a member of the committee. Amendments which were offered in 1958 and 1959 were adopted by the committee and presented to the Senate. The Senate acted favorably upon these amendments in 1960 by a vote of 80 to 4, but for some unexplained reason the bill was never acted on by the House. I attribute failure of the House to act to the opposition of the Bureau of Mines, supported by the United Mine Workers. I do not criticize the United Mine Workers, but I do criticize the Bureau of Mines, because in 1960 the bill that passed the Senate would have provided for greater safety. Since the Bureau of Mines did not approve of the Senate committee's recommendations, it opposed the 1960 amendments. Therefore, for a period of 6 years no legislation was passed to improve safety conditions in the mines until the 1966 amendments.

Today there is tremendous interest in coal mine safety legislation because of the explosions which have occurred in gassy mines in West Virginia; I refer to the November 20 disaster killing 78 men at Farmington. This disaster has renewed interest in Congress and the Nation as a whole toward reducing ignitions and explosions in gassy mines which cause a great number of fatalities each year.

Throughout all these years, the statistics furnished by the Bureau of Mines show that over one-half of the injuries and fatalities which have occurred in the coal mines have been because of roof falls. The amendments which I proposed in 1958 and 1959 recognized the hazards of roof falls and dealt with this problem.

Of the bills now before Congress, one proposed by the administration, of which I am a cosponsor, one proposed by the distinguished chairman of the Subcommittee on Labor (Mr. WILLIAMS), one by the distinguished Senator from West Virginia (Mr. RANDOLPH), who over the years has made lasting contributions in the field of coal mine safety legislation, and others, few, if any, deal adequately with the problems of roof falls.

Mr. President, in my prepared statement I pointed out that in my own State as well as nationwide, over one-half the

injuries and fatalities which occur in underground coal mines result from roof falls.

Today, I introduce an amendment designed to strengthen the provisions of existing law by affording greater protection against roof-fall accidents.

The PRESIDING OFFICER. The amendment will be received, printed, and appropriately referred.

The amendment was referred to the Committee on Labor and Public Welfare.

Mr. COOPER. Mr. President, I wish to announce that later I shall introduce two other amendments which deal with other problems of safety in the coal mines.

I recall that when we had these questions before us in 1958 and 1959, and again in 1965, that it was almost impossible to get accurate information from the Bureau of Mines concerning the causes of injuries and fatalities in both the large and small mines.

Today, we are provided by the administration and the Bureau of Mines with more accurate information.

However, on questions concerning the distinction between gassy and nongassy mines—to which I shall address myself at a later date—the Bureau of Mines has failed to support by evidence its proposal to extend certain features of the Coal Mine Safety Act to nongassy mines; while the Bureau has emphasized the 27 fatalities caused by ignitions and explosions which have occurred in nongassy mines since 1953, it has failed to show that in this same period some 374 miners were killed and 412 were injured by ignitions and explosions in gassy mines.

Mr. President, I shall offer amendments which I believe will recognize the distinguishing characteristics between gassy and nongassy mines, the incidence of injuries and fatalities in both, and go more directly to the heart of this question than the amendments which are now pending before the committee.

Today, I did want to emphasize that over half the injuries and fatalities in our coal mines occur because of roof falls, and my amendment is directed toward providing greater protection to our miners in this area.

DESIGNATION OF CERTAIN ISLANDS IN MICHIGAN, WISCONSIN, AND MAINE AS WILDERNESS AREAS

Mr. KENNEDY. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Calendar No. 190, Senate 826.

The PRESIDING OFFICER. The bill will be stated by title.

The LEGISLATIVE CLERK. S. 826, to designate certain lands in the Seney, Huron Islands National Wildlife Refuges in Michigan, the Gravel Island and Green Bay National Wildlife Refuges in Wisconsin, and the Moosehorn National Wildlife Refuge in Maine, as wilderness.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

There being no objection, the bill was considered, ordered to be engrossed for a third reading, was read the third time, and passed, as follows:

S. 826

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, in accordance with section 3(c) of the Wilderness Act of September 3, 1964 (78 Stat. 892; 16 U.S.C. 1132 (c)), certain lands in (1) the Seney, Huron Islands, and Michigan Islands National Wildlife Refuges, Michigan, as depicted on maps entitled "Seney Wilderness—Proposed", "Huron Islands Wilderness—Proposed", and "Michigan Islands Wilderness—Proposed", (2) the Gravel Island and Green Bay National Wildlife Refuges, Wisconsin, as depicted on a map entitled "Wisconsin Islands Wilderness—Proposed", and (3) the Moosehorn National Wildlife Refuge, Maine, as depicted on a map entitled "Edmunds Wilderness and Birch Islands Wilderness—Proposed", all said maps being dated August 1967, are hereby designated as wilderness. The maps shall be on file and available for public inspection in the offices of the Bureau of Sport Fisheries and Wildlife, Department of the Interior.

SEC. 2. The areas designated by this Act as wilderness shall be administered by the Secretary of the Interior in accordance with the applicable provisions of the Wilderness Act.

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 91-200), explaining the purposes of the bill.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE

This bill is identical to S. 3502 of the 90th Congress, which was favorably reported by the committee and unanimously passed by the Senate, but did not receive House action.

S. 826 would designate as units of the National Wilderness Preservation System the Seney, Huron Islands, and Michigan Islands Wilderness areas in the State of Michigan, the Wisconsin Islands Wilderness in the State of Wisconsin, and the Edmunds Wilderness and Birch Islands Wilderness in the State of Maine. All of the lands included are presently within the National Wildlife Refuge System.

DESCRIPTION

The Seney Wilderness proposal contains approximately 25,000 acres of the Seney National Wildlife Refuge in Schoolcraft County, Mich. The proposed area includes treeless bogs and strips of bog forest, remnants of black spruce and white pine forests, inhabited by a variety of big and small game, ranging from moose to red fox and timber wolves. The area is relatively inaccessible.

The proposed Huron Islands Wilderness contains approximately 147 acres consisting of eight small islands in Lake Superior. The islands are made up of pink and gray granite upthrusts, with trees, brush, and herbaceous plants over two-thirds of the islands, and the remaining third largely barren. The islands are not often visited because of their isolation, rough seas, and limited landing sites.

Six small islands, totaling approximately 41 acres, constitute the Michigan and Wisconsin Islands Wilderness proposals. They are important breeding and nesting areas for herring and ring-billed gulls. The fragile island ecology, abundant bird population, and picturesque terrain features have unique beauty and are of major interest to scientists, students, and nature lovers.

A total of 2,780 acres constitute the wilderness proposals for the Edmunds and Birch Islands areas within the Moosehorn National Wildlife Refuge in Washington County, Maine. This refuge is one of the few Federal areas in the Northeast containing wilderness resources.

HEARINGS

In accordance with the requirements of the Wilderness Act of September 3, 1964 (78 Stat. 890), public hearings were held at locations convenient to the areas affected. The results of these hearings are summarized in the synopses accompanying the recommendations to the President, which follow later.

COST

No additional budgetary expenditures are involved in enactment of S. 826.

RECOMMENDATION

The Senate Committee on Interior and Insular Affairs reports favorably on S. 826 and recommends early enactment.

SENATOR MANSFIELD'S COMMENTS ON THE CBS PROGRAM "FACE THE NATION"

Mr. KENNEDY. Mr. President, yesterday, appearing on the CBS nationwide television program, "Face the Nation," the distinguished majority leader, the Senator from Montana (Mr. MANSFIELD), responded to a number of questions concerning this Nation's policies in foreign and domestic affairs.

Once again, his understanding, and perceptions add great insight into difficult problems, and his remarks are worthy of the attention of all Members of this body. I therefore ask unanimous consent to have a transcript of the program printed in the RECORD.

There being no objection, the transcript was ordered to be printed in the RECORD, as follows:

FACE THE NATION

(By the CBS Television Network and CBS Radio Network, Sunday, May 25, 1969, Washington, D.C.)

Guest: Senator MIKE MANSFIELD, Democrat, of Montana.

Reporters: George Herman, CBS News; Frank Mankiewicz, syndicated columnist; Daniel Schorr, CBS News.

Producers: Sylvia Westerman and Prentiss Childs.

Mr. HERMAN. Senator Mansfield, you have said that the Senate has been derelict in not subjecting Supreme Court nominees to more searching scrutiny. That was before Judge Burger was nominated as Chief Justice. Do you feel that his nomination should be subject to some kind of new and more intensive kind of examination?

Senator MANSFIELD. Oh, yes, not only Judge Burger but all other nominees from now on in all departments, as well as the Judiciary.

ANNOUNCER. From CBS Washington, in color, "Face the Nation," a spontaneous and unrehearsed news interview with Senate Majority Leader Mike Mansfield, of Montana. Senator Mansfield will be questioned by CBS News Correspondent Daniel Schorr, Syndicated Columnist Frank Mankiewicz, and CBS News Correspondent George Herman. We shall continue the interview with Senator Mansfield in a moment.

Mr. HERMAN. Senator Mansfield, what can the Senate do in way of more searching scrutiny? Does it have to enlist the help of the administration, for example the Justice Department? How do you go about it?

Senator MANSFIELD. No, I wouldn't think so. I would expect the Executive Branch to be more thorough in its size-up of nominees from now on, and I would expect the Senate committees, the committees concerned, to use their own staffs to follow up on what is given to them by the Executive Department to the end that they can be as absolutely sure as possible before they report a name to the Senate for confirmation.

Mr. MANKIEWICZ. Senator Mansfield, turning to foreign policy for a moment, are you satisfied with the progress the administration is making in moving toward strategic arms talks with the Soviet Union? There has been some thought that we may be waiting until we have tested fully some of the more advanced weapons, the multiple warheads on our missiles and so forth.

Senator MANSFIELD. No, I am not satisfied at all, because we initiated the proposals for talks in 1964. Since that time there have been a number of unofficial feelers from the Soviet Union. I am sure that in reply unofficially we have given them encouragement. Secretary Rogers said that talks would begin in late spring or early summer; so far nothing has been done, no date has been set, and I think the way to handle this matter and to bring an arms limitation and an arms freeze, covering ABMs, MIRVs and other vehicles and missiles, is to set a date certain, sometime next month perhaps, to get down and get to business.

Mr. SCHORR. Senator, I would like to come back for a moment to the Supreme Court problem, the issues that have arisen from the resignation of Justice Abe Fortas. You are quoted in support of bills, at least the ideas of bills introduced by Senator Griffin and Senator Hart that would provide generally for greater financial disclosure by members of the Federal Judiciary.

Yesterday a committee of the U.S. Judiciary Conference, acting with rather unseemly haste got to work on a code providing for self-policing by the Judiciary itself. I believe it provides for financial—fairly full financial disclosure, but secretly, within the Judiciary. Would you be willing to be headed off at the pass, so to speak, and accept self-policing by the Judiciary?

Senator MANSFIELD. No, I think they are late and we are late in facing up to this problem. When I say "we are late," I mean the Congress itself. I am interested and do intend to join with Senators Hart and Case of New Jersey in sponsoring a bill which will be extended to include not only the Executive and the Legislative Branches but also the Judicial Branch as well. Senator Griffin's, I believe, covers just the Judiciary.

Mr. SCHORR. That's correct.

Senator MANSFIELD. And what I would like to see would be a combination, at the very least, of what the Senate has done in making public outside honorariums and what the House has done making public outside business connections. And I think that the Hart-Case bill is a good way to face up to this problem. It should include the Judiciary. I intend to support it and I would hope we could get action before too long.

Mr. SCHORR. Are you afraid of a constitutional confrontation with the—

Senator MANSFIELD. I think we ought to take that chance and face up to it and make our wishes known, and I think the sooner we do it the better.

Mr. HERMAN. Let me just make sure I understand you. You are saying that the legislature should set ethical standards for both the Executive and the Judiciary, as well as for the legislature itself?

Senator MANSFIELD. Exactly.

Mr. HERMAN. You don't think—

Senator MANSFIELD. Treat them all alike.

Mr. HERMAN. You don't think that there is any problem in having it all come from the Legislative Branch?

Senator MANSFIELD. There may be a problem, but let's cross that bridge when we come to it. Let's at least put the imprint of what we think is the right type of legislation into being as soon as possible.

Mr. HERMAN. Would it be satisfactory to you—I am going back a little bit over some of the ground that Dan covered—if the Senate tightened up, for example, on its confirmation procedures and then left policing of the Judiciary problems after confirmation to a Judiciary council of some kind?

Senator MANSFIELD. No, that doesn't go far enough.

Mr. HERMAN. Do you think that the code or whatever system that you envision has to be specific—specific problems, specific limits, and specific action to be taken?

Senator MANSFIELD. Yes, and I think it should apply to all members in the three branches of government who earn in excess of \$18,000 a year, and I think it should include outside business connections, honorariums and the like, and I would even go so far as to make income tax available for public purposes.

Mr. HERMAN. I have just one further question on this subject, and that is do you feel strongly enough about this so that if there should be some kind of a legal confrontation, you would push for a constitutional amendment?

Senator MANSFIELD. Well, you are getting me out of my depth when you ask that question, but I certainly would not be adverse to supporting such a test, if need be.

Mr. SCHORR. Let me understand you correctly. Are you saying that, for all officials of any branch of the government, you would deny them more than \$18,000 of additional income from any source, including their own investments?

Senator MANSFIELD. No, no. Those who receive an income from the government of \$18,000 or more, which is the medium set by the Senate in its application of what ethics we have, would be the applicable cut-off salary.

Mr. MANKIEWICZ. Then everybody above that would be required to disclose whatever additional income—

Senator MANSFIELD. Exactly.

Mr. MANKIEWICZ. I see.

Mr. SCHORR. Would you limit sources of income? Would you, for example—the cases are now under discussion, there was Justice Abe Fortas and the Wolfson Foundation; there has been some discussion of Justice Douglas, who has just resigned from the Parvin Foundation; and there is the fact that Federal Judge Burger, now Supreme Court Justice-Designate, has been getting \$2,000 a year from the Mayo Clinic. Would you bar that?

Senator MANSFIELD. Not necessarily. What I know about Judge Burger's association, there is nothing questionable about it. He is a trustee—if that is the right word to use—of a very reputable foundation, the Mayo Clinic. No questions have been raised about any connections which it has with any other group or individuals. I would assume, though, that on the basis of the brouhaha which has developed lately, that Judge Burger may well disassociate himself from this foundation; however, I have no indication to that effect.

Mr. SCHORR. But are you drawing your line on outside income on the reputability of the source?

Senator MANSFIELD. In part, yes, because if this is made public, then I think that is where, perhaps, not only the Legislative Branch of the government but perhaps the Judicial Ethics Committee, which you referred to, might have something to say about the conduct of judges.

Mr. MANKIEWICZ. So that the question would be disclosure, really, which might then lead to some of these other activities, once all the income were disclosed?

Senator MANSFIELD. That is correct. That is better put than I said it.

Mr. HERMAN. Is this a two-way street, Senator? Should the Executive Branch and should the Judiciary Branch have something to say about congressional ethics?

Senator MANSFIELD. Well, after all, I think the Congress itself has faced up to its responsibility in a limited way. The Senate hasn't gone far enough, nor has the House, but, if you combine what the House and Senate have done, then I think we are facing up to what is primarily our responsibility.

After all, we ought to apply, stretching this a little bit further, the same sort of code in a certain sense that we apply to presidential nominees. We make them divest themselves of bank holdings, securities, and what-not, and we create situations which, in effect, define a nominee as dishonest until he is proven innocent. And what we do to them we ought to do to ourselves. In other words, all three branches of the government should be treated equally.

Mr. MANKIEWICZ. Senator, if we might go back to the major issue on the Senate floor at the moment, at least what most people concede to be the, the ABM and, in line with your view about early arms talks, do you see a possibility with the at least close vote on the ABM, that seems to be ahead in the Senate, one way or the other, do you see the possibility that the President might work out some arrangement where that vote could be postponed until after the beginning of arms talks, or do you see the administration forcing that issue to a vote?

Senator MANSFIELD. Now, that is hard to say. I know that this weighs heavily on the President's mind. He didn't make this move lightly in changing Sentinel to Safeguard. He did bring about a decided change in the application of the ABM. I am certain that he is aware of the closeness of the vote which would take place in the Senate today, and I think the best way to face up to it would be to get arms talks under way as soon as possible. Whether or not that will be done remains to be seen. I do not doubt in any sense the President's good intent in this area or his desire to go down the road to bring about in time an arms limitation or an arms freeze. But I do not anticipate that the question of the ABM will come up before the latter part of next month, and we will see what happens then.

Mr. SCHORR. Senator, on Vietnam, President Nixon has made a major effort to convince the Nation that he is doing his best to achieve peace in Vietnam. Are you satisfied that he is making every reasonable effort?

Senator MANSFIELD. I am. I had the opportunity to spend a couple of hours with the President on the afternoon of the day he made his speech, in which he proposed an eight-point formula. He stated at that time that every word had been gone over carefully. Most of that speech was written by himself and, as I read it, at least the last half, certainly the last third bears his own personal imprint. I know that he has left himself a great deal of room for maneuverability and flexibility. And, if you look at the NLF's ten points and Nixon's eight points, you will find that there is more in the way of similarity than dissimilarity.

Mr. SCHORR. It is said that the White House has been telling some congressional critics that they have not read the speech carefully enough and have referred them to points in the speech which would need a second reading. Is there anything in the speech in the way of flexibility that we have missed?

Senator MANSFIELD. I don't think so. Those who want to take a second look and really go through the President's points and compare them with the NLF's theses, ought to do so because there is much more, I think, in the President's proposals than meets the eye on an offhand cursory basis.

Mr. SCHORR. How about escalation in Vietnam—do you think that the U.S. is unnecessarily escalating the war in Vietnam recently?

Senator MANSFIELD. I do. I think that the instructions laid down last November, at which time the bombing of the North ceased, to "keep the pressure on" was not the right way to bring about a negotiated settlement at Paris, and evidently what we have been doing since that time is keeping the pressure on. If you do that, then you are going to have a development of the act-react syndrome, and the first thing you know you are going to be further away from the

peace table than you should be. What we ought to do is not so much apply pressure in Vietnam as to, instead, apply pressure in Paris. That is where the peace is going to be made, not on the battlefield.

Mr. MANKIEWICZ. Senator, some of the critics of President Nixon's speech on Vietnam turned around a few days later and said that they felt satisfied—I am talking now about Senator Church and Senator Gore, at least—said that they were satisfied that the Nixon proposal of last week did in fact provide the possibility, for the first time in the United States position, of a coalition government in Saigon before elections would be held.

Senator MANSFIELD. That would be my reading of the situation, and I think that the only way you are going to bring about a settlement in South Vietnam itself is through a coalition government which, in my opinion, is inevitable.

Mr. HERMAN. Senator, doesn't the power in the person in charge, the President or whomever, have to make a major philosophical decision about how to make peace with the Communists? It has been the American philosophy for years that the only way you can really bring the Communist to a settlement at the peace table is through constant pressure. Are you saying now, or is there a feeling now that the way to bring them to settlement at the conference table is to relax pressure and to take the pressure off them?

Senator MANSFIELD. Well, not to exert pressure all the time, constantly and consistently, but to arrive at an area where you can defend yourself, where you can anticipate things which might happen but not to develop an act-react syndrome. This war will not be won militarily, even the hawkies of the hawks will admit that now. And here we are fighting an enemy with everything we have except nuclear devices, and it is an area which I think is not vital to our interests or to our security. It is an area in which we should never have become engaged because this is a tragic, a brutal and a barbaric war, and it is an area in which we should get out of as soon as possible, and as responsibly as possible.

Mr. HERMAN. Well, I asked the question negatively, let me turn it around now and ask it positively. Do you believe that we might win a settlement with Ho Chi Minh and Hanoi more rapidly now by relaxing pressure?

Senator MANSFIELD. Not relaxing pressure but not extending pressure. That is not a good answer to your question, but you have got to find a medium there in which you can operate.

Mr. SCHORR. Do you not except the contention of the administration that actions like Hamburger Hill are basically defensive, that if—

Senator MANSFIELD. No, I do not, because the General involved said that the hill had no strategic value, and I think it is another indication of pressure being applied, I think it is a continuation of the search and destroy policy, and I do not think it helps the negotiations in Paris, because the more pressure, I repeat, that you put on in South Vietnam, the less pressure, legitimate pressure you can apply in Paris.

Mr. HERMAN. Whose fault is it?

Senator MANSFIELD. I wouldn't say. I don't know. I don't know if the order to keep the pressure on is still in effect or not, but as far as the men in the field are concerned, they have to carry out their responsibilities. I deplore the cost. As far as Senator Kennedy is concerned, I am sympathetic towards what he had to say.

Mr. MANKIEWICZ. Well, that is substantially what you said last night in an interview, at least so it is reported in this morning's press. You are saying, in effect, then, that at least the momentary increase in American casualties, you deplore them, you

think that is a product of this increasing pressure on the battlefield rather than at Paris?

Senator MANSFIELD. That's right, plus the fact that several weeks ago there were B-52 raids for the first time in the kingdom of Cambodia, which I thought was uncalled for, unnecessary and contained the seeds of broadening rather than limiting or shortening the war.

Mr. SCHORR. I think I know your point of view, Senator, but just to pin it down and just to give, in fairness, a little more attention to the administration's point of view on this—what the generals are saying and what the White House has been saying is that if you don't try to clear North Vietnamese and Viet Cong off a hill, then the next thing you're doing is defending yourself on less safe ground, allowing them the opportunity to infiltrate and set off charges within your perimeter. Their contention is that they really are trying to defend themselves in a place like a hill. Now, I admit and I will have to submit that the line between the defensive and the offensive is not as easy in action as in words, but do you reject the contention of the administration on this?

Senator MANSFIELD. No, I would say the question is debatable. The administration may be right, I may be wrong, but I have at least tried to express my personal feelings on the matter.

Mr. HERMAN. Senator, it is very fashionable these days—not on your part, I must say—but it is very fashionable in some parts on the Hill and some parts of the Nation to criticize the military for almost everything. In the House, particularly, we have seen Congressman Moorhead working on the problem of the C-5A—that is also Mr. Symington in the Senate—what is your feeling about the growth of distrust in the military and the military-industrial complex, to use that complicated—

Senator MANSFIELD. I don't think it is a growth of a feeling of distrust. I think it is one more of apprehension and questioning, and there again I think that the Congress has been at fault for allowing things to get out of hand. I certainly would not impugn the integrity or the patriotism of the generals who are doing what they are told, incidentally, by their civilian superiors, and have been for some years. But I do question the type of contracts which have been let, the amount of money which has been expended, and the tremendous amounts which have been wasted, and the fact that until last year all the Defense Department had to do was to ask and they would receive. Beginning with the ABM question last year a change in attitude developed which has been accentuated this year, and I think this is all to the good. I think it will be beneficial to the military, and I think this combine which you speak of, which is not just military-industrial but includes labor, the academic area, and the political field, including people like myself who want projects for their state, are all at fault and are all to blame because we haven't had the guts to stand up to this growth like topsy and do something about it until events, in effect, have forced us to.

Mr. MANKIEWICZ. Do you see a parallel, perhaps, with Executive nominations, and do you think maybe the defense appropriation will be subjected to the same kind of closer scrutiny that you spoke of with nominations?

Senator MANSFIELD. Oh, yes, and I would point out, just to set the record straight, that Chairman Russell has consistently, over many years past, reduced the defense budget request by in excess of a billion dollars a year. That isn't usually understood or appreciated. I would anticipate that his successor, Senator Stennis, will do the same thing, and I know that Senator Stennis is

spending a great deal of time on the defense measure now before him, and has appointed subcommittees to look into it, and that he intends that a very careful scrutiny be made of all requests which come to his committee.

Mr. HERMAN. Senator, the Democrats are now, I guess, the loyal opposition. The loyal opposition in parliamentary countries has a unified leadership and, yet, when you look at the Democrats you see the Democratic National Committee with its policy committee, you see the Senate with its Policy Committee of Democrats, and in the House—are you ever all going to get together or is that a good idea?

Senator MANSFIELD. Well, I doubt that we ever will. Democrats aren't made that way, but I think we will reach a stage of coordination and accommodation and cooperation, which will work out for the best.

Mr. SCHORR. Senator, how is your young apprentice as majority leader, Senator Edward Kennedy, doing?

Senator MANSFIELD. Great.

Mr. SCHORR. Do you want to expand on that? Have you learned—how does he work?

Senator MANSFIELD. He is on the floor all the time. He is prepared to take up the responsibilities which go with his job. He is very interested, at the same time he attends to his committee duties and, in my opinion, Senator Kennedy is a Senate man.

Mr. SCHORR. Senator, you look young and you look well, but, can I ask you, when do you think you will be turning over the reins to him?

Senator MANSFIELD. Oh, not for many years.

Mr. MANKIEWICZ. Senator, just a philosophical point, do you find it easier to be leader of the majority with the opposition party in the White House than when your own party controlled it?

Senator MANSFIELD. I certainly do.

Mr. HERMAN. I have one more question about Senator Kennedy, before we leave that altogether. The one difference that I have noticed, the one really large difference, between Senator Kennedy as a party official in the Senate and his predecessor, is that he has not been either unafraid or unwilling to tackle Senator Dirksen head-on. In fact, he sometimes seems to provoke some of those. Now, in some of those matches between Senator Dirksen and Senator Kennedy, you sometimes look like an amused neutral. Are you?

Senator MANSFIELD. Well, I like to sit back on occasion and listen, learn and enjoy myself. As far as Kennedy and his predecessor are concerned, Kennedy is a good assistant majority leader; Senator Long was a good assistant majority leader.

Mr. HERMAN. Are scraps between the Democratic leadership and the Republican leadership a good idea or do they do no harm?

Senator MANSFIELD. I think that scraps do a lot of harm and I would rather reach a stage of accommodation in the best interests of the country rather than a victory which would benefit one party or the other.

Mr. HERMAN. Do you quietly communicate that fact to Senator Kennedy?

Senator MANSFIELD. No, but I think we understand each other quite well, but we each have to go our divergent ways.

Mr. SCHORR. Senator, when Senator Kennedy took this job of assistant majority leader, it was commonly believed—and I think he rather confirmed the impression—that he saw a great opportunity now in this Congress because with a Republican administration and a Democratic control of Congress that there was an opportunity to establish a kind of independent center of action in Congress, not necessarily to oppose the administration as such but to make it more activist. The administration has been rather slow in some of its programs, but not very much has come out of Congress so far, either. How would you assess, now, this

many months later, the effort to make a Democratic record in Congress side by side with the administration's record?

Senator MANSFIELD. Well, first, let me say that I think that President Nixon is doing a good job in moving carefully, deliberately, and cautiously. We passed a lot of legislation over the past eight years which still needs digesting, shaking down and the application of which could be rendered more effective through desirable changes through amendments and otherwise. As far as the Congress is concerned—and I can only speak for the Senate—we have developed in the Policy Committee a policy thesis which we brought before the chairman of the committees of the Senate and also last week before a well-attended Democratic Caucus. We intend to get more and more into the field of policy. We do not intend to oppose for the sake of obstruction. When we find that we differ from the administration, we will try to offer constructive alternatives, because the important thing is basically not the success of the Republican or the Democratic Party primarily but the welfare of the country, and the country is in trouble today.

Mr. MANKIEWICZ. Senator, you are the ranking Democrat, I believe, on the Foreign Relations Committee. That committee has now come out—brought out to the floor this national commitments resolution which says in effect that the Executive Branch cannot make a foreign policy commitment for the United States without the Legislative Branch—without the Senate participating. Do you see any connection between that and the sort of down-playing, for example, of the SEATO Treaty that seems to be going on? Secretary Rogers was out there and treated it rather perfunctorily and I believe some of the other representatives, too, and President Nixon wrote an article about SEATO some months before his candidacy, tending to feel that it was a little obsolete. Do you think that the commitments resolution will have the effect of weakening some of these regional treaties that date back to the fifties and before?

Senator MANSFIELD. Not at the moment. The purpose of the amendment is to strengthen the President's hand and to give the Senate a voice, and for the Executive

Branch and the Senate to work together so that there will be no more Vietnams. It is not applied to any particular President. It is applied to the office of the Presidency. As far as the Senate is concerned, we have allowed our constitutional powers to be eroded over the past four or five decades, and all we are asking is a chance to cooperate with the President so that we can develop, if possible, a better foreign policy. This takes no powers of the Presidency away from him. You mentioned SEATO. May I say, as the only remaining living signatory of that treaty, I never thought it was very good when it was signed in 1954; I don't think it is very good today because it is really a paper treaty with not much in the way of teeth.

Mr. HERMAN. Didn't—

Senator MANSFIELD. And I think it has been used maladroitly.

Mr. HERMAN. Didn't Secretary Rogers say, when he was out there, that if SEATO failed to act in an attack on any of the members of SEATO that the United States would be prepared to give assistance unilaterally?

Senator MANSFIELD. I don't know whether he said that, but the United States cannot do that because it has to act under its due constitutional processes. Speaking of the countries working together there, Great Britain, France and Pakistan, members of SEATO, have not done a thing to give it any life or to give it any strength.

Mr. MANKIEWICZ. Senator, do you expect to bring the commitments resolution to the floor soon in this session?

Senator MANSFIELD. Yes, about the 16th of June.

Mr. HERMAN. In the thirty seconds that we have left, Senator Mansfield, you mentioned the ABM vote, what is your reading? If it were to come up right soon, how would it go in the Senate?

Senator MANSFIELD. Right now it would be fifty-fifty, with perhaps a little bit in favor of those opposed to the ABM. When it comes up, if the administration applies the pressure which it has at its disposal, it could win by one, two or three votes, but the result could well be, on that basis, a pyrric victory. I hope a compromise can be worked out, because none of us want to embarrass the

President. None of us are against the ABM, as far as research and development is concerned, but we would like to have talks.

Mr. HERMAN. Senator, I have to cut in unilaterally and say thank you very much, Senator Mansfield, for being with us on "Face the Nation."

ADJOURNMENT

Mr. KENNEDY. Mr. President, if there be no further business to come before the Senate, I move, in accordance with the order previously entered, that the Senate stand in adjournment until 12 o'clock noon tomorrow.

The motion was agreed to; and (at 2 o'clock and 27 minutes p.m.) the Senate adjourned until tomorrow, Tuesday, May 27, 1969, at 12 meridian.

NOMINATIONS

Executive nominations received by the Senate May 26, 1969:

ASSISTANT SECRETARY OF THE ARMY

J. Ronald Fox, of Massachusetts, to be an Assistant Secretary of the Army.

U.S. ATTORNEY

Robert B. Krupansky, of Ohio, to be U.S. attorney for the northern district of Ohio for the term of 4 years, vice Merle M. McCurdy, resigned.

DEPARTMENT OF THE TREASURY

K. Martin Worthy, of Maryland, to be an Assistant General Counsel in the Department of the Treasury (Chief Counsel for the Internal Revenue Service).

CONFIRMATION

Executive nominations confirmed by the Senate May 26, 1969:

ATOMIC ENERGY COMMISSION

Theos J. Thompson, of Massachusetts, to be a member of the Atomic Energy Commission for the remainder of the term expiring June 30, 1971.

HOUSE OF REPRESENTATIVES—Monday, May 26, 1969

The House met at 12 o'clock noon.

Rabbi Howard A. Simon, Har Sinai Congregation, Baltimore, Md., offered the following prayer:

And the heaven of heavens shall not contain Thee.—I Kings 8: 27.

This is testimony to the Lord's greatness, and to the potential for excellence He placed within man. Today we stand in admiration of three men who have realized this potential. They are the voice of America, a land of limitless possibilities. They are inspiration for the source of national development, this very Government. Lead us, O God, to transfer the mastery over things technological to the field of human relations, where we need to create understanding and love. May the labors conducted within these hallowed Halls serve to unite all America in love for one's neighbor; in a trust in tomorrow; in a belief in these United States created as one nation devoted to liberty and justice for all. Amen.

THE JOURNAL

The Journal of the proceedings of Thursday, May 22, 1969, was read and approved.

MESSAGE FROM THE SENATE

A message from the Senate by Mr. Arrington, one of its clerks, announced that the Senate had passed without amendment a bill and concurrent resolutions of the House of the following titles:

H.R. 9328. An act to amend title 37, United States Code, to provide special pay to naval officers, qualified in submarines, who have the current technical qualification for duty in connection with supervision, operation, and maintenance of naval nuclear propulsion plants, who agree to remain in active submarine service for one period of 4 years beyond any other obligated active service, and for other purposes;

H. Con. Res. 35. Concurrent resolution authorizing the printing of additional copies of a Veterans' Benefits Calculator; and

H. Con. Res. 95. Concurrent resolution authorizing certain printing for the Committee on Veterans' Affairs.

The message also announced that the Senate had passed with amendments in which the concurrence of the House is requested, concurrent resolutions of the House of the following titles:

H. Con. Res. 162. Concurrent resolution authorizing the printing of the book, "Our American Government," as a House document; and

H. Con. Res. 192. Concurrent resolution to reprint brochure entitled "How Our Laws Are Made."

The message also announced that the Senate agrees to the amendments of the House to a joint resolution of the Senate of the following title:

S.J. Res. 99. Joint resolution to authorize the President to issue annually a proclamation designating the first week in June of each year as "Helen Keller Memorial Week."

The message also announced that the Senate had passed bills and a concurrent resolution of the following titles, in which the concurrence of the House is requested:

S. 126. An act to designate certain lands in the Pelican Island National Wildlife Refuge, Indian River County, Fla., as wilderness;

S. 574. An act to authorize the Secretary of the Interior to engage in feasibility investigations of certain water resource developments;

S. 1046. An act to protect consumers by providing a civil remedy for misrepresentation of the quality of articles composed in whole or in part of gold or silver, and for other purposes;

S. 1519. An act to establish a National

Commission on Libraries and Information Science, and for other purposes;

S. 1611. An act to amend Public Law 85-905 to provide for a National Center on Educational Media and Materials for the Handicapped, and for other purposes;

S. 1652. An act to designate certain lands in the Monomoy National Wildlife Refuge, Barnstable County, Mass., as wilderness; and

S. Con. Res. 21. Concurrent resolution to print additional copies of parts 1 and 2, thermal pollution, 1968 hearings.

The message also announced that the Vice President, pursuant to Public Law 84-372, appointed Mr. INOUE as a member of the Franklin D. Roosevelt Memorial Commission in lieu of Mr. TYDINGS, resigned.

RESIGNATION AS MEMBER OF THE HOUSE OF REPRESENTATIVES

The SPEAKER laid before the House the following communication:

The Honorable the SPEAKER,
U.S. House of Representatives,
Washington, D.C.

DEAR SIR: It is my duty to inform you that I have transmitted to the Governor of Illinois my resignation as a Representative in Congress from the 13th Congressional District of the State of Illinois, to be effective as of midnight, Sunday, May 25, 1969.

As you know, my resignation is caused by my having accepted the positions of an Assistant to the President and Director of the Office of Economic Opportunity.

I very much appreciate the privilege of having served with you and my colleagues in the House, and I thank you for your cooperation, fairness, assistance, and good will.

Respectfully,

DONALD RUMSFELD,
Representative in Congress.

RABBI HOWARD A. SIMON

(Mr. FRIEDEL asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. FRIEDEL. Mr. Speaker, from the very start of the settlements in the New World, as the American continent was then called, the people who came here declared their dependence upon Almighty God. Before this Congress was established by the present Constitution, the American Colonies established the Continental Congress and it is a matter of historical record that the Journal of that Congress, for September 6, 1774, carries an entry that a chaplain was in attendance and opened the session with a prayer. Thus from the earliest times to the present, every session of this great lawmaking body began with an invocation. I am pleased to note that the Rules of the House of Representatives, rule VII, so provide.

In conformity with this necessary requirement, and at my request, the Speaker of the House and the elected Chaplain invited a very brilliant and eloquent clergyman to deliver today's invocation. He is Rabbi Howard A. Simon of Baltimore, Md., associate rabbi of the Har Sinai Congregation—the oldest continually Reform Jewish Temple in the United States.

We were all inspired by the words of the dynamic young minister who has so eloquently referred to the three intrepid astronauts, who at that time were almost

back to earth after having been to within 9 miles of the moon. Such accomplishments make all of us feel exceedingly humble.

Believing that it may be of interest to know something about the inspired religious leader whom we were privileged to hear today, I mention but a few facts. Only 6 years ago, he was called to Baltimore's Har Sinai Temple, which incidentally is my congregation. During this short time, he has endeared himself, not only to his own congregation, but also to the people of the city of Baltimore and the State of Maryland through his many and varied activities, among which is his chairmanship of the Clergy for Community Understanding of the City of Baltimore which has done so much to create an atmosphere and climate of good will between the various segments of the population of the largest city south of the Mason and Dixon Line.

Because of Rabbi Simon's comparative youth coupled with wisdom far beyond his years, he has a special rapport with children. He is currently writing a book for teachers that will assist them in the instruction of young people who are enrolled in the religious schools of the country. He also has a deep compassion for the aged and infirm and serves with distinction on a committee of the aged of the Union of American Hebrew Congregations.

A man of deep religious faith, he works for the interest of Reform Judaism by being the treasurer of the mid-Atlantic council. I am proud to say Rabbi Simon is a patriotic American. He is married to the former Donna L. Nelson and is the father of three lovely children, David, Ilene, and Karen.

I am sure I voice the sentiments of my colleagues when I say it was good to have had Rabbi Simon lead us in prayer this day.

PERMISSION FOR COMMITTEE ON RULES TO FILE CERTAIN PRIVILEGED REPORTS

Mr. SISK. Mr. Speaker, on behalf of the Committee on Rules, I ask unanimous consent that the committee may have until midnight tonight to file certain privileged reports.

The SPEAKER. Is there objection to the request of the gentleman from California?

There was no objection.

THE MANPOWER ACT

(Mr. O'HARA asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. O'HARA. Mr. Speaker, I take this time to announce the introduction today of legislation known as the Manpower Act, which would revise and improve the existing manpower and training programs that are now federally assisted or federally sponsored, and would, in addition, provide two new components to a comprehensive manpower policy: a public service employment program, and an upgrading program to encourage upward mobility training by industry for those who are presently employed there.

There are, Mr. Speaker, 105 cosponsors of this legislation, and I hope that these bills will have prompt and careful consideration by the Congress. The intention of these bills is to insure that every man who is willing to work will have the opportunity for a decent job. I can think of no better investment we can make in the future of this Republic.

I ask unanimous consent, Mr. Speaker, for a special order at the conclusion of legislative business today during which I can discuss these bills at greater length.

UNIVERSITY OF MINNESOTA BAND CITED

(Mr. ZWACH asked and was given permission to address the House for 1 minute, to revise and extend his remarks, and include extraneous matter.)

Mr. ZWACH. Mr. Speaker, one of the most successful of our cultural programs with the Soviet Union has been the tour of the band from the University of Minnesota. The opening performance of this excellent group in Leningrad was an outstanding success. The great Philharmonic Society Hall was filled to capacity for this occasion, and the band was called back for six encores by the enthusiastic audience. Again and again throughout Russia they were most enthusiastically received by the respectful people.

It is my belief that this route of opening new relations and understanding could well be the route to produce a calmer world, conducive to the building of a lasting world peace.

Through this avenue of the excellent presentation of music, a new bond of appreciation and understanding of each other could well be the start of the atmosphere most necessary to the lessening of world tensions.

I highly commend this method and sincerely congratulate the members of the University of Minnesota Band in their role of peace-seeking ambassadors.

CONGRESSMAN DONALD RUMSFELD NEW DIRECTOR OF THE OFFICE OF ECONOMIC OPPORTUNITY

(Mr. PUCINSKI asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. PUCINSKI. Mr. Speaker, earlier today one of our colleagues, Congressman Donald Rumsfeld of the 13th Congressional District of Illinois, was sworn in as the new Director of the Office of Economic Opportunity. I am sure that I share with all of our colleagues here in the House a deep and sincere wish for good luck to him on this new and very difficult mission.

Congressman Rumsfeld is my congressional neighbor immediately to the north in the 13th Congressional District. I believe that he has taken on a most difficult task. There is no question that poverty continues to exist in this country. Hunger continues to exist. I applaud him for his courage in taking on this very difficult assignment, and as his neighbor, wish him Godspeed in the successful performance of his duties.

Mr. ARENDS. Mr. Speaker, will the gentleman yield?

Mr. PUCINSKI. I yield to our colleague from Illinois (Mr. ARENDS).

Mr. ARENDS. I appreciate what the gentleman has said about our former outstanding colleague, Congressman Rumsfeld, being appointed to the high position as head of OEO. This position entails a lot of headaches and is a difficult assignment in view of all of us. May I add I am convinced that Don Rumsfeld will perform outstanding service to his country in the important job on which he has embarked, and with cooperation from us "on the hill," perhaps his load can be lightened to some extent. We know he will do an outstanding job and we wish him well.

Mr. PUCINSKI. I am sure that those of us on the Education and Labor Committee, which has jurisdiction over the poverty program, will be looking forward with anticipation to his suggestions for improving the programs he will administer.

I congratulate the chairman of our full committee, the gentleman from Kentucky (Mr. PERKINS), for delaying further consideration of the poverty program in order to give Mr. Rumsfeld an opportunity to appear before the committee and formulate some of the administration's policies. His is a most difficult task and I wish him luck in this new chapter in his public career. I think he will need every bit of his skill and luck to get this seemingly impossible job completed.

THE SS "HOPE"

(Mr. HALL asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. HALL. Mr. Speaker, in 1958, President Dwight Eisenhower asked Dr. William B. Walsh, a Washington, D.C., heart specialist, to consider initiation of a non-governmental health program, aimed at the people in the newly developing nations. From this suggestion came Project HOPE, and the People to People Health Foundation.

This foundation, through contributions of interested citizens from all over the Nation, grew until it was able to finance the purchase of a mothballed U.S. Navy ship, which in turn became a floating hospital, completely equipped with the latest equipment medical science could offer and staffed with a permanent contingent of 135 U.S. medical specialists, supplemented during the course of its voyage by 150 volunteer physicians and dentists.

For the past 10 months, port of call for the SS *Hope* has been Ceylon. There, its staff has conducted a comprehensive medical teaching and training program. More than 1,700 patients were treated aboard ship, with another 3,000 given care in the ship's dental department. Some 70,000 children received immunization against diphtheria, whooping cough, and tetanus.

At the request of the Ceylonese medical authorities, *Hope* left behind a continuing program to assist in that nation's dentistry and hospital planning.

The day before the ship left Ceylon to return to Philadelphia, more than 20,000

people came to the dock to bid the ship and crew farewell.

Project HOPE, with almost a decade of experience abroad, has added a new dimension to medical teaching programs. It presents an opportunity for an honest exchange of ideas and a definite understanding, through the study of common medical problems, that bring people closer together regardless of their strange and varied backgrounds. Project HOPE, in the finest traditions of America, is helping people to help themselves.

President Eisenhower said:

I firmly believe Project HOPE is the single most effective step in presenting America as a warm and good friend.

CALL OF THE HOUSE

Mr. GROSS. Mr. Speaker, I make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

Mr. BOGGS. Mr. Speaker, I move a call of the House.

A call of the House was ordered.

The Clerk called the roll and the following Members failed to answer to their names:

[Roll No. 61]

Adair	Dickinson	Monagan
Adams	Diggs	Morton
Addabbo	Dowdy	O'Neal, Ga.
Albert	Duiski	Ottenger
Anderson, Calif.	Dwyer	Pepper
Ashbrook	Edwards, La.	Podell
Ashley	Erlenborn	Pollock
Ayres	Evins, Tenn.	Powell
Baring	Fallon	Price, Tex.
Bates	Feighan	Pryor, Ark.
Beall, Md.	Fish	Randall
Bell, Calif.	Fisher	Rees
Berry	Ford	Reifel
Biaggi	William D.	Rivers
Bingham	Foreman	Ronan
Blackburn	Gallagher	Rooney, N.Y.
Blatnik	Gettys	Rosenthal
Bow	Gialmo	Roudebush
Brock	Goldwater	Royal
Brown, Calif.	Green, Oreg.	St. Onge
Burleson, Tex.	Halpern	Sandman
Cahill	Hanley	Scherle
Carey	Hébert	Scheuer
Carter	Heckler, Mass.	Scott
Cederberg	Helstoski	Shriver
Celler	Hunt	Smith, N.Y.
Chisholm	Jacobs	Stafford
Clark	Kirwan	Staggers
Clausen,	Kluczynski	Stanton
Don H.	Koch	Stephens
Clawson, Del.	Kyl	Stratton
Collier	Landrum	Symington
Colmer	Latta	Teague, Tex.
Conyers	Long, La.	Thompson, Ga.
Corbett	Lowenstein	Watts
Corman	McCarthy	Whalley
Coughlin	McClure	Wiggins
Cowger	Macdonald,	Wilson, Bob
Davis, Ga.	Mass.	Wilson,
Dawson	Mann	Charles H.
de la Garza	Marsh	Wold
Dellenback	Martin	Wyman
Dent	Miller, Calif.	Young
	Mollohan	

The SPEAKER. On this rollcall, 306 Members have answered to their names, a quorum.

By unanimous consent, further proceedings under the call were dispensed with.

ALBERT FUENTES

(Mr. GONZALEZ asked and was given permission to address the House for 1 minute.)

Mr. GONZALEZ. Mr. Speaker, for several days I have been importuning the House of Representatives and calling at-

tention to a malodorous situation that arose in the Small Business Administration in my congressional district.

As a result, one of the men involved, Albert Fuentes, who on March 3 was appointed special assistant to the Administrator of the Small Business Administration called me a liar about 9 days ago. This morning he was indicted with another person by the Federal grand jury in San Antonio.

Mr. Speaker, I will continue to address this House about some of the activities that have yet to be brought to light in conjunction with this man's activities as special assistant to the Administrator of the Small Business Administration, not the least of which has been another involvement in a swindling deal with another man with whom he took an assumed-name corporation, who has been indicted by the Bexar County grand jury. The Bexar County grand jury on top of the Federal grand jury is also looking into this matter.

DEPARTMENT OF AGRICULTURE AND RELATED AGENCIES APPROPRIATION BILL 1970

Mr. WHITTEN. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 11612) making appropriations for the Department of Agriculture and related agencies for the fiscal year ending June 30, 1970, and for other purposes; and pending that motion I ask unanimous consent that general debate on the bill be limited to not to exceed 3 hours, 1½ hours to be controlled by the gentleman from Minnesota (Mr. LANGEN) and 1½ hours by myself.

The SPEAKER. For what purpose does the gentleman from Illinois rise?

Mr. FINDLEY. Mr. Speaker, I make a point of order against consideration of H.R. 11612 until tomorrow noon, and I would like to be heard on the point of order.

The SPEAKER. The gentleman will state his point of order.

Mr. FINDLEY. My point of order is that taking up the bill at this time is a violation of rule XXI, section 6, which reads as follows:

No general appropriation bill shall be considered in the House until printed committee hearings and a committee report thereon have been available for the Members of the House for at least 3 calendar days.

I would like to state to the Chair that Friday afternoon of this past week, which was less than 3 full calendar days from this hour, I called at the office of the Appropriations Committee and asked for a copy of the appropriation bill and the accompanying committee report. I was given a document, which I am glad to present to the Chair, which carries the label "Committee Print," but has no report number and refers to no bill by number. I asked the committee if this was the only document available. I said I wanted a report which had a report number printed on it and which referred to a particular bill. I was informed by the chief clerk of the Appropriations Committee that such document would not be avail-

able until the next morning, that is Saturday morning. Inasmuch as section 6 of rule XXI explicitly says "at least 3 calendar days," I think it is only reasonable to assume from that the 3 days means three 24-hour periods, and three 24-hour periods have not yet elapsed since the committee report bearing the report number was made available to the Members of the House.

The SPEAKER. Does the gentleman from Mississippi wish to be heard?

Mr. WHITTEN. Mr. Speaker, may I say for the RECORD that we had until midnight Friday night to file the report and bill for printing. The bill and report were made available to every Member and the general public on Friday, May 23, and this is Monday, May 26. Three calendar days have elapsed since they were reported, which conforms to the rule.

The committee hearings were printed in five volumes: They became available April 7, April 26, May 7, May 19, and May 23. So the fact is that the 3-calendar-day rule has been carried out in all respects.

Mr. FINDLEY. Mr. Speaker, as a point of clarification, may I state that I called at the Appropriations Committee at 2:30 p.m. last Friday and was informed by the clerk that not until the next morning could I secure a report with a number printed on it.

The SPEAKER. The gentleman from Illinois (Mr. FINDLEY) makes a point of order against the consideration of the bill (H.R. 11612) making appropriations for the fiscal year ending June 30, 1970, and for other purposes, on the ground that printed committee hearings and the committee report on the bill have not been available for 3 calendar days as required by clause 6, rule XXI. It has been the uniform practice of the House in determining the expiration of a required number of days to include in such computation either the initial or terminal day, but not both. The chair has ascertained that the report on the bill was filed on Friday last, pursuant to the unanimous-consent agreement of Thursday, May 22, and that all five parts of the printed committee hearings on the bill were available for inspection by Members by Friday last. Thus, by counting either Friday last, the day the report was filed and all hearings were available, or today, the day of consideration of the bill, as well as Saturday and Sunday last, the 3-calendar-day requirement of clause 6, rule XXI has been complied with by the Committee on Appropriations. The Chair therefore overrules the point of order.

Is there objection to the request of the gentleman from Mississippi?

There was no objection.

The SPEAKER. The question is on the motion offered by the gentleman from Mississippi.

The motion was agreed to.

IN THE COMMITTEE OF THE WHOLE

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the consid-

eration of the bill H.R. 11612, with Mr. WRIGHT in the chair.

The Clerk read the title of the bill.

By unanimous consent, the first reading of the bill was dispensed with.

The CHAIRMAN. Under the unanimous consent agreement, the gentleman from Mississippi (Mr. WHITTEN) will be recognized for 1½ hours, and the gentleman from Minnesota (Mr. LANGEN) will be recognized for 1½ hours.

Mr. CONTE. Mr. Chairman, I make the point of order that a quorum is not present.

The CHAIRMAN. The Chair will count. One hundred Members are present, a quorum.

The gentleman from Mississippi (Mr. WHITTEN) is recognized.

Mr. WHITTEN. Mr. Chairman, I yield myself such time as I may require.

Mr. Chairman, it is with real pride that I present this appropriation bill to the House floor for perhaps the 17th or 18th time. When I began to handle this bill as chairman of this subcommittee, my knowledge of agriculture had come largely from study, in that I left the farm at an early age. Through the years I have enjoyed presenting this to the House of Representatives.

As a result of improvements through the years, a few provide so much for the rest of us, but those few do not get the same degree of attention as well they might. This is very well expressed in our report.

If the United States of America were a primitive, isolated village of 20 persons, and if one of those 20 produced all of the food—and much of the fiber for clothing—consumed by the other 19, that one man would be hailed by his fellows as the preeminent contributor to the commonweal. For they would see clearly—in these simple circumstances—that they depended on this single individual for the most basic necessities of life itself.

This great Nation is not, of course, a primitive village—far from it. Yet one American on the farm does, in fact, produce nearly all of the food and fiber consumed by 19 of his fellow citizens.

Not only is this fact little understood today by the 94.4 percent of our people who live in cities and towns, but the whole vast scope of our amazingly productive agricultural economy is a foreign subject to tens of millions of our citizens.

Many of our children undoubtedly think milk originates in cartons;

They may believe that meat and poultry begin their trip to market wrapped in plastic;

They are probably not aware that a woolen suit or cotton shirt did not just grow that way.

These children's parents would not make these mistakes, of course, but they, too, are likely to be unaware of conditions on the farm today, and of the fact that agriculture is still the very cornerstone of our modern way of life.

It has been pointed out in many previous reports of this committee that the economic welfare of the Nation's economy is dependent on the economic strength of each segment thereof. Time

has proved that labor and industry can be prosperous only to the extent that the agricultural economy is strong and healthy.

Agriculture is the principal source of new wealth. It is the main provider of basic raw materials which support all segments of business and industry. Reliable estimates indicate that each dollar of wealth taken from the soil generates \$7 of income throughout the rest of the economy.

Agriculture is our largest industry. Its assets exceed those of any of the next 10 largest industries. It employs more workers than any other major industry. It employs seven times the number of people in the mining industry, 23 times the number in the oil and coal industry, and five times the number in the automobile industry. In addition, it supports directly another 10 percent of our non-farm population which supplies the farmer with his needs and processes and markets his products.

Agriculture is one of the major markets for the products of labor and industry. It spends more for equipment than any of the other large industries. Agriculture uses more steel in a year than is used for a year's output of passenger cars. It uses more petroleum products than any other industry in the country. It uses more rubber each year than is required to produce tires for 6 million automobiles. Its inventory of machinery and equipment exceeds the assets of the steel industry and is five times that of the automobile industry.

But over the years, in spite of Government farm programs, industry and labor's share of the consumer's food dollar has risen substantially. Compared with 1950, retail food prices were up almost 40 percent by 1968. But during that same period, prices received by farmers, while fluctuating from year to year, remained unchanged in the aggregate.

In 1950, the farmer's share of the retail food dollar was 47 cents. By 1968, it was down to 39 cents. Taking several specific examples:

The farmer receives only 3.3 cents of the retail cost of a loaf of bread, which averaged 22.4 cents in 1968.

In the same year, he received only 23 cents of the \$4.60 retail price of a cotton business shirt.

The farmer's component of the 87-cent-per-pound average retail price of beef was only 52 cents per pound.

One of the important contributions of American agriculture to the national economy has been its contribution to our balance of payments abroad.

Total agricultural exports increased from \$4.5 billion in 1960 to \$6.3 billion in 1968. Exports for dollars rose from \$3.2 billion to \$4.7 billion during this period. During the calendar year 1967, agricultural exports for dollars exceeded agricultural imports by \$585 million. This more than offset the trade deficit for commercial trade of \$400 million in 1967.

From 1961 through 1968, agricultural exports contributed over \$32 billion to our balance of payments. Even though only about 22 percent of total exports are agricultural commodities, they account

for over 50 percent of our favorable trade balance.

The efficiency and productivity of U.S. agriculture has made this country the world's largest exporter of food to the many nations of the world. In recent years the export of U.S. agricultural commodities has increased to the point where production from one out of each four acres is sold abroad. In addition to supplying much needed foreign exchange, this has contributed to the domestic economy by providing about 1 million jobs in the agribusiness fields.

American agriculture continues to make a major contribution to the national welfare through the production of bountiful supplies of high quality and low-cost foods for the Nation's consumers. Food is one of today's best bargains.

This is apparent at the supermarkets, where city consumers can choose from thousands of safe, wholesome, and delicious foods—products of the farms of our 50 States. Using only 17 percent of their income, American consumers can select foods with a knowledge of nutrition and balanced diets that makes this a Nation of healthy and well-fed people. Many people in the world spend half or more of their available income on food. In underdeveloped areas people spend most of their time grubbing a living from the earth.

In 1929, 23.4 percent of consumer income in the United States went for food. This decreased to 22.2 percent in 1950,

20 percent in 1960, and 17 percent last year. This steady decrease has occurred despite the increasing portion of food costs which go for marketing and related services. If the 1960 level of 20 percent had continued through 1968, U.S. consumers would have had \$18 billion less to spend for the products of industry and labor.

HUNGER AND MALNUTRITION IN AMERICA

Few subjects have attracted as much publicity and created as much public outcry in recent months as the alleged existence of hunger and malnutrition in America. No one—least of all the members of this committee—would wish even one of our fellow citizens this misfortune of going to bed hungry.

Last year, this committee recommended and the Congress approved total funds of approximately \$1.2 billion for the various food distribution programs of the Department of Agriculture. Appropriations recommended by the committee in the current bill, plus amounts available from section 32 funds, will provide a total of nearly \$1.5 billion for the operation of these programs in fiscal year 1970.

Through the years, real progress has been made in improving public health and extending life expectancy in this country. The food distribution programs for which funds are carried in this bill have made a real contribution to this progress. The following figures indicate the story:

TOTAL DEATHS REPORTED IN THE UNITED STATES FROM SEVERAL NUTRITIONAL CAUSES

	1966	1956	1949	1945	1940	1935
Beriberi.....	14	25	47	46	63	7
Pellagra.....	21	70	321	914	2,123	3,543
Scurvy.....	0	7	22	18	26	30
Active rickets.....	3	6	65	93	161	261
Malnutrition: General or multiple deficiencies ¹	150	588	799			

¹ Changes in the system of reporting deaths have altered the reporting of nutritional diseases from time to time.

RELATIVE LIFE EXPECTANCY IN THE UNITED STATES, MALES AND FEMALES, 1900-66 (in years)

Year of life	1966		1949-51		1929-31		1900-1902	
	Male	Female	Male	Female	Male	Female	Male	Female
1.....	65.3	71.9	64.2	68.6	56.6	58.6	48.5	50.0
50.....	22.0	26.8	21.5	24.7	21.0	21.0	19.1	20.3
70.....	10.7	13.1	10.5	12.0	9.0	10.2	8.7	9.6

It is this committee which has initiated and supported additional efforts to seek out and to care for especially needy cases of malnutrition and hunger. In 1967, the chairman of this subcommittee recommended and the Congress approved the following provision:

CONFERENCE REPORT NO. 746 ON DEPARTMENT OF AGRICULTURE APPROPRIATION BILL, FISCAL YEAR 1968

Amendment No. 37: Food stamp program.—The managers on the part of the House intend to offer a motion which will provide \$185 million for this program, \$23,200,000 from prior year balances and \$161,800,000 by direct appropriation. Of the amount provided, \$5 million may be used in needy areas in this program where it may be required to meet problems resulting from the need for special considerations for extremely low-income families.

In 1968, he recommended and the Congress increased the appropriation by \$50,000,000 and passed the following provision:

1969 APPROPRIATION BILL (H.R. 16913—PUBLIC LAW 90-463) FOR DEPARTMENT OF AGRICULTURE

* * * and (4) not more than \$45 million (including not to exceed \$1 million for State administrative expenses) for (a) child feeding programs and nutritional programs

FOOD DISTRIBUTION PROGRAMS—COMPARISON OF BUDGET ESTIMATES AND APPROPRIATIONS [INCLUDES SPECIAL MILK, SCHOOL LUNCH, FOOD STAMP, AND DIRECT DISTRIBUTION PROGRAMS]

Fiscal year	Budget	Appropriation	Difference
1969.....	\$1,114,468,000	\$1,128,499,000	+\$14,031,000
1968.....	945,535,000	939,625,000	—5,910,000
1967.....	600,600,000	701,455,000	+100,855,000
1966.....	669,900,000	672,900,000	+3,000,000
Grand total, 4 years.....	3,330,503,000	3,442,479,000	+111,976,000

authorized by law in the School Lunch Act and the Child Nutrition Act, as amended; and (b) additional direct distribution or other programs, without regard to whether such area is under the food stamp program or a system of direct distribution, to provide, in the immediate vicinity of their place of permanent residence, either directly or through a State or local welfare agency, an adequate diet to other needy children and low-income persons determined by the Secretary of Agriculture to be suffering, through no fault of their own, from general and continued hunger resulting from insufficient food: *Provided*, That in making such determinations, the Secretary shall take into consideration the age; income; location and income of parents, if a minor; and employability.

It is this latter provision of law which has authorized the Secretary of Agriculture to provide free and reduced-price food stamps in several States recently.

This committee has long been active in trying to help with nutritional education. Back in 1950, the committee was responsible for an appropriation to prepare and issue one of the first bulletins on the subject of human nutrition, "Family Fare."

It had come to the committee's attention that 36 percent of the young men being called into the draft in World War II had defects which could be attributed to faulty nutrition. So the committee recommended and the Congress agreed to redirect funds which had theretofore been used for a bulletin on keeping livestock healthy to the development of a book on human nutrition.

The debate in the House on this subject can be found in the CONGRESSIONAL RECORD of April 27, 1950, pages 5925 to 5927.

This pamphlet now is the No. 1 bulletin of the Department of Agriculture. Testimony before the committee shows that about 12 million copies have been sent out over the United States. According to the Director of Information of the Department of Agriculture, it has been the most popular bulletin nearly every year since 1950.

TOTAL SPENDING FOR FOOD ASSISTANCE PROGRAMS

The total food distribution expenditures by the U.S. Department of Agriculture during fiscal year 1969 will exceed \$1.2 billion. Since 1960, total funds for combating rural poverty and pushing rural development have increased nearly threefold to \$2.3 billion.

This committee has no authority or desire to relieve parents of the legal obligation to provide for their children. However, this committee and the Congress have generally provided more money than requested in the budget for food distribution purposes, as indicated by the following figures, for the past 4 years:

The amounts included in the bill and financial plans for 1970 for food assistance programs, together with funds for the current year, are shown in the following table:

FOOD ASSISTANCE PROGRAMS
[In thousands]

	Fiscal year 1969, estimated	1970 bill
A. Child feeding programs:		
1. Cash grants to States:		
(a) School lunch (sec. 4)	\$162,041	\$168,041
(b) Special assistance (sec. 11)	10,000	44,800
(c) School breakfast	3,500	10,000
(d) Nonfood assistance	750	10,000
(e) State administrative	750	750
(f) Nonschool food program	5,750	10,000
(g) Special milk	103,314	750
(h) Special sec. 32	43,941	89,000
Total, cash to States	330,046	332,591
2. Commodities to States:		
School lunch (sec. 6)	64,325	64,325
Sec. 32 ¹	80,500	90,411
Sec. 416	144,872	146,838
Total, commodities	289,697	301,574
3. Federal operating expenses:		
School lunch	2,161	3,100
Nonschool feeding	500	750
Special milk	681	
Total operating expenses	3,342	3,850
Total, child feeding	623,085	638,015
B. Family feeding programs:		
1. Food stamp program	279,908	340,000
2. Direct distrib. to families (reg. program):		
(a) Sec. 32 ¹	142,141	225,028
(b) Sec. 416	116,539	140,000
Total, DD to families	258,680	365,028
3. Nutritional supplement (special packages):		
(a) Special sec. 32—Food stamp areas	1,000	11,000
(b) Sec. 32 ¹	7,318	22,000
(c) Sec. 416	500	1,500
Total, special packages	8,817	34,500
Total, family feeding	547,405	739,528
C. Direct distribution to institutions:		
1. Sec. 32 ¹	1,967	3,800
2. Sec. 416	43,000	29,000
3. VA, Armed Forces, penal	17,875	21,000
Total, DD to institutions	62,842	53,800
D. Nutrition aide program		
	10,000	30,000
Total, food assistance program	1,243,332	1,461,343

¹ Includes related administrative expense.

EXTENT OF MALNUTRITION AND HUNGER

Today's publicists of the malnutrition problem are claiming that countless millions of our fellow Americans are hungry. It is clear that the facts about the extent of malnutrition must be ascertained before effective action can be taken to meet the problem. Certainly the search for facts should not be interpreted as a failure to understand or sympathize with the plight of the undernourished among us. Further still, the search for facts has not delayed action by Congress on the recommendation of this committee. For many years, this committee has tried its best to determine the facts regarding the true extent of hunger and malnutrition in the country and to act on them. The record set forth heretofore provides ample evidence of this.

A great many books and pamphlets—including one called "Hunger, USA"—have been given wide distribution recently. In addition, on May 21, 1968, and again on June 16, 1968, the Columbia Broadcasting System—CBS—presented a television program "Hunger in America" which was viewed by millions

of people. The assertions made in these books and on that program were shocking to all of us.

This committee, after providing the foregoing funds and authority, then set about to determine the facts on which the books and program were based, in order to find a way to seek out and provide for alleviating the suffering of the unfortunate individuals portrayed therein. The committee's professional surveys and investigations staff conducted a lengthy inquiry into these matters. These trained professionals conduct their studies on a completely independent and unbiased basis. After this investigation was ordered, the members of the committee had no further influence on the conduct of it, or the results and data contained in the staff's final report.

This special report has been received, and has been published in full in part V of the hearings on this bill. The facts presented are, in their way, as shocking as the allegations in the books and programs which preceded the report. It appears that many of the incidents de-

scribed or photographed were staged, as though for a Hollywood production.

Our country's press and other news media are free—they have been throughout our history, and always should be, but somehow we must make them responsible. The first amendment to our Constitution provides that Congress shall make no law abridging the freedom of the press—and this wise declaration by our founding fathers has stood the test of time for nearly two centuries—though at times, it seems some take this provision to be a license to say anything—whether true or not.

But rights carry responsibilities with them. A responsible press—newspaper, magazine, radio, or television—should have as its first guiding principle a duty to inform its readers or viewers fairly, objectively, and truthfully. Does not the public have a right to expect that this will be done?

The Nation's best interests are simply not well served when appeals to emotions are substituted for reasoned calls for responsible action.

MALNUTRITION A COMPLEX PROBLEM

As noted above, this committee and the Congress have been attempting to eradicate malnutrition in America for many years. And there can be no doubt that the Federal programs and funds provided—amounting to nearly \$1.5 billion for fiscal year 1970 alone—have done and will continue to do a great deal of good in meeting this problem. Yet malnutrition persists, at least in some instances.

There is no single answer to the problem, because malnutrition may have many different causes. The final elimination of hunger from America will require that—in the last analysis—the circumstances of individual hungry people must be examined. For example:

If the real problem in some cases is that the food stamp office is too distant from home—and local transportation is inadequate—then a car pool run by a local service organization would do more to solve the problem than a new Federal program;

If food is available, but certain individuals do not know how to prepare it properly, then education, not more food, is the answer;

If certain people, through habit and custom, are eating the foods their mothers prepared for them when they were children—and these foods are not sufficient to provide an adequate nutritional diet—then education again is the answer.

If certain children receive their only good meal of the day at school because their parents are deliberately not caring for them properly—and there are such cases—then the laws of each of the 50 States, which make it a criminal offense to neglect one's children, should come into play.

And if wealthy teenagers are subsisting on soft drinks and hamburgers, some parental leadership is all that is indicated.

These examples do not exhaust the subject. Many others could be cited. But the point is clear: malnutrition is a complex problem, with no single solution. If more Federal assistance is required to

solve a part of the problem, then it should be provided. But it cannot do the job alone.

There is no lack of research findings on proper nutrition. And there is no lack of written materials describing good nutritional practices in easily understood terms. As pointed out earlier in this report, about 12 million copies of a single Department of Agriculture bulletin, "Family Fare"—which the committee initiated nearly 20 years ago—have been distributed to families throughout this Nation and are available to others who need them. And there are many other bulletins on this subject.

But despite these efforts—and despite the appropriation of billions of dollars over the years for food assistance programs—it is clear that, in some cases, the message is just not getting across.

The purveyors of easy answers should bear in mind two fundamental truths:

First, massive new Federal programs and large additional appropriations will be good only to the degree they are directed to the real problem areas.

Second, American family life must be preserved. If all needy children were to be fed in institutions—as some have suggested—they would not be hungry. But what would this do to the fabric of family life, and the traditions inherited by our future generations?

Our pioneer forebears believed in being their brothers' keeper. It took a strong back of many men to raise high the roof beam of each frontier cabin. From our earliest days down to the present time, Americans have believed in providing for those—the children, the elderly, the sick, the disabled—who could not provide for themselves.

But the true greatness of America has also sprung from the sweat of the brow of countless millions in the last two centuries. The continent was not spanned, and our great cities were not built, by men who stood aside and waited for others to do the work.

All of us share in the responsibility to extend a helping hand to those among us who are hungry and in need. We must provide the funds and other means necessary to do this. We must not, however—through Federal programs—encourage our people to forsake their traditions of independence and self-reliance. Further, we must be certain that Federal funds for these purposes will provide the maximum benefits to those in real need.

THE FOUNDATION OF OUR FOOD SUPPLY

All of the controversy about hunger and malnutrition today has taken for granted the availability in the United States of a plentiful supply of nutritious food. We, in fact, have such a supply—the most abundant the world has ever seen. But we must not forget that the continued availability of these ample food supplies is not automatic. Future supplies to feed the rapidly growing population of this Nation and the world, including the hungry and the undernourished, will be determined by the economic viability of our agricultural producers, and the continued productivity of our soil and water resources.

Regardless of all else, it is an irrefutable fact that our bountiful food supply

can continue only so long as the income to farmers and ranchers is sufficient to keep them productive and efficient—in fact, to keep them in business. Our current programs of price supports, low-cost loans, research, and regulatory activities are directed toward this end. These basic programs benefit all of us—the poor and the hungry as well as the better off—equally as much as the farm producer upon whom they must depend for their basic necessities of life.

Further, the needy and the hungry—as well as all Americans—cannot long be fed unless our basic soil and water resources are preserved. The future welfare of all our people regardless of income or station in life is entirely dependent on the preservation of the basis for continued food production.

William Jennings Bryan is reputed to have once said:

Burn down your cities and they will arise again as if by magic. But destroy our farms and the grass will grow on the streets of every city in the land.

NEED TO CONSERVE OUR FOOD PRODUCTION CAPACITY

Three-fourths of our land area is in private ownership and 60 percent is in farms and ranches. Therefore, our farmers and ranchers are the principal managers of the Nation's soil and water resources for all the people. If this Nation is to survive and prosper, we must continue to assist these custodians of our natural resources to reforest our lands, protect our watersheds, harness our streams for electricity, and conserve soil and water.

If we leave to future generations a fertile land, this country will be able to meet its future domestic problems, international threats, and financial needs. Money alone is of no value. It must be supported by natural resources adequate to generate new wealth for future generations.

In our private lives, we all can live prosperously for a short time if we cash in all our insurance, use all our savings, and mortgage our assets. As a Nation, we can do the same if we are willing to "cash in" on our land, leaving to our children what is left—like previous generations have done in India, China, and the rest of the world we help to feed and clothe today.

It is considered good financial practice for a successful industrial concern to invest a portion of its income in the maintenance and preservation of its basic productive plant. It is equally important that our Nation invest a portion of its wealth in the protection of our food production capacity and its preservation for future generations.

SOIL AND WATER CONSERVATION

Remarkable progress has been made in soil and water conservation in the United States in the last 25 years. The major part of the soil conservation job still lies ahead, however. The United States continues to suffer heavy soil erosion losses. Some 120 million acres are endangered seriously, and only about a third of our land is safeguarded adequately. More than half the estimated \$1.2 billion average annual flood water and sediment damage in the United States occurs on

the headwater streams and small tributaries. And sediment causes costly damage to the Nation's 10,000 major water storage reservoirs. The amount of erosion-produced sediment dredged annually from our rivers and harbors exceeds the volume of earth dug for the Panama Canal.

Increased farm production resulting from tremendous advances in science and technology tends to obscure the fact that, to meet food and fiber needs of a few years hence, this country will need the production equivalent of around 200 million more acres, based on current yields. Since we do not have additional acres of cropland available in the United States, this production must come largely from increased yields on existing cropland. This is in the face of continuing annual losses of some 400,000 acres of cropland because of erosion, and three times that amount each year through conversion of good farming land to urban and industrial uses.

Nearly one-fourth of the people of the Nation face problems of water shortage, poor water, or both. The rate of water use predicted for 1980 is nearly twice what it was in 1955. In some areas of this country we are already finding that expansion of population and industry is limited by the lack of adequate sources of water.

An official of the Department recently described one of the Nation's major problems of water conservation as follows:

The Nation is concerned about its water problems but it seems that very few people are aware that 70 percent of the Nation's water budget that comes as rain or snow is lost by evapotranspiration from vegetated lands. Only 30 percent of our water budget becomes massed flow into streams and reservoirs.

For example, during the average growing season in New York State a half million gallons of water will evaporate from an acre of potatoes, regardless of the kind of crop produced, since the evaporation is largely determined by solar radiation. The farmer who produces 500 bushels of potatoes per acre is producing 1 bushel of potatoes for every thousand gallons of water evaporated. If his yield is only 50 bushels of potatoes per acre, he will use 10,000 gallons of water for each bushel of potatoes produced.

Today's 200 million Americans are figuratively and literally "abusing the privilege" where the use and handling of water is concerned. Our lake and rivers have become catch basins for the residues of our factories, automobiles, household and agricultural chemicals, for human wastes from thousands of villages, towns, and cities. How well we clean up this situation and learn to handle it without restricting man's means of providing our high standard of living may well determine the future of our Nation.

As we approach this problem, we must keep in mind that the power to control water quality or quantity is not only the power to make or break business but is a power over the life of the Nation itself. We must also keep in mind that agriculture's claims and responsibilities for the use of water are second to none, for agriculture provides our food, clothing and shelter, the basic necessities for life.

In addition, agriculture has a great

responsibility in the use of water, for land is the great gathering place and reservoir for storage of water. Just a few years in the future we will need three times the water we use today, all of which points up the need to protect and manage the quality and quantity of our water supply.

Yet, in the face of all of these facts, the 1970 budget recommends severe cutbacks in the watershed programs of the Soil Conservation Service and the agricultural conservation program, which have as their sole purpose the preservation of our soil and water for future generations of Americans. The specific reductions will be discussed in more detail later in this report.

THE ORIGIN OF OUR PRESENT FARM PROBLEMS

Throughout history there has been a major war nearly every generation, and an economic or financial depression has occurred with about the same regularity. Many believe that the reason is that each new generation fails to recognize the lessons learned by the one which preceded it.

This Nation seems to be in somewhat the same situation with regard to agriculture today.

The seeds of the great depression of the 1930's were sown in the agricultural depression of the 1920's which followed the First World War. The failure to maintain farm exports or to support farm prices during this period, and thus to maintain farmers' purchasing power, weakened banking and business throughout the country. Yet, people frequently fail to remember the lessons of the terrible financial crises of the 1920's and 1930's. It was graphically illustrated in 1921, in 1929, and again in 1937 that, if the farmer's prices and purchasing power collapse, the whole economy suffers both in the cities and in rural areas.

Let us briefly review the history of farm prices in the late twenties and the thirties, when a drop in the purchasing power of those engaged in agriculture not only wrecked farming but dragged down the economy of the whole Nation.

After the First World War ended, the Government announced that it would no longer support the price of wheat. Wheat which had brought \$2.94 a bushel in Minneapolis in July 1920, brought \$1.72 in December 1920, and 92 cents a year later. Agricultural prices in general collapsed. Cotton fell to a third of its July 1920 price and corn by 62 percent. The "Yearbook of Agriculture" of 1922 shows that the total value of agricultural products dropped from \$18,328,000,000 in 1920 to \$12,402,000,000 in 1921. As a result of the agricultural crash of 1920-21, 453,000 farmers lost their farms. Many others remained in serious financial trouble which, in turn, was reflected by failures of local banks.

Average wheat prices for the years 1924-27 stayed in a range between \$1.19 and \$1.44 a bushel as compared to a parity price of approximately \$1.40 for that period. Corn prices in these same years varied between 70 cents a bushel and \$1.06 a bushel versus a parity price of about \$1. Cotton prices were 12.5 cents a pound in 1926 but averaged 20.7 cents for the other years, compared to a parity price of 19.1 cents. In 1928 these prices

were: wheat, \$1; cotton, 18 cents; and corn, 84 cents. By 1931 wheat was 38 cents; cotton, 5.5 cents; and corn, 32 cents—roughly one-third of the pre-1928 price levels. Starting in August of 1929, wheat prices for the dominant futures on the Chicago Board of Trade fell from \$1.43 average price to 76 cents in November of 1930, a drop of over 50 percent in 15 months. The Dow Jones stock price averages followed by declining from a high of 381.2 in September to a low of 41.2 in July of 1932. The decline of the price of wheat on the commodity exchanges was particularly significant since there were nearly \$250 million of open contracts in October 1929, almost 2½ times the number of contracts in normal years. A great many of these speculators were ruined.

It has been said there were more suicides during this period among those that did not know what a farm was as a result of the breakdown in farm or commodity prices—which had led to a fall in prices and values throughout the economy—than in any other period in our history.

It was a sad way to learn it, but people at that time came to realize that real wealth starts with material things—corn, wheat, cotton, food crops of all kinds, and other raw materials—and that the general economy was primed by the sale of raw materials since, in general, the total national wealth averages some seven times the sales value of the farm or raw material production.

The people of the United States should have learned several important lessons from these experiences of the twenties and thirties.

First, when farmers cannot get a fair return for their products, the land suffers. The price of producing food, clothing, and shelter must be paid, either by a fair price from those who consume them or by further depletion of the land from which they come. Congress, reacting to the terrible depletion of our soil and water resources because of the poor financial position of many farmers, passed the Soil Conservation and Domestic Allotment Act of 1936. Yet today these same facts are being overlooked and we are being requested to devote less attention to our soil and water conservation efforts.

To make this point clear, one might draw a comparison between the farmer's position in this situation, and the activities of a typical American businessman.

If a businessman cannot make enough return on his investment to replace his depleted capital and keep his plant in operation, sooner or later he will go out of business. A rundown, inefficient factory and rusty outmoded equipment will eventually drive him to the wall. This is an economic fact well recognized by those engaged in industrial production.

The farmer, too, can deplete the fertility of his land and reduce his productive capacity—perhaps for a number of years in some instances—and stay in business. But sooner or later, he, or his successors, will have a wornout farm which will no longer produce the food and fiber which the consumers need from that farm unit.

In drawing this comparison, one thing must be kept clearly in mind. If a factory and its equipment go out of production, another businessman can come along and rebuild the factory and purchase new equipment in a relatively short time. But our soil and water—our agriculture production plant—are irreplaceable in our lifetime, and in the lifetimes of our children and our children's children. It takes nature as much as 10 million years to create a single inch of productive topsoil in many areas of the world.

Second, we sometimes seem to forget that some form of effective control over farm production and marketing is necessary. In 1937 heavy crop production caused surpluses and low prices for wheat and cotton, and a severe drop in commodity prices precipitated another economic decline throughout the economy. Based on this experience, Congress passed the Agricultural Adjustment Act of 1938.

The stated objective of this act was to: "regulate interstate and foreign commerce in cotton, wheat, corn, tobacco, and rice to the extent necessary to provide an adequate and balanced flow of such commodities. Such a flow can follow only from the leveling out of the recurrent surpluses and shortages that burden and obstruct interstate and foreign commerce in such products."

This law provided loans for storable commodities, generally called basics, the overproduction of which can be carried over to adversely affect succeeding crops for a number of years. Cotton, for instance, can be readily stored for 50 years without deteriorating to any noticeable degree. These storable or basic commodities were designated by Congress as corn, wheat, cotton, rice, tobacco, and peanuts.

In addition to providing crop loans so as to support prices, this law also provided that there must be an agreement by those receiving such loans to limit productions so as to have a workable program.

Third, many in this country seem to have forgotten that one of the major aims of the act of 1938 was to establish and maintain a fair relationship between the farmer's income and costs of production. This was necessary to maintain a reasonable relationship with what labor and industry received as the result of various laws passed by Congress to guarantee bargaining rights and minimum wages.

The principle of adopting special laws to help certain groups was not new. In the early history of this Nation, laws were passed providing tariffs to protect industry. It was recognized at that time that early industry in America, with its lack of capital and know-how, with its lack of developed markets, and with many other disadvantages, could not compete with the well-established industry in the mother country of England or in other countries.

Also, about 60 years ago, the American people began to realize that labor needed some protection relative to wage rates, working conditions, and hours set by industry. At that time the Congress began to enact laws on minimum wages and the right to organize and to strike.

Through the years these advantages have been increased greatly by various laws passed by the Congress.

This Nation learned in the great depression of the twenties and thirties that, in order to retain the purchasing power of those engaged in agriculture and allow them to stay in business to provide food essential to the general welfare, there had to be some provision in the law to maintain a balance between industry, agriculture, and labor, particularly since industry was protected by high tariffs and could place its markup or margin of profit over and above its cost, including raw material and labor.

Thus the Congress included in the act of 1938 a formula to maintain such a balance. To operate this program, the Congress created the Commodity Credit Corporation—a huge corporation first organized under the laws of the State of Delaware in 1933 with paid-in Government capital—and later made it a Federal Government corporation.

Under this program, the producer can borrow for his storable or basic commodities, the major commodities, at a fixed percentage of parity. This level is usually set by the Secretary of Agriculture within limits fixed by the Congress, and usually varies in percentage depending upon the commodity and the supply needed. At the end of the year, the farmer can repay his loan, claim his commodity and sell it on the open market if the price is advantageous. If not so redeemed by the producer, the Government can foreclose on the loan and take title to the commodity. With such loan assurance under this plan, the price on the domestic market usually is sustained because the Commodity Credit Corporation is not authorized to sell below the support price.

Now, one might well ask: "Why does the farmer need the protection of these laws and programs? Why can't he just add his margin on top of his costs, just as any other businessman would do—even though those costs are higher because of laws protecting industry and labor?"

There are two fundamental reasons why he cannot do this:

In the first place, there are millions of farmers. Under a completely free system, no individual farmer-businessman could have any say as to the prices he would receive for his product. These prices would be determined by market forces over which he could not have even a small amount of control. For an individual farmer to say, "I am going to sell at a certain price because my costs are going up" could price him completely out of the market if he were not competitive.

In the second place, farmers and ranchers do not produce unique products. One farmer's wheat or cotton or tobacco of a certain grade and type is usually the same as another farmer's wheat or cotton or tobacco of the same grade and type. Each is competing in a nationwide market for that particular grade and type of wheat or cotton or tobacco. There is no opportunity to compete in the open market in the normal private enterprise manner.

An industrial concern, on the other

hand, can create a special demand for and distinguish or differentiate its products. It can create and cater to many different markets instead of one. For example, Americans do not regard automobiles as a standardized product—if they did, we might all be riding in a uniform version of the "people's car."

This differentiation of product by industry also makes advertising feasible. One businessman, through advertising, can convince consumers that his detergent or headache remedy is best for all, and the price may even become a secondary consideration.

It is for these reasons that the people of this Nation and especially its legislative leaders must review the record, must fully inform themselves as to the reasons for our present farm programs, and must remember the disadvantaged position of agriculture in our modern-day society.

It is for these reasons that our people must never forget the painful lessons of the past and the reasons why the present farm programs were placed on the statute books and have been in operation since the great depression of the 1920's and 1930's.

We must not forget the lessons of history and suffer again through the same mistakes and failures that our forefathers did. We must use the experience gained from those lessons to preserve the progress we have made in developing the finest agricultural system ever known to man.

COMMITTEE ACTION ON BILL

The bill includes an appropriation of \$130,182,000, plus a transfer of \$15 million from section 32 funds, for research for the coming fiscal year. This is an increase of \$1,063,700 over funds available for fiscal year 1969 and a decrease of \$449,300 in the revised budget estimate for fiscal year 1970. With a constantly increasing population, increased research is absolutely necessary if we are to maintain our standard of living, our health and our food supply.

The committee has included an additional \$100,000 for contract research on avian leukosis in poultry, making a total of \$837,500 available for the coming fiscal year. Avian leukosis continues to be the most baffling and costly of all poultry diseases, costly to producer and consumer alike, and is now rapidly becoming the No. 1 disease threat to broiler and egg production. Condemnations of poultry because of avian leukosis have increased from 6.5 percent of all birds condemned in 1962 to 35.2 percent of all birds condemned in 1967. The number of birds condemned due to this disease has increased tenfold during this same period. Current research efforts have produced new and important leads which offer promising approaches to better understand the complex disease.

An increase of \$100,000 for additional food and nutrition research is proposed, which will provide a total of \$400,000 for this purpose in the next fiscal year. These funds will enable the Department to up-date the handbook on nutrition, "Family Fare," which provides the latest information on vitamins, proteins, minerals, and other important nutritional factors. More than 12 million copies of

this bulletin, first prepared for distribution in 1950 at the direction of this committee, have been distributed throughout the Nation since that time. We expect efforts to be made in the coming year to make this essential information more readily available to those who need it. Much valuable information has already been developed through research. What is needed most urgently now is an expanded effort to get undernourished people to put it to use.

The committee has also added \$50,000 for a cooperative Federal-private industry cane sugar refining research project at the Southern Utilization Laboratory in New Orleans, La. In the past several years there has been a definite change in the nature of raw sugars resulting from changing farm operations. Hand labor has been replaced with mechanical devices. Chemicals are now more widely used for weed and insect control and for fertilizer. These changes have slowly rendered the old and well-known processing techniques less effective. Research on the basic chemistry of the processes and on the identification of the trouble-causing constituents is needed to improve the processes and develop new ones.

The sum of \$50,000 has been added to the bill for expanded research on bovine mastitis. This will provide a total of approximately \$500,000 for the next fiscal year. Mastitis, an infectious disease of the udder, is the most serious animal health problem of the dairy industry, resulting in losses estimated to be as much as \$500 million a year which are costly to both producers and consumers. The disease is caused by numerous microorganisms and is influenced by many environmental conditions. The primary effect is reduction in milk production and the loss resulting from milk that is unfit for human food. It is recommended that the additional funds be used to intensify contractual research on a method for the measurement of the milk-ejecting hormone as developed by scientists now working on this problem in Massachusetts.

Through the years, the committee has strongly supported the wholesaling and retailing research program of the Department. This work was discontinued by the Department last year, however, despite such support. In view of the extreme importance of this research, which enables the 200,000 independent grocers who handle about 58 percent of the Nation's retail food sales to compete with the larger chains to the benefit of their customers, the committee has included \$100,000 to reinstate this research at about 50 percent of its former level. This will permit the most essential features of this work to be continued. Such wholesaling and retailing research conducted by the Federal Government is the only means of enabling independent and small businesses to compete with the few large corporations which have the capability of satisfying their own needs for such research.

Also, the Department's planning studies of wholesale food markets in the larger urban centers of the country need to be continued and strengthened wher-

ever possible. These studies, which have been completed or are underway in some 62 major cities throughout the United States, a list of which appears on page 236 of part 4 of the hearings, are making a significant contribution to the location, design, and operation of the new markets involved. This is of great benefit to the Nation's consumers by providing them higher quality food at lower costs.

The committee has also provided an additional \$100,000 for operation of the new Water Quality Laboratory at Durant, Okla. It appears uneconomical not to adequately staff this new laboratory, when it is in the public interest to keep current our water quality knowledge. Since agricultural and other chemicals are essential to our food supply, we must develop accurate and authentic data on this matter as rapidly as possible.

The committee calls attention to the fact that more pollution research can and should be undertaken at the National Sedimentation Laboratory, since the location and facilities available will enable the Department to move ahead immediately. Operations at the Big Spring, Tex., Research Station should be continued at not less than the current level in the coming fiscal year.

A fund of \$50,000 has been included in the bill to enable the Department to continue planning for the Soil-Water-Plant Research Facility at Ithaca, N.Y., and to initiate planning for the Akron, Colo., Soil and Water Research Center. If additional planning funds are needed for these purposes in the coming fiscal year they should be obtained by transfer from the Agricultural Research Service's contingency research fund.

An increase of \$300,000 is provided for the construction of a central refuse incinerator and modernization of other facilities at the Beltsville Research Center. Modernization and improvement of facilities, many of which are 30 years or more of age, is needed to protect the approximately \$50 million real property investment at the Center.

The sum of \$360,000 is also recommended to undertake the construction of additional facilities at the Soil and Water Research Laboratory at Morris, Minn. The plans for this location, which were funded several years ago, have been completed and construction is ready to proceed. It is important that the research on surface water pollution to be performed at this Laboratory be gotten underway as soon as possible.

For plant and animal disease and pest control the committee recommends an appropriation of \$89,493,000 for the next fiscal year, an increase of \$2,853,500 over the 1969 appropriation and a decrease of \$1,683,500 in the revised 1970 budget request.

An additional \$250,000 is recommended for plant and animal quarantine inspection activities. The volume of foreign trade and travel continues to go up and is expected to increase in the future.

An increase of \$100,000 is included in the bill for cooperative activities with Central America on foot-and-mouth disease and rinderpest. The proposed increase would provide technical assistance, advice, and cooperative surveillance

with the Central American countries and Panama. Working arrangements would be provided through the International Regional Organization for Plant and Animal Sanitation.

An additional \$49,500 is provided for expanded work to assure the safety and potency of veterinary biologics under the Virus-Serum-Toxin Act. The increase proposed would be used to contract for the preparation of new standards and reagents and the replenishing of existing standards and reagents. These testing materials would be used by the department and by licensees to evaluate veterinary biological products.

The committee recommends an increase of \$100,000 for expanded enforcement under the Federal Insecticide, Fungicide and Rodenticide Act. Under this act, the Department seeks to protect the public from misbranded, adulterated, unsafe, and ineffective pesticide products. The primary tools to reach this objective include product registration, testing and enforcement of regulations. A recent report by the General Accounting Office cited the need for more effective action to remove violating products, to prosecute offenders, and to publish notices of judgment.

The committee has repeatedly urged the Department to establish a factfinding team to look into reports of damages attributed to the use of pesticides and to determine the full facts. The Department has agreed to do so. Since it is the responsibility of the Department to test, register and monitor the use of pesticides, and since the production of food, its preservation, and its protection from contamination by humans, insects, and animals are dependent upon all forms of pesticides, the formation of this new unit is well justified and has the full support of this committee.

The sum of \$1,000,000 is provided to commence construction of a new animal quarantine facility at Fort Tilden, N.Y. The existing facility is virtually obsolete. Federal laws and regulations require the quarantine of all imported wild and domestic animals, including poultry, upon arrival in this country. Public Law 88-592, approved September 12, 1964, authorized the sale of the Department's present animal quarantine facility at Clifton, N.J., to the city of Clifton for public purposes and the establishment of a new quarantine station in the New York-New Jersey port and airport area.

The committee, recognizing the danger to health and the cost of disease outbreaks, has also gone along with the increases of \$750,000 each proposed in the revised 1970 budget for the screw-worm and hog cholera eradication programs. The cost of providing the sterile screw-worm flies necessary to maintain the screw-worm barrier zone along the United States-Mexico border continues to increase due primarily to the rise in cost of media for the production of sterile screw-worm flies and the operation and maintenance of the aircraft for fly release operations. It is hoped that the additional funds will permit continuation of the program at the present rate, which is needed to keep this insect threat under control.

The 1961 legislation establishing the hog cholera program directed the Secretary of Agriculture to prohibit or restrict the interstate shipment of hog cholera virus as necessary to carry out the eradication program. Program procedures, adopted by the Department and the States in 1962, recognized the need for such action and required removal of live virus vaccines for at least 1 year prior to recognition of any State as hog cholera free. The program schedule, adopted by Federal, State, and industry groups, calls for national eradication by the end of 1972. The current demand for removal of vaccines at the earliest possible time reflects recognition that the 1972 goal cannot be met, unless this action is taken in advance of that target date. When vaccines are withdrawn, some buildup of outbreaks of the disease can be expected. These outbreaks can be eradicated without return to the use of vaccines if sufficient indemnity funds are available for prompt depopulation of herds.

The committee has approved an appropriation of \$30 million for the nutrition aide program initiated last fall. This is in line with the latest budget recommendation and places existing programs on a yearly basis. Of this sum, \$7,500,000 shall be available for professional workers to promote 4-H type programs in the depressed areas of our cities. This program involves educational work among low-income groups to reduce the incidence of malnutrition, by providing homemaker aides who will use available information, knowledge and skills to teach needy people to utilize all resources toward the achievement of a more nutritionally adequate diet.

In this connection, the committee feels that full use should be made of the Nation's 3 million 4-H Club members to promote 4-H Club-type work with the youth of our towns and cities. The success of this program in rural areas has forcefully demonstrated the effectiveness of this approach. It may well be found that the most successful results from nutritional education of low-income families will come through work with the younger members of the family.

For conservation operations, the full budget estimate of \$118,786,000 is provided for this program for the coming fiscal year. The net increase of \$3,893,000 is provided to cover mandatory pay increases. Therefore, the amount recommended will provide the same level of funding as was available for fiscal year 1969.

A total of 19 conservation districts were formed in the 1968 fiscal year. Consolidations and changes in boundaries of 17 other districts resulted in the transfer of nearly 8 million acres between districts, and the addition of 15 million acres to 75 existing districts. The net increase of new territories brought into districts in 1968 was 15,971,628 acres. About 96 percent of the total farm and ranch lands and 99 percent of the farms and ranches in the Nation are now within the boundaries of conservation districts.

A total of 15 new soil and water conservation districts are expected to be organized in the 1969 fiscal year. An-

other 12 districts are projected for 1970. The formation of districts is nearing completion in most States. About 40 more districts are expected to be organized within the next few years.

For watershed planning, the full budget request of \$6,209,000 is recommended for the next fiscal year. This will permit the program to continue at about the current year's operating level. The committee directs that not less than 100 new plans be started during the coming year.

For watershed works of improvement, a total appropriation of \$57,873,000 is proposed for fiscal year 1970. This amount, will provide the same funding level as established for fiscal year 1969, including supplemental funds to meet mandatory pay increases. For this program, the committee directs that not less than 80 new construction starts be undertaken in the next fiscal year.

For consumer protective, marketing and regulatory programs, the bill includes a recommended appropriation of \$130,867,000 for the next fiscal year, a reduction in the budget of \$4,387,200 and an increase of \$14,602,500 over current year funds.

The proposed closing or discontinuance of market news services has not been approved in view of the importance of these services to the Nation's agricultural industry, and the Department is directed to retain these services. The small amount of funds involved could better be taken from the cost of other operations of the Department in Washington. In the opinion of the committee, the need for timely and reliable market reports by farmers and agribusiness to deal with increasing market pressures and ever-growing consumer demands for better food at lower prices makes these market news services increasingly essential. The offices and reports involved, which are to be continued in operation next year, are as follows:

Fruits and vegetables: Columbia, S.C.; Birmingham, Ala.; Louisville, Ky.; Hammond, La.; Southern Pines, N.C.; Richmond and Windsor, Va.; Florida City and Sanford, Fla.

Grain: Houston and Austin, Tex.; Cleveland, Miss.

Livestock: Ogden, Utah; Tulsa, Okla.; Memphis, Tenn.; Fort Smith, Ark.

Poultry: Lincoln, Nebr.; Charleston, W. Va.; Austin, Tex.; Baton Rouge, La. Naval Stores: Savannah, Ga.

Reports: National Weekly Peanut Report, Farmers Weekly Cotton Price Reports for North and South Carolina, Georgia, and Alabama; Monthly Cotton Linters Review issued in Memphis.

An additional \$10 million has been included for meat inspection activities. This will provide a total of nearly \$80 million for the coming year. The major portion of the increase will be used for grants to States under the Wholesome Meat Act of 1967. Grants were made to 18 States in fiscal year 1968 and it is expected that around 30 will be in the program by the end of the current fiscal year.

The committee has also included an increase of \$3 million for poultry inspection, which provides a total of about

\$28.5 million for fiscal year 1970. With the passage of the Wholesome Poultry Products Act of 1968, almost all poultry and poultry products sold in the United States will be subjected to the same enforcement standards that hitherto have been required only of those plants engaging in interstate commerce.

This new legislation increases the responsibility of the Federal Government in the poultry inspection field by providing for technical and financial assistance to States for improving the quality of their poultry inspection programs. The act gives the States 2 years from the date of enactment—August 18, 1968—to develop inspection programs comparable to the Federal program. A possible extension of 1 additional year may be pro-

vided at the end of 2 years if a State has made significant progress in improving its program. However, if any State fails to develop a comparable program within the period provided by law, the Federal Government is required to take over inspection of all establishments engaging in the sale of poultry and poultry products in that State.

For child nutrition programs, the full budget request of \$311,766,000 is provided for fiscal year 1970, \$117,500,000 by direct appropriation and \$194,266,000 by transfer from section 32 funds. This is an increase of \$58,967,000 over funds available for the present year. The amounts included for each of the programs funded under this head, as compared to fiscal year 1969, are as follows:

	1969	Increase	1970 bill
1. Cash payments to States:			
(a) School lunch program.....	\$162,041,000	+\$6,000,000	\$168,041,000
(b) Special assistance.....	10,000,000	+34,800,000	44,800,000
(c) School breakfast program.....	3,500,000	+6,500,000	10,000,000
(d) Nonfood assistance program.....	750,000	+9,250,000	10,000,000
(e) State administrative expenses.....	750,000		750,000
(f) Nonschool food program.....	5,750,000	+4,250,000	10,000,000
Subtotal.....	182,791,000	+60,800,000	243,591,000
2. Commodity procurement.....	64,325,000		64,325,000
3. Operating expenses.....	2,661,000	+1,189,000	3,850,000
Unobligated balance.....	3,000,000	-3,000,000	
Total available or estimate.....	\$252,777,000	+\$58,989,000	\$311,766,000

¹ Excludes \$22,000 transfer to General Services Administration.

For the food stamp program, this program operates through normal channels of trade to provide food to families in economic need of assistance. Participants include those households receiving some type of welfare assistance—the aged, the blind, the disabled, and mothers with dependent children. Other low-income families also are eligible to participate even though they do not qualify, for a variety of reasons, for welfare aid. These are people living on small pensions, the unemployed, the underemployed, and the unskilled low-paid employed.

Participants exchange the amount of money they would normally spend on food for food coupons worth more. Under the Food Stamp Act, the purpose is to enable participants to improve their diets in both quantity and quality.

The bill carries an appropriation of \$340,000,000 for this purpose in fiscal year 1970, the full amount authorized for this program by present law. This is an increase of \$60,000,000 over funds available in fiscal year 1969.

The program will reach an estimated 3,630,000 participants, in some 1,550 project areas, by June 30, 1969, an increase of 1,218,000 participants over the June 1968 level. At the time the program will be operating at an annual rate of about \$325 million.

Section 32 funds are used to encourage the production of food by stabilizing prices and by the exportation and domestic consumption of agricultural products, and to contribute to stabilizing market prices either through announcements that the Department stands ready to enter the market, or by actual participation in the market. The extent to which funds actually will be obligated and expended, for perishables and other

surplus removal programs, will depend upon the market situation which develops as peak marketing seasons approach. The type of program to be developed also depends upon the kind and volume of existing surpluses and the availability of potential outlets. Generally, surpluses are removed from the market through purchases, which are then donated to schools, institutions, and needy persons.

For the law to work, it is essential that the Department have on hand at all times sufficient funds to purchase price-depressing surpluses; otherwise we could well lose our fine foods and high standard of living by producers going out of business.

FUNDS IN BILL FOR MILK

The funds provided in this bill provide \$100 million for special feeding programs under section 32. The Department may use as much of this as may be used for milk for needy children.

Also some 500 to 600 million additional meals will be served under the expanded school lunch, school breakfast, and other child nutrition programs for which an increase of \$59 million is provided in this bill. Each of these meals will include milk.

Further, the \$60 million increase for the food stamp program will increase milk consumption significantly.

In total, some \$174 million of additional funds are included in this bill for free and reduced cost food for needy people. Much of this will be used to provide milk for needy children.

The committee has approved the budget request for all of these programs to be certain that means are provided to care for the needs of those in this country suffering from malnutrition or

hunger. The record shows that individual cases do exist despite public welfare programs and the efforts of this committee, Congress, and local charities. The committee points out that directives were issued in 1967 to meet the needs of especially needy persons and that last year \$50 million above the budget was provided with authority granted to the Secretary of Agriculture to locate hungry people anywhere in the United States and to provide them with free food where deemed necessary, taking into consideration such factors as age, income, employability, and so forth—clause 4b. It has been noted that special programs in several States have been established under this authority.

In view of continuous allegations of hunger, the committee must insist that the Secretary meet this responsibility by providing free food on an individual case basis wherever he finds and can certify that such hunger does in fact exist under such circumstances. If we are to reach those who may actually be hungry, the Department must locate such people and see that they are properly fed. Large, mass feeding programs such as proposed will never reach these isolated cases where people cannot participate in the food stamps, direct distribution, or special feeding programs because of illness, isolation, or ignorance.

The bill includes an appropriation of \$22,937,000 for the next fiscal year for the Foreign Agricultural Service, a decrease of \$1 million in the revised budget request for fiscal year 1970 and a net increase of \$1,395,700 over 1969. In addition, transfers of \$3,117,000 from section 32 and \$107,000 from CCC are approved.

The committee has funded the opening of a new agricultural post in Korea, which is a fast growing market for U.S. agricultural commodities, such as wheat, soybeans, barley and cotton. In total volume of commodities purchased, it ranks among the top nations in Asia. There is no other free world country with this volume of agricultural trade where the United States is not represented by an agricultural attaché. A great opportunity exists in Korea for an expanded market promotion program in cooperation with private trade groups and this opportunity should be pursued. Further, the lack of USDA representation at this important post has been a serious handicap in obtaining adequate agricultural data. The total cost is expected to be \$80,000.

An increase of \$1,500,000 is recommended to expand the market development program for agricultural commodities. The additional funds will be used in part to mount a comprehensive 5-year export program which will parallel similar work underway for industry in the Department of Commerce. Agricultural export targets will be set up commodity by commodity on a 5-year basis in line with the 5-year industrial program currently being developed by the Department of Commerce.

Conservation practices under the agricultural conservation program are developed initially at the local level by ASC State and county committees, the Soil Conservation Service, and the Forest Service. Representatives of the land-

grant colleges, the Farmers Home Administration, State conservation committees, and other State and Federal agricultural agencies also participate in these determinations.

The recommendations of these groups are used as the basis to formulate joint recommendations to the Agricultural Stabilization and Conservation Service in Washington. From these recommendations, the various agencies of the Department in Washington develop and recommend to the Secretary of Agriculture a national program. State and local people then develop their local programs within the structure of the national program approved by the Secretary. No practices are adopted and put into effect in any State or county unless approved by the local conservation groups.

As mentioned earlier, this program reaches in excess of 1 million farms each year and results in the application of the greatest amount of conservation measures to the land at the lowest cost per acre of any other similar program.

By continued emphasis on the establishment of long-term conservation practices, benefits go to nonfarm people as well as to farmers. The program attempts to get low income and other farmers who are lagging in the conservation effort to undertake significant conservation projects. Also an increasing proportion of its funds has gone for land treatment measures in watershed program areas and other rural areas development projects. For example, the following accomplishments were attained under the 1967 program:

First. Enduring-type practices received 87 percent of the cost-share funds.

Second. About \$15.1 million of ACP cost-sharing funds, involving 79,000 farms, went into 41 resource conservation and development project areas and 12 rural renewal program counties.

Third. About \$15.4 million of ACP cost-sharing funds, involving 69,000 farms, went into more than 1,200 Public Law 566 and pilot watershed program areas to advance land treatment measures in those watersheds.

Fourth. About \$5.1 million of ACP cost-sharing funds, involving 26,000 farms, went into the 11 flood prevention watersheds.

Within program authority for operations, a growing proportion of ACP cost-shares is being used for those conservation practices which conserve water and reduce water pollution—particularly those that reduce sediment—those primarily for wildlife conservation, and those which provide recreational and beautification conservation benefits. In 1967, wildlife conservation and conservation-beautification practices serving about 4.7 million acres were performed.

An appropriation of \$195,500,000 is recommended to make payments due under the program authorized in the 1969 agricultural appropriation bill. Amounts owed under that program are legal commitments and funds must be provided to meet all obligations incurred.

The committee also recommends that the advance announcement for the 1970 program be included in the bill at the \$195,500,000 level. In the opinion of a

majority of the members of the committee, this program provides the best possible means for getting soil and water conservation practices applied to the land. It is the financial core for the nationwide conservation effort. The practices applied to the land under this program provide the land treatment phase of the conservation work included in all other programs, including the Public Law 566 small watershed projects, the flood prevention projects, the resource conservation development projects, and others. The elimination of funds for the ACP conservation practices would, therefore, require the addition of such amounts to the other conservation and watershed programs to enable them to continue their operations at current levels.

The restoration of this program to the 1969 level is essential, as heretofore noted, to prevent a drastic reduction in soil conservation technicians and ASC county committee employees. Testimony received from USDA officials indicates that the elimination of the ACP program would reduce 406 SCS technicians the first year, with the complete elimination during the next year of 1,020 technicians now located in SCS field offices throughout the country.

Further, such officials indicate that the elimination of the ACP program would affect a large number of the ASC county office operations. In addition to the probable closing and consolidation of some county offices, where ACP generates more than half the total workload, it would require the reduction of some 2,500 employees as follows:

	Man-years
Washington, D.C.-----	20
Data processing centers, management	
field office-----	11
State offices-----	164
Total Federal employment-----	195
County offices-----	2,300
Total -----	2,495

The full budget requests of \$320,000,000 for electrification loans and \$123,300,000 for telephone loans are included in the bill for the coming fiscal year. These amounts, together with unobligated funds which will be carried forward from prior year authorizations, will provide total funds of \$345,000,000 for electrification loans and \$125,000,000 for telephone loans.

Power requirements of the REA borrowers continue to increase at a steady pace. During fiscal year 1968, consumers used approximately 56 billion kilowatt-hours of electricity. By 1980, consumption is expected to increase to an estimated 120 billion kilowatt-hours. Average monthly kilowatt-hour consumption by farm and residential consumers increased more than 28 kilowatt-hours during the past year, to a current average of 571 kilowatt-hours per month. At the end of fiscal year 1968, there were 5,929,361 consumers being served on REA financed lines.

The telephone program has been expanding at the rate of about 100,000 new subscribers annually. There is a continuing demand for the improvement of service by subscribers in rural areas. The development and economic well-being of

rural areas urgently require that critical needs for efficient and reliable communications be met. Long-range economy in the use of loan funds to build these systems requires that they meet industry standards and provide service comparable to that in neighboring towns and cities.

Pursuant to the Consolidated Farmers Home Administration Act of 1961, a direct loan account was established in fiscal year 1962. Collections of principal and interest on loans outstanding are deposited in the direct loan account and are available for principal and interest payments on borrowings from the Secretary of the Treasury and for making additional loans for: First, farm ownership; second, soil and water conservation; and, third, operating purposes. Such loans may be made only in such amounts as may be authorized in annual appropriation acts.

The bill authorizes continuation of the loan programs financed under this account at the fiscal year 1969 level, as follows:

Real Estate loans (including farm ownership and soil and water loans)	\$83,000,000
Operating loans	275,000,000
Soil Conservation loans (watersheds, flood prevention, resource conservation and development)	4,900,000
Total loan authorizations	362,900,000

The committee has restored proposed budget reductions of \$13,400,000 for soil and water loans and \$25,000,000 for farm operating loans. The restoration of the 1969 level for farm operating loans is based on the urgent need for reasonably priced farm credit to enable the smaller farm producers to stay in business. The restoration for soil and water loan funds is directly related to the restoration of the 1969 level for the other soil and water conservation programs of the Department.

The committee recommends an appropriation of \$40,000,000 for rural water and waste disposal systems in the next fiscal year. This amount is \$12,000,000 over the 1969 level and the revised 1970 budget. It is \$12,000,000 under the original request contained in the January budget.

The need to develop central water supplies and waste disposal systems in rural areas far exceeds the grant and loan resources available to the Farmers Home Administration. A priority system has been established to facilitate meeting the most urgent needs with the funds currently available. This increase will significantly assist in meeting such needs.

A recent survey indicates that as of March 1, 1968, about 1,500 rural counties will require Farmers Home Administration grant assistance to finance the preparation of comprehensive water and sewer plans. It is necessary that these plans be completed prior to October 1, 1971 for the area to be eligible for development grant assistance. An average of 18 months is needed to complete a plan. Therefore, if counties are to meet the

October 1, 1971, deadline, a substantial number of the plans must be started in fiscal year 1970.

The size and scope of the various programs of the Farmers Home Administration have increased steadily through the years.

During 1970, the Farmers Home Administration will service an estimated \$5.3 billion of outstanding loans, an increase of \$820 million over 1969.

To meet this growth in administrative workload, the committee has included \$65,000,000 in the bill for 1970, an increase of \$6,770,000 over fiscal year 1969. These additional funds will cover mandatory pay increases and will provide an additional \$5,000,000 to meet increased program requirements.

The amounts recommended will finance an additional 1,590 man-years of personnel for next year. While this is not the full increase requested, it appears adequate to meet the most essential needs. Since qualified personnel are limited for this as well as other agencies of Government, the gradual expansion allowed by this increase seems to be the most realistic and reasonable approach to meeting the need for expanded services.

COMMODITY CREDIT CORPORATION

The Corporation was organized October 17, 1933, under the laws of the State of Delaware, as an agency of the United States, and was managed and operated in close affiliation with the Reconstruction Finance Corporation. On July 1, 1939, it was transferred to the Department of Agriculture by the President's Reorganization Plan I. On July 1, 1948, it was established as an agency and instrumentality of the United States under a permanent Federal charter by Public Law 80-806, as amended. Its operations are conducted pursuant to this charter and other specific legislation.

The Commodity Credit Corporation engages in buying, selling, lending, and other activities with respect to agricultural commodities, their products, food, feeds, and fibers. Its purposes include stabilizing, supporting, and protecting farm income and prices; assisting in the maintenance of balance and adequate supplies of such commodities; and facilitating their orderly distribution. The Corporation also makes available materials and facilities required in connection with the production and marketing of such commodities.

The Corporation is managed by a Board of Directors appointed by the President and confirmed by the Senate, subject to the general supervision and direction of the Secretary of Agriculture, who is, ex officio, a Director and Chairman of the Board. In addition, it has a bipartisan Advisory Board of five members appointed by the President to survey the general policies of the Corporation and advise the Secretary with respect thereto.

Personnel and facilities of the Agricultural Stabilization and Conservation Service, ASC State and county committees, and other USDA agencies are used to carry out Corporation activities.

The Corporation has an authorized capital stock of \$100 million held by the United States and authority to borrow

up to \$14.5 billion. Funds are borrowed from the Federal Treasury and may also be borrowed from private lending agencies. In addition it received funds from repaid loans and the sale of commodities. In connection with loan guarantees, the Corporation reserves a sufficient amount of its borrowing authority to purchase at any time all notes and other obligations evidencing loans made by lending agencies or certificates of interest issued in connection with the financing of price-support operations. All bonds, notes, debentures, and similar obligations issued by the Corporation are subject to approval by the Secretary of the Treasury as required by the act of March 8, 1939—15 United States Code 713a-4.

Public Law 87-155—15 United States Code 713a11, 12—authorizes appropriations to reimburse the Corporation for net realized losses previously incurred. The appropriations provided under such authority, therefore, must represent prior year losses actually reflected in its accounts and shown in its reports of financial condition.

The bill includes a total appropriation of \$4,965,934,000 to restore capital impairment incurred in previous years, as follows:

Balance of 1961 inventory revaluation	\$57,047,170
Full reimbursement of 1967 losses	2,210,668,971
Partial reimbursement of 1968 losses	2,698,217,859
Total appropriation	4,965,934,000

If necessary to perform the functions, duties, obligations or commitments of the Commodity Credit Corporation, administrative personnel and others serving the Corporation shall be paid from funds on hand or from those funds received from the redemption or sale of commodities. Such funds shall also be available to meet program payments, commodity loans, or other obligations of the Corporation.

For Public Law 480, the bill carries a total of \$900,000,000 for the next fiscal year, \$400,000,000 of which is for title I sales for foreign currencies and for dollars on credit terms, and \$500,000,000 is for title II donations abroad. Approximately \$200,000,000 of the latter amount is provided to fund 1969 costs, leaving the balance of \$300,000,000 for fiscal year 1970 shipments.

In addition, an estimated \$361,000,000 will be available during the next fiscal year from sales of foreign currencies and carryover of unused 1969 funds. This will make available \$1,261,000,000 for fiscal year 1970.

The amounts provided in the appropriations are not fully controlling since the basic law permits the Government to enter into agreements involving expenditures which must be financed from subsequent appropriations. On the other hand, if funds appropriated are in excess of amounts actually used in a particular year, such amounts are applied against current year's costs and reduce the subsequent appropriations required.

In closing, it should be pointed out that the committee has included a new section under general provisions which would exempt the Department from the

personnel limits under section 201 of Public Law 90-364. Section 510 of the bill would exempt all positions of the Department from section 201 of Public Law 90-364 except the Forest Service which is not covered by this act. However, those positions in the Forest Service which are financed from appropriations in this act—such as flood prevention and watershed works of improvement—would be exempt by section 510. Under this section, the employees of a milk marketing administrator who are paid from fees charged milk handlers, and all other activities paid from funds provided in this act, would be exempt from the provisions of section 201.

This language is necessary to permit the Department to employ the additional employees funded in this bill for meat and poultry inspection, the food stamp and child nutrition programs, and the Farmers Home Administration activities.

Also, it should be noted that the committee has included language in the bill to permit the Secretary, if he finds it necessary, to use up to \$250,000 of funds in the Department's working capital fund to carry out activities under the Civil Rights Act of 1964. This would be in addition to the slightly more than \$300,000 available in the appropriation for general administration. To the extent that the working capital fund is used for this purpose, it is expected that the fund would be reimbursed from applicable appropriations available to the agencies of the Department which have responsibilities under this act. On this basis the capital of the fund would not be impaired.

Mr. CONTE. Mr. Chairman, the gentleman from Mississippi is making a very important statement, and I think there ought to be more Members here to listen to him. Therefore, I make the point of order that a quorum is not present.

The CHAIRMAN. The Chair will count. Eighty-three Members are present, not a quorum. The Clerk will call the roll.

The Clerk called the roll and the following Members failed to answer to their names:

[Roll No. 62]

Abbt	Cowger	Helstoski

Accordingly the Committee rose; and the Speaker pro tempore (Mr. FASCELL) having assumed the chair, Mr. WRIGHT, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill H.R. 11612, and finding itself without a quorum, he had directed the roll to be called, when 296 Members responded to their names, a quorum, and he submitted herewith the names of the absentees to be spread upon the Journal.

The Committee resumed its sitting.

The CHAIRMAN. When the Committee rose, the gentleman from Mississippi (Mr. WHITTEN) had 3 minutes remaining of the time he had allotted to himself.

Mr. PERKINS. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. The time of the gentleman has expired.

Mr. WHITTEN. I yield myself 2 additional minutes.

Mr. PERKINS. Mr. Chairman, I certainly wish to compliment the gentleman from Mississippi (Mr. WHITTEN) for a tremendous job, but as I understand the report, if I understand it correctly, on page 40, under "Commodity procurement," you have \$64,325,000. I am unable to tell whether that is taken from section 32 or from the Agricultural Adjustment Act. Now, on page 41 you take that same item down there in the chart where it says, "Child Nutrition Programs" and last year you have \$64,325,000 and you jump it up to \$194,266,000 for fiscal 1970. The discrepancy in my mind is this: I am wondering where is the \$93,800,000 that was transferred in fiscal year 1969 from section 32 for the procurement of commodities for the school lunch program. That is what I cannot reconcile.

Mr. WHITTEN. I am afraid I have not followed completely the gentleman's question. Later in the debate I will be glad to answer him, but, first, I would like to see the figures he is using.

Mr. NATCHER. Mr. Chairman, will the gentleman yield?

Mr. WHITTEN. I yield to the gentleman from Kentucky.

Mr. NATCHER. Mr. Chairman, in answer to the question of my colleague, the gentleman from Kentucky (Mr. PERKINS), I believe if the gentleman will examine page 41, and the table that appears at the bottom of the page, the gentleman will find under "Transfers" the heading "Child Nutrition Programs" and the gentleman will see a figure of \$194,266,000. The figure that the gentleman has directed to the chairman of our subcommittee is incorporated in and is a part of that overall figure.

Mr. PERKINS. Mr. Chairman, if the gentleman will yield further, the \$64,325,000, then, is not transferred from section 6 of the Agricultural Adjustment Act?

Mr. NATCHER. It is transferred from section 32.

Mr. PERKINS. Now, where is the \$93,800,000 item that was transferred from section 32 for fiscal year 1969?

The CHAIRMAN. The time of the gentleman from Mississippi has again expired.

Mr. WHITTEN. Mr. Chairman, I yield myself 1 additional minute.

The CHAIRMAN. The gentleman from Mississippi is recognized for 1 additional minute.

Mr. WHITTEN. That must be a transfer from section 32 last year for the purpose of purchasing commodities. We have made no changes in or deletion of any transfers to the school lunch programs from section 32.

Mr. PERKINS. I make the point that that item last year somehow is deleted from these charts where we had the \$93,800,000 transferred from section 32 for the purpose of purchasing commodities and for the school lunch program.

The CHAIRMAN. The time of the gentleman from Mississippi has again expired. The gentleman from Mississippi has consumed 18 minutes.

Mr. LANGEN. Mr. Chairman, I yield myself 10 minutes.

Mr. Chairman, the distinguished chairman of our subcommittee, the gentleman from Mississippi (Mr. WHITTEN) has once again given us an outstanding and concise explanation of the provisions in the bill now before us. This is my first opportunity to lead the consideration of this bill for my side of the aisle having succeeded the distinguished gentleman from Illinois (Mr. MICHEL) who has moved to the ranking position on another subcommittee. He has served as the ranking minority member of this subcommittee since 1965. During the past 4 years, he has been the minority's leader in developing this annual agriculture appropriations bill. I certainly attach great value to the guidance and counsel he has given to me and the other members of this subcommittee. I am pleased to say that he has remained a member of this subcommittee and continues to apply his considerable knowledge and his attention to the problems that confront us.

I would like to call to the Members' attention the committee report which accompanies this legislation. This excellent document, which was prepared by the committee and its staff under the direction of the distinguished gentleman from Mississippi (Mr. WHITTEN), contains a great deal of valuable information on the fantastic job that is being done by American agriculture in supplying the Nation's, and indeed the world's, demands for food and fiber. Also, it graphically demonstrates the increasingly precarious economic condition of rural America.

I also note with deep regret that this is the last agriculture appropriations bill debate at which Ross Pope will serve as our chairman's side. Since coming to the committee in 1949, Ross has fulfilled the difficult role of committee counsel with great ability, prompt efficiency, and unstinting regard for those who have had the opportunity to work with him. He

has been always helpful when we went to him for advice, assistance, or knowledge. I am certain that I am not alone when I say that I shall miss him very much.

The committee is doubly distressed with the impending departure of Carl Schafer, the subcommittee's staff assistant. Although he has been here only a short time, all of us have been impressed with his energy, desire for hard work, and quick grasp of the difficult material with which the committee must deal.

Mr. Chairman, this bill provides \$6,806,655,000 in new obligational—budget—authority for the Department of Agriculture in fiscal 1970. In line with the necessity for keeping a tight lid on expenditures this year, we have reduced the obligational authority for the Department by \$160,907,050 from President Nixon's revised budget request of \$6,967,562,050. Once again, I take pride in the fact that we have kept expenditures down to the lowest level prudent in the face of increasing demands on our fiscal resources and the necessity to restore balance to our economy. As I stated last year when we were considering the agriculture appropriations bill under similar economic circumstances, "By this appropriation bill, agriculture is making more than its full share of contribution toward a solution of the fiscal crisis. This is only typical of the generous manner in which agriculture has always responded to any and all of the crises that have confronted this Nation over the years, during both war and peace." I feel that statement is equally appropriate today.

In considering the budget requests submitted for the Department of Agriculture, we have attempted to meet the needs of that Department for the coming fiscal year. There can be no doubt there are enormous tasks confronting the Department of Agriculture—providing for the production of sufficient food and fiber to meet our country's needs as well as assisting other countries in meeting their needs, feeding the Nation's hungry and malnourished, inspection of foods for poultry, soil and water conservation, agricultural research to improve the quality and quantity of food and fiber produced on U.S. farms, disease and pest control, supervision of stockyards and packers, and regulation of commodity exchanges are a few of these tasks—and they will require the expenditure of substantial sums of moneys.

Surely, there can be no doubt in the mind of anyone who has the slightest acquaintance with the agricultural situation that our farmers are in trouble. The parity ratio is currently 73; the same distressingly low level it was at last year. Farm debt continues to increase while farmers are forced to pay record high interest rates. The Department of Agriculture predicts that even though farm production and prices will increase this year, increasing production costs will consume all of this additional income, leaving the farmer with approximately the same net income he received last year. True, net income per farm will increase this year but this is accounted for by the decline in the number of farms producing food and fiber for the American consumer.

Furthermore, it should be clear that each of us has a vital stake in the restoration of agriculture to a healthy condition. It is by far the largest industry in the United States—its 5 million employees are more than the combined total employment in transportation, public utilities, steel, and the automobile industry; agriculture's assets of \$298 billion equal two-thirds of the value of the current assets of all U.S. corporations. Farmers purchase nearly \$48 billion in goods and services a year. Agriculture gives the American consumer the best bargain we have ever known—he can purchase all of his food for only 17.2 percent of his disposable income of which the farmer receives only 5 percent. In more concrete terms, 1 hour's factory labor bought 2.6 pounds of round steak in 1968 compared with 1.5 pounds in 1948. It bought 13.4 loaves of bread in 1968 compared with 9.6 in 1948. Obviously, the constituents of every Member has an interest in seeing that this bill is approved.

In addition to benefiting the entire country by serving the legitimate needs of agriculture, the USDA provides many services directly to the general public. In fact, over one-half of the Department's budget is allotted to programs that directly benefit the general public.

An additional point in this regard is that some of the programs originally designed to benefit farmers have been expanded to include services that directly benefit the general public. Both the Extension Service and the 4-H programs have been taken into urban areas and used to assist ghetto residents. For example, the nutrition aid program, which was initiated last fall in the Extension Service, has received the committee's approval for a 30 million appropriation in this bill. This program involves professional personnel working directly with low-income groups to reduce the incidence of malnutrition by assisting them in acquiring the necessary knowledge and skills to maximize their available resources toward obtaining a more nutritious diet. A substantial portion of this program will be directed to urban areas as well as rural areas.

This is another indication of the extent to which the Extension Service and rural America provides a great contribution to the well-being of the entire Nation. It is encouraging to note that such programs as the 4-H program has been recognized for its great contribution to the youth of our Nation and is now being expanded to include urban areas. This expansion, I am sure, will prove to be most beneficial in meeting many of the problems today prevalent throughout the cities.

The effort to feed the hungry in our Nation has deservedly become a priority matter. President Nixon's message on hunger and malnutrition in America to the Congress, which calls for an additional \$1 billion for the food-stamp program, certainly deserves our attention and study. In this bill, we have provided an appropriation of \$340 million for the food-stamp program which is the total amount authorized by current legislation. In order to appropriate more funds, there must be an additional authorization.

It is probably not a widely known fact that the free food stamp program was initiated by the Agriculture Subcommittee in fiscal 1968 under the leadership of the gentleman from Mississippi (Mr. WHITTEN). I am certain he must take a great deal of pride in the progress and promise demonstrated by this worthwhile program in the 2 years it has been in existence.

Mr. Chairman, I feel that it is vital that each Member be aware of how important each of the programs, operated by the Department of Agriculture, that are covered in this bill is to every citizen. Agriculture is the base on which our society has been able to build the magnificent, complex economic structure we have today. Our industry and commerce that are able to supply us with a fantastic array of consumer and industrial goods would not be possible without the American agricultural system which provides an ever-increasing supply of inexpensive and high quality food and fiber. Agriculture is truly the Atlas on which our rich and diverse economy rests.

Without the programs funded by this bill, this Atlas would surely wither and collapse, bringing down the rest of the economy with it. In order to have a strong, vibrant agriculture, we must have a price structure for farm products that will provide a fair and profitable return on the farmer's investment. We must have the conservation programs that will preserve our productive capacity for the future. We must have the research that will enable us to eradicate the diseases and pests that afflict our crops and develop the new varieties of food and fiber capable of meeting our continuously expanding demands for these products. I strongly urge every Member to read pages 13 and 21 of the committee report on this bill. The information contained there clearly and strongly demonstrates the importance of this work for the survival of a strong and stable agriculture. This bill will enable the Department of Agriculture to carry on these tasks which are vital to agriculture and to all of us.

I appreciate the importance of the Department of Agriculture's tasks in distributing food to the needy as keenly as the next man. I am confident that my colleagues on the committee also appreciate the importance of these tasks. We have funded these programs to the fullest extent possible given our current fiscal and economic condition. I know that everyone is aware that our failure to insure an adequate diet for all of our citizens is not due to agriculture's failure to produce sufficient quantities of good, healthy foods. Rather, the failure is in the distribution of this abundant food supply. Obviously, we must continue the work toward perfecting our food distribution methods.

However, to achieve this, we dare not sacrifice the programs which seek to maintain the productive capacity of agriculture. For if we do, we may achieve the ability to fully distribute our food production; but we will surely have destroyed our capacity to produce the food necessary to feed our and the world's ever-growing population. This bill attempts to provide to the best of our ability the necessary means to achieve these

vital goals—a healthy agricultural industry and the distribution of the abundant fruits of this industry to every citizen in amounts adequate to supply a nutritious diet.

AGRICULTURAL RESEARCH SERVICE

The Agricultural Research Service is the primary research arm of the Department of Agriculture. The Service conducts research in the following major categories: farm research, utilization research and development, nutrition and consumer use research, and marketing research. It carries out emergency programs for the control and eradication of animal diseases and for the control of outbreaks of insects when necessary. Additionally, the Administrator of ARS is in charge of coordinating all research of the Department.

This bill includes an appropriation of \$130,182,000, plus a transfer from section 32 funds of \$15,000,000 for fiscal 1970. Although this is a decrease of \$449,300 in the revised budget estimate, it is an increase of \$1,063,700 over funds available in the current fiscal year.

Included in the increase is an additional \$100,000 for food and nutrition research which will enable the Department to update its handbook on nutrition "Family Fare." Also included is \$100,000 to reinstate the wholesaling and retailing research program which was discontinued last year.

In order to begin promptly the important task of surface water pollution research, we have included \$360,000 to construct necessary additional facilities at the Soil and Water Research Laboratory in Morris, Minn.

In order to assist in the prevention of serious disease outbreaks in the future, the committee supports the requests in the revised 1970 budget of an additional \$750,000 each for the screw-worm and hog cholera eradication programs.

Of interest to many Members of the House who have expressed their interest to me is the inclusion of \$40,000 to undertake a statistical reporting service for the mink industry. The problems of the mink industry in recent years have been most difficult and this service should be of some help to them in coping with the same economic and supply problems in the future.

SOIL CONSERVATION SERVICE

The Soil Conservation Service is responsible for the soil and water conservation activities of the Department of Agriculture. It provides professional leadership in soil, water, and plant conservation, working directly with locally managed soil conservation districts and sponsors of watershed projects. The Service also provides technical services for the agricultural conservation program, the soil and water conservation loans made by the Farmers Home Administration, and other groups having soil or water conservation problems.

Our committee has provided the full budget estimate of \$118,786,000 for SCS for the coming fiscal year. The amount recommended will provide the same level of funding as was available for the current fiscal year since the net increase of \$3,893,000 is needed to cover mandatory pay increases.

AGRICULTURAL STABILIZATION AND CONSERVATION SERVICE

The Agricultural Stabilization and Conservation Service is the action agency of the Department of Agriculture. As noted in the committee report beginning on page 44, it is responsible for operating the following programs: production adjustment programs for designated basic commodities, the Sugar Act program, the agricultural conservation program, the cropland adjustment program, emergency conservation measures, the conservation reserve program, and the milk indemnity payment program. Additionally, the personnel and facilities of the Service administer the price-support and related programs that are financed through the Commodity Credit Corporation.

This bill provides \$209,903,000 for the administrative and operating expenses of the Service's various programs, \$147,420,000 of this amount is provided by direct appropriation; and \$62,483,000, the balance, is authorized to be transferred from the Commodity Credit Corporation to cover the operating and administrative costs of the Corporation's programs if necessary. This amount is an increase of \$6,107,500 over fiscal 1969's level of funding. This increase consists of \$4,107,500 for pay increases and \$2,000,000 to establish a contingency reserve for CCC administrative expenses.

Meriting special attention is the agricultural conservation program—ACP—which the committee recommends be restored to the 1969 level of \$195,000,000. The elimination of funds for ACP would require the addition of such amounts to the other conservation and watershed programs if we are to maintain our commitment to conserving our natural resources. This program provides the best possible means for getting soil and water conservation practices applied to the land. I would also point out that enduring-type practices receive 87 percent of the program's cost-sharing funds.

RURAL ELECTRIFICATION ADMINISTRATION

This bill provides for loan authorizations of \$320,000,000 for electrification loans and \$123,300,000 for telephone loans; these are the full amounts requested in the budget. By including unobligated funds which will be carried forward from prior year authorizations, there will be a total of \$345,000,000 available for electrification loans and \$125,000,000 available for telephone loans.

FARMERS HOME ADMINISTRATION

The expanding role of the Farmers Home Administration has probably caused that title to become a misnomer. In addition to making and insuring loans on farm homes, FHA's activities include: direct and insured farmownership loans, direct and insured soil and water conservation loans, direct operating loans, direct emergency loans, watershed and flood prevention loans, planning grants for water and sewer systems, grants for water and sewer development costs, direct and insured loans for rural rental housing, technical assistance and direct loans for rural renewal activity, insured farm labor housing loans, and direct resource conservation and development loans.

The committee has included an additional \$25,000,000 for farm operating loans above that requested in the budget. This will enable that program to continue at its current level of \$275,000,000. In 1950, farm debt totaled \$12.4 billion. In 1960, it was \$24.8 billion. Today, it is \$55.4 billion. Farm debt has truly become a staggering burden for agriculture to carry. With today's extraordinarily high interest rate, the farmer is forced to devote an inordinately large percentage of his income to servicing this debt. Consequently, there is an urgent need for reasonably priced farm credit that will enable many farmers to remain in agriculture.

COMMODITY CREDIT CORPORATION

The appropriation is \$4,965,934,000 for the Commodity Credit Corporation recommended by the committee is strictly for the restoration of capital impairment incurred in previous years. Coupled with the \$1,000,000,000 for CCC that was included in the first supplemental agriculture appropriation bill earlier this year, this amount should enable the Corporation to fulfill its obligations for the coming fiscal year and still maintain an adequate reserve.

With the continuing inflationary pressures now present in the economy, it is clear to everyone that we have not yet escaped the possibility of a truly staggering financial crisis. Not only must we do everything possible to avoid this potential crisis, but we must also recognize that the current condition of the Nation's economy is intolerable over a sustained period of time. It will not be enough to merely make the adjustments that enable the Government to avoid devaluing our currency, as occurred in Great Britain in the fall of 1967 or the country to avoid a spectacle similar to that which occurred in France in the spring of 1968. We have to take the hard steps that will end the slow but constant hemorrhaging that is affecting each of us today. I am probably being too mild when I described the extent of inflation as being a slow but steady drain on the economy. Certainly more and more of our fellow citizens are becoming aware of its impact on their lives, and those residing in the Seventh District in Minnesota are letting me know that it is time to bring this situation to an end.

Certainly no group in our economy is more sensitive to the impact of inflation and has a greater interest in seeing it brought under control than the farmers. Historically, they have been the first and the chief victims of inflation. It is one of our chief clichés to refer to the 1930's as the "Great Depression." However, I would remind the Members that in rural America, we also include the 1920's when we refer to bad times in years past. In rural America, we tend to cringe when someone says, "A little inflation is a good thing."

Recognizing the need for drastic action to bring an end to inflation, the House last week approved an expenditure ceiling of \$192.6 billion for fiscal 1970. This figure is identical to the amount requested by President Nixon after he reduced the Johnson budget requests by \$4.2 billion. I note that with-

in the \$4.2 billion reduction, the \$177 million reduction for the Department of Agriculture is surpassed only by the reductions for the Department of Defense and the Department of Housing and Urban Development.

Hopefully, this step we have taken, plus additional efforts by the Nixon administration, the Federal Reserve Board, and by ourselves to conduct our fiscal and monetary affairs prudently, will enable us to bring an end to the current inflationary state of the economy.

In concluding it is my opinion that your committee has done its best to provide sufficient funding of all of the essential activities of the Department of Agriculture. It has directed its concerns particularly to the immediate needs of farm folks and rural America. It has given high priority to programs and services that sustain farm income as well as maintaining the production capacity of the agricultural industry. It is most essential that we do not deplete the greatest natural resource that has been the great fortune of American citizens during all of this Nation's history. Equal attention has been directed to the food needs of the many unfortunates throughout the Nation who have experienced great inadequacies in this regard during recent years. It is my opinion the committee's judgment is well founded and I can heartily recommend this appropriation bill as it is now before you for your approval.

Mr. PERKINS. Mr. Chairman, will the gentleman yield?

Mr. LANGEN. I am glad to yield to the gentleman for a question.

Mr. PERKINS. I agree with what the gentleman is saying, but I wonder whether he feels that the special milk program is of such great importance that it should have a special appropriation—or whether he feels the extra \$58 million that has been added to the other children's food programs will reach the schoolchild. How does the gentleman feel about that?

The CHAIRMAN. The time of the gentleman from Minnesota has expired.

Mr. LANGEN. Mr. Chairman, I yield myself 5 additional minutes.

Let me respond very briefly to the gentleman. I know of his great interest in the school milk and lunch program and I share that interest with him.

The committee has tried its best to provide funds so that milk will be available throughout the extended program. It is mandatory that every lunch will be accompanied by a half pint of milk.

In addition to that, we have extended the other programs both in and out of the school so that these programs will continue during the summer and the money has been provided for milk so that it should be available until September. Milk has been designated as being a part of all these programs. Let me say this, quite obviously, milk becomes a part of the nutrition food programs.

So in view of that, it would seem that the objective of including milk in the nutrition program, has been provided for in this appropriation bill.

Mr. PERKINS. If the gentleman will permit one additional question, why in

the fiscal year 1969 do we have \$104 million transferred from the section 32 funds for the special milk program and this year there is nothing appropriated or transferred for the special milk program. Am I correct in that statement?

Mr. LANGEN. That is correct.

Mr. WHITTEN. Mr. Chairman, will the gentleman yield?

Mr. LANGEN. I yield to the gentleman from Mississippi, the chairman of our committee.

Mr. WHITTEN. I would like to point out, in answer to the gentleman from Kentucky, that the committee has always supported the need for milk and its value in schools. But it was the feeling of the committee, or a majority of the committee that we were providing the milk. We, in this bill, have provided funds—\$100 million—for special feeding programs under section 32, and which is available for the purchase of milk, along with other commodities. Also, the bill provides for from 500 to 600 million additional meals which will be served under the expanded school lunch, school breakfast, and other child nutrition programs, for which an increased amount of \$59 million is provided in the bill. Each of these meals will include milk.

In addition the \$60 million increase provided for the food stamp program will increase milk consumption significantly.

In total, some \$175 million of additional funds are included in this bill for free food for needy people. Much of this will be provided in the form of milk for needy children.

It was my idea that in this enlarged program, in which milk will be included, the milk consumption level would be, at least, at the present level. This still leaves section 32 funds available to buy milk in surplus, as the act provides. So we have not excluded milk. We have just put it together with the other foods because there was some criticism that we were giving as much of a refund on a half pint of milk as would be given on a whole lunch. I am of the opinion that milk is provided for in this bill to the same degree it has ever been. It is simply not set off to the side, in a special amount, and there is money left in section 32 to purchase milk in the event there is a surplus.

Mr. LANGEN. The chairman has stated the case very well. As he has said, under the program there might well be not only an equivalent amount of milk available but an increased amount of milk.

Mr. ZWACH. Mr. Chairman, will the gentleman yield?

Mr. LANGEN. I yield to my colleague from Minnesota.

Mr. ZWACH. Mr. Chairman, I wish to compliment my colleague from Minnesota, and especially the chairman and the members of this subcommittee, for pointing out what I consider to be of tremendous importance in this report. How fortunate we are in America that we are talking about the great blessing of abundant food. How fortunate we are that we and all of our constituents do not need to worry about food, as do so many people throughout the world. How fortunate we are that we have the

greatest bargain in food in the history of the world. Only 5 cents out of a dollar of income of our people in our country is spent for food to the producer today. Never in the history of the world have we had such a record.

I also want to compliment the subcommittee for pointing out the importance of the fight on hunger. I just want to say to the gentleman, as he knows, the producers of America are interested in feeding America and in feeding the world. They are interested in seeing food used. You are taking that kind of a step. You are also concerned about natural resources, so that we will exercise a wisdom and a foresight that we will always be blessed with an abundance of food.

I think this is a marvelous report and it is of tremendous significance to America today.

Mr. LANGEN. I thank the gentleman for his kind and appropriate comments. We know about his work and concern as it relates to agriculture. Surely his remarks are commensurate with the great endeavor he exerts in this Congress every day.

Mr. STEIGER of Wisconsin. Mr. Chairman, will the gentleman yield?

Mr. LANGEN. I yield to the gentleman from Wisconsin.

Mr. STEIGER of Wisconsin. I appreciate the gentleman's yielding.

Mr. Chairman, I would like to pay tribute to the Appropriations Committee for its recognition of the need for reliable data in assessing the volume of domestic milk production by providing funds for the Statistical Reporting Service to begin compiling such data. Such statistics are vital to an industry which has of late been plagued with decreasing prices and a dramatic attrition of domestic ranchers. If we are to be able to make necessary decisions regarding the effect of imports and other factors on the industry, and to formulate ways to preserve a strong, vital milk industry in the United States, we must have adequate statistics. Again, I want to thank the members of the committee for their foresight.

Mr. LANGEN. May I respond to the gentleman by saying that the committee was pleased to be able to respond in this manner, and it was only because of the very effective interest that was presented to us by those like the gentleman from Wisconsin and the many other Members who recognized the problems of the milk industry. I hope this will provide an answer to a part of their problem.

Mr. NELSEN. Mr. Chairman, will the gentleman yield?

Mr. LANGEN. I yield to the gentleman from Minnesota.

Mr. NELSEN. Mr. Chairman, I thank my colleague for the fine presentation he has made.

I might add that to some degree I am disturbed about the reference to the school milk program as set forth in the report. However, I am pleased to hear the report of the chairman of the committee that it is the intention that funds will be made available through other means to actually duplicate if not exceed the previous expenditure for the school milk. I do think this is a very important objective and one we certainly endorse.

Again I thank the gentleman for his very fine statement.

Mr. LANGEN. I thank the gentleman from Minnesota for his comment.

Let me call also to the attention of the gentleman that during the course of the hearings and in the report the committee consistently expressed its concern for the use of milk throughout the lunch programs in the schools.

Mr. CONTE. Mr. Chairman, I think the gentleman from Minnesota (Mr. LANGEN) is making a very excellent statement. I think we should have more Members here to hear the gentleman. Therefore, I make the point of order that a quorum is not present.

The CHAIRMAN. The Chair will count.

103 Members are present, a quorum.

The Chair recognizes the gentleman from Minnesota (Mr. LANGEN).

Mr. HALL. Mr. Chairman, will the gentleman yield?

Mr. LANGEN. I yield to the gentleman from Missouri.

Mr. HALL. Mr. Chairman, I appreciate the gentleman yielding. I commend him on the statement he has made in the well of the House.

Mr. Chairman, I appreciate the work the committee has done and the excellent report they have given us as Members concerning the differentiation between nutrition, starvation, hunger, and even parasitic diseases, some of which have been portrayed to the public as a travesty on the truth.

Mr. LANGEN. I thank the gentleman for his kind and timely comments.

Mr. HALL. Mr. Chairman, the agricultural conservation program restored in this bill, is one of those "quiet programs" that go on year after year and actually accomplishes a lot for the investment involved. No one is more anxious to curtail unnecessary expenditures than I. But we must not make meat-ax cuts or forget our priorities. Too many administrations have done so, knowing full well the Congress would restore them to the bill in these self-help areas.

It is perfectly obvious that many Congresses have thought this was a good program. In 1936 the Soil Conservation and Domestic Allotment Act was passed and what we now know as "ACP" was funded at \$500 million. To those whose only concern is cutting back all programs as much as possible, let me make it very clear that if all other programs had taken their proportionate cuts that ACP has in every economy drive, we would not be faced with the budgetary pressures we have today. From \$500 million it was scaled down to \$250 million over the years and then to \$195.5 million 2 years ago when the 10 percent across-the-board cut was made.

Before considering the funding of this program further, let us look at what it is doing. Each farmer of the Nation may cooperate with his Government in a 50-50 partnership on carrying out long-range conservation practices. There are more than 40 practices in the Nation and last year about a million farmers participated. The average payment was about \$210 and no farmer can receive more than \$2,500. Certainly this is not a

get-rich scheme for farmers nor is it much of a farm subsidy. It seems to me it comes closer to being a consumer subsidy. Here we have a program—and the record is full of the accomplishments both nationally and by States, so I will not quote a large number of statistics—impressive as they are—which quietly go on year after year holding the soil in place and replenishing depleted minerals.

In this day when every man is aware of the extent of hunger abroad and here at home, it is not just the scholars who know that India, China, and other nations did not take care of their soil. And the man in the street is becoming aware that in just a few short years the population explosion is going to put great pressure on all civilization to feed the world's people. So, how in good conscience can we even consider doing away with a program that has reached more farmers, brought about more conservation and done it relatively inexpensively, than any other ever devised by man? Let me point out this is being done for less than \$1 per person. That is little enough to spend to insure the consumer of adequate reserves to feed him, his children and grandchildren.

As I said, in a real sense, this is a consumer subsidy, because if our foodstuffs get in short supply, it is not going to be the farmer who goes hungry, but the man in the city. The farmer has long emphasized the quality of nutritious products to the consumer. With the middle men, we have come to call it agribusiness.

There is another consumer hidden benefit in this agricultural conservation program. Dr. J. B. Peterson, head of the Department of Agronomy at Purdue University has written a very fine article which some of you may have seen.

As a doctor of medicine I have long been aware of the value of calcium to the entire human system. While the layman realizes that calcium is vital for good teeth and bone structure, few fully realize that the nervous system, blood and muscles all require sizable amounts of calcium—in fact more than any other single element—for proper growth and proper functioning, clear through maturity.

Dr. Peterson spells all this out in great detail but I shall not go into it further at this time. But how do we get this calcium? Nearly everyone knows that milk is the best source. But there are other ways of getting it. And the ACP has done more than anyone realizes to play a most significant role in our national health.

While Congress passed the Soil Conservation and Domestic Allotment Act in 1936 to accomplish what its name implies, "conservation of soil," this act has done a great deal more.

In the humid area of our country, the growth of clovers and alfalfas is one of the best conservation measures possible. But to do this the soil must be as near neutral as possible. Prior to 1936, the use of agricultural limestone varied from 1 to 3 million tons a year. In the 1940's, the use of this material had reached 30 million tons a year—to grow clovers and

alfalfas because of the stimulus of the ACP. But what is agricultural limestone? It is a calcium carbonate— CaCO_3 —or calcium and magnesium carbonate— $\text{CaCO}_3\text{MgCO}_3$. So while we have been conserving our soil all these years, we have been pouring on 30 million tons of material very high in calcium. This, in turn, has gone into our crops and animals and, ultimately, into all consumers as they purchase their foodstuffs. Note there is no danger of nitrate poisoning here.

While our headlines have tended to stress "hunger in America," the fact remains we are one of the healthiest nations in the world. And the importance of calcium to human health cannot be overstated as Dr. Peterson so clearly points out.

So I would like to suggest to my colleagues, particularly those from urban areas, that while this program was conceived as a farm program and its long-range benefit was from soil conservation, there has been a most significant immediate benefit to the consumers as well.

No farm program passed by the Congress reaches more farmers than the agricultural conservation program. No farm program has more long-range potential for this Nation. Conservation and restoration of the soil and water is a separate title in the authorizing bill, and is one of the very basics of my own farm bill, that I have introduced in previous sessions of the Congress. I believe the Nation's entire farm program could and should be based on these principles. Because of the demonstrated goodness of the agricultural conservation program, when comparing the benefits against the relatively little cost. I am pleased to offer my support to the committee's report and bill.

Mr. LANGEN. Mr. Chairman, I thank the gentleman from Missouri for his timely and appropriate statement.

Mr. WHITTEN. Mr. Chairman, I yield such time as he may consume to my colleague on the committee, the gentleman from Kentucky (Mr. NATCHER).

Mr. NATCHER. Mr. Chairman, the Subcommittee on Agriculture of the Appropriations Committee once again brings to the floor of the House for your approval the annual appropriations bill for the Department of Agriculture.

We recommend new obligatory authority of \$6,806,655,000, a reduction of \$207,776,050. The January budget estimate totaled \$7,014,431,050. The amount we recommend is \$1,372,244,650 below funds provided for 1969 which is a reduction of 17 percent.

For the Agricultural Research Service we recommend a total of \$224,175,000. This is \$1,917,200 more than the amount appropriated for fiscal year 1969 and \$5,919,800 less than the budget request.

We recommend the appropriation of \$129,129,000 for our Extension Service. This is \$32,066,000 more than the amount appropriated for fiscal year 1969 and \$1,780,000 less than the amount of the budget request.

Mr. Chairman, we recommend the sum of \$233,730,000 for our Soil Conservation Service. This is \$4,416,000 more than the amount appropriated for fiscal year 1969 and \$2,795,000 more than the budget request.

We recommend that the sum of \$589,967,000 be appropriated for Consumer and Marketing Service. This is \$3,478,500 more than the amount appropriated for fiscal year 1969 and \$4,387,200 less than the budget request.

For our Agricultural Stabilization and Conservation Service, we recommend that the sum of \$209,903,000 be appropriated. This is \$6,107,500 more than the amount appropriated for fiscal year 1969 and \$18,550,000 more than the budget estimates.

To continue the agricultural conservation program we recommend \$195,500,000. This is \$5,500,000 more than the amount authorized for fiscal year 1969. For a number of years now we have had to restore the reductions in this program. This program affects 1,200,000 farmers and is one of the best agricultural programs in operation today.

This bill carries adequate funds for continuation of our tobacco research program. Here, Mr. Chairman, we have an industry that pays into the Federal, State, and local tax collecting agencies about \$4 billion each year and 21 of our States produce tobacco. Over 700,000 farm families are involved in the production of this commodity. This is a \$10 billion industry.

We recommend loan authorization for our Rural Electrification Administration in the sum of \$320 million. For our loan authorization for rural telephone service we recommend \$123,300,000.

This bill provides for the general operations of the Department of Agriculture and the Farm Credit Administration. Under title I we have regular continuing programs of the Department such as research, disease and pest control, inspection of meat, poultry, and other foods, school lunch, milk and food stamp programs, overseas agricultural services, regulation of commodity markets, policing of packers and stockyards, State experiment stations, extension services, assistance to farm cooperatives, soil and water conservation, crop reports, marketing services, enforcement of the program for licensing and control of laboratory animals, and various service and staff officers. Title II includes the credit programs; title III includes Federal Crop Insurance, Commodity Credit Corporation, and foreign assistance programs. Title IV includes the Farm Credit Administration.

Agriculture is our largest industry. Its assets exceed those of any of the next 10 largest industries. Agriculture employs more workers than any other major industry and in fact employs seven times the number of people in the mining industry, 23 times the number in the oil and coal industry, and five times the number in the automobile industry. Agriculture is one of the major markets for the products of labor and industry. It spends more for equipment than any of the other large industries. Agriculture uses more steel in a year than is used for a year's output of passenger cars. It uses more petroleum products than any other industry in the country. It uses more rubber each year than is required to produce tires for 6,000,000 automobiles. Its inventory of machinery and equipment exceeds the assets of the steel

industry and is five times that of the automobile industry.

Our farmers' assets now are approximately \$300 billion.

In considering the question of prosperity insofar as agriculture is concerned, we must keep in mind, Mr. Chairman, that the average capital investment in farming today is something like \$66,000. In 1950 the average capital investment was about \$17,000. Today a great many of our young people on the farms have no chance to get started in agriculture unless they either inherit a farm or succeed in borrowing a large sum of money to invest in land which is adequate for a livelihood.

In 1950 the farmers' share of the retail food dollar was 47 cents. Today it is down to 39 cents.

Our American farmers know how to produce and today our country is the world's largest exporter of food to the many nations of the world.

Three-fourths of our land area is in private ownership and 60 percent is in farms and ranches. If our country is to survive and prosper we must continue to assist these custodians of our natural resources to reforest our lands, protect our watersheds, harness our streams for electricity, and conservation of soil and water. We must leave to the future generation a fertile land and a land sufficient to produce food for our people.

Our Soil Conservation Service is more important today than at any time in the history of this Service. We have 202 million people in the United States today. When we consider the need for more food and fiber and keep in mind that some of our best land is now being used for airports, interstate highways, subdivisions, and for recreational purposes generally, we must preserve as much of our best land as possible and at all times have tillable land in production which will produce enough food for our people. Today in our country we have in cultivation some 382 million acres. We are losing so much good land each year that it is now more necessary than ever that we have definite planning and programs which will establish a national policy in this country concerning the need for keeping good land in production and systems devised for use of land not so fertile to be used for the many purposes where good farmland has been used in the past.

In closing, Mr. Chairman, I want you to know that I definitely am of the opinion that we still have serious problems in agriculture and certainly this is not the time to turn our back on the American farmer. It is becoming more difficult to maintain a sound agricultural economy due to increasing cost of labor, equipment, and the high cost per acre of good farmland.

We must give more time and study to the situation that now prevails between the time agricultural commodities leave the farm and are sold to the time the products go into the homes of our people for consumption.

Our American farmer is entitled to a fair share of our national income.

Mr. Chairman, our committee recommends this bill to the Members of the House.

Mrs. SULLIVAN. Mr. Chairman, will the gentleman yield?

Mr. NATCHER. I yield to the gentleman from Missouri.

Mrs. SULLIVAN. I thank the gentleman.

Mr. Chairman, I do not know who has been accusing the chairman and members of the Subcommittee on Agricultural Appropriation of the House Appropriations Committee of refusing or failing to recommend sufficient funds to feed hungry Americans, but I certainly have not been among those voicing such criticisms. As a matter of fact—and I have said this many times—the Subcommittee on Agricultural Appropriations has generally given full support to the food stamp program and has recommended almost every cent authorized for the program. The one important exception was last October, in the supplemental appropriation bill for 1969, when only \$280 million was appropriated instead of the \$315 million authorized under the 1968 Amendments to the Food Stamp Act.

I see in the hearings of the subcommittee that the chairman has acknowledged the fact that too much of a cut was made in this program last October and I think that is a courageous and straightforward acknowledgment of a mistake. It was a mistake at the time and has been responsible for limiting the effectiveness of the food stamp program to some extent, particularly since February when substantial improvements were made in the program under recommendations and decisions made last year by former Secretary of Agriculture Orville L. Freeman.

NO REQUEST MADE FOR 1969 SUPPLEMENTAL APPROPRIATION

Despite the mistake which was made here last year in the appropriation process—last October—neither the Johnson administration nor the Nixon administration asked for any additional funds after Congress reconvened in January to permit further expansion of the food stamp program during the remainder of the 1969 fiscal year. So if the Appropriations Committee made a mistake, as I believe it did and as it acknowledged it did, no one in authority seems to have wanted to do anything about it for the current fiscal year.

Going back over the years, I would say flatly that the Appropriations Subcommittee for Agriculture has given far more support to the food stamp program—many times over—than the legislative committee which has responsibility for the basic Food Stamp Act. It has always been like pulling teeth getting anything out of the Committee on Agriculture in the way of improvements in the law; it has generally not been difficult getting the full appropriation from the Subcommittee on Agricultural Appropriations headed by the gentleman from Mississippi.

SECTION 32 FUNDS MAY NOT BE USED

The Nixon administration has indicated that it intends to seek funds to virtually double the food stamp program during the 1970 fiscal year which begins this coming July 1. I have found no indication of how this is going to be done. There is no legislation from the admin-

istration so far to increase the present authorization of \$340 million under the Food Stamp Act for fiscal 1970, yet such legislation would have to be passed before an additional cent could be appropriated above the \$340 million included in this bill. Thanks to a cruel amendment agreed to unanimously 2 years ago by the Senate Committee on Agriculture, not a single cent of the nearly \$1 billion available to the Secretary of Agriculture for surplus food removal under section 32 can be spent under the Food Stamp Act—not a cent of it. So far as I can tell, neither the administration nor any of the members of the Senate Agriculture Committee who are now so deeply concerned about hunger have taken a step toward repealing that cruel amendment contained in the Food Stamp Amendments of 1967.

I welcome President Nixon's announced intention to seek to broaden the program and I am glad to see that some of the members of his party in the House joined in a statement in the CONGRESSIONAL RECORD on May 20, submitted by the chairman of the Republican National Committee, the gentleman from Maryland (Mr. MORTON), pledging support for the President's position in behalf of an expanded and more effective food stamp program. Of course there is not anything that President Nixon now wants to do about the food stamp program that could not have been done under the bill we passed here in the House on July 30, 1968. That bill had provided for an open-ended authorization for the program so that Congress could appropriate whatever funds were necessary. The improvements which President Nixon is now talking about making in the program are generally the same improvements which Secretary of Agriculture Orville L. Freeman had intended to make under the bill we passed here last July 30. Unfortunately, the Senate Agriculture Committee conferees torpedoed the House bill and restored inadequate appropriation ceilings in the law. And the House conferees went along with that. So Mr. Freeman could make only limited improvements in the program under the present law which was passed last fall.

MOST VOTED "NO"

But on the crucial vote here in the House on July 30, 1968, on the Sullivan substitute, which was cosponsored by 130 Members of the House, including 10 chairmen of standing committees and four ranking minority members of standing committees of the House, approximately four out of five of the Members of the minority who joined with the chairman of the Republican National Committee last week in praising President Nixon's proposed improvements of the food stamp program, and criticizing what had been done previously, voted against the substitute measure.

Out of the 65 Republican Members who pledged their support for the proposed expansion of the food stamp program this year, in the statement in the RECORD of May 20, seven are new Members who did not serve in the 90th Congress, one failed to vote on the critical amendment on July 30, 1968, 45 voted "no" and only 12 voted "yes."

So it was not the chairman of the Subcommittee on Agricultural Appropriations, Mr. WHITTEN, who should have to apologize for his past actions on the food stamp program—I think he has generally supported it and I am grateful to him for the funds he has been instrumental in making available to the program over the years, since it began as a very small pilot operation in 1961.

NO NEED TO EXAGGERATE THE STARK TRUTH

I think there is more politics in the hunger issue than in almost anything else we have had before us. There is enough substance to the issue of malnutrition in this country that it does not have to be dressed up into a political football, or made the victim of faked scenes or misleading propaganda. The facts themselves are stark enough to justify emergency action to correct the problem. I think it is deplorable when these facts are deliberately exaggerated to make a better story because the genuine story is serious enough, and I think anyone involved in faking evidence of starvation is guilty of a crime against the people's right to truth and honesty in the reporting of national issues.

Undoubtedly the sight on the television screen of an infant dying from starvation is dramatic material to stir the emotions and shock the conscience of every American. But I am horrified to read in the report of the Committee on Appropriations that the infant shown in the broadcast as having starved to death was a premature baby who weighed only a little more than 2 pounds at birth—it was not a case of malnutrition at all. This is an indefensible misuse of the television news camera. There are hungry children in this country—there are lots of them. But I do not like to see faked pictures used even for a good purpose. I think the gentleman from Mississippi has a right to be incensed at the facts brought out in the investigation into the manner in which the hunger story was reported. The good Lord knows the facts are bad enough without any exaggerations.

WHERE THE CRUCIAL DECISIONS ARE MADE

But if television wants to dramatize the problems of solving malnutrition in the United States, it will find the story not in scenes of pickets marching around the Department of Agriculture or in the premature baby ward of a Texas hospital, but in the decisions made in the House and Senate Committees on Agriculture. That is where the battle has always been crucial, and frequently has been lost. Every television camera in Washington seemed to be down at the Department of Agriculture last year when the Resurrection City marchers were picketing the Secretary. On the same day the House Committee on Agriculture was opening hearings on the food stamp program and there were six people in the audience—not one of them from Resurrection City. And there were no television cameras outside in the corridor. Nor were there any, apparently, outside the meeting room of the House and Senate conferees on the food stamp bill last year when the decision was reached to reject the House bill and adopt restrictive ceilings on appropriations, so that only \$340 million can now

be included in the bill today for food stamps instead of the \$610 million the Nixon administration says it would like to spend for the program in the coming year.

The Whitten subcommittee has, on the whole, an excellent record on this issue. It deserves praise, not criticism, for its actions on food stamp funds. Too many critics of our food programs are directing their attacks at the wrong targets.

Mr. LANGEN. Mr. Chairman, I yield such time as he may consume to the gentleman from Illinois (Mr. MICHEL).

Mr. MICHEL. Mr. Chairman, I should point out that while we bring the bill to you under the budget, there is what I believe to be a phony cut of \$250,000,000 for capital restoration of the Commodity Credit Corporation.

You will recall several weeks ago we had a \$1 billion supplemental for CCC. You may get another in fiscal year 1970 if the situation does not change drastically.

The biggest add-on has to do with the forward authorization of the ACP program where the committee restored the \$195,000,000 cut in the budget. This is the same funding level as this year. Quite frankly, I have tried in the past to cut out these funds for all but long-range conservation practices and been badly beaten. If I offer the amendment when we read the bill it will only be done to show the Bureau of the Budget how futile an effort it is.

For the Extension Service we have recommended \$129,066,000, which is a decrease in the request of \$1,780,000 and an increase over 1969 of \$32 million.

The Members from urban areas will be interested in knowing how the Extension Service helps their areas, and I would like to give you some examples from my district, Peoria, Ill.

The agriculture extension work directly benefits all people—urban, rural nonfarm, and rural. Extension personnel assist by advising zoning boards, encouraging the need for conservation of natural resources, and promoting recreational areas. Len Caro, city manager of Peoria, requested help on adaptable soil types for areas to be used for factory sites, housing development, and waste disposal or land fill. Peoria and other communities have sought information from extension to determine the local water table and soil conditions to provide a good water supply. Some of this has resulted in building impounded areas for a water supply, or drilling a well, or developing sewage systems. A good water supply and proper waste disposal systems will help expand the communities and improve living conditions for all people.

Homeowners seek information from extension service on maintaining an attractive lawn; growing thrifty wholesome food in gardens; controlling household insects; selecting and caring for trees and shrubs; and using chemicals properly. It may seem unimportant to us, but what to do in case a swarm of bees settles on your back porch, or how to keep the snakes out of your basement can be of utmost importance to a homeowner, regardless of location.

The biggest increase we have made is under payments to the States for the

nutrition aid program. We are recommending \$112.4 million, which is an increase over 1969 of \$30.7 million. This program has been operating during the last 6 months of this fiscal year on \$10 million the Secretary appropriated from section 32 funds.

In the expanded nutrition program in two counties in my district we are concentrating on the individual low-income homemakers. Our program assistants are working with the homemaker to help her improve family diets and to manage and utilize food by developing some skills in planning, buying and preparing meals. The regular home economics extension program has always worked with food and nutrition in 4-H Young Homemakers, and the adult program. They have never done such individual or indepth work with the regular program. The Extension Service has worked in one interest area at a time, not only in food, but in all areas related to the home. Many low-income homemakers will not come out to group meetings; they need to find someone they have confidence in. This program will not have overnight results; but if followthrough is done properly, it can have lasting results.

Our program started in Peoria and Tazewell Counties in February with a 6-month budget of \$49,500. To date, 17 program assistants have enrolled and contacted 356 families, at an average at this date of \$139 per family.

The program assistants are recruited from the areas which they will serve and are paid \$2 per hour.

With regard to the rural electrification program I look at the REA experience over the last year with mixed feelings. When the new Administrator Mr. Hamil took office on March 6 he found that only \$82 million of the \$345 million of funds scheduled for loans in fiscal year 1969 were unobligated. He also found that of the \$263 million already loaned, \$193 million or 73% had been loaned for generation and transmission purposes. This was done even though both the House and Senate Appropriations Committees last year instructed the Administrator to hold generation and transmission loans to a minimum. As a result of the actions of the previous administrator \$70 million of distribution loans that should have been made this year will have to be carried forward and become a burden on the 1970 loan authorization.

Fortunately, the new Administrator has taken prompt action to try to restore some order out of the chaos he found.

I am happy to report that Mr. Hamil has revised the REA Bulletin setting forth policy on loans for generation and transmission facilities. The new bulletin at long last deletes the controversial third criteria having to do with the nebulous security and effectiveness provisions that were merely a shield behind which the Administrator could do anything he wanted to do. The revised bulletin establishes a more sound basis for making generation and transmission loans by separating initial construction from supplemental construction and requiring that estimated savings from REA financed facilities bear a significant rela-

tionship to the amount of the proposed loan.

Mr. Hamil also made much needed revisions of policy concerning section 5 loans for wiring, plumbing, and electric appliances and equipment. He restored the original intent of the law by eliminating a farfetched interpretation which had been used in recent years, to permit loans for commercial and industrial enterprises. The revised bulletin adds ventilating and heating ducts to the loan authorities, requires borrowers to comply with the Truth in Lending Act, eliminates use of section 5 loans for consumer financing of merchandise, and limits section 5 loans to 5 years.

Another bulletin that has been revised and brought up to date is the one covering wholesale contracts. The revised edition eliminates the 5-year limit on the term of contracts and sets forth certain conditions for power purchase contracts both with other cooperatives and with noncooperative suppliers.

The thorough and constructive steps that have thus been promptly taken were possible only because of the experience, knowledge, and sound thinking of the new Administrator. For example, he recognized that 5-year power supply contracts made little sense today in light of recent technological advances in scale and the fact that REA borrower loan commitments for generation have 35-year maturities. I am looking forward to continued improvement in the administration of the REA program under Mr. Hamil. The committee report gives him a good springboard from which to proceed.

The committee emphasizes the need "to devote as much as possible of the amount available to meet the urgent need for additional distribution facilities." To comply with this directive it would seem to me to be necessary to apply the provisions of the new bulletins carefully and to establish rather firm priorities for allocation of funds. The Administrator will also need to take a good look at the advances he makes this year because of the budgetary restrictions that have been established due to the critical fiscal situation facing our Nation and the controversial nature of some of the large G. & T. loans that have been approved in recent years. While I realize that there are legal obligations of the Government that must be respected I am also aware of the fact that certain decisions made in the past are of questionable legality, were indiscreet and would not qualify under present policies. The interests of the Government and the taxpayer should be protected to the extent it is legally possible to do so.

I have been interested in the PPB method of evaluating programs and understand some use of this system has been made by the Department of Agriculture in the REA area. If the procedure is as good as its proponents claim for it, it would appear to me that the system should be extended to review an evaluation of specific loan requests, in a manner somewhat similar to that used in feasibility studies for direct Federal Public Works construction. If the Federal Government believes such analyses are necessary for Federal works it intends to

build itself, it would seem there is an even greater need for it where it is putting up the money when someone else is doing the work.

The National Rural Electric Cooperative Association at its annual meeting this year approved the creation of a Rural Utilities Bank whose initial capital would be financed by subscriptions from REA cooperatives. The bank was chartered in the District of Columbia in April, 1969. Under the proposal, applications for rural electrification loans would be processed through REA which would prepare feasibility studies, determine those loans which it will approve, and forward the remainder to the bank together with a detailed list of material developed in its analysis. Since the bank will require a first lien on facilities installed with the proceeds from its loans, the existing REA mortgages would have to be subordinated or otherwise accommodated, because they cover all property of borrowers, existing or after-acquired. These are but two of the many problems created by the new bank.

Administrator Hamil stated at the House Appropriations Committee hearings that he had hoped that at least in the initial stages of supplemental financing for the rural electric cooperatives he would "have the opportunity to use the funds made available by the Congress, and commingle them with funds that could be made available from outside sources." This is a new wrinkle which, at least at first blush, looks extremely ominous. Any movement in that direction should be carefully studied before commitments are made because it could have many pitfalls. I fear the consequences of such involvement, and would expect the Administrator to obtain congressional approval through the normal legislative route if he is seriously considering any proposal of that nature.

It is essential that satisfactory means be found for supplemental financing of the rural electric cooperatives program. It is regrettable, however, that no comprehensive study has been presented to the Congress by the executive branch of the various possible alternatives for such financing; the costs and benefits of the various plans; the advantages, disadvantages and consequences of each; as well as a clear, succinct statement of the proper role and responsibility of the rural electric cooperatives in the late 20th century. Such a detailed study could likely have provided a sound, workable solution to the problem and avoided much of the confusion and controversy created by the proliferation of questionable and unsuccessful, piecemeal schemes we have faced in the last several years.

I am particularly concerned about this whole matter because we seem to insist on going about the business in a process which is directly opposite from the approach of the traditional Federal credit program. The customary procedure is for the Federal Government to provide credit assistance only as a last resort when a justified undertaking cannot be financed through normal investment channels. In the case of REA the plans have been to have outside financing for the facilities the Government does not wish to, or cannot legally, finance under

present statute. In other words applications would be processed through the Government first, and then forwarded to a private bank. This unusual method of attacking the problem from reverse is of itself enough to confuse even the most astute official. Furthermore, REA should not be permitted to use either administrative or loan funds supplied by this Congress, under the 1936 act, to study, promote, or finance, in whole or in part, facilities that cannot be legally built under the act.

I urge the Rural Electrification Administration to avoid hasty, ad hoc decisions on the new gimmick that is now current—the Rural Electric Bank—to stop stumbling around with various makeshift arrangements, and to start looking to the development of a carefully conceived, objective, economically and financially feasible, long-range answer to the rural electric cooperatives' financing needs.

Another area where REA has, in the past, been lax in administration is in the execution of laws concerning minority employment. It is quite evident that the new Administrator has not had sufficient time to fully examine this matter. I am sure, however, that the dismal record that exists is causing him concern.

A recent issue of the Civil Rights Digest showed that out of 46,380 employees of REA electric and telephone borrowers only 2,083 or 4.49 were from minority groups and only 1,347 or 2.9 percent were Negro. What is more, most of these Negro employees are working in semiskilled, unskilled, and service jobs. I fail to see how REA could consider such a record as compliance with the Civil Rights Act of 1964.

Section 601 of that act provides that no person by reason of race, color, or national origin shall be subjected to discrimination under any program or activity receiving Federal financial assistance.

On September 24, 1965, former President Johnson issued Executive Order No. 11246, part III of which deals with nondiscrimination provisions in federally assisted construction contracts. This provision prohibits discrimination in the construction of such federally aided facilities. Sanctions are provided in section 303(b) of the order. These sanctions include cancellation of the loan contract or refraining from making future contracts for assistance to such entity. I have yet to hear of the REA canceling any loan contract because of discrimination or refusing to make future loans to a borrower as a result of such discrimination.

Section 703(a) of the 1964 act makes it an unlawful employment practice for an employer to discriminate against an individual with respect to employment because of his race or color. An employer means any person "in an industry affecting commerce" which has 25 or more employees. Practically every electric or telephone borrower from the REA is "in an industry affecting commerce"—commerce meaning interstate commerce. According to the REA, 575 of the 981 electric borrowers—and 112 of 811 tele-

phone borrowers—had 25 or more employees.

Certainly the figures in the hearings indicate that some borrowers must be discriminating in employment. They obtain loans from the Treasury with interest at only 2 percent when the average rate of interest on the total marketable debt of the United States is 5.12 percent. I ask you: Is it fair and proper that the United States should subsidize discrimination through the REA loan programs? Obviously the answer is "No."

I think it is high time REA investigates this matter and takes steps to assure compliance with the law. Where borrowers fail to do so the authorized sanctions should be applied.

SOIL AND WATER CONSERVATION

I would hope in the next year that we see some shift in budget allocations for research in the soil and water conservation research.

I am inserting a chart at this point which shows that for each \$1,000 worth of research in the Corn Belt States the Soil and Water Conservation Research Division receives 11 cents. For a three-State—Idaho, Oregon, Washington—area in the Northwest, the Research Division allocates 68 cents for \$1,000 of farm receipts.

RESEARCH SUPPORT BUDGET ALLOCATIONS TO SOIL AND WATER CONSERVATION RESEARCH DIVISION, USDA-ARS

	Cash receipts from farming (millions) ¹	Research support per \$1,000 of receipts ²
Northeast.....	\$3,668.2	\$0.88
Southern.....	6,446.3	.33
Corn Belt.....	13,080.2	.11
Northern Plains.....	3,751.7	.37
Southern Plains.....	5,116.5	.29
Northwest.....	1,944.3	.68
Southwest.....	4,271.6	.40

¹ 1964 agricultural statistics.

² Estimated obligations for research by States, salaries and expenses, fiscal years 1964-65, ARS.

Note: Some figures based on preliminary figures.

Source: PL IV, Hearings Before a Subcommittee on Appropriations, House of Representatives, Agriculture, 1968.

These Corn Belt States produce one-third of the cash receipts from farming.

According to 1966 agricultural statistics, the Corn Belt States produce 78 percent of the corn, 72 percent of the hogs, 68 percent of the soybeans, 60 percent of the oats, 47 percent of the milk, 43 percent of the turkeys, 38 percent of the hay, and 32 percent of the cattle in the United States.

Yet these States in the Corn Belt—Iowa, Illinois, Indiana, Kentucky, Michigan, Minnesota, Missouri, Ohio, and Wisconsin—receive the smallest amount for research support per \$1,000 of receipts.

Mr. LANGEN. Mr. Chairman, I yield 5 minutes to the gentleman from Massachusetts (Mr. CONTE).

Mr. CONTE. Mr. Chairman, later in the day I intend to introduce an amendment to limit aggregate farm subsidy payments for any one producer to \$20,000 with the exception of sugar payments.

This is the same amendment which I introduced on July 31 of last year and

which the House approved by a record vote of 230 to 160.

Mr. Chairman, our present farm programs are not working properly—they are wasteful, inequitable, and in need of basic revision.

On March 25 of this year we considered legislation to appropriate additional funds for the Commodity Credit Corporation. Those circumstances were not appropriate for offering my payment limitation amendment and I so stated this on the floor. I went on to state, however, and I quote:

At the first appropriate time I intend to again introduce my amendment placing a \$20,000 maximum on farm subsidy payments.

I intend to continue this battle until we have been successful—until we have eliminated the unfair subsidies which now exist and have developed new agriculture programs and policies to meet the challenges of today.

Mr. Chairman, today is that "first appropriate time."

I will defer any further discussion of my amendment until I have introduced it later on.

I would, however, like to comment here on the action taken late last week by the leadership in rescheduling consideration of this bill from tomorrow to today.

Mr. Chairman, there can be no justification for this action.

It is perfectly clear that the leadership switched this bill and the Treasury-Post Office appropriations bill around for one reason and one reason only—to limit the support for a farm payments limitation, thereby protecting the huge unjustifiable subsidies which are presently being paid out.

The leadership was well aware of the fact that many supporters of the amendment would still be in their home districts today while most of its opponents, coming from more distant areas, would be here on the floor. This is why we suddenly find ourselves considering the Agriculture appropriations bill today.

Mr. Chairman, we need new farm programs for our Nation and we must begin moving on this immediately. My amendment will constitute a first step forward in accomplishing this and at the same time eliminate the wasteful spending of hundreds of millions of dollars of the American taxpayers' money.

I urge the Members of this body to support me when I introduce my amendment later in the day.

Mr. FINDLEY. Mr. Chairman, will the gentleman yield?

Mr. CONTE. I will be glad to yield to my good friend from Illinois.

Mr. FINDLEY. I would like the gentleman to know that in the May 21 CONGRESSIONAL RECORD, beginning on page 13287, I placed a listing of each recipient in the United States whose payments in the aggregate from the various programs, excluding sugar and wool, exceeded \$25,000. The amendment which the gentleman from Massachusetts and myself both support and intend to offer later is at \$20,000, so there is admittedly a gap between the \$20,000 amendment and \$25,000 and above figures as reported in the CONGRESSIONAL RECORD of that date. Any Member of this body desiring

to see firsthand how this amendment would likely affect his own constituents can turn to that page of the RECORD and find out the name and address and the dollar amount.

I am sure the gentleman will agree with me some of the figures are indeed shocking. For example, under Arizona I see an item of \$504,000. There are two items in California in the range of \$3 million each.

Mr. CONTE. Not only millions of dollars are involved, but there are prisons getting subsidies, rich oil companies getting subsidies, and rich land developers getting subsidies. This is one of the worst programs we have in this Government.

There are Congressmen and Senators getting farm subsidies, and it is high time we stopped it.

Mr. Chairman, I yield back the balance of my time.

Mr. LANGEN. Mr. Chairman, I yield 3 minutes to the gentleman from Minnesota (Mr. NELSEN).

Mr. NELSEN. Mr. Chairman, I listened with interest to the discussion relative to the limitation of farm payments, and I wish to comment that I, too, will offer an amendment as to the payments, but mine will be different.

We forget the purpose of the farm program is to limit production to the demand. If a cutoff is made at an arbitrary figure, the odds are that the largest producers will not participate in the program and will continue to produce more and more and, as a result, destroy the agricultural economy.

Mr. HUNGATE. Mr. Chairman, will the gentleman yield?

Mr. NELSEN. I yield to the gentleman from Missouri.

Mr. HUNGATE. Can the gentleman tell me why sugar and wool would be excluded from the limitation?

Mr. NELSEN. I do not know. I cannot answer that question. However, let me suggest that the gentleman ask that question of someone else, and I would like to use the amount of time that I have, the 3 minutes, for my little pitch on the idea that we have.

There will be a graduated payment under my plan and under Congressman Zwach's plan where as the payments go up the percentage goes down. Under this plan, there will be no bar to participating in the program because of economic pressure, but the smaller producers would get a little bit more and larger producers would get a little bit less. This will be done in such a manner that there will be participation in the program. If we drive the large producers out, we will have a surplus that will depress the market. The purpose of my amendment will be to take an even, middle road which I think has merit and which has been endorsed at some of the national conventions.

And I am sure that the members of the committee will be pleased to see the provisions of my amendment when it comes up later. I thank you very much.

Mr. Chairman, I yield 3 minutes to the gentleman from Illinois (Mr. FINDLEY).

Mr. FINDLEY. I thank the gentleman for yielding.

The question was raised as to why

sugar and wool are excluded from the limitation on payments. Wool is not excluded. It will definitely be included. And I might say in explanation that the figures which I placed in the RECORD did exclude sugar and wool but only because the statistics were furnished to me in that form and I did not have the wool and sugar payments available. But because of the unique features of the sugar program, producers cannot vote by referendum as to whether to continue the sugar program or not. This is the principal reason I propose to exclude sugar payments in my limitation of payments amendment.

Further, the question was raised as to whether the largest producers under, say, the cotton program would cooperate in the event a limitation is placed upon payments.

It is interesting to note that Louisiana State University recently issued a study of the economic advantage of planting cotton as opposed to the most logical next crop: that is soybeans. They found it to be economically unsound for a cotton producer in Louisiana to switch from cotton to soybeans, unless the soybean price rose to nearly \$4 per bushel. Therefore, I concluded that even with the \$20,000 limitation on payments, the big producers in that area and presumably in all sections of the land where cotton is grown would continue to produce pretty much the same volume as they do now.

The very important fact is that the taxpayers do not have to pay the gigantic payments to cotton producers in order to get their cooperation.

The main reason I asked for this time, I will say to my friend from Minnesota, is to inquire as to the estimated cost of the programs for the coming year. I understand that the sign-up under the feed grains program is the largest in a long time, if not the largest in history.

Can anyone supply me with an estimate as to what the feed grains program will cost in this 1969 crop year? Can anyone give me an estimate on that? Surely, out of the hearings which were held on the bill for the restoration of capital operating stock to the Commodity Credit Corporation there must be something to indicate the anticipated cost.

Mr. LANGEN. Mr. Chairman, if the gentleman will yield, I refer the gentleman to volume 3 of the hearings and the table which appears on pages 130 and 131 thereof where there is identified in chart form the respective costs of the programs beginning with 1964 and running through 1970, including wheat certificates.

Mr. FINDLEY. Could the gentleman capsule for our benefit the cost of each program—the cost to the taxpayers of each program involved? I would like to have figures on the feed grains program as well as others. I understand that the cost of the cotton program is about \$900 million.

Mr. LANGEN. Just one moment and let me see if we have those figures available.

For the feed grains program there is the estimate of \$710 million; for the wheat program—certificates issued to producers—\$738.4 million; for the cotton, upland wool and ELS, \$798.6 million; for wool, \$55.8 million, making the

total price support for those categories \$2,302,800,000.

For wheat certificates sold to processors which amount to a refund and that amount is \$390 million, making, therefore, a net price support payment cost of \$1,912,800,000. These are estimated costs for 1970. In addition there are diversion payments of \$632 million for feed grains and \$80 million for wheat.

Mr. FINDLEY. Did I understand the estimate for 1970 for feed grains was only \$700 million.

Mr. LANGEN. It is \$710 million.

The CHAIRMAN. The time of the gentleman from Illinois has expired.

Mr. LANGEN. Mr. Chairman, I yield 3 minutes to the gentleman from Massachusetts (Mr. KEITH).

Mr. KEITH. Mr. Chairman, I would like to bring to the attention of the chairman of the committee and the Committee on Appropriations a memorandum put out by the School Lunch Program Agency dated July 21, 1964, signed by the director of the Food Distribution Division. This memorandum is pertinent to our effort to try to help domestic industries, not only agriculture, but others.

It says:

One of the primary objectives of the National School Lunch Program, as stated in the Act, is "to encourage the domestic consumption of nutritious agricultural commodities and other food". The Congressional intent is for the National School Lunch Program to promote the increased consumption of domestically produced agricultural commodities and other goods and not those of foreign origin.

It has been brought to my attention that the school lunch program funds are being used to purchase imported fish—this in spite of the fact that our fishing industry is having real tough sledding and needs and deserves all the help that it can get.

I would like to have reaffirmed in the debate here today the legislative intent as to the proper use of the funds in the school lunch program—with respect to imports.

Mr. WHITTEN. Mr. Chairman, if the gentleman from Massachusetts will yield to me, I believe that I could state in partial answer to the inquiry of the gentleman that in our consideration of this bill—while there have been some variations of opinion—I would say that adequate attention has been given to this problem. We have section 32 funds for purchasing surplus foods for use in the school lunch and other programs. In addition to that, we also have these other provisions of law, such as the Child Nutrition Act, in which permission is given to purchase additional items in order that the recipients may have a well-rounded lunch.

Certainly, speaking for myself—and I feel that I am also speaking for most of the members of the committee—I would certainly like to see American fish products used, since it is an American industry, and certainly the products of the American fish industry should be funneled into our school lunch programs.

But I would further say that in section 32 they are allowed to go to additional protein sources in order to provide a well-rounded diet, and as a result, some products might be imported.

Mr. KEITH. Mr. Chairman, would the gentleman believe that it would be illegal for a school lunch administrator to purchase foreign foods when domestic foods are available?

Mr. WHITTEN. The gentleman has used the word "illegal." This would go particularly to the legislative intent, and I am not familiar enough with the situation to know the complete limitations on the administrator's discretion. So I would say that his decision should be based on what his authority is. I certainly agree with the gentleman, but I would not want to pass on the legality, because I am not an expert in that field.

The CHAIRMAN. The time of the gentleman from Massachusetts has expired.

Mr. LANGEN. Mr. Chairman, I yield 2 additional minutes to the gentleman from Massachusetts.

Mr. KEITH. I thank the gentleman for the additional time.

Mr. LANGEN. Mr. Chairman, if the gentleman will yield, I want to agree first of all on the proposition the gentleman has made. It is certainly well founded. I would agree with the response that the chairman of the subcommittee has provided the gentleman. I do not believe it was the intent of the Congress, nor the intent of this committee, that money provided for the school lunch program was to be used for the purchase of imported products of any kind, whether fish or something else, as long as those products were available domestically.

However, I believe in all fairness it should be stated that this problem, to my recollection, was not called to the attention of the subcommittee. Had it been, we surely would have explored the matter further for the purpose of determining whatever factors may have been involved in these purchases, and to determine their effect on our own fishing industry.

I would suggest to the gentleman that this matter will be the subject of the committee's consideration in the future.

Mr. KEITH. I would like to point out that on the one hand the Department of Agriculture is inadvertently permitting the further deterioration of the fishing industry by not being able to stop the use of imported seafoods in the national food program. It is interesting, to say the least, to note that the Department of Commerce and the Department of the Interior are literally spending millions of dollars to try to revive that same industry.

If a research into the legislative history of this act would indicate that an amendment might be necessary to prohibit the purchase of foreign seafood, I would like to advise my colleagues on the committee that at the appropriate time such an amendment may be offered.

Mr. WHITTEN. Mr. Chairman, I yield such time as he may desire to the chairman of the Committee on Appropriations, the gentleman from Texas (Mr. MAHON).

Mr. MAHON. Mr. Chairman, this is the first regular appropriation bill for the fiscal year 1970, which begins on July 1 next. We have considered two supplemental appropriation measures at this session, but we will have before us

13 regular annual bills for fiscal 1970, and this is the first one.

Another of the 13 bills is scheduled for floor debate tomorrow, the Treasury-Post Office appropriation bill.

The committee is moving along rather rapidly toward completing hearings and preparing several other bills for submission to the House. But I should say that a number of the remaining 11 bills cannot under the rules be brought forward until various programs that are subject to annual authorization have first been authorized by legislation out of several authorizing committees. I would hope that the authorizing committees will move along as rapidly as they are able to under all the circumstances.

I would like to say at this time that while there are legislative provisos of one kind or another included in appropriation bills from time to time, personally I feel, and I believe this generally reflects the views of the House, that we should keep such provisions on the appropriations bills to a minimum.

I say that particularly now in view of the fact that I understand an effort will be made later this afternoon by way of a limitation on expenditure of funds, to limit payments under the basic farm program law.

The present farm program legislation will expire at the end of next year. A new bill is needed. A new bill will have to be enacted. But for the House to undertake to write anything as complex as a modification of the farm program—and that is exactly what such a seemingly simple payment limitation involves—as an amendment to an appropriation bill here on the floor would be utterly absurd. I hope that we would not undertake to do that.

It might be said that the limiting amendment is just a simple amendment and could be easily applied. But officials at the Department of Agriculture advise me it would be virtually impossible to administer such a limitation.

The so-called Conte-Findley amendment would in effect cost the Government more money than the present system, especially in the cotton program.

Moreover, the amendment is unsound and indefensible. It ought to be defeated. I urge the defeat of the amendment when the vote on this issue arises later in the afternoon.

Mr. Chairman, we have legislative committees for the purpose of formulating these complex pieces of legislation, which deal with such matters as farm programs designed to be helpful to farmers and consumers alike.

I do hope that we can pass this appropriation bill without undertaking to write major farm legislation of far-reaching consequences by any ill-advised action on the bill now before us.

I would earnestly hope that this would be the prevailing view in the House.

Mr. Chairman, I thank the gentleman from Mississippi for yielding me this time.

The CHAIRMAN. The gentleman from Texas has consumed 4 minutes.

Mr. WHITTEN. Mr. Chairman, I yield 5 minutes to the gentleman from Indiana (Mr. MADDEN).

Mr. MADDEN. Mr. Chairman, the pending farm subsidy appropriation now under consideration will undoubtedly take precedence over any appropriation in this session of Congress that could be classified as being one of the most reckless, extravagant, and unnecessary expenditures of the taxpayers' money that I have observed in my long service in the Congress. By this statement I do not mean to suggest that all of the \$3.5 billion annual subsidy is not necessary for the smaller rural recipients.

I opposed this legislation when it came before the Rules Committee in the last Congress and recommended that there should be a ceiling of approximately \$15,000 or \$20,000 to any one farm operation in the country. When this legislation was before the House last July I supported, spoke for, and voted for an amendment calling for a \$20,000 limitation subsidy for any one farm operation whether it be individual or corporate farm operation.

When this bill was before the Rules Committee last July the members perused the 1,244-page volume of names, addresses, and annual payments to farm operations. The volume only listed the farmer recipients who received over \$5,000 per year. The recipients who received under \$5,000 per year were not enumerated in the volume because it would possibly require several volumes to list the under-\$5,000 recipients.

Of the various counties listed over the Nation several southern and western counties received payments between \$16 and \$20 million annually. Remember, I am referring to counties, not States. A half dozen individual farm corporations received over \$1 million each, but I believe the champion recipient of all was J. G. Boswell Co., Litchfield Park, Ariz., Kings County, Calif., who received \$4,091,818 from the American taxpayers in the year 1967 for its idle land. Close behind was Rancho San Antonio, Gila Bend, Ariz., Fresno County, Calif., who received \$2,863,668 in the year 1967. The runnerup was Giffen Farms, Inc., of Huron, Calif., who received \$2,397,073 from the American taxpayers in the year 1966 for its idle land.

In the CONGRESSIONAL RECORD, volume 114, part 17, page 22191, I listed the names and addresses of 25 large-farm recipients whose individual payments run from \$442,327 up to \$4,091,818. I also submitted on that page of the CONGRESSIONAL RECORD where 10 farming operations received a total of \$14,785,760 which is more than the total of \$13,409,756 received by all farmers in 10 States—Alaska, Rhode Island, Massachusetts, New Hampshire, Connecticut, Delaware, Nevada, Vermont, Maine, and West Virginia—plus the Virgin Islands.

These 10 large operations received payments in excess of those received by all farmers in any one of 15 States—Alaska, Rhode Island, Massachusetts, New Hampshire, Connecticut, Delaware, Nevada, Vermont, Maine, West Virginia, New Jersey, Maryland, Hawaii, Utah, and Wyoming.

Twenty-five farming operations received a total of \$22,766,943 which is more than the total of \$17,610,650 re-

ceived by all farmers in 11 States—Alaska, Rhode Island, Massachusetts, New Hampshire, Connecticut, Delaware, Nevada, Vermont, Maine, West Virginia, and New Jersey—plus the Virgin Islands.

I do hope that every Member of the House will get a copy of the Senate hearings, first session, 90th Congress, listing the names, addresses, and amounts of all annual recipients over \$5,000 by reason of this farm subsidy. In 1966 the total cost to the taxpayers of this rural subsidy was \$3,281,621,070. The year 1967 was approximately a duplication of the previous years' subsidy. The House of Representatives is today called upon to appropriate this relief bonanza for another year, which, if passed, will cost the American taxpayers approximately another \$3.5 billion.

I hope that the Members will refer to the CONGRESSIONAL RECORD, volume 114, part 17, page 22702, where I got permission to include an editorial from the Chicago Tribune entitled, "A Mississippi Farmer Squawks." This editorial outlined a protest by one Roy Flowers, a wealthy Mississippi cotton and soybean grower, who was ordered to pay \$50,000 in back wages to more than 200 Negro tenants under the Fair Labor Standards Act. The editorial states that Flowers makes more than \$1 million per year from his various plantation enterprises. He failed to pay minimum wages to his fieldworkers. Some were under 16 years of age. According to the suit, the tenants were charged \$70 per month for houses without inside plumbing and water, but with holes in ceilings and walls, when a "reasonable cost" would have been \$5 per month.

The Department of Agriculture lists Flowers as having received \$210,332 in Government subsidies for not planting crops, presumably cotton, last year. In 1966 he received \$162,657 in Federal cash.

Of course Mississippi is not the only State where the rich corporations have taken advantage of this subsidy by adding thousands of acres to their holdings so as to come under this rural subsidy bonanza. According to statistics, records of recipients by various States contained in the CONGRESSIONAL RECORD, Wednesday, May 21, 1969, page 13288, it is astounding to read the fabulous sums paid corporate and conglomerate farms throughout the country, especially in the West, Midwest, and South.

There were 1,826 Texas farmers in payments of over \$25,000 annually who received a total of \$74,190,000; 624 California farmers in payments of over \$25,000 annually received a total of \$47,063,276; 443 Arizona farmers in payments of over \$25,000 annually received a total of \$28,121,115; 817 Mississippi farmers in payments of over \$25,000 annually received a total of \$38,266,282; 35 Iowa farmers in payments of over \$25,000 annually received a total of \$1,343,148; 148 Kansas farmers in payments of over \$25,000 annually received a total of \$5,266,932; nine Minnesota farmers in payments of over \$25,000 annually received a total of \$275,000; 170 Alabama farmers in payments of over \$25,000 annually received a total of \$6,624,115; and 55 Indiana farmers in payments of

over \$25,000 annually received a total of \$2,059,023.

I could go on and enumerate other States where large farm operations have bought additional land and expanded this gigantic subsidy which jeopardizes the whole farm legislation to the detriment of the small farmer who no doubt, in many cases, needs Federal help.

I have received many letters during the last few weeks from all over the United States protesting the extension of this subsidy to the wealthy and corporate farmers of the Nation. Some protests recommend that if legislation of this type must be passed, that the limitation to any one farm should be not more than \$10,000 to \$20,000. If the Members of Congress think that it is necessary to aid the small farmer, to reimburse him for idle land, in order to curtail abundance, a limitation of this type would prevent large farm operations from buying more land, vacating the tenants as an economy move, so they could collect big checks from Uncle Sam.

In an article in Harpers magazine recently, Mr. John Fischer pointed out the following:

When you offer a bribe for every acre taken out of cultivation, the men with the most acres naturally get the most money—in many cases hundreds of thousands of dollars every year. Typically they use their loot in two ways: (1) to buy more land from their smaller neighbors; and (2) to invest in tractors, cotton-pickers, fertilizer, weed-killers, six-row cultivators, and all the other devices of modern technology.

The larger the farm, the bigger the operation with modern equipment, and the farmer can take more acres out of production and thus get a larger annual payoff check from the taxpayer.

This rural bonanza program in 1967 forced over three-quarters of a million farmers off the land and they, in turn, have moved into the urban areas to seek employment.

I have seen some of my rural colleagues go up the center aisle on teller votes to oppose relatively small appropriations for Headstart and other makework and manpower training programs for our urban areas. I have also seen a number of our rural colleagues oppose increases, and in many cases supporting reductions, in several of the great educational programs and housing projects. The same statement can apply to hospitalization, medicare expansion, and air and water pollution programs which some of our good colleagues oppose and wish to reduce or terminate.

It is remarkable that a great number of our Members from rural areas will enthusiastically support the \$3.5 billion boondoggle, 75 percent of which will be siphoned into the profit receipts of corporate and wealthy farm operators throughout the Nation.

Last year the House Agriculture Committee wanted a 4-year extension of this program and the other body sustained their request, but thanks to the opposition a few of us exerted against a 4-year extension, this legislation was limited to but 1 year.

I have every confidence that, by reason of the fight we are making, to inform the voters of the Nation regarding the

unjust and unreasonable demands of large farm conglomerates and large individual farm operations, this year will terminate the fabulous amounts to farmers by prohibiting any one farm operation to receive more than \$20,000 annually.

Mr. LANGEN. Mr. Chairman, I yield 2 minutes to the gentleman from Michigan (Mr. CHAMBERLAIN).

Mr. CHAMBERLAIN. Mr. Chairman, I have asked for this time to make a brief inquiry as to what provisions, if any, are in this bill to take care of continuing research on the cereal leaf beetle. Up in our area of Michigan, and in the Midwest area, this has become a serious problem. I should like to have some assurances that adequate provisions are made in this bill to continue the research which has been underway for the past several years.

Mr. MICHEL. Mr. Chairman, will the gentleman yield?

Mr. CHAMBERLAIN. I am happy to yield to the gentleman from Illinois.

Mr. MICHEL. I shall be happy to respond to the gentleman.

The gentleman will recall our exchange during consideration of the bill last year, in which we pointed out that testimony came before our subcommittee that the most serious pest to which we had to contend with was the cereal leaf beetle.

There was at least \$200,000 in the bill last year. There is money in this bill this year, to continue the research, but it ought to be accelerated.

I should say to the gentleman, and make it a matter of the legislative history, that on the strength of the threat this poses we are not doing enough, particularly when we compare this to what we are doing with respect to the screw-worm and the fire ant and some others, where the dollar loss is nowhere close to what could be the loss in the opening up of the 40 million acres of the breadbasket of this country to the cereal leaf beetle. As the gentleman knows, this beetle infestation in this country began in Michigan and spread to Ohio, Indiana, and parts of Illinois. The Department has to move more militantly to remedy this threat.

I should like to have some assurance from the chairman that he, too, feels this way.

Mr. WHITTEN. Mr. Chairman, will the gentleman yield?

Mr. CHAMBERLAIN. I yield to the gentleman from Mississippi.

Mr. WHITTEN. I should like to agree with what has been said by my colleague from Illinois. May I amplify it to some degree?

At this stage, we are still doing research, trying to determine how best to deal with the cereal leaf beetle. The amount of \$200,000 is a considerable amount when one is still doing research.

I would point out that we have made an effort to meet this problem. I mention it here, because this is one of the things to be considered. There is contingency reserve of \$1 million which we provided to the Department to meet emergencies. If they have a breakthrough in the research, they have this \$1 million with which to proceed. We try to proceed as fast as we can to learn the answers to

problems. We do have this \$1 million "escape valve" which they can use.

Mr. CHAMBERLAIN. I thank the chairman and the gentleman from Illinois. It is reassuring to know that this matter has had the careful attention of the committee. It is my hope it will continue to have such attention.

Mr. KUYKENDALL. Mr. Chairman, the subject of cotton subsidy payments and payment limitations probably generates as much confusion and misinformation as any that comes before you.

Somehow, a debate on payment limitations never really seems to get around to the real issue involved. That issue is whether we are to have farm programs or not. Regardless of the motives behind efforts to limit payments, we are voting on whether to terminate the farm program. One would think, in reading many of the statements arguing for an end to big payments, that the farmers of our country were getting handouts from the public Treasury. This is not the case; it has never been the case; and I am hopeful our debate here today will help to clear up a lot of the misunderstanding which unfortunately has been generated.

My district—the city of Memphis—is the largest spot cotton market in the world. The economic health of Memphis is tied in good part to cotton. Cotton payments are a carefully calculated part of the farmer's income. The average cotton farmer cannot grow cotton at the price he has to sell in the marketplace. This difference is made up by a payment on his domestic allotment only—this year—to encourage him to stay in the cotton business—which he certainly cannot do at a loss.

No farmer I have ever heard of assumes for 1 minute that these payments can be made indefinitely. Cotton growers have tried for years to get the kind of research program underway they need to cut their cost and make it possible to grow for the market without benefit of subsidy. This is their goal. And we of the Congress have an obligation to help them achieve that goal. They are doing their part with a dollar-a-bale program and deserve our assistance in every way that we can appropriately give it.

If payment limitations are imposed, certainly we still will have a cotton industry. But it would not be a healthy industry. Several million acres of land will have to go out of cotton and into other crops. I do not know any area of any commodity that can afford additional production without very serious adverse effects. What would happen to wheat, feed grains, vegetables, cattle, and many other commodities if land now planted to cotton were planted to them? And what will happen to all the industries that supply and service cotton?

There is one other aspect of this problem we need to consider very seriously. I think this Congress has an implied commitment through 1970 on the present law—a commitment to farmers that we should not break. Last year we extended the act of 1965 through 1970 to give the new administration time to develop its own program—a program that certainly would deal with this limitations issue. We are being asked here today to

do something entirely different, and I would strongly urge that we vote down any efforts to limit payments to farmers as class legislation at its worst.

Mr. CRAMER. Mr. Chairman, the threatened elimination or reduction of the agricultural conservation program posed far more portentous dangers than apparently were envisioned when the matter was first proposed. At stake was not the future of just one particular program, as appeared on the surface, but rather the welfare and well-being of the entire Nation were indeed in danger of being eroded.

For at the very foundation of a great nation and a free people is the rightful fulfillment of that most basic of human needs—the right to and the benefit of proper nutrition and natural resources. These are our historical heritages in a country made strong because its people drew strength from the land and its natural benefits. It is an elementary fact, and one that plagues much of the world today, that a people deprived of an adequate food supply are prey to doubts that the free enterprise system holds out to them the promise and hope of realizing for themselves the opportunities of a free nation. The seed of freedom cannot flourish in the soil of deprivation.

As stated in the committee report on today's bill:

All of the controversy about hunger and malnutrition today has taken for granted the availability in the United States of a plentiful supply of nutritious food. We, in fact, have such a supply—the most abundant the world has ever seen. But we must not forget that the continued availability of these ample food supplies is not automatic. Future supplies to feed the rapidly growing population of this nation and the world, including the hungry and undernourished, will be determined by the economic viability of our agricultural producers, and the continued productivity of our soil and water resources.

This statement in itself is a most compelling argument in support of the highly successful agricultural conservation program, as an important, integral part in the development and preservation of the finest of agriculture systems. The agricultural conservation program is a cost-sharing program, with the local programs developed by the State and local communities, within the structure of the national program and with the approval of the Secretary of Agriculture. This is truly a grassroots program in that no practices are adopted and put into effect in any State or county unless approved by the local conservation groups. The benefits of this program go to nonfarm people as well as to farmers with the program's continued emphasis on the establishment of long-term conservation practices. A growing proportion of agricultural conservation program cost-shares is being used for those conservation practices which conserve water and reduce water pollution; those primarily for wildlife conservation, and those which provide recreational and beautification conservation benefits.

The report further states:

In the opinion of a majority of the members of the Committee, this program provides the best possible means for getting soil and water conservation practices applied to the land.

The land, with its great natural resources and its abundant food supply, has historically provided the strength and the hope for the development of our Nation to its fullest capacity as the leader of the free world. To eliminate or reduce the highly meritorious agricultural conservation program would be most unwise and seriously detrimental to the future accomplishment of the program's goals.

I previously indicated my great concern over the proposed withdrawal of all funds for the agricultural conservation program for this coming fiscal year, and I am relieved and gratified by the committee's position that the vitally important program must be continued. The committee has recommended in H.R. 11612 an appropriation of \$195,500,000 to make payments due under the program authorized in the 1969 agricultural appropriations bill, noting that the amounts owed under that program are legal commitments and funds must be provided to meet all obligations incurred.

Both propriety and humanity place this program in the highest priority and, as the ranking minority member of the House Public Works Committee, which authorizes watershed projects as part of the total conservation program, I urge its uninterrupted continuance through the approval of the funds recommended by the committee.

Mr. VANIK. Mr. Chairman, I want to take this opportunity to announce that I expect to vote against this appropriation bill which will cost the taxpayers of America \$6.6 billion in this fiscal year. Frankly, I do not believe there is any benefit ratio sufficient to justify this kind of public spending.

In the past, I have supported farm legislation. A healthy farm economy makes for a prosperous nation. Our achievements in the agricultural sciences are the marvels of the world—even dwarfing our achievements in space. No other nation has done so much to produce food.

There is poverty on the American farm in large parts of the country and we must deal effectively with that poverty as we deal with urban poverty. But there are also huge profits for some segments of agriculture which enjoy the benefits of our Federal subsidies—and these profits for the greater part completely bypass the Treasury and the tax collector.

As a member of the Ways and Means Committee, I was shocked to learn of the maneuvers which are employed to avoid taxation.

The ingenious farmer who protests urban programs manages to get every conceivable kind of deduction. The farmer gets depreciation, depletion, investment credit, and long-term gains.

On a cattle ranch, the breeding cattle are owned by the children, who pay ordinary taxes at lower rates, while the steers are owned by the parents who pay taxes on these operations at reduced rates as long-term capital gains. The investment credit extends to orange trees in Florida.

The conglomerate was born on the farm—and spread to the city.

This bill provides \$6.6 billion to the agricultural industry of America. That is only part of the story. The overwhelming portion of our public works program

not related to transportation adds billions more to the agricultural sector. No other segment of American life receives so much and pays in so little.

The testimony before our committee indicated that tax payments by agriculture in America approximate \$1 billion. We spend approximately \$8 billion in agriculture including this bill and public works and get back less than \$1 billion in tax revenues. Somehow or another these subsidy programs costing billions of dollars should also generate some tax receipts to justify their continuance.

It is time for us to stop treating agriculture as a pampered child. The industry has progressed far enough to stand on its own and help pay its own way.

Mr. WOLFF. Mr. Chairman, once again we are being asked to appropriate billions of dollars for wasteful farm subsidies that will line the gilt-edged pockets of rich, corporate farmers. These "fat cats" annually come looking, with a highly paid lobby, for the largest single handout in the world. The indolence at the economic trough displayed by these wealthy farmers is especially galling because so little of these subsidies go to deserving family farmers. Were the appropriation reoffered in the spirit that the farm subsidies were created—to help the small farmer who is the platform of our economy—I would be ready to lend it my support.

But I cannot vote for a \$5 billion farm subsidy program with the knowledge that the largest part of these funds will go to corporate farmers whose very existence is designed to exploit the price support program.

At a time when there is much talk in this Nation about the high cost of welfare I think it is important to identify this farm subsidy program for what it is—the single most costly and unproductive welfare program ever designed by man. And it must not be perpetuated no matter how strong the farm lobby can be.

Mr. Chairman, I am prepared to vote for the amendment to be offered by the gentleman from Illinois (Mr. FINDLEY) to limit the size of single subsidies to \$20,000 a year. I consider this proposal properly designed to control, as a first step, the excessive subsidies that saw more than 400 farmers receive payments in excess of \$100,000 during 1967.

I am also prepared to support the amendment to be offered by the gentleman from California (Mr. EDWARDS) to violation of existing civil rights legislation. Our farm program is not above the law and I was sorely distressed by recent disclosures of expenditures in violation of civil rights legislation.

While voting for these amendments I shall vote against the appropriation because of the distorted sense of values symbolized by the legislation. We are asked to vote \$5 billion in subsidies and a mere \$1.5 billion to feed the hungry in this Nation. This is a great and tragic irony and shows a confused and dangerous sense of priorities. As long as there are hungry people we should not be plowing food under. As long as there are hungry people they should receive our highest priority. Instead we get a minimum food for the hungry appropriation in the midst of an excessive subsidy appropria-

tion for large farmers who neither need nor deserve these outlandish subsidies.

We should be doing much more for the hungry in this Nation. At a period of such great prosperity it is a continuing shame that there is hunger and malnutrition in many parts of the United States. Our failure to properly attack the problem of hunger is especially disappointing and totally unacceptable as we move toward what will probably be routine approval of wasteful subsidies.

Obviously our priorities are unbalanced—as unbalanced as the ratio between a \$5 billion subsidy and \$1.5 billion food for the hungry program. I shall vote against this appropriation in the hope that we can discern the difference between need and waste and thus reorder our priorities.

Mr. WHITTEN. Mr. Chairman, we have no further requests for time.

Mr. LANGEN. Mr. Chairman, we have no further requests for time.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

DEPARTMENT OF AGRICULTURE
TITLE I—GENERAL ACTIVITIES
AGRICULTURAL RESEARCH SERVICE
SALARIES AND EXPENSES

For expenses necessary to perform agricultural research relating to production, utilization, marketing, nutrition, and consumer use, to control and eradicate pests and plant and animal diseases, and to perform related inspection, quarantine and regulatory work: *Provided*, That appropriations hereunder shall be available for field employment pursuant to the second sentence of section 706

(a) of the Organic Act of 1944 (7 U.S.C. 2225), and not to exceed \$75,000 shall be available for employment under 5 U.S.C. 3109: *Provided further*, That appropriations hereunder shall be available for the operation and maintenance of aircraft and the purchase of not to exceed two for replacement only: *Provided further*, That appropriations hereunder shall be available pursuant to 7 U.S.C. 2250, for the construction, alteration, and repair of buildings and improvements, but unless otherwise provided, the cost of constructing any one building (except greenhouses connecting greenhouses) shall not exceed \$25,000, except for six buildings to be constructed or improved at a cost not to exceed \$55,000 each, and the cost of altering any one building during the fiscal year shall not exceed \$7,500 or 7.5 per centum of the cost of the building, whichever is greater: *Provided further*, That the limitations on alterations contained in this Act shall not apply to a total of \$100,000 for facilities at Beltsville, Maryland:

Research: For research and demonstrations on the production and utilization of agricultural products; agricultural marketing and distribution, not otherwise provided for; home economics or nutrition and consumer use of agricultural and associated products; and related research and services; and for acquisition of land by donation, exchange, or purchase at a nominal cost not to exceed \$100; \$130,182,000, and in addition not to exceed \$15,000,000 from funds available under section 32 of the Act of August 24, 1935, pursuant to Public Law 88-250 shall be transferred to and merged with this appropriation, of which \$710,000 shall remain available until expended for plans, construction, and improvement of facilities without regard to limitations contained herein: *Provided*, That the limitations contained herein shall not apply to replacement of buildings needed to carry out the Act of April 24, 1948 (21 U.S.C. 113a): *Provided further*, That none of the funds appropriated in this Act shall be used to formulate a

budget estimate for fiscal 1971 of more than \$15,000,000 for research to be financed by transfer from funds available under section 32 of the Act of August 24, 1935, and pursuant to Public Law 88-250;

Mr. SISK. Mr. Chairman, I move to strike the last word.

Mr. Chairman, I yield to my colleague from California (Mr. MILLER) for a brief announcement.

Mr. MILLER of California, Mr. Chairman, I want to thank the gentleman.

I just got back here, but I wish the Record to show that the three astronauts are back on the carrier and we have had another successful flight.

Mr. SISK. Mr. Chairman, we have had a demonstration, it seems to me, just a little while ago of what can happen when only a little light has been shed on a subject. It seems to me that we are talking about a subject on which there needs to be a lot more light placed. I do not claim to be any farm expert or to be one who can shed all of the light by any means on this subject that is necessary, but I do happen to represent a number of people some of whom I might say have been referred to by my good friend from Indiana (Mr. MADDEN) here this afternoon. It seems to me that without some knowledge and understanding of what our farm program actually is about and what these subsidies are used for has led to the greatest misunderstanding and to some of the most unfair charges against a certain segment of America that I have ever heard in the 15 years I have spent on the floor of this House.

Let me say that the funds provided for in this bill and which are made available to the American farmer through a variety of programs are generally for reimbursement of contributions that he is making to the agricultural economy of this country and to the stabilizing of our farm economy. Some of us are still around who can remember some of the things that happened in the late 1920's and 1930's and are aware of the fact that when a depression develops on the farm and the farmer's purchasing power ceases to exist, he can drag down the balance of the economy of this great country.

I sometimes wonder if some of the gentlemen who sound off here about some of these payments have ever talked to some of the financial institutions in this country who are engaged in the business of financing the American farmer. It would be interesting if you would review the recent record of the Farmers Home Administration and see the condition of literally thousands of farmers throughout this country who cannot meet their payments and who are unable to repay their production loans for this last year. It would be very interesting, I might say to my good friend from Indiana, if he would talk to the officials of the Bank of America in California who finance a great many of these farmers and find out how few of them have been able to repay their loans of last year.

I might say to the gentleman from Indiana that I looked at a recent set of books prepared by an expert accountant dealing with a farmer in my district who drew \$52,000 in subsidies on last year's crop. His situation right now is about at

the position where he is faced with bankruptcy because he has to make a choice. Recently he went to his bank and said, "What do you want me to do? I can either meet my payments on my farm implements or pay you and let the farm implements go back and get into some other kind of business." The fact is that this gentleman and hundreds of thousands of gentlemen like him use that money which they receive through these programs to pay their taxes on their land and to pay the interest on money they borrow and to pay for irrigation assessments and to pay the labor which is required to produce that crop. As a result, he came out this year at the little end of the horn, with no profit whatsoever, in spite of the fact that he had received \$52,000, as I say, in Federal payments.

Mr. MADDEN. Mr. Chairman, will the gentleman yield?

Mr. SISK. My good friend from Indiana has been talking for a long while. I would like to have a little time to talk, too, and then I will be glad to yield to him.

Mr. Chairman, I recognize that I mentioned the gentleman's name, and I will say to him that I will yield to him at a later time. However, let me continue now with my statement.

We talk about these enormous payments. I recognize that we are facing in the next couple of years a revision of some of the provisions of our farm program. I am sure any of us can point out many things that we would like to see changed—things which we would like to see improved.

I am not sure how many of these things may be improved upon or changes that might occur through amendments, perhaps, offered by the Committee on Agriculture of the House and of the other body when faced with the necessity of bringing to this floor for authorization a bill for either the extension of the present farm program or for a new farm program. If we are going to attempt to change the program and to revise policy, that is another question. Then there is a question of the right time whether it comes this year or next year, but it seems to me there should be a proper time and a proper opportunity to try to change a given policy.

The CHAIRMAN. The time of the gentleman from California has expired.

(By unanimous consent, Mr. Sisk was allowed to proceed for 5 additional minutes.)

Mr. MADDEN. Now, Mr. Chairman, will the gentleman from California yield?

Mr. SISK. I now yield to the gentleman from Indiana.

Mr. MADDEN. Would it not be a deplorable situation if all the businesses in my district out there which is an industrial area did not make a profit at the end of the year and they came to the Federal Government and wanted the Federal Government to bail them out? If that should take place with big business all over the country our Government would be ruined in the next few months. It is my understanding that there is in California a county by the name of Kern where there is being paid

in these subsidies the amount of about \$20 million. How can any given county justify receiving \$20 million under this program?

Mr. SISK. I shall undertake to answer the question of the gentleman from Indiana, but I would prefer that he would not make a speech.

Mr. MADDEN. Can the gentleman explain why one county needs \$20 million and why another needs \$19 million under this farm subsidy?

Mr. SISK. I would say to my friend that I believe both counties he mentioned are not in my district, but I do have counties in my district which receive substantial payments and they happen to be Fresno County and Merced County. But let me say to my good friend that there are many subsidies. There are all kinds of subsidies and I am not at all sure but what there are not substantial businesses in the gentleman's district which are receiving high payments in subsidies. I have during the past 15 years supported billions of dollars in subsidies for a variety of businesses in this country all the way from airline subsidies, railroads, shipbuilding subsidies, and a whole variety of things.

Let me say to my good friend from Indiana that I recognize what we are attempting to do here is to try to reach some balance in our economy. I do not begrudge the fact that our railroads, for example, have to be subsidized.

Mr. MADDEN. If the gentleman will yield for one very brief statement—

Mr. SISK. All right, I yield for a brief statement.

Mr. MADDEN. There are some businesses, including oil refineries, in my district which are receiving subsidies, but they are getting it through some tax loopholes.

Mr. SISK. I agree that there are some loopholes here and there, as my good friend well knows.

Mr. FINDLEY. Mr. Chairman, will the gentleman yield?

Mr. SISK. I yield to the gentleman from Illinois.

Mr. FINDLEY. The gentleman from California cited the plight of a farmer in his district—

Mr. SISK. I could cite many more.

Mr. FINDLEY. But the gentleman cited one specific case of a farmer who was not able to make it after getting payments of \$35,000.

The question which comes up in my mind is this: Is this investment by the taxpayers worthwhile, first; and, second, if this were not enough money to enable that farmer to get by in his farming operations, how much money does the gentleman from California think we should provide to this individual?

Mr. SISK. I would like to say to my good friend from Illinois that I have heard a good deal in the past along this line. We had, for example, an operation called the land bank, and I understand that there is now pending a proposal to come out of the new administration with reference to the Department of Agriculture as to how to stabilize through some type of land bank or soil bank our agricultural economy.

When you get down to it, in a large

measure we are asking private individuals to carry this burden, and do the same thing today for the purpose of stabilization. Does the gentleman propose to ask them to do it free of charge?

I am curious to know at what point our Federal obligation begins and ceases in connection with this. Do we propose to go into an arrangement with the farmers and purchase the land outright? And I am also curious to have the comment of the gentleman about how many billions of dollars would be involved if we propose to do it that way rather than bringing about a cooperative coordinated program where individual farmers through cooperation with a program can simply receive reimbursement for their contribution to the program. Because this is exactly what our farm program is intended to serve.

Am I right or wrong?

Mr. FINDLEY. If the gentleman would yield further, we have the opportunity here today to provide the answer to the gentleman's question. The answer is \$20,000 should be the limitation to the farmers in payments. That is as far as I believe we should be willing to go.

Mr. SISK. I am sure my good friend recognizes the fact that merely by looking at the record, even taking the record that my good friend from Indiana is talking about, of the American farmers and the amount of land that they farm, the volume they farm, that a \$20,000 limitation means a substantial number of individual farmers are going to have to operate outside the program, and therefore not contribute to the stability on other limitations on your soil bank or on the soil conservation program, because otherwise they cannot pay taxes on their land.

After all, would the gentleman like to take these lands off the tax rolls and spend the billions necessary to acquire title to them?

The CHAIRMAN. The time of the gentleman from California has expired.

Mr. FINDLEY. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, the distinguished chairman of the Committee on Appropriations made some remarks just a few moments ago to which I listened as intently as I possibly could, and if I caught their drift correctly the chairman was telling us that it was highly inappropriate for us to put legislation on an appropriation bill.

Maybe I misunderstood the gist of his comments, but I believe that was it. If that is the case, then I would draw the attention of the gentleman to page 39 of the bill now before us, section 510. If anything is legislation on an appropriation bill, it is that section.

Furthermore, on page 30 of this same bill, under "General administration," it says: "Not to exceed \$250,000 of funds contained in the working capital fund established under authority of Public Law 78-129 may be used to carry out responsibilities under the Civil Rights Act of 1964."

Once again we are clearly legislating on an appropriation bill. Now, I can understand why the Committee on Appropriations would reserve to itself certain

privileges, but if legislation on an appropriation bill is all right in committee, then why is it not all right here on the floor?

Mr. MAHON. Mr. Chairman, will the gentleman yield?

Mr. FINDLEY. Yes, indeed; I am glad to yield to the distinguished chairman.

Mr. MAHON. My feeling is that wherever reasonably possible we ought not to put legislation on an appropriation bill. We try to hold legislation to a minimum, but always—or most always in appropriations bills—there are some legislative provisos or limitations. And in my previous statement, which I now emphasize, I am merely taking that position: Let us undertake to keep appropriation bills as free as reasonably possible of legislative provisions, and let us not undertake to pass an amendment which in effect would repeal certain important present farm laws of the 50 States of the Union, and throw us back to the law of 1958. This would cause pandemonium in a portion of the farming industry. This would be costly to both the Government and the farmer, particularly the cotton farmer.

Mr. FINDLEY. Mr. Chairman, I thank the gentleman, but the problem we confront is that at this time last year the leadership of that legislative committee was telling us "Give us just 1 more year, give us 1 more year to deal with this problem," and yet here the year is almost up and hearings have not even begun on general farm legislation.

I believe the patience of many Members is running out, and that it is high time we took action without waiting for the legislative committee.

Mr. MAHON. Mr. Chairman, will the gentleman yield?

Mr. FINDLEY. I yield to the gentleman.

Mr. MAHON. The point is that the new administration is now coming into power. Now, the administration of the gentleman's own political faith, as the gentleman knows, has not yet had time to formulate its policies and make its recommendations to the Congress. It is working diligently on the matter. The gentleman's administration, as you know, has come out in opposition to the amendment that the gentleman proposes to offer.

The farm law will expire in 1 more year so there is no way to avoid action by the Congress it seems, and I am sure the Committee on Agriculture is busily engaged in trying to find ways—

Mr. FINDLEY. It has not even begun this job. It is a fact—it has not even begun this job. If we go along at the present pace, in a very short time we are going to be confronted with the same emergency situation which prevailed last summer and which supposedly required the extension of the same program that we have now including these gigantic payments.

I do not mean to press this unduly, but it does seem to me that the patience of many Members of this House is beginning to run out and they have every right to consider in this appropriation bill a limitation of \$20,000 on how much the individual farmer can be paid.

Mr. MAHON. Mr. Chairman, will the gentleman yield?

Mr. FINDLEY. I am glad to yield to the gentleman.

Mr. MAHON. The gentleman realizes that if his amendment is adopted, this will invalidate a large section of the present farm laws and would have very far-reaching effects and it would be in effect repealing the present farm legislation relating to cotton.

Mr. FINDLEY. If I may respond to that, it is true that the present program has in it what is called the snapback clause. But that very same clause also provides the Secretary with authority to carry out the new cotton program, which would be effected through the "snapback" by means of simultaneous purchase and sale, which is a very fancy expression for "direct payments."

So it is my opinion that this same \$20,000 limitation could be applied to the program brought into effect by means of the snapback clause. Therefore the budget savings would indeed be considerable.

Mr. MAHON. But if the gentleman will inquire of the Secretary of Agriculture, he will find that going back to that program will cost immeasurably more, by the tens of millions of dollars, and that it would be unworkable in the view of the present Department of Agriculture. The gentleman's amendment should be rejected.

Mr. PUCINSKI. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I come from a large urban area, but I am very disturbed by this bill and how it affects the agricultural community of America.

This is a \$6.6 billion measure pending before this House. We appropriate all this money supposedly to help the farmers, as we have all these years, and yet it appears the farmer is worse off today than he has ever been.

I read this morning a column by the distinguished agricultural editor of the Chicago Tribune, Richard Orr, who I think would make a great Secretary of Agriculture.

He said in his column this morning:

At the start of this year the number of farms had dropped to about 2.9 million, lowest in more than 75 years. The farm population of a little more than 10 million is only about half that of 20 years ago and only a third of what it was 50 years ago.

Earlier in this debate, the gentleman from California made a plea for this huge program of subsidies and told us how it affected the farmers.

If the program is so good, why are these farmers leaving the farm in such large numbers and coming into the cities and trying to make a living there? Their migration off the farm creates serious problems in housing and training for the host community.

Mr. Orr further says:

Many people find it hard to believe that the farmer is actually getting less per unit for some basic commodities, such as corn and wheat, than he did some 20 years ago.

Altho farm prices continue to sag, farmers have to spend three to four times as much as they did 20 years ago for implements, machinery, and materials needed to produce.

Last year, prices farmers received for their products averaged 4 per cent less than those in the period 1947-49, and prices for some commodities, such as corn and wheat, were

much lower. In the last two years the prices farmers received averaged 74 per cent of parity, lowest since 1933 when the great depression was on.

He concludes:

The farmer's return from the foods in the market basket went down 2 per cent as the costs of processing and marketing these foods increased 52 percent.

Mr. Chairman, I have a great deal of confidence in Mr. Orr and in his judgment. I accept this statement as a fact.

I raise this question: If indeed the points made by Mr. Orr in his column this morning are correct, then isn't there something basically and tragically wrong with this legislation?

It occurs to me that it does not reach the people it is designed to reach as Mr. Orr points. Therefore, I feel strongly the amendment offered by the gentleman from Illinois (Mr. FINDLEY) and the gentleman from Massachusetts (Mr. CONTE) has validity. I think if we delete these large payments and rewrite the legislation to free up the money that is now going to the chosen few, perhaps we can start bringing order out of what appears to be considerable chaos in the farming communities of this country.

This legislation, for example, deals with the food stamp program. There is a large appropriation for that. I think there is validity in the statement made by the Secretary of Health, Education, and Welfare, Mr. Finch, the other day that perhaps the best way to deal with the problem of the hungry, instead of giving them food stamps, is to give them cash. Let the poor go out and buy the food, simply because, as I was told the other day by the director of county welfare in Chicago, many people do not have the basic money to purchase food stamps. The basic food allotment they get from public aid is not enough to buy food stamps to take full advantage of this program. So it would seem to me that the Committee on Agriculture and the Appropriations Committee should address themselves to the basic problems.

I said last year that the great depression of America, in the early 1930's, started on the farm. I am disturbed about what is happening on the farm again. It seems to me the program we have here today is merely a repetition of what we have been doing year after year. In the bill before the House we would provide \$6.6 billion, when some of the most distinguished observers of the agricultural community have said that the program is not working.

Mr. FINDLEY. Mr. Chairman, will the gentleman yield?

Mr. PUCINSKI. I yield to the gentleman from Illinois.

Mr. FINDLEY. I want to thank the gentleman for his support of my amendment; secondly, to second the nomination of Dick Orr to be the next Secretary of Agriculture, and in doing I mean no lack of respect for the present Secretary, Mr. Hardin, who began his administration with a statesmanlike decision on soybeans.

Furthermore, I wish to point out that if a limitation in payments is established, it would begin to reverse the trend toward bigness in agriculture. It is obvious that when the Boswell Co. or the

Kern County Land Co. get anywhere from \$1 to \$4 million a year out of the U.S. Treasury, they have the resources with which to expand their operation and buy out the little fellows.

Mr. PUCINSKI. The gentleman is correct. I cannot put my fingertips on the figures, but there is no question that the size of the American farm has been growing every year simply because the big, corporate farm is driving out the small farmer from business with the huge Federal subsidies we have been paying.

Mr. BURTON of California. Mr. Chairman, I move to strike the requisite number of words.

I have supported every single farm bill reported out of committee by the Committee on Agriculture, and I have supported all the agriculture appropriations. I may well support this final agriculture appropriation bill. I am not yet certain.

There is a point or two, however, during the course of this debate that I think ought to be spread on the RECORD. The first point I would like to stress to some of my colleagues on my right. I would like to point out that in the State of California large cotton growers, consciously and explicitly have thrown their lot in with the grape growers in an effort to frustrate the grape workers' effort to organize into a collective bargaining unit of their own choosing. I stated in private, and I will say now publicly that if they are going to use the increased largess made available by Federal programs to cripple the rights of those who work on the farms and in other aspects of the agriculture industry, they will do without my vote. Hence I am going to vote this time, and I voted against last time, the payment limitation.

There is another general observation I would like to make to those of my colleagues on this side of the aisle, and that observation is this, that those of us from the cities may well find ourselves voting for the last time for agriculture legislation until we reach that point in time when those who work for large corporate farmers are given a legitimate and meaningful right to organize into unions of their own choosing. And when I say "meaningful right," I do not mean that phony bit of legislation I saw floating around here the past few weeks. I mean a meaningful effort under the old Wagner Act terms for the farm workers to select a bargaining agent of their own choosing.

In the absence of this right to those who work on the farm for the large farmers of this country, Members may well find themselves in a position where they will be doing without the votes of us from the cities, who have been supporting the agriculture program ever since we have been elected to the Congress.

Mr. DENT. Mr. Chairman, I move to strike the necessary number of words.

Mr. Chairman, I do not intend to get into this legislation from the basis of figures. My State has about 93,000 farms. My district has about one-fifth of its population in the farming business. The largest single payment in my district is

about \$5,000, and it is paid to an educational institution for not planting wheat.

What happened in this case was that they stopped farming for their own use. They decided, after some farm agent explained it to them, I am told, to just not to plant wheat, and just let the farm stand. They would then get a subsidy payment, and they could buy their farm needs in the marketplace.

There is something radically wrong with that. That is why I have voted against the farm program for years.

The grape problems are not new. The gentleman from California stated it, but some of us may have to know more about it. My committee, investigating charges made in the grape fields of California, went to California and sat for hearings. We discovered a large corporation, in fact a corporation in the distillery business, had, during the time of the war, because of the shortage of grain for alcohol, decided to go into the wine business. They were in a position to arrange tie-in sales with a large number of liquor dealers to buy wine by the carloads in order to get their quota of liquor. They were organized by an affiliate of the American Federation of Labor, and they had 800 acres in grapes we were informed during our hearings.

The men who signed a contract with these distillers were not experienced in the ways and means of those who hold corporate entity offices. Therefore, right after the contract was signed, the distillers shut down the grape fields in their own name, and leased them out to somebody not tied to the contract. There has been a war ever since to renegotiate a contract with this grape grower.

Today we are talking about cutting down on the educational programs in our country. The Appropriations Committee, I understand, will cut down very needed programs that the States are dependent upon and the children of our country are dependent upon.

Yet we go along, willy-nilly, handing out this money every year without regard to need.

Certainly the gentleman from Ohio is correct when he says that the reaction to any limitation of \$20,000 on a per farm basis will result in a breakdown of the large corporate farms into smaller units, because they are not going to hold that land, as they now hold it. They hold it only for the purpose of getting the subsidy. Certainly they owe a great deal of money. Why wouldn't they? They buy every farm they can get their hands on, and naturally they all owe a great deal in mortgages, but money they get from the Federal Government takes care of that.

In fact this farm program lends itself to the purposes of monopolies in the field of agriculture. I have gone into this thoroughly in the last 5 years. There is a piece of legislation we have introduced which will take care of it. The only answer to it is to phase it out. What this legislation will do is limit payments to family-owned farms, to farms which provide the sole income base of the person who receives the subsidy, and it is to be phased out in 5 years. Unless we do that, as the gentleman from Illinois said, we

will have more and more farmers farming their talents out in the streets of New York and the ghettos of our cities, because that is where farmers who are pushed off the farms go—to the cities.

Mr. CONTE. Mr. Chairman, will the gentleman yield?

Mr. DENT. I yield to the gentleman from Massachusetts.

Mr. CONTE. Mr. Chairman, I compliment the gentleman from Pennsylvania for his observations and for the excellent speech he has made on the floor.

The gentleman is absolutely correct when he says the wealthy farmers are making millions of dollars. What they are doing is holding this land collecting subsidies and waiting until the day when they can subdivide that land and make millions of dollars selling it.

Mr. DENT. Mr. Chairman, the owners go further than that. The so-called Wall Street farmer comes out into our area and turns it into thoroughbred race-horse raising and stocked with fancy cattle. He takes his income from his professional activities and plows it into the farm. He decorates the place with great, fancy, big, red-and-white barns and very fine stock, prize stock. He runs the price up for the ordinary farmer who is trying to buy a decent bull to better his herd. Then the wealthy farmer takes a loss every year and pays no income tax on his ordinary income, and gets subsidies plus capital gains preferential tax treatment when he sells the beefed up farm property, well stocked, beautifully landscaped, adequately supplied with the finest farm machinery and the latest in appliances.

Mr. BURLISON of Missouri. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, the point which the gentleman from Pennsylvania was speaking to was the problem of the hobby farmer. He said the Wall Street farmer. The hobby farmer is the man we want to get to, with our closing of the loopholes on income tax, which will come before this body probably within this legislative session.

But I want to tell the Members that this legislation we are voting on today is not a windfall for the legitimate farmer in this country.

The gentleman from Illinois, the gentleman from Massachusetts, the gentleman from Indiana and their cohorts are today attempting by amendment to this appropriation bill to legislate retroactively. This issue—that is, payment limitations—was legitimately debated on its merits in this body during the last 3 days of July 1968. The amendment carried, but it was lost in conference.

Later in the year, or at the very latest sometime in 1970, the agricultural authorization bill will again be before this body. That will be the appropriate time to discuss the issue of a payments limitation.

As has been said so frequently by counsel much more sage than myself—for instance, the distinguished chairman of the Appropriations Committee, who just a moment ago said this same thing—this is not the place to legislate, while we

are considering an appropriation bill. Much unwise legislation has been written on the floor of the House, and I admonish us not to duplicate that today.

The basic purpose of our present farm program is to bring supply into some semblance of balance with demand by controlling production. Success of the farm program is dependent upon attracting into the program the major producers. If they are forced out as they obviously would be by limitations on individual payments, the slack would have to be taken up by the small producer. If one of the fundamental goals of our farm policy is to protect the small farmer, is not that policy better served by taking 1,000 acres from one large producer than 10 acres from 100 small producers? If the program is to continue, then those acres must be taken from somewhere, if not from the large then from the small. When the Government makes these payments it is acquiring a right. Has there ever been a suggestion in this body that limitations be placed on payments for a highway right-of-way or for land for urban renewal?

The program has its inception prior to production because it is cheaper to retire acres before the expense of making a crop are incurred rather than purchase the crop after it has been produced. Under the Benson program in the Eisenhower years, it cost a billion dollars a year just to store surplus commodities. I submit that we are not ready for a repeat of that program.

Under our farm program we have been losing more and more of our family farmers. But it is submitted that if the limitations are approved, the corporate farm movement will be accelerated beyond anything we can conceive at this time. The large producers will not participate thereby depriving us of production control, bringing surpluses and depressed prices.

Our farm program cost is not excessive, when the subsidization of other segments of our economy is considered, for example, business through postal, import quota, tariffs, maritime industry, transportation industry, and other subsidies. And do not forget the public housing and model cities programs, among others, in our cities. And please do not forget that a larger and larger portion of the farm budget is not going to the farmer but to feed the poor and hungry of the city.

The thrust of the payments limitation theory is that the large producer gets more than his fair share of the money. But critics fail to recognize that these payments do not constitute profit. As pointed out by the distinguished chairman of the Agriculture Committee when debating this question in the last session, these payments do not even pay the interest on the 7 to 8 percent mortgages in most instances. The larger farmer has greater capital investment and risk that goes with it. He has more expenses. He should have more money. The farmer's parity ratio is now 73 percent. Most proponents of the payments limitation will admit this is deplorable. I challenge them to explain how limitations can raise the farmer's parity. As has been stated in a book by Marion Clawson:

All available data point to the existence of large numbers of very low income farmers along with a moderate number of fair income ones, and few relatively good incomes—but even these latter may be rewarded less than their talents and capital deserve.

So remember that the amount may be large while at the same time the percentage return may be minuscule. This thought is buttressed by statistics given to this body last July by the gentleman from Iowa (Mr. SMITH). He stated that farmers earning less than \$1,000 a year get 45 percent of their income from the farm program. Contrast that with the fact that farmers making over \$20,000 receive only 3 percent from Government payments. In conclusion, the farm program is not a windfall for the wealthy farmer.

The CHAIRMAN. The time of the gentleman from Missouri has expired.

(Mr. BURLISON of Missouri, at the request of Mr. MAHON, was allowed to proceed for 3 additional minutes.)

Mr. MAHON. Now will the gentleman yield?

Mr. BURLISON of Missouri. I appreciate the gentleman's request for my time to continue, and I will be pleased to yield to the distinguished chairman of the Committee on Appropriations.

Mr. MAHON. The gentleman from Missouri is making a very interesting and able statement about the farm situation.

One thing that has not been highlighted here this afternoon is the fact that the people, generally speaking, have secured pay raises in recent years on several occasions. As the gentleman comes from a farm district, I believe—

Mr. BURLISON of Missouri. He does.

Mr. MAHON. The gentleman knows that the farmer is getting less today than he got 5, 10, 15, or 20 years ago for his production. The cost of production at the same time has skyrocketed. In view of the low cost of what he produces, there has to be some way, if the consumer is going to be able to continue to get foods and fibers at the low prices at which he gets them in the United States today, for the producer to survive. Is that generally correct?

Mr. BURLISON of Missouri. I thank the distinguished chairman for those remarks. We tend to forget that the wheat farmer, the cotton farmer, and the corn farmer are getting substantially less, far less, for their crops now than they were 20 years ago. Contrast that with what the farmer has to pay when he goes out to buy a cottonpicker or combine, or cornpicker. He pays 3, 4, 5, and 6 times more for that now than he did 20 years ago. Let us take a look at what the consumer gets out of this program. The farm program is fundamentally tailored to the benefit of the consumer. Fifty years ago or perhaps not quite that, in 1929, the consumer in this country paid 25 percent of his income for food. Now in 1969 he pays 17 percent of his income for food.

Mr. GIAIMO. Mr. Chairman, will the gentleman yield?

Mr. BURLISON of Missouri. I am pleased to yield to the gentleman from Connecticut.

Mr. GIAIMO. What the gentleman says may well be correct, but what has that to do with the corporate farmer we

are talking about who does not live on a low-income level? The corporate farmer who is actually buying farms in order to qualify for the subsidy payments by not planting them. What has this to do with him? I am talking about the man who receives more than \$100,000 in subsidy. The corporation farmer in some cases is making hundreds of thousands of dollars a year out of this. The argument the gentleman is using does not apply to this corporate farmer with the large income who is deriving benefits out of present law, the amendment of the gentleman from Massachusetts is designed to eliminate this inequity.

Mr. BURLISON of Missouri. But the argument does apply. As I have earlier stated the mess that our farmer is in today is not because of the farm program. It is in spite of the farm program. If we lose this farm program, this corporate farming concept is going to accelerate and speed up. We cannot conceive of what it will be 15 years from now.

Mr. GIAIMO. I think we have the responsibility to take care of the small farmer but not the corporate farmer.

The CHAIRMAN. The time of the gentleman from Missouri has again expired.

Mr. CONTE. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I would like to ask a question of the gentleman from Missouri (Mr. BURLISON) who just preceded me in the Well. First of all, the gentleman mentioned at the beginning of his statement that we were trying through this amendment to make this retroactive. This only applies to the 1970 crop. My amendment, if the gentleman will read it, applies to the 1970 crop. Therefore, it is not retroactive. It runs parallel with this legislation.

Mr. BURLISON of Missouri. The gentleman is correct in that the way he read it, he interpreted my statement too narrowly, and the gentleman is technically correct. But the point I am making is that this should not be done in these last few days before July 1969. In my opinion the proper way in which to handle this type of legislation is to handle it when the next farm bill comes up early in 1970. That is what I intended by that statement.

Mr. CONTE. I get your point, but if you will remember, when I offered that amendment in 1968 it carried by a vote of 230 to 160, but then something happened between the time it left here and was received on the other side of the Capitol in the other body, where it was dumped.

The gentleman from Missouri says for us to wait until the legislative committee comes in with its bill for the extension of the agricultural program. We have about as much chance in that committee of getting a limitation on subsidy payments as Phyllis Diller has of becoming Miss America in 1970.

Mr. BURLISON of Missouri. Mr. Chairman, if the gentleman will yield further, I think you will find you will have just about as much chance of having it amended when it comes up in the legislative committee as we do now. I believe it would be far more legislatively sensible to do it through that process. In other words, you will have a better chance

than you now have because you are flying in the face of proper legislative procedure.

Mr. CONTE. Well, I will say to the gentleman that I certainly do not feel that way. I feel we have the opportunity today to do it and I hope when the vote is taken that the amendment will carry. Then, if it needs perfecting, the representatives of the Department of Agriculture can go before the Senate Appropriations Subcommittee on Agriculture and perfect it in that committee.

The chairman of the Committee on Appropriations' heart bleeds for the farmers, and he talks about the recent pay increases that the Members of Congress have received as well as pay increases which have been received by others but, in effect, says that the poor farmer has not gotten anything.

Let me tell you that when this amendment was first adopted in the 1930's, 25 percent of the population were farmers and where, furthermore, the poor rural areas were the most desperately poor. Only a very small part of the subsidy money, perhaps no more than 5 percent, goes to farmers who are basically what one would call the rural poor in danger of malnutrition. So therefore, we are not hurting this "poor farmer" if we should adopt this amendment. The only guy we grab is the rich farmer, the guy who is getting richer and richer and richer. Further, there are some Members of the House of Representatives and some Members of the other body who should not even vote on this amendment today if they are receiving farm subsidies.

Mr. TEAGUE of California. Mr. Chairman, will the gentleman yield?

Mr. CONTE. Of course I yield to the gentleman from California.

Mr. TEAGUE of California. Mr. Chairman, I confirm what the gentleman from Massachusetts has said. I have been on the Committee on Agriculture for 13 years. We are a house divided, and I am in the small part of that division. I have voted against the farm subsidy programs for a long time. I will confirm what the gentleman from Massachusetts has said. We have as much chance of getting a bill out of the House Committee on Agriculture to even phase out these subsidies, much less limit them, as I do of becoming the Pope and I am not even a Catholic.

Mr. FINDLEY. Mr. Chairman, will the gentleman yield?

Mr. CONTE. I yield to the gentleman from Illinois.

Mr. FINDLEY. As I followed the speech by the gentleman from Missouri (Mr. BURLISON), I might point out the fact that the taxpayers would be about \$300 million worse off.

The former Under Secretary of Agriculture, Dr. Schnitker, issued a study recently prepared in the Department in which he estimated that a limitation of the very kind embodied in this amendment that will soon be before us would allow budget savings of up to \$300 million a year. I believe this is an item that should attract our attention in this period in which we are on the verge of extending the surtax, and where we are cutting back and cutting out many Federal programs. Surely we will reach for and

seize this opportunity to save about \$300 million a year.

The CHAIRMAN. The time of the gentleman from Massachusetts has expired.

Mr. WHITTEN. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, this debate has been going on for a long time, and I do not know how much light has been shed on the problem, but there are two or three factors that I believe should be brought out:

First, concerning the payment of subsidies. I was one of those who opposed the present farm bill, because I knew that the urban press and the other news media—as well as others—would be criticising the total amount paid.

That act, with all due deference to everybody concerned, was an effort to maintain the purchasing power of those engaged in producing food and fiber for the rest of the Nation.

I wrote the Library of Congress some time ago, and asked if they could give me an estimate of how much of the retail price that we pay for goods and services is raised because of the minimum wage law, the right of labor to organize and to strike, and so forth. They gave me a nine-page reply but the answer was in one sentence. They said they could not estimate it.

The difference between the farm programs and the rest of our programs is that when we passed laws for the benefit of the other segments of our economy—other than farming—the results were passed on to the consumer as a part of the retail price, rather than in the form of a check from the Treasury.

If Members want evidence of that, they will find it on page 3 of the report, where it is stated that since 1950 the farmer's share of the retail dollar has gone from 47 cents down to 39 cents. This means that through these various laws we have passed for the rest of the economy, the others are taking the difference between the 47 cents which the farmer was getting back then, and the 39 cents out of the dollar that he is getting today.

I thought it was a mistake to make the American producer sell at world prices, and yet have to buy on the domestic market where the retail price embodies this difference between the 47 cents and 39 cents.

I believe I will attempt to point out to the Members of the House what will happen if this amendment were adopted.

In the first place, the amendment is limited to the money in this bill. The Commodity Credit Corporation is a corporation we are dealing with contracts that this Congress led these producers to enter into in good faith. If you do not pay them, you will be breaking faith on those contracts.

But let me tell you how it would actually work. You would pay the same thing to the producers either way. What you would have to do is have two sets of books. Producers would get up to \$20,000 from the money in this bill, and get the balance of the payments due them—over and above \$20,000—out of the \$5 billion which the Corporation already has. And in the process you would end up with as much as a \$50 million increase in costs.

Second, under the snapback provi-

sion, you would go back to the 1958 law on cotton, and you would start paying the farmers 65 to 90 percent of parity. But under the amendment, when the Government had to lend him as much as he was getting under the previous law, the Government would have to pay even more.

Of course, my friend from Illinois and I have this colloquy each and every year. I do know this much and I say this to the Members: that the producers would receive the \$20,000 out of the money in this bill. Then, we would have to pay the remainder in good faith out of the \$5 billion the Corporation already has.

How much do you suppose employees collectively make out of the minimum wage law? Are you going to say that no company shall pay to its employees more than \$20,000 because of the minimum wage? Are you going to say that \$20,000 is the most any large corporation can pay to its employees, so as the break that corporation up into little two-bit companies?

Are you going to do that? Are you going to fix it so that half of us are going to have to go back to help work on the farm? I do not want to go back. I have tried it. If you do go back, you would have to have a \$72,000 investment on the average to get into farming today.

I know that many of you Members voted for this program. I did not, because I thought it was bad for the producer of raw materials if he had to look to his Government for a check for a part of his costs and all of his profits, while we let labor and everybody else include it in the retail price so nobody can identify it.

Mr. ABERNETHY. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I want to commend my colleague (Mr. WHITTEN), the chairman of this subcommittee and my friend from the State of Mississippi for putting this issue on the line, right the way it is.

With all deference, some of you have had a good time here this afternoon at the expense of people who are not responsible for this program. I really do not think you understand the history and mechanics of the program or this problem.

My friend, the gentleman from Indiana (Mr. MADDEN) had quite an enjoyable time pointing to some people over in the Lower Mississippi Valley over what their payments were.

Let me remind you of something that happened when this bill came before us 4 years ago—the legislative bill—and the gentleman from Mississippi (Mr. WHITTEN) has already alluded to it. Not a single Member—not one single Member of the Mississippi delegation—not one—voted for the payment program—not one of us.

We knew then that the time would come when this very debate would take place in this House.

We knew then that the curtain would rise on the stage of trouble for the farmers this program was designed to help.

We went through this once before back in the thirties when the names of farmers who received payments were published in the press. The name of one of my Senators has been dragged through the mire

of the press and also the debate on what he has received—and mind you he voted against this program. Yet they kicked him around a bit which, of course, made good reading in the press; but bear in mind he did not support the program.

What have we done now? As the gentleman from Mississippi (Mr. WHITTEN) has just said, we made a contract—I did not do it—you did—most of you here made a contract with these farmers when Orville Freeman, then Secretary of Agriculture, brought this program to the Hill. You passed and adopted it. You did it over the objection of a large number of us who opposed it. I opposed it. I opposed it because I knew this very problem would arise.

Now, last year in response to my friend, the gentleman from Illinois (Mr. FINDLEY), we did ask for an extra year. We did it because we knew that a new administration was coming into power. We did it because almost all members of our committee, including the ranking Republican member, felt that we should have another year to give the new administration the time and the opportunity it needed to consider a new program.

Secretary Hardin is out moving around the country now talking with people and farmers. The President has others on his advisory staff doing the same thing.

I do not know what they are going to propose. I do not have any idea. But certainly it would be a bit presumptuous on our part to call Secretary Hardin before the committee now, before he is ready to testify, and inquire of what he wants. As yet he does not know. That is the reason we asked for and got—and it was like pulling eye teeth, I know that—and got an additional year.

Now, we made a deal with these people. We made a contract with them. We should live up to it.

I do not like the program. I do not like it at all. And I stood in the well of this House and spoke against it in 1965 when my friend from Indiana (Mr. MADDEN) was speaking for and voting for it. If he wants to quarrel about so-called fat cat farmers, as he calls them, he is just about 4 years too late. I know he is disappointed in his vote of 1965. I am, too. I wish he and others had voted as I did then. I do not know whether the gentleman from Illinois (Mr. FINDLEY) or the gentleman from Massachusetts (Mr. CONTE) voted for it or not. I know there are several others here who are disappointed in their votes. I wish you had killed it then.

But now you have required these farmers to adjust their farming to this type of program. You have required them to cut their production back. If they do not cut it back, they have to produce under penalty. They could not market a single bushel of wheat, a single bushel of grain, a bale of cotton, or anything else, without paying a tremendous penalty to the Federal Government, and you would break them as a result.

The CHAIRMAN. The time of the gentleman from Mississippi has expired.
(By unanimous consent, Mr. ABERNETHY was allowed to proceed for 1 additional minute.)

Mr. FINDLEY. Mr. Chairman, will the gentleman yield?

Mr. ABERNETHY. I yield to the gentleman from Illinois.

Mr. FINDLEY. Just to state that I have not at any point voted for any of these subsidy programs.

Mr. ABERNETHY. Well, good. But those here who did vote for this made it the law. They made it the program. This is what they did for, as well as to, these farmers. This is what you told them they had to take, and I think we are obligated to pay for it.

Actually, we have not reached the point in the bill where this debate should take place. I hope we can get along with the bill and get to the point of the amendment and see where we stand.

Mr. CONTE. Mr. Chairman, will the gentleman yield?

Mr. ABERNETHY. I yield to the gentleman from Massachusetts.

Mr. CONTE. Certainly my amendment does not break any contract. It merely applies to the 1970 crop.

Mr. ABERNETHY. Well, I am sure you will not break any contract with the sugar refineries of Massachusetts which you propose to favor by leaving them out of your amendment.

Mr. POAGE. Mr. Chairman, I move to strike the requisite number of words.

I had hoped not to break into this interesting discussion on the limitation of payments, but I feel that the House is probably getting the impression that there is nothing of controversy in this bill except the limitation on payments. Generally, the committee has done an outstanding job. I congratulate the chairman of the full committee and the chairman and the members of the subcommittee. Theirs is a difficult job. They have done well but they are not perfect.

There is a matter which comes up on page 19, before we reach the question of the limitation of payments, to which I want to direct your attention, and that is the question of the school milk program. On May 10 this House voted, by a record vote of 384 to 2, to continue the special school milk program and to authorize \$125 million a year for that program.

I listened to the discussion about legislation on appropriation bills. The chairman very correctly suggested that we should avoid, as far as we could—and I agree with the chairman of the committee fully; that we should avoid as far as possible changing what has been fixed by legislation by a provision of an appropriations bill. It seems to me clear that the effect of this bill is to undo everything that this House did by a vote which amounted to almost 200 to 1 just 3 weeks ago.

I cannot conceive that there is much consistency in that sort of thing. If, in fact, we do not want a school milk program, we should have voted against it on May 10 when that was before us. On the other hand, if, in fact, those 384 Members of this House were sincere in wanting to provide a school milk program as I am sure they were, then we should fund it in this bill and not repudiate what we have just done within the past 3 weeks. I cannot conceive of anything which is a more direct repudiation of legislation than

what is done in this bill in regard to the special school milk program.

I know the report says "Yes," but we are making \$20 million available to take care of needy children, who would otherwise have been able to get school milk under the existing special school milk program. That is \$105 million less than this House suggested just 3 weeks ago.

It eliminates every child unless he can prove he is a pauper. It eliminates every little child who cannot prove he or she is a pauper, and his or her parents do not have any money.

I do not like that sort of thing. I am not going to be a party to saying that a program of this Congress should be opposed simply because it helps some people who are not new voters, who are not members of groups which we think may influence an election in some way. Nor am I going to say it is wrong to provide some kind of help for the great masses of Americans regardless of their economic situation.

Mr. PUCINSKI. Mr. Chairman, will the gentleman yield?

Mr. POAGE. I yield to the gentleman from Illinois.

Mr. PUCINSKI. Mr. Chairman, would the gentleman advise the House whether it is his intention to offer an amendment at the appropriate time?

Mr. POAGE. It is my intention to offer an amendment to finance this program at \$120 million, which is the present authorization figure in the existing law.

Mr. STAFFORD. Mr. Chairman, will the gentleman yield?

Mr. POAGE. I yield to the gentleman from Vermont.

Mr. STAFFORD. Mr. Chairman, I congratulate the gentleman on the statement he has just made, and I associate myself with his statement.

Mr. TEAGUE of California. Mr. Chairman, will the gentleman yield?

Mr. POAGE. I yield to the gentleman from California.

Mr. TEAGUE of California. Mr. Chairman, we will have an opportunity to discuss this further when the gentleman's amendment is offered. However, I offer this observation at this time. In my view the school milk program is a subsidy for the dairy industry. I was one of the two who voted against it. It is simply a subsidy for the dairy industry in my view. If my colleagues wish to support it for that reason that is understandable but let us not deceive ourselves that the \$125 million involved does much for the truly needy.

Mr. POAGE. Mr. Chairman, the school lunch program does help needy children. It does help needy children and children who are not so needy. It does provide nutrition which is needed. It is the only nutritional program which this Government now has in operation.

I do not say it is the only feeding program. It is not. We have one dozen feeding programs. We have programs which give away food and fat and meat and beans and asparagus.

The CHAIRMAN. The time of the gentleman from Texas has expired.

(By unanimous consent, Mr. POAGE was allowed to proceed for 3 additional minutes.)

Mr. POAGE. Mr. Chairman, we have

programs which give away all kinds of food, but we have not a single one which is based on nutrition except the school milk program. It is, in fact, a nutritional program. It is based upon nutrition.

I am not one who is going to vote against a program of nutrition even though it helps some dairy farmers. I do not think there is anything evil in being a dairy farmer. I was a dairy farmer myself for 10 years, and I almost went broke at it. Fortunately I finally had the good sense to get out. I could not make a living out of it. But the fact that a man is in the dairy business does not mean that it is vile or evil to help him. I hope this program does help dairymen. The more people one program helps the better.

Dairy people provide for our children. They have done so for years. The dairy people help this Nation. I do not see why we should find a program reprehensible simply because it will help the dairy people. I think it will help dairy people. I think it will help other people. I think it will help the children from middle-class families. I do not see that there is any crime in that. Some Members seem to take the position that anything is vicious and wrong unless it is confined to those on whom we can put on the label of poverty.

I am not trying to put the label on anybody. I am trying to keep the label off. I am trying to help the dairy farmers. I am trying to help the well-to-do families. I am trying to help the poverty-stricken families. I am trying to improve the nutrition of as many schoolchildren as possible.

Mr. TEAGUE of California. Mr. Chairman, will the gentleman yield?

Mr. POAGE. I yield to the gentleman from California.

Mr. TEAGUE of California. I certainly do not for a moment consider the dairy farmers to be evil. I merely want to make my point that in my view that dairy subsidization is the real purpose of this bill.

Mr. POAGE. I wish the gentleman would get a little time of his own. I have only a few seconds remaining.

I would call attention to the fact that when this bill deliberately refuses to maintain a program we have had for 14 successful years and destroys the opportunity to do what this House voted to do by a vote of more than 190 to 1 just 3 weeks ago, which is in effect legislation on an appropriation bill. While I had not planned to raise any point of order, it might be raised. I believe such a point would be good. I believe, however, we should pass upon this matter on its merits, and I certainly hope that the committee will accept this amendment.

Mr. PUCINSKI. Mr. Chairman, will the gentleman yield?

Mr. POAGE. I am glad to yield to the gentleman from Illinois.

Mr. PUCINSKI. I congratulate the gentleman for preparing the amendment. Without the assurance that the gentleman would offer the amendment I am certain the point of order would be made.

Mr. POAGE. I will offer the amendment.

Mr. WHITTEN. Mr. Chairman, could we have some agreement on time on this section? I ask unanimous consent that

debate on this section conclude in 10 minutes.

The CHAIRMAN. Is there objection to the request of the gentleman from Mississippi?

There was no objection.

Mr. GERALD R. FORD. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. Under the unanimous consent agreement, all debate on this section will conclude in 10 minutes.

The gentleman from Michigan will state his parliamentary inquiry.

Mr. GERALD R. FORD. Could the Chair enlighten us on the section we are talking about? If my recollection is correct, the Clerk has not started to read any section.

The CHAIRMAN. The Chair understands that the Clerk has read through page 3.

Mr. GERALD R. FORD. Mr. Chairman, I have been here ever since we went from general debate into the reading of the bill, and others have, also, and all of us have no recollection of hearing the Clerk read any section yet.

The CHAIRMAN. The Chair will advise the gentleman from Michigan that the Clerk did begin reading and has read through 1 paragraph, it concluding on page 3, line 25. So the unanimous-consent request of the gentleman from Mississippi would apply to all debate on this paragraph.

The Chair is advised that the following Members were standing at the time the unanimous-consent request was made: The gentleman from Mississippi, Mr. WHITTEN; the gentleman from Texas, Mr. ECKHARDT; the gentleman from Louisiana, Mr. WAGGONER; the gentleman from New York, Mr. OTTINGER; the gentleman from California, Mr. TEAGUE; the gentleman from Indiana, Mr. MADSEN; the gentleman from Texas, Mr. ROBERTS; the gentleman from Texas, Mr. PURCELL; the gentleman from Washington, Mr. MEEDS; the gentleman from Minnesota, Mr. QUIGLEY; the gentleman from Minnesota, Mr. LANGEN; the gentleman from Massachusetts, Mr. CONTE; and the gentleman from Connecticut, Mr. GIAIMO. Therefore, each Member heretofore named will be recognized for approximately 47 seconds.

Mr. POAGE. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. POAGE. I heard the minority leader's question, but I did not understand the answer. Where is the end of the first section?

The CHAIRMAN. Page 3, line 25, is the point at which the Clerk stopped reading.

Mr. POAGE. I understood that, but where is the end of the first section of the bill? The gentleman from Mississippi asked unanimous consent that we consider the first section as read. There are no sections in this bill.

The CHAIRMAN. The Chair will respond to the inquiry of the gentleman from Texas by stating that the Chair interpreted the request of the gentleman from Mississippi to be that it applies to that portion of the bill which the Clerk has read. The first section of the bill goes all the way over to page 30, it being

title I of the bill, actually. So nothing is being done by this request or in this action to foreclose debate on any of the remainder of title I.

The Chair now recognizes the gentleman from Connecticut (Mr. GIAIMO).

Mr. GIAIMO. Mr. Chairman, I rise to support the amendment which will be offered by the gentleman from Massachusetts (Mr. CONTE).

Over and over again, the American taxpayer has shown his willingness to support this Government and this Nation financially and otherwise, but his patience is wearing thin.

Two things anger him. He is sick of seeing certain rich individuals absolved from paying their fair share of taxes because of loopholes in our tax laws. I am sure that the distinguished members of the Ways and Means Committee, who are now conducting extensive hearings on tax reform, have firsthand knowledge of this discontent.

The American taxpayer is also becoming disgusted because his hard-earned money is not being used to solve the obvious problems which exist in this country. He is more than willing to help the poor; he is more than willing to help our senior citizens; he is more than willing to help support our defense effort; but he wants to see results.

Last week I rose to denounce the loose spending and squandering of billions of tax dollars by the Defense Department. I am pleased that my colleague from Illinois has pointed to another equally outrageous waste of our precious fiscal resources.

Many Federal programs are being eliminated or cut back because of the need to save money, but unless this amendment is adopted, the wealthy farmers in America will still receive this inequitable dole.

What are we going to tell the American people this time? How can we explain to our senior citizens that needed social security increases might not be adopted when, at the same time, we continue to pay huge sums to wealthy farmers for leaving acreage unplanted?

How can we explain to our struggling taxpayers that we have to extend the surtax when, at the same time, we could be saving, according to the Department of Agriculture, anywhere from \$200 to \$300 million?

How can we tell those that are hungry that we cannot afford food programs for them when, at the same time, we continue to subsidize rich farmers for not planting wheat?

The American people are not ignorant, nor are they blind. They can see where their money is being spent, and they do not like it. If we fail to approve this amendment, and thus continue to shell out millions while our urgent problems go unsolved, how can we explain this to them?

This amendment would not affect the small farmer who desperately needs help. It would not cripple the wealthy farmers, who would still receive \$20,000 each in subsidies. Moreover, according to the Department of Agriculture, this limitation would have "no serious effect on production or on the effectiveness of production adjustment programs."

When this amendment was introduced last year, opponents maintained that a change in this policy should not be debated during consideration of an appropriations bill. They claimed that a better proposal could be developed in committee if we would only give them a chance.

Nearly a year has passed and what has been done? Hearings on this issue have not even been scheduled. Is it any wonder that the American taxpayer is becoming impatient with us?

It is no longer a question of whether we in the Congress can wait, it is a question of whether the American public will wait. We have a mandate from the American people to act, and we must act—not next month, not next year, but right now.

This amendment gives us an opportunity to show the American people that we are responsive to their wishes. Especially now, we cannot afford to let them down.

I strongly urge adoption of this needed amendment.

The CHAIRMAN. The Chair recognizes the gentleman from Texas (Mr. PURCELL).

Mr. PURCELL. Mr. Chairman, I would like to ask the gentleman from Illinois (Mr. FINDLEY) one question. Does it not seem logical to the gentleman that if there was an interstate highway being built through the State of Illinois and if a part of this highway went through a large farm, does the gentleman not agree that this landowner should receive payment for the number of acres that was taken just like a small farmer might be paid for the smaller number of acres that would be taken?

Mr. FINDLEY. If the gentleman will yield.

Mr. PURCELL. I yield to the gentleman.

Mr. FINDLEY. Let me say that I understand the time limitation is about 47 seconds for each speaker. I am afraid, however, that I do not get the gist of the question.

Mr. PURCELL. If the gentleman from Illinois will study the question I would like to have his answer after he understands the question.

The CHAIRMAN. The Chair recognizes the gentleman from Texas (Mr. ROBERTS).

(By unanimous consent, Mr. WAGGONER yielded his time to Mr. ROBERTS.)

Mr. ROBERTS. Mr. Chairman, I think there seems to be as many opinions of what a farmer is as there are members of the delegation here today. According to my friend the gentleman from Massachusetts (Mr. CONTE) I would not be able to participate or to vote on this because I am a farmer. I have a half interest in 700 acres of land in Texas which is good farmland. Normally I run about 100 acres of wheat, about 200 acres of cotton, and about 300 acres of row crops, with the rest in pasture. One of my big newspapers did a story about the subsidy that I get and how much I get an acre. They came up with the fact that I get \$393.13, according to the news story. The gentleman from Indiana was talking about the Litchfield, Ariz., project. I happen to be familiar with this project, because I happened to do Navy duty there.

They have about 100,000 acres of irrigated cotton land where they raise three or four bales an acre. They raise approximately 300,000 bales, and they take it all out of there. They get paid on the basis of how much they take out. In my 200 acres of cotton I raise half a bale and get 100 bales, maybe. So they pay me \$393.13. Nobody pointed out that the tenants farming that land get four times that much. It is not just going to the landowner. Somebody is going to have to feed the country, and I hope it will be these farmers.

The CHAIRMAN. The Chair recognizes the gentleman from California (Mr. TEAGUE).

Mr. TEAGUE of California. Mr. Chairman, I commend the Committee on Appropriations for its decision not to fund the special milk program. Let me give you the reason for making this statement. I have in my congressional district 8 or 10 nonprofit, nonparochial private schools with an enrollment of about 1,500 students. The average net wealth of the parents of these children I would guess is at least \$500,000 or perhaps more, while all of the taxpayers of this country are furnishing to these schools free or subsidized milk. These parents are perfectly able to buy milk for their own children. This is not a program which should be intended to support children in this category.

Remember this program is costing \$125,000,000 a year.

The CHAIRMAN. The Chair recognizes the gentleman from Indiana (Mr. MADDEN).

Mr. MADDEN. Mr. Chairman, I yield back the balance of my time.

The CHAIRMAN. The Chair recognizes the gentleman from New York (Mr. OTTINGER).

Mr. OTTINGER. Mr. Chairman, I rise to advise the committee that at the appropriate time I will move to amend this appropriation bill by prohibiting the use, distribution, or purchase of pesticide applications in violation of State laws.

Mr. Chairman, there are certain nondegradable pesticides which are causing great damage and which are actually threatening the survival and safety of human beings. Two States now have laws which prohibit the use of chlorinated hydrocarbons and other States are considering such legislation.

The effect of the amendment which I propose to offer would only be to subject the Federal Government to the same laws that operate in the several States, as respects the use of chemical pesticides. I shall also offer an amendment to outlaw the entire use of the persistent pesticides by the Federal Government.

The CHAIRMAN. The time of the gentleman from New York has expired.

The Chair recognizes the gentleman from Texas (Mr. ECKHARDT).

Mr. ECKHARDT. Mr. Chairman, I address myself to a point in opposition to the Conte amendment. I would favor the Nelsen amendment, if it is germane.

Mr. Chairman, the Secretary of the Department of Agriculture has made available to us today a statement which reads as follows:

However, to make such a limitation effective legislative changes are needed. With only

the simple amendment that is possible in connection with appropriation bills, the so-called "snap-back" provision for cotton would come into effect. The cotton program would then become subject to a loan-and-redemption or a buy-and-sell-back arrangement that would increase costs while the large producers would escape the intent of the payment limitation.

Mr. Chairman, I do not believe the amendment will accomplish its intended purpose.

The CHAIRMAN. The Chair recognizes the gentleman from Mississippi (Mr. WHITTEN).

Mr. WHITTEN. Mr. Chairman, may I reiterate what I said earlier, and I hope the gentleman from Texas will listen, the chairman of the Committee on Agriculture.

The committee, as I pointed out earlier, enlarged the food programs including increased school lunches and the special feeding programs financed under section 32. In taking that action it was the opinion of the committee that we probably had provided for the purchase of as much milk as we had before. I would also say that section 32 commodity program funds are available to buy such other milk as might be available that comes within its provisions. So, we had not thought that we needed to provide that a certain amount be available only for this purpose. What is involved here is whether you want to specify that section 32 funds be used for this purpose. It might be in order for that to be done. I shall confer with my colleagues on the subcommittee and see what their attitudes are on the subject. However, I did not want the RECORD to show that there is any effort to cut out or prevent this type of program.

We had increased the purchase of milk through the other means to the degree I mentioned, and left section 32 available also for this purpose. We did not tie it down.

The CHAIRMAN. The time of the gentleman from Mississippi has expired. All time has expired.

The Clerk will read.

The Clerk read as follows:

Plant and animal disease and pest control: For operations and measures, not otherwise provided for, to control and eradicate pests and plant and animal diseases and for carrying out assigned inspection, quarantine, and regulatory activities, as authorized by law, including expenses pursuant to the Act of February 28, 1947, as amended (21 U.S.C. 114b-c), \$89,493,000, of which \$1,500,000 shall be apportioned for use pursuant to section 3679 of the Revised Statutes, as amended, for the control of outbreaks of insects, plant diseases and animal diseases to the extent necessary to meet emergency conditions: *Provided*, That no funds shall be used to formulate or administer a brucellosis eradication program for the current fiscal year that does not require minimum matching by any State of at least 40 per centum: *Provided further*, That not to exceed \$1,000,000 shall remain available until expended for construction of facilities without regard to limitations contained herein: *Provided further*, That, in addition, in emergencies which threaten the livestock or poultry industries of the country, the Secretary may transfer from other appropriations or funds available to the agencies or corporations of the Department such sums as he may deem necessary to be available only in such emergencies for the arrest and eradication of foot-and-mouth

disease, rinderpest, contagious pleuropneumonia, or other contagious or infectious diseases of animals, or European fowl pest and similar diseases in poultry, and for expenses in accordance with the Act of February 28, 1947, as amended, and any unexpended balances of funds transferred under this head in the next preceding fiscal year shall be merged with such transferred amounts;

AMENDMENT OFFERED BY MR. OTTINGER

Mr. OTTINGER. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. OTTINGER: On page 5, line 5, change the semicolon to a colon and add the following: "Provided, That no appropriation contained in this act shall be used for the purchase or application of chemical pesticides, except for small quantities for testing purposes, within or substantially affecting States in circumstances in which the purchase or application of such pesticides would be prohibited by State law or regulation, for any citizen or instrumentality of State or local government."

Mr. WHITTEN. Mr. Chairman, I wish to reserve a point of order.

The CHAIRMAN. The gentleman reserves a point of order.

Mr. OTTINGER. Mr. Chairman, we are coming to know from the scientific community that there is real danger to human safety and survival by the use of certain nondegradable pesticides that have a particularly long life. I read recently of the almost complete extinction of certain species of birds by the reason of pesticides that have built up in their bodies. A little bird will eat the insects contaminated by vegetation, then a larger bird comes along and eats that bird, and then you have even more large birds who have eaten the other birds, and eventually the animals at the top of the food chain have an extremely high concentration of these chemicals. These birds are actually producing eggs whose shells are so thin that their offspring cannot survive.

Mr. Chairman, we are ourselves at the top of a long food chain and we are accumulating quantities of pesticides in our bodies. Many scientists are saying that the pesticides are showing up in our organs and may pose a dangerous and serious hazard to our genetic heritage.

They also call attention to the fact that these nondegradable pesticides are destroying systematically the oxygen-producing plants on land and may do the same to our oceans, with accumulations from the pesticides used, at around some 170 million pounds per year. Once in the biosystem, these pesticides continually go on killing plant and animal life, and nobody seems to have given much thought to the possibility that we may eventually tip the balance of nature in the wrong direction.

Unfortunately, we are not in the habit of acting on environmental ills until a real emergency occurs, as was the case of the oil pollution out at Santa Barbara, Calif., and as has been the case in other communities. In consequence, if we blandly wait for a pesticide catastrophe it may well be too late.

The amendment I am offering is designed merely to prohibit the use of chemical pesticides by the Federal Government in any State where those pes-

ticides could not be legally used, under State law or regulation.

DDT and similar chemical pesticides have been extensively criticized in recent years, and the intensity of this criticism has been considerably increased in the past few months; many scientists have suggested that these chemicals should be banned outright.

Responding to this attack, Arizona and Michigan have banned the use of these chemicals, and several other States are considering similar bans; in addition, many States have the authority to prohibit by regulation or executive action the use of chemicals which are found to be harmful.

I do not feel that the Congress should be guilty of imposing its own judgment in this area by permitting the use of these chemicals in cases where the responsible State authorities have concluded that they should be prohibited. My amendment would subject the Department of Agriculture to no greater restrictions than now operate upon citizens and State agencies in those States, and in States where similar bans may be imposed in the future.

I am unable to determine the extent to which the Department's pest control program would be inhibited, if my amendment were passed. Frankly, I do not feel it makes much difference.

Adequate alternatives are available for the most dangerous of these chemicals and if the State authorities feel that they should not be used, I do not feel it right that we should at this time supersede them.

As I say, Arizona and Michigan have banned DDT.

In New Jersey the governor is considering an executive order which might have the same effect.

Studies are underway on DDT in Arkansas and Montana, and in Nebraska DDT is, and I quote, "not recognized or recommended by the department of agriculture."

In Pennsylvania a special legislative committee has recommended the banning of all chlorinated hydrocarbons.

Bills to ban some of these chemicals and pesticides have been introduced in the following State legislatures: California, Wisconsin, Illinois, Washington, and Minnesota.

The following States have the power by regulation to ban chemical pesticides considered to be undesirable: New Mexico, Colorado, Utah, Oklahoma, Oregon, Connecticut, Maine, and Washington.

In Wisconsin the department of natural resources is holding hearings to determine whether DDT is to be classified as a pollutant and therefore to be kept out of its waters.

In its budget on the item we are presently considering, the Agriculture Department has set aside \$5,750,000 for the coming fiscal year, for the purchase and application of chemical pesticides.

This information was obtained from Mr. Miles, the Deputy Director of the Budget Bureau of the U.S. Department of Agriculture.

I think myself the problem is sufficiently serious that we should take action at least to the extent of not exceeding what the States have already done and

might do in the future on this important problem.

The CHAIRMAN. Does the gentleman from Mississippi desire to be heard on his point of order?

Mr. WHITTEN. Mr. Chairman, upon reading the amendment, I notice it goes further than I thought it did. In the first place, I do not know of any provision in this bill for the purchase of chemical pesticides.

May I say further, Mr. Chairman, that the amendment before us goes to the State law, exempting or including pesticides based on those States which have passed State laws.

On that basis, Mr. Chairman, I contend that the amendment is not germane and goes far beyond the legislation before us.

The CHAIRMAN. Does the gentleman from New York (Mr. OTTINGER) desire to be heard on the point of order?

Mr. OTTINGER. Yes, Mr. Chairman.

Mr. Chairman, the bill goes directly to the legislation itself.

There are 89 million and some odd dollars appropriated for pest control within this particular section, although I am told that \$5,750,000 is for the distribution and application of chemical pesticides. So that the amendment is completely germane, and it only relates to the States insofar as the limitation of appropriation itself is concerned.

The CHAIRMAN (Mr. WRIGHT). The amendment offered by the gentleman from New York (Mr. OTTINGER) provides that no appropriation contained in this act shall be used for the purchase or application of chemical pesticides.

The amendment notes certain exceptions within or substantially affecting States in circumstances in which the purchase or application of such pesticides would be prohibited by State law or regulation, or any citizen or instrumentality of State or local government.

It is a well-established rule that an amendment to an appropriation bill is germane wherein it denies the use of funds for a specific purpose.

The amendment offered by the gentleman from New York (Mr. OTTINGER) appears to fall within that rule. It is a limitation upon the use of funds appropriated in the bill. It is a denial of the use of those funds for a specific purpose. Therefore, the Chair overrules the point of order.

Mr. WHITTEN. I have done a world of study in this area, as have many others. The continuing battle of man against insects has been going on since the beginning of time. The Department of Agriculture has the responsibility for testing and approving all of the new chemicals that are essential to human health.

Not only is that true, but also household insects, such as roaches and flies, have caused many epidemics, such as the bubonic plague, which have swept the world throughout history. With malaria and many other diseases rampant, except for chemical pesticides it is doubtful we would enjoy constantly increasing life expectancy, which may now be around 15 or 20 years longer than it was in 1900.

Our world is absolutely dependent on

these pesticides for controlling disease and pestilence caused by insects, rats, and many other rodents. Not only is that true, but the plant life which we all must depend on for our food, is attacked by insects. On an average of every 5 years we have to have a new strain to meet the need.

So if we are to continue to have improved health, if we are to continue having fruit that is beautiful and wholesome, as compared with what we find when we are traveling in many foreign countries, where we have seen bugs, insects, rot, worms, and all those things, we would realize that we must show some discretion in handling these matters.

At the same time, it is agreed that we have got to see that the dosage is within proper limits. The Department of Agriculture is the department that makes each of these products go through tests before approved for use.

I say to you that certainly you would not want to tie the hands of the department that has the responsibility for protecting our health, protecting it on the one hand by seeing that pesticides that are dangerous are used in dosages that make them safe for use, and, on the other hand, approving them when they prove their use is essential to human health and essential to the production of fruits, vegetables, and the many things on which our well-being depends.

I would hope that you would vote down the amendment. This is an area in which, if action is to be taken, it should be taken by the appropriate legislative committee where witnesses can be heard on all sides of the question. You would find that we would suffer untold damage, for example, if we were needlessly to restrict the one department that has this responsibility. I hope the amendment will be voted down.

The CHAIRMAN. The question is on the amendment offered by the gentleman from New York (Mr. OTTINGER).

The question was taken; and on a division (demanded by Mr. OTTINGER) there were—ayes 25, noes 75.

So the amendment was rejected.

AMENDMENT OFFERED BY MR. OTTINGER

Mr. OTTINGER. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. OTTINGER: On page 5, line 5, change the semicolon to a colon and add the following: *Provided*, That no appropriation contained in this act shall be used for the purchase or application of the following chemical pesticides: DDT, Dieldrin, Aldrin, Andrin, Heptachlor, Toxaphene, Benzene hydrochloride, Lindane, Chlordane and other chlorinated hydrocarbon pesticides, except small quantities for testing purposes."

Mr. WHITTEN. Mr. Chairman, I reserve a point of order against the amendment.

Mr. OTTINGER. Mr. Chairman, I will not belabor the House on this point. These are the pesticides which are considered by the scientific community to be too dangerous to use. The committee, having chosen not to adopt the States rights approach on this problem, will obviously reject the amendment.

I am convinced, myself, that these pesticides are dangerous enough, considering the fact that alternatives exist, that they ought to be prohibited outright for use by the Federal Government. That is what this amendment would do. I am confident that one of these days we will take this step. I just hope that the day when we do it will not be too late.

Mr. WHITTEN. Mr. Chairman, I make the point of order that the specific pesticides included here were included in the earlier language and were indeed voted upon.

The CHAIRMAN (Mr. WRIGHT). The Chair is going to rule that this is a different amendment in that it specifically stipulates those pesticides which would be proscribed by the amendment.

The Chair overrules the point of order.

Mr. WHITTEN. Mr. Chairman, I rise in opposition to the amendment. I reiterate the argument I made earlier. The control of agricultural pests is an area in which we are dependent upon all the tools which are determined to be safe in order to protect our food production and our health from pests and disease.

This is not the place to decide in these few minutes an issue which has become so controversial and which is so technical. I trust the amendment will be voted down.

The CHAIRMAN. The question is on the amendment offered by the gentleman from New York (Mr. OTTINGER).

The amendment was rejected.

The CHAIRMAN. The Clerk will read. The Clerk read as follows:

COOPERATIVE STATE RESEARCH SERVICE PAYMENTS AND EXPENSES

For payments to agricultural experiment stations, for grants for cooperative forestry and other research, for facilities, and for other expenses, including \$53,854,000 to carry into effect the provisions of the Hatch Act, approved March 2, 1887, as amended by the Act approved August 11, 1955 (7 U.S.C. 361a-361i), including administration by the United States Department of Agriculture; \$3,785,000 for grants for cooperative forestry research under the Act approved October 10, 1962 (16 U.S.C. 582a-582a-7), of which amount, the sum of \$201,642.80 shall be paid to those States for the benefit of the counties from which timber receipts earned as a result of agreements entered into under the authority of the Weeks Act (16 U.S.C. 500) have been withheld; \$2,000,000 in addition to funds otherwise available for contracts and grants for scientific research under the Act of August 4, 1965 (7 U.S.C. 450i) of which \$1,000,000 shall be for the special cotton research program and \$400,000 for soybean research; \$1,000,000 for grants for facilities under the Act approved July 22, 1963 (7 U.S.C. 390-390k); \$160,000 for penalty mail costs of agricultural experiment stations under section 6 of the Hatch Act of 1887, as amended; and \$376,000 for necessary expenses of the Cooperative State Research Service, including administration of payments to State agricultural experiment stations, funds for employment pursuant to the second sentence of section 706(a) of the Organic Act of 1944 (7 U.S.C. 2225), and not to exceed \$50,000 for employment under 5 U.S.C. 3109; in all, \$61,175,000.

Mr. YATES. Mr. Chairman, I make a point of order against the language contained on page 6, lines 22, 23, 24, and 25, and on page 7, lines 1 and 2, through the word "withheld".

My point of order is predicated on four grounds.

First, this is legislation in an appropriation bill. Under the so-called Weeks Act, lands may be transferred by States to the Federal Government under an agreement to pay 75 percent of the funds for timber cut for school purposes and for roads, but under the Civil Rights Act of 1964, such funds come within the purview of moneys to be paid by the Federal Government to the States. The Attorney General and other appropriate agencies have determined the so-called Weeks Act falls within the purview of that act. Therefore, in requiring funds to be paid under the Weeks Act in contravention to the decision of the Attorney General that no such funds should be paid, it changes the Civil Rights Act of 1964.

Second, Mr. Chairman, it establishes an affirmative direction to the Secretary of Agriculture or to one of his subordinates to make a payment. It requires him to take a specific action. It says the money shall be paid. Contrary to other provisions of this appropriation bill, which say that funds shall be available for certain purposes, this is a direction, a mandate, a requirement to an executive officer to take certain steps.

Third, Mr. Chairman, this is an appropriation without authority of law. If the Chair will note the citation for the funds, it is given as 16 U.S.C. 582a-582a-7. Mr. Chairman, I have read those sections very carefully, and I find no authority in those sections for making this particular payment. I have the code before me. The code is directed to a sustained yield forest management program. It does not provide for any payments to be made under the so-called Weeks Act.

Finally, Mr. Chairman, assuming that there is authority under the Weeks Act, this language is not directed to authority under the Weeks Act. Assuming whatever authority the Weeks Act provided for payment of certain funds, that authority no longer exists when appropriate agencies of the Federal Government takes steps to suspend payments that were authorized under that law, taking the steps authorized under another act.

For example, whatever authority the Weeks Act gave to make such payments, that authority was suspended by the action taken under the Civil Rights Act of 1964 authorizing the Attorney General to suspend any payments to counties which did not require their schools to desegregate in accordance with the law.

For those reasons, Mr. Chairman, I respectfully suggest that the point of order should be sustained.

The CHAIRMAN. Does the gentleman direct his point of order to the language beginning in line 23?

Mr. YATES. Yes, Mr. Chairman, I do. Did I mention line 22? If I did, I was in error.

The CHAIRMAN. The gentleman does not direct any point of order against the language in line 22?

Mr. YATES. No, Mr. Chairman. My point of order begins in line 23, through the word "withheld" on line 2 of page 7.

Mr. WHITTEN. Mr. Chairman, would the gentleman withhold his point of order?

Mr. YATES. Mr. Chairman, I reserve my point of order.

The CHAIRMAN. The gentleman from Illinois reserves his point of order.

Mr. WHITTEN. Mr. Chairman, our committee realizes its limitations, but I think it well to point out in connection with the point of order that the authority under which the committee has attempted to act is that found in 582 of title 16, the language which is in line 22.

May I say that the Weeks Act, which is mentioned here, provides that the Federal Government can purchase land in the various States, thereby taking the land off the local tax rolls provided it has the agreement and the consent of the States. The Federal Government has gone into States throughout the country and has gotten State legislatures to pass enabling acts authorizing the Federal Government to buy these lands on the basis of the agreement by the Federal Government that 25 percent of the timber receipts shall go to the States as agents of the local counties for roads and school purposes.

In other words, the Federal Government has made an agreement under the Weeks Act to take title to lands in the Federal Government and has agreed in consideration thereof, if the State has given its consent, to pay to the State, for the use of the counties losing the lands from the tax rolls, 25 percent of the timber receipts for roads and schools.

In a few States—I believe there are three now—the Attorney General, acting at the direction of the Department of Health, Education, and Welfare, has frozen these funds that were part of the agreement when the lands were taken off the local tax rolls.

It is certainly most unfair, and in effect contrary to what they may intend at the Department of Health, Education, and Welfare. They are taking these moneys from education. I want the Members to know that each of these States and each of these counties has schools which are open to members of all races.

But we live in a country, now, where the Department of Health, Education, and Welfare, or some official down the line in that Department, can tell the Attorney General, "Just violate any agreement you may have. Hold on to these lands which the State legislature authorized you to buy and take off the tax rolls and renege on your agreement to give 25 percent of the land rental to them."

Mr. Chairman, in view of the words "shall be paid" I would have to agree that the section is subject to a point of order.

The CHAIRMAN. The gentleman from Mississippi concedes that the language is subject to a point of order.

Does the gentleman from Illinois insist upon his point of order?

Mr. YATES. Mr. Chairman, I insist on my point of order.

The CHAIRMAN. The Chair sustains the point of order of the gentleman from Illinois (Mr. YATES). The language of the bill beginning in line 23, page 6, to and through the word "withheld" on line 2, page 7, constitutes a diversion of funds from authorized appropriations for an

unauthorized purpose; and the Chair sustains the point of order against that language.

The Clerk will read.

The Clerk read as follows:

PAYMENTS TO STATES AND POSSESSIONS

For payments to departments of agriculture, bureaus and departments of markets, and similar agencies for marketing activities under section 204(b) of the Agricultural Marketing Act of 1946 (7 U.S.C. 1623(b)), \$1,600,000.

Mr. MICHEL. Mr. Chairman, I move to strike the last word, and I would like the attention, if I might, of our subcommittee chairman, the gentleman from Mississippi (Mr. WHITTEN).

Mr. Chairman, Illinois receives \$30,237 during the present fiscal year and at least \$10,000, has more than been matched by our State of Illinois on this project.

As payments are based upon an evaluation of the relative urgency of the marketing problems confronting the State and the probable effectiveness of the plan and the State's ability to carry out the program, I should think there would be very little problem in receiving these funds.

Furthermore, soybean research in general has been short changed. For every Federal and State scientist working on soybean production research in 1967, there were \$25 million of soybeans produced. For every scientist working on rice, grain sorghum, and wheat, there were \$15-16 million of each crop produced. For each scientist in tobacco, \$9 million; peanuts, \$7 million; cotton, \$4 million; and sugar crops, \$3 million of crop produced.

Soybeans are raised on over 40 million acres in 30 States, provide our Nation with its most valuable agricultural export for dollars, is second in farm value of cash crops—and gets an infant's research diet.

I would hope that under the payments to the States category of the Consumer and Marketing Service that the Department of Agriculture will provide an additional \$20,000 to Illinois for the purpose of building and operating an instrument to measure the oil, moisture and protein content of soybeans.

This instrument has already been invented by the USDA's Agriculture Research Service and we in Illinois, as the largest soybean producer, are very anxious to put it to use.

I offer examples of the pressing need: Japan buys up 27 percent of this Nation's soybean crop. They are demanding a certain oil content for the soybeans they import and there is a possibility that we could lose this market if we do not have a method of measuring the oil content of beans quickly and efficiently.

Also soybeans can be used as a protein source for human foods and demands for high protein beans can be expected in the very near future.

I hope that the chairman of the subcommittee will have that same view, because we are here at a point of breaking through on this item. All it really needs is that a matter of legislative history be made here to give the folks downtown a nudge to get the job done.

Mr. WHITTEN. Mr. Chairman, will the gentleman yield?

Mr. MICHEL. I yield to the gentleman from Mississippi.

Mr. WHITTEN. May I say to my distinguished colleague from Illinois, with whom I have had the privilege of working through these many years, I agree with him that there is no crop which shows as much benefit from the aid we have given and which makes as great a contribution to American agriculture as soybeans. As I have said on the floor previously, there is in this bill \$1.6 million for payments to States, some portion of which can be used for such activities. They do have the right to shift funds from one activity to another. Certainly such a transfer as you have described here is warranted, and I hope and trust that the Department of Agriculture will do as we feel they should and make those funds available as they are needed.

Mr. MICHEL. I thank the chairman for his assurance.

The CHAIRMAN. The Clerk will read. The Clerk read as follows:

REMOVAL OF SURPLUS AGRICULTURAL COMMODITIES (SECTION 32)

Funds available under section 32 of the Act of August 24, 1935 (7 U.S.C. 612c) shall be used only for commodity program expenses as authorized therein, and other related operating expenses, except for (1) transfers to the Department of the Interior as authorized by the Fish and Wildlife Act of August 8, 1956; (2) transfers otherwise provided in this Act; (3) not more than \$2,900,000 for formulation and administration of marketing agreements and orders pursuant to the Agricultural Marketing Agreement Act of 1937, as amended, and the Agricultural Act of 1961; and (4) in addition to other amounts provided in this Act, not more than \$100,000,000 (including not to exceed \$2,000,000 for State administrative expenses) for (a) child feeding programs and nutritional programs authorized by law in the School Lunch Act and the Child Nutrition Act, as amended; (b) additional direct distribution or other programs, without regard to whether such area is under the food stamp program or a system of direct distribution, to provide, in the immediate vicinity of their place of permanent residence, either directly or through a State or local welfare agency, an adequate diet to other needy children and low-income persons determined by the Secretary of Agriculture to be suffering, through no fault of their own, from general and continued hunger resulting from insufficient food; *Provided*, That in making such determinations, the Secretary shall take into consideration the age; income; location and income of parents, if a minor; and employability; and (c) milk for needy children in schools and other nonprofit institutions heretofore receiving milk under the special milk program.

AMENDMENT OFFERED BY MR. POAGE

Mr. POAGE. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. POAGE: On page 19, lines 23 through 25, strike "and (c) milk for needy children in schools and other nonprofit institutions heretofore receiving milk under the special milk program," and substitute "For necessary expenses to carry out the provisions of the Special Milk Program, as authorized by section 3 of the Child Nutrition Act of 1966 (42 U.S.C. 1772) \$120,000,000, to be transferred from funds available under section 32 of the Act of August 24, 1935 (7 U.S.C. 612c)."

Mr. WHITTEN. Mr. Chairman, will the gentleman yield?

Mr. POAGE. I yield to the gentleman from Mississippi.

Mr. WHITTEN. Mr. Chairman, I have had occasion to check with the members of our subcommittee and we have no objection to the amendment. As I expressed earlier, our purpose was not to eliminate these funds, but to have them available. I have no objection to the amendment.

Mr. TEAGUE of California. Mr. Chairman, will the gentleman yield?

Mr. POAGE. I yield to the gentleman from California.

Mr. TEAGUE of California. Obviously, Mr. Chairman, I must recognize that I am going to be defeated in my stand on this amendment, but I want the Record to show that not being a member of the Committee on Appropriations, but being opposed to the amendment according to the original action of the Committee on Appropriations, and for the reasons earlier stated, I, for one, do not agree to the acceptance of the amendment. This is not help for undernourished and needy children. It is help for the dairy industry. I understand why my colleagues wish to assist the milk producers and do not criticize them for it. However, let us understand the real purpose of this \$125 million program.

Mr. QUIE. Mr. Chairman, will the gentleman yield?

Mr. POAGE. I yield to the gentleman from Minnesota.

Mr. QUIE. Mr. Chairman, I strongly favor the amendment offered by my colleague from Texas (Mr. POAGE). The special school milk program has been in operation for 14 years. It is well received by educators, nutritionists, parents, and students. It would be a shame not to continue this act.

The attitude of the House is clearly seen by its vote recently—384 to 2 favoring the permanent extension of the special school milk program. Our efforts to feed the needy must be continued and expanded; however, when an outstanding program providing the most important ingredient of lunch on a specialized basis as the special school milk program does, all children will benefit no matter what their economic level. In fact, all children need the nutritional value which can be found in milk, and I am hopeful that this House will not only vote for the Poage amendment at this time, but make certain that funds will be available in the future for an adequate supply of milk for school children.

Mr. STEIGER of Wisconsin. Mr. Chairman, the bill, H.R. 11612, as reported by the Appropriations Committee, contains inadequate provision for the special milk program and thus I support the Poage amendment. In previous years we have appropriated approximately \$104 million for this essential program, but the recommendations of the committee this year would eliminate the appropriation altogether and provide only \$20 million through transfers from section 32 funds.

I find this recommendation totally unacceptable given the past successes of this milk program and the ever-increasing body of knowledge which indicates mas-

sive problems of malnutrition and hunger in the Nation.

The increase funding for the child nutrition, school lunch, and food stamp programs is commendable and deserves the support of this Congress. But I am not yet convinced, nor have I been shown any evidence which indicates, that the proposals embodied in this bill will meet the nutritional needs of the Nation's schoolchildren. On the contrary, most of the evidence would seem to indicate that even with the expansion of the nutrition programs, large numbers of children in dire need will still not receive adequate nutritional supplements in our schools.

Numerous studies have pointed to the fact that several million poor and disadvantaged youngsters who urgently need to participate, are not able to do so because of a lack of facilities for food service at the schools they attend. The milk program has reached many of these children and has been administered in such a way as to better meet the needs of these youngsters. The other nutrition programs have failed in the past because of inadequate funding and inequitable administrative practices.

Given the fact that we are as yet a long way from meeting the nutritional needs of all Americans and that no one can guarantee that the new ordering of financial priorities incorporated in this bill will insure adequate coverage, it ill-behoves us at this time to severely cut back a program which has been very successful in supplementing the diets of the disadvantaged.

Even with the expanded programs for regular meals in the schools, the overall consumption of fluid milk will be substantially reduced if we acquiesce in the recommendations contained in this bill. Where in prior years the \$104 million for the special milk program has provided some three billion half-pints of milk annually, this bill provides only \$20 million or approximately 581 million half-pints for fiscal 1970,—assuming a reimbursement rate of 3.44 cents per half-pint, the rate in fiscal 1969. Even if we add to this the assumption that one-half-pint will be served with each of the new meals to be provided, for an additional 523 million half-pints, the net reduction in fiscal 1970 as compared to fiscal 1969 will be approximately 1.9 billion half-pints.

I certainly support the efforts of the committee to improve funding for our other child nutrition programs, but I believe we are not yet in a position to eliminate a program of proven value, which has been instrumental in improving the health of millions of young Americans. Until such time as we can be confident that none of our children are malnourished and that other programs are functioning effectively, we must continue to provide dietary supplements through the special milk program. I am, therefore, urging the committee to support an effort to restore funds to the level appropriated for fiscal 1969. Passage of this amendment will guarantee an adequate level of funding for the program during the coming fiscal year.

This particular program has won widespread support across the Nation. I have

received a telegram from Mr. William Eckles, general manager of Pure Milk Products Cooperative in Wisconsin, urging continued support for this essential activity.

Funding of this unique and valuable program has salutary worth not only to the dairy industry but also to the millions of children that the program is designed to help nutritionally.

The action of the House recently in supporting the authorization bill, H.R. 5554, introduced by the gentleman from Texas (Mr. POAGE), clearly indicates the wide support in the House for this program and the Appropriations Committee can, I believe, work to assure equitable treatment of the special milk program. This amendment should be adopted and I join in urging support.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Texas (Mr. POAGE).

The amendment was agreed to.

Mr. KEITH. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state his parliamentary inquiry.

Mr. KEITH. Mr. Chairman, I have an amendment which is in my hands and ready to go to the Clerk to page 18, line 15. Is it my understanding that we did actually read all of page 18?

The CHAIRMAN. The Chair will state to the gentleman from Massachusetts that the Clerk has read through page 18 and page 19 and an amendment has been adopted at the bottom of page 19.

Mr. KEITH. Mr. Chairman, I ask unanimous consent that we return to page 18, line 15, so that I may offer an amendment which I mentioned earlier in the debate.

The CHAIRMAN. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

AMENDMENT OFFERED BY MR. KEITH

Mr. KEITH. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. KEITH: On page 18, line 15, add "And provided further, That no funds expended under the authority contained in this Act shall be used for the purchase of fish products unless such fish or fish products are available on the domestic market".

The CHAIRMAN. May the Chair clarify the amendment? Does the amendment state "unavailable"?

Mr. KEITH. Mr. Chairman, I think that the Clerk misread it.

Mr. YATES. Mr. Chairman, I ask unanimous consent that the amendment be reread.

The CHAIRMAN. Is there objection to the request of the gentleman from Illinois?

There was no objection.

The Clerk read as follows:

Amendment offered by Mr. KEITH: On page 18, line 15, add "And provided further, That no funds expended under the authority contained in this Act shall be used for the purchase of imported fish or fish products when such fish or fish products are available on the domestic market".

Mr. KEITH. Mr. Chairman, it has been brought to my attention that some school

lunch programs are buying fish and fish products which have been imported. There is, in fact, a memorandum put out by the school lunch program authorities which says that it is the congressional intent of the school lunch program to encourage the use and consumption of only domestically produced agricultural commodities and other goods, and not those of foreign origin. It seems that the regulations are not being observed, or at least the intent of the Congress is not being observed at the local level. I believe that legislation of this sort would help to strengthen the hand of the Federal officials in administering what was the intent of the Congress, and, secondly, it would be very helpful to the domestic fish industry which is suffering from a 98-percent increase in imported fish or fish products since 1957. It seems, further, that the Department of Commerce and the Department of the Interior are literally spending millions of dollars to revive this same fishing industry.

So, Mr. Chairman, I ask for the support of my colleagues in the adoption of my amendment.

I would further point out, Mr. Chairman, that earlier this afternoon the chairman indicated to me that he was in sympathy with the intent, but that a point of order might lie against the amendment. Subsequent rulings by the Chair with reference to other points of order have given me confidence to offer the amendment, particularly in view of the sentiment as expressed by the chairman on the floor.

The CHAIRMAN. The Chair will state to the gentleman that no point of order is pending.

Mr. KEITH. Mr. Chairman, I reserve the balance of my time.

Mr. WHITTEN. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, I did not make the point of order that we had read too far in the bill to consider the amendment. I did not suggest that point of order, so that the gentleman might offer his amendment.

Here again I can appreciate the concern of the gentleman coming from the area he does. I expressed myself earlier that, where fish or other protein foods are available, and where it is necessary to make that type of purchase in order to have a well-rounded lunch, that preference should be given to buying American products. But to put it into law, where they would have to make such a determination, I believe would be carrying it too far. If an amendment were to be offered to the School Lunch Act, or to the Nutrition Act, I believe that would be the proper place.

Also, as I understood the language of the amendment, it would prohibit the buying of foreign fish from foreign sources when available on the domestic market. To tie down the purchase of readily available fish and have to determine whether that fish came from abroad or from this country, would be putting an undue burden upon the school lunch authorities.

Mr. Chairman, I am arguing on the merits of the amendment, but I am in sympathy with the gentleman and his concern, and I will cooperate with the

gentleman in any way I can. But I do not believe we should put something into law that is too stringent. So I hope the amendment is voted down. But again I say that I hope we can work out something to the satisfaction of the gentleman in some other way.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Massachusetts (Mr. KEITH).

The question was taken; and on a division (demanded by Mr. KEITH), there were—ayes 32, noes 65.

So the amendment was rejected.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

AGRICULTURAL STABILIZATION AND
CONSERVATION SERVICE
EXPENSES, AGRICULTURAL STABILIZATION AND
CONSERVATION SERVICE

For necessary administrative expenses of the Agricultural Stabilization and Conservation Service, including expenses to formulate and carry out programs authorized by title III of the Agricultural Adjustment Act of 1938, as amended (7 U.S.C. 1301-1393); Sugar Act of 1948, as amended (7 U.S.C. 1101-1161); sections 7 to 15, 16(a), 16(d), 16(e), 16(f), 16(i), and 17 of the Soil Conservation and Domestic Allotment Act, as amended (16 U.S.C. 590g-590q); subtitles B and C of the Soil Bank Act (7 U.S.C. 1831-1837, 1802-1814, and 1816); and laws pertaining to the Commodity Credit Corporation, \$147,420,000: *Provided*, That, in addition, not to exceed \$62,483,000 may be transferred to and merged with this appropriation from the Commodity Credit Corporation fund (including not to exceed \$26,757,000 under the limitation on Commodity Credit Corporation administrative expenses): *Provided further*, That other funds made available to the Agricultural Stabilization and Conservation Service for authorized activities may be advanced to and merged with this appropriation: *Provided further*, That no part of the funds appropriated or made available under this Act shall be used (1) to influence the vote in any referendum; (2) to influence agricultural legislation, except as permitted in 18 U.S.C. 1913; or (3) for salaries or other expenses of members of county and community committees established pursuant to section 8(b) of the Soil Conservation and Domestic Allotment Act, as amended, for engaging in any activities other than advisory and supervisory duties and delegated program functions prescribed in administrative regulations.

AMENDMENTS OFFERED BY MR. CONTE

Mr. CONTE. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. CONTE: On page 22, line 17, strike the period and insert the following: "*Provided further*, That no part of the funds appropriated by this Act shall be used to formulate or carry out any price support program (other than for sugar) under which payments aggregating more than \$20,000 under all such programs are made to any producer on any crops planted in the fiscal year 1970."

Mr. WHITTEN. Mr. Chairman, I reserve a point of order against the amendment.

The CHAIRMAN. The gentleman from Mississippi (Mr. WHITTEN) reserves a point of order against the amendment.

The gentleman from Massachusetts (Mr. CONTE) is recognized for 5 minutes in support of his amendment.

Mr. CONTE. Mr. Chairman, the bill presently before this committee provides appropriations for the Department of Agriculture and related agencies for the

fiscal year 1970. I rise to introduce an amendment which will limit the aggregate payments to any producer from the price support programs covered by this bill, except for sugar, to \$20,000. This payment limitation furthermore will only apply with regard to crops planted during fiscal year 1970 and thus does not cut off funds for producers whose actions during fiscal year 1969 have been governed by the lack of a payment restriction.

Mr. Chairman, on July 31, 1968, I offered practically this same amendment on the floor of this Body. My motion at that time to recommit the farm bill and report it out with a \$20,000 payments limitation was approved by the House by the recorded vote of 230 to 160.

Last year after my amendment was approved by the House, it was quickly dropped in conference.

Abnormal procedures were then used to prevent me from obtaining a rollcall vote on this amendment when it came back to the House for a vote.

Mr. Chairman, there is no justification for allowing such parliamentary tactics and maneuvers to be used to prevent the Members of this body from deciding issues of extreme importance. Nor can there be any justification for the action taken late last week by the leadership in rescheduling consideration of this bill from Tuesday to today. As I stated earlier, this was done for only one reason—to limit support for a farm payments limitation by having us vote on it while many supporters are still in their home districts today.

Our farm program is not working properly today and it has not been for some time.

Mr. Chairman, what is the rationale which allows the J. G. Boswell Co. of California to receive subsidy payments of \$3 million in 1968 and \$4,100,000 in 1967 while some 12 to 15 million people in this country continue to suffer from starvation and malnutrition.

What is the rationale for payments in 1968 of \$2,800,000 to Giffen, Inc., of California, for \$1,200,000 to South Lake Farms of California, for \$786,000 to Salvor Land Co. of California, for \$504,000 to Farms Investment Co., of Arizona, for \$430,000 to Hamilton Farms of Arizona, for \$474,000 to Lee Wilson & Co. of Arkansas, for \$320,000 to J. K. Griffith of Texas, for \$228,000 to John B. McKee, Jr., of Mississippi.

Mr. Chairman, what is the rationale which leads to prisons in Texas, Arkansas, Louisiana, and Mississippi receiving subsidy payments in 1969 of \$294,000, \$154,000, \$51,000, and \$28,000, respectively, while the small farmer in this country for whom these farm programs were originally designed receives today almost no help at all from them.

What is the rationale for the Southern National Bank receiving \$170,000 and Reynolds Metal receiving \$44,000 in subsidy payments while poor people throughout this country—black and white go around without the memory of what a full meal tastes like.

Mr. Chairman—there is no rationale for this—there is no justification for this—and it is high time that we begin to put our farm programs in order.

Mr. Chairman, to those who would argue that today's bill is not an appropriate place for these limitations, I would argue that just the opposite is the case.

We have waited patiently for years for new legislation to replace our present terribly inequitable and wasteful farm programs.

We will have to wait for years and years more if the impetus for a new legislative approach is to be left to the distinguished chairman from Texas and his Agriculture Committee.

Meanwhile, hundreds of millions of dollars of the American taxpayer are being wasted in these inequitable and unjustifiable subsidy programs.

Everyone in this Body is aware of the difficult financial times we presently face in this Nation—of the burdens of inflation, of the need for keeping an extremely tight reign on Government spending.

We in Congress have been forced to make substantial spending reductions in numerous important and valuable Government programs because of present economic conditions.

How can we possibly sit here while this is going on and allow to continue, for 1 day more, these wasteful and unfair farm programs.

We must act and we must act now. My amendment in putting an end to these huge payments will lead to savings for the American taxpayer of up to \$300 million per year.

To those who argue further that this payment limitation will result in huge surpluses and destroy agriculture in this country, I draw attention to the study prepared last year by the Department of Agriculture under Dr. John Schnitker, the former Under Secretary of Agriculture.

The Department study was clear in its finding that we can limit farm payments in this country to \$20,000 per farm "without serious adverse effects on production or on the effectiveness of production adjustment programs."

I urge all Members to support me in this fight and vote to limit farm subsidy payments to no more than \$20,000 for a producer.

The CHAIRMAN. The time of the gentleman from Massachusetts has expired.

(On request of Mr. WAGGONER, and by unanimous consent, Mr. CONTE was allowed to proceed for 3 additional minutes.)

Mr. WAGGONER. Mr. Chairman, will the gentleman yield at that point?

Mr. CONTE. I am glad to yield to the gentleman from Louisiana.

Mr. WAGGONER. I would be interested in knowing what the gentleman's rationale is in omitting sugar from his proposed limitation on payments. Why is sugar singled out to be omitted? I am interested in sugar, too. We grow it in Louisiana. Why is the gentleman interested in omitting only sugar?

Mr. CONTE. As the gentleman knows, last July my amendment did not cover sugar. Today in discussing my amendment with some Members of Congress including Mr. FINDLEY, I noted his amendment omitted sugar. They argued

that they have a unique program there that is a self-sustaining program, that the excise tax imposed upon them substantiates the payments they have in the program.

Mr. WAGGONER. Does the gentleman have sugar mills in his district?

Mr. CONTE. I am more than pleased that the gentleman has asked that question, because the gentleman from Mississippi, whose State is one of the largest recipients of subsidies under this program, mentioned the subject. I have no sugar refineries in my district, I have no sugar mills, and I have never voted to authorize any farm subsidy, in 1961 or even when the cotton subsidy bill came up which could have helped textile mills in my district. I voted against that one also.

Mr. Chairman, it is high time we stopped this racket. It is high time that Congressmen and Senators who have their faces in the public trough stop collecting subsidies or do not vote on these bills as they come up in the House and the Senate.

Mr. QUIE. Mr. Chairman, will the gentleman yield?

Mr. CONTE. I am glad to yield to the gentleman from Minnesota.

Mr. QUIE. I think we ought also to point out that there is a limitation on payments in the Sugar Act.

Mr. CONTE. I thank the gentleman for his contribution.

The CHAIRMAN. The time of the gentleman from Massachusetts has expired.

Mr. WHITTEN. Mr. Chairman, I reserved a point of order.

The CHAIRMAN. Does the gentleman from Mississippi desire to be heard on his point of order?

Mr. WHITTEN. I do, Mr. Chairman.

The CHAIRMAN. The gentleman will state it.

Mr. WHITTEN. Mr. Chairman, this subject has been discussed a number of times. There are several new features in this amendment that have not been included in previous amendments.

Congress set up the Commodity Credit Corporation as a corporation so that it could act as such. It gets its authority from several sources. One is borrowing authority granted by the Congress on the recommendation of the Banking and Currency Committee. Another is the sale of commodities on hand. The Corporation is given the right to sue and be sued. It is given the right to conduct itself in all ways as a corporation.

I was one who discovered in an investigation that we had a number of corporations Congress had forgotten all about. One was the American Spruce Corp. For 25 years it accounted to nobody. So, along with others, I sponsored the Government Corporation Control Act whereby we would keep account of what these corporations were doing.

At that time, Mr. Whittington, the chairman of the committee, made the statement that one thing it was important for us to reserve was the right to review the actions of the corporations. That covers TVA as well as Commodity Credit Corporation. While we had the right to review these activities, the Government Corporation Control Act itself prohibited us from dealing with it as we

would deal with an appropriation for a regular department or agency of Government.

So I respectfully submit that in the absence of a law repealing the Government Corporation Control Act and the charter of the Commodity Credit Corporation, under which it was given certain functions and commitments, that we would have to change that act in order to limit its functions.

Let me give this further observation if I may and point out something else. In our committee report—and this is surplusage and we did not have to say it—this corporation has certain amounts in this bill. This amendment is directed to the money in this bill, but that corporation has approximately \$5.6 billion that is either in cash or loans advanced on commodities, where it will be subject to repayment or taking over under the loan, or it is in commodities to which they have actual title. So we say in our report, so that Members may know what will happen, that it is within their privileges and obligations already.

We say in our report that if Mr. CONTE's amendment should be adopted, or Mr. FINDLEY's, and if out of the funds in this bill the Corporation can pay only \$20,000, we say that the Corporation would still have to do what its charter authorizes and binds it to do—because they have these contracts—and that is to go ahead and pay the remainder, over and above \$20,000, out of other moneys they have.

Now the gentleman has changed his amendment from what I earlier heard and now says it applies to formulation and so forth of a 1970 program. May I say, the same reasoning applies, because if they cannot do it with the money which is in this bill, which goes to restoration of capital impairment in 1961, 1967, and 1968, then under the Corporation charter and under the law, they will have to do it out of other money.

So I am saying we would be requiring two sets of books.

My investigation indicates that it will probably cost \$50 million to maintain two sets of books, and a new system of controls. Formulation of such a program could be done with money the Corporation has, and it has an obligation under existing law to formulate these programs.

If, by chance, I am not right in my reasoning—and I have every reason to believe I am—then under the basic act it says if for any reason these payments are not made for cotton, it "snaps back" to the 1958 act. That is in the law. What I am telling the Members is in the Corporation's charter. It is in the act by which we assumed the right to survey and look it over and see what it is doing. But even in that law we said that nothing shall be done to prevent the Corporation from discharging its functions. We have no right to do that.

If this amendment were to prevail, they would still have other funds on hand.

Second, lest I be in error on my first point, under the law they go back to the 1958 act, and they would have to lend all this money—about 43 cents a pound—on cotton.

Having loaned that money on cotton,

that would be the normal 100 percent of parity. Presuming that the Secretary of Agriculture would put it at the lowest possible support level in the 1958 act, it would be 65 percent of parity, which would be the price today of 22 and a fraction cents which the producer gets, plus another 9 percent which is in these checks received by producers for having limited production in line with the Government's demand. Then the Government would have the cotton on its hands, and in order to export it in world trade you would have to pay out 9 and a fraction cents.

Now I come back to my point of order. The Corporation's charter provides its authority. We have not amended that charter. We passed legislation letting us supervise its activities, but in that law permitting us to survey it, it says nothing shall be done to keep that corporation from carrying out its functions under its charter.

I say again, on the one hand, they are going to have to pay from these other moneys and to keep two sets of books. On the face of it, that does not save money. That is evident.

Second, on the law, we cannot plead ignorance of the basic legislative act. Under the basic legislative act, if they try to impose a limitation here, it goes back to the other law and costs more money.

I respectfully suggest that I know from personal knowledge that we set out to make the corporation free of such controls. I know we tried to. I know for several years it was so considered.

If that does not strengthen the case, read the charter. Read the Corporation Control Act. Then read the law.

The amendment here will cost from \$60 million to some \$600 million or more. So instead of saving money, you are spending a whole lot of money if you adopt the Conte amendment.

Mr. CONTE. Mr. Chairman—

Mr. WHITTEN. I yield to the gentleman from Massachusetts.

Mr. CONTE. Has the gentleman raised a point of order, or is he arguing against the amendment?

Mr. WHITTEN. I raised a point of order, and in my remarks I perhaps made some statements against the amendment.

May I ask the gentleman: he says sugar is exempt. Could he tell me what is under the amendment?

Mr. CONTE. Mr. Chairman, is the gentleman raising a point of order? I should like to speak on the point of order, and then we can get on to the debate.

The CHAIRMAN. The Chair is hearing the gentleman from Mississippi on the point of order which, as the Chair understands it, is lodged against the amendment offered by the gentleman from Massachusetts on the ground that it constitutes legislation.

Mr. WHITTEN. I think I have made myself clear, Mr. Chairman, so I yield to the gentleman for his argument.

The CHAIRMAN. Does the gentleman from Massachusetts desire to be heard on the point of order?

Mr. CONTE. I do, Mr. Chairman.

The CHAIRMAN. The Chair will hear the gentleman from Massachusetts.

Mr. CONTE. Mr. Chairman, I believe that the point of order does not lie against the amendment.

My amendment is within rule XXI, clause 2, commonly referred to as the Holman rule.

The amendment is negative; it shows retrenchment and it does not impose any additional duties nor add to existing law.

Furthermore, amendments of this nature have been sustained on numerous occasions in past years in spite of similar objections.

Payment limitation amendments to agriculture appropriation bills have been introduced and sustained during the past 3 or 4 years in the House.

My amendment is merely a limitation on the amount of money being spent, and therefore the point of order should not prevail.

Mr. WHITTEN. Mr. Chairman, may I make one more point briefly?

The CHAIRMAN. The Chair will hear the gentleman from Mississippi.

Mr. WHITTEN. Mr. Chairman, this is a very unusual and peculiar provision, but in order that we know what we are doing may I say this amendment would not do what I think the gentleman insists it does. It is quite evident, if it does what he says, that it would drastically amend existing law, so to that degree it is legislation on an appropriation bill.

Mr. LANGEN. Mr. Chairman, may I be heard on the point of order?

The CHAIRMAN. The Chair will hear the gentleman from Minnesota.

Mr. LANGEN. I think the points have been made substantially, but let me add to them to this degree: Were this amendment to be adopted, it would substantially change the provisions of a farm program that is now in existence. In its application to compliance and to payments that are made, it does add to the work that has to be done by the department, in that they will have an entirely new calculation to make and it will provide a substantial added expense. There is nothing that says this is a limitation on payments. It could well amount to a greater expenditure in its final effect. So, consequently in my opinion, it does not comply with the provision that it be a strict limitation of payments and that it not constitute the changing of legislation already on the books.

The CHAIRMAN. The Chair is prepared to rule.

The gentleman from Massachusetts (Mr. CONTE) has offered an amendment against which the gentleman from Mississippi (Mr. WHITTEN) has made a point of order on the ground that the amendment constitutes legislation on an appropriation bill in violation of clause 2 of rule XXI.

As the gentleman from Mississippi points out and as was further pointed out by the gentleman from Massachusetts, amendments almost exactly identical to that offered by the gentleman from Massachusetts have been offered on numerous previous occasions, as early as 1959 and as recently as May 1, 1968. On several of those occasions points of order have been raised against this amendment or its equivalent on similar

grounds. On all those previous occasions the occupants of the chair have held that the amendment is a valid limitation on funds appropriated by the bill, and on all of those occasions the point of order has been overruled. The Chair has had occasion to observe the elaborate and scholarly argument presented on May 1, 1968, by the gentleman from Mississippi (Mr. WHITTEN), and to hear his further argument today. The gentleman from Mississippi (Mr. WHITTEN) contends that the amendment would limit and restrict the activities of a Government corporation created and regulated by other law and that therefore constitutes legislation. The Chair finds on the face of the amendment that what it limits and restricts is the application of funds appropriated in this bill to a Government corporation, and as such the Chair believes that it falls well within the rulings by Chairman Kilday in 1959, by Chairman Harris on January 26, 1965, and by Chairman CORMAN on two occasions, June 6, 1967, and May 1, 1968. The Chair therefore holds that the amendment is a valid limitation on the funds appropriated in the bill and therefore overrules the point of order.

SUBSTITUTE AMENDMENT OFFERED BY MR. NELSEN TO THE AMENDMENT OFFERED BY MR. CONTE

Mr. NELSEN. Mr. Chairman, I offer a substitute amendment to the amendment offered by the gentleman from Massachusetts (Mr. CONTE).

The Clerk read as follows:

Substitute amendment offered by Mr. NELSEN to the amendment offered by Mr. CONTE: On page 22, line 17, strike the period and add a colon and the following: "Provided further, That notwithstanding any other provision of law, in the case of any producer entitled to payments for any calendar year after 1969, under price support or commodity program, the incentive payments, Diversion payments, Price support payments, and Wheat marketing certificate payments to any single recipient, exceeding in the aggregate the amount of \$10,000, the amount of such payments with respect to that year to which the producer would otherwise be entitled shall be reduced in accordance with this subsection. If the aggregate amount of the payment is—

"(1) over \$10,000 but not over \$15,000, the reduction is 10 percent of the excess over \$10,000

"(2) over \$15,000 but not over \$25,000, the reduction is \$500 plus 15 percent of the excess over \$15,000

"(3) over \$25,000 but not over \$50,000, the reduction is \$2,000, plus 20 percent of the excess over \$25,000

"(4) over \$50,000 but not over \$100,000, the reduction is \$7,000 plus 25 percent of the excess over \$50,000

"(5) over \$100,000 but not over \$500,000, the reduction is \$19,500, plus 35 percent of the excess over \$100,000

"(6) over \$500,000 but not over \$1,000,000, the reduction is \$159,500, plus 45 percent of the excess over \$500,000

"(7) over \$1,000,000, the reduction is \$384,500 plus 55 percent of the excess over \$1,000,000.

"For the purposes of this section, payments include the dollar value (as determined by the Secretary of Agriculture) of any payments-in-kind made to a producer, but do not include the amount of any price support loan made to a producer."

Mr. WHITTEN. Mr. Chairman, I make a point of order against the amendment.

The CHAIRMAN. The gentleman will state his point of order.

Mr. WHITTEN. Mr. Chairman, this amendment, on its face, will usurp completely the jurisdiction of the Committee on Agriculture. It is not only legislation, but is rather complete, complex, and lengthy. It is certainly not only legislation on an appropriation bill, but it is a substitute on an appropriation bill in the nature of legislation.

The CHAIRMAN. Does the gentleman from Minnesota wish to be heard on the point of order?

Mr. NELSEN. Mr. Chairman, I would submit to this body that if a limitation as provided in the previous amendment is in order, certainly this amendment would also be in order and I ask for a ruling by the Chair.

The CHAIRMAN. The Chair is prepared to rule. This substitute offered by the gentleman from Minnesota (Mr. NELSEN) is clearly distinguishable from the amendment offered by the gentleman from Massachusetts (Mr. CONTE).

The gentleman from Massachusetts (Mr. CONTE) offered an amendment which provided that no part of the funds appropriated by this act should be used for certain specific purposes.

The substitute offered by the gentleman from Minnesota (Mr. NELSEN) goes much further than this. It does not constitute a limitation upon this act but indeed applies to other acts and amounts. Clearly in the opinion of the Chair it proposes legislation such as is prohibited in an appropriation bill. Therefore, the Chair sustains the point of order against the substitute.

Mr. NELSEN. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I wish to make the observation—it is obvious that large individual farm payments are under attack not only by Members of this body but by the general public. It was my purpose in proposing a graduated scale of payments to move in the middle of the road direction so the large producers would not desert the program which is intended to reduce surpluses and maintain an adequate price for the farmers. In my judgment, a straight \$20,000 limitation could well encourage the large producers to double their production, wherever possible.

This would create a surplus that would descend upon the small farmer as well as the big, and the whole farm program would be disrupted.

Now, I note that at one of our national conventions, and it was not the Republican Convention, a resolution was included in the platform that supported a graduated payment proposal such as I have offered here today. In my judgment when limitations are finally implemented they will be along these lines.

I might also say that a major part of the argument today has been on the basis of what is incorrectly termed a subsidy to the farmers. The objective of a farm program is not to subsidize farmers but to reduce production to prevent flooding the markets with price-depressing surpluses.

It has been rather interesting to listen to the farm experts. Now, I am not a farm expert, but I like to think that I

am a successful farmer. I thank the chairman of the committee for referring to the dairy farmers and especially his observation about the school milk program because it does provide a market for some of the milk coming from the farms, at the same time doing a great service to the children in our public school system.

Mr. ECKHARDT. Mr. Chairman, will the gentleman yield?

Mr. NELSEN. I yield to the gentleman from Texas.

Mr. ECKHARDT. Mr. Chairman, I merely wanted to thank the gentleman for at least attempting to offer this amendment. Had it been declared germane I certainly would have supported his procedure.

Mr. WHITTEN. Mr. Chairman, I wonder if we could agree on a limitation of debate on this amendment and all amendments thereto?

Mr. Chairman, I ask unanimous consent that all debate on this amendment and all amendments thereto close in 30 minutes.

Mr. VANIK. I object, Mr. Chairman.

Mr. QUIE. I object, Mr. Chairman.

Mr. MAYNE. I object, Mr. Chairman.

Mr. WHITTEN. Mr. Chairman, I move that all debate on this amendment and all amendments thereto close in 45 minutes.

The motion was agreed to.

The CHAIRMAN. The Chair has noted the names of Members standing to be recognized under the limitation of time.

Pursuant to the motion adopted by the Committee, each Member will be recognized for approximately 1 minute and 5 or 6 seconds.

The Chair recognizes the gentleman from Arizona (Mr. UDALL).

Mr. SISK. Mr. Chairman, I ask unanimous consent to yield my time to the gentleman from Arizona (Mr. UDALL).

The CHAIRMAN. Without objection, it is so ordered.

There was no objection.

Mr. UDALL. Mr. Chairman, it seems to me as I look around these days, maybe we ought to just disband the standing committees and do all our legislating on the continuing appropriations and supplemental appropriations and the regular appropriation bills.

This is a complicated process. This is a complicated act.

I have people in Arizona who are getting large payments. I think we ought to work out a system so that they do not get large payments. I am willing to abandon the present system if we can find something better.

The act will be up for renewal at the end of next year. Let us do a job on it. I am prepared to take my responsibility. The job may do something for some of my constituents which they would not like in this field, but the fact is I am told by experts that under the cotton part of this program there is a snap-back provision in the old law which means that instead of paying 10 cents a pound in subsidy, if this payment limitation is enacted, the taxpayers are going to have to dig up 20 cents a pound so that instead of paying less for this next year under this one appropriation

bill, the taxpayers that the sponsors of this amendment are trying to help, are going to be coughing up a lot more money.

I think it is extremely unwise to change a complicated and technical farm act.

The fact is that millions of farmers, people who have gone on under these provisions, people have planted and borrowed the money and set up their agricultural operation are all of a sudden—here on an appropriation bill—finding the whole system distorted and damaged.

I strongly urge that in a responsible way that the amendment be voted down. Next year we can take a look at the recommendations of the new administration and see what their ideas are and the farm programs that they will come up with and any better ideas. But this is unwise and an unsound way to legislate and I strongly urge that the amendment be defeated.

The CHAIRMAN. The Chair recognizes the gentleman from Washington (Mr. FOLEY) for approximately 1 minute and 5 seconds.

Mr. FOLEY. Mr. Chairman, the remarks of the gentleman from Arizona (Mr. UDALL) were exactly in point.

I just want to suggest to the Members that there is an irony on the floor today in that the gentleman from Massachusetts (Mr. CONTE) in the examples of large payments that he gave, put it almost exclusively as being under the cotton program. I doubt that any of the payments he cited to which he objected came from either the wheat or feed grains program. They are all cotton payments under the provisions of the existing law and will require the snap-back provision to occur on cotton if any payment limitations are imposed by this bill will go to 16 million acres, the minimum allocation for cotton on 65 to 95 percent of parity.

It will only disturb the existing situation and cost the taxpayers more money.

As a member of the Committee on Agriculture of the House, I can assure those in this Chamber who favor payment limitations, that the committee may well undertake hearings this year and that the subject of payment limitations will be fully explored.

The CHAIRMAN. The Chair recognizes the gentleman from Mississippi (Mr. MONTGOMERY).

Mr. MONTGOMERY. Mr. Chairman, I rise in opposition to this amendment offered by the gentleman from Massachusetts to place limitations on payments under the Agriculture Act of 1965.

My first reason for opposition is, I feel, any amendment of this sort is untimely. It should have been attached to or incorporated in, authorization legislation for the farm act and not made a part of the appropriations process.

My second reason for opposition is I feel very strongly that limitation on the amount of price support payments and Commodity Credit Corporation loans to any farm or firm under current programs would wreck agriculture and many business enterprises serving agriculture.

Manufacturers readily regulate production to prevent price disasters. Because of their large numbers, farmers

historically have not been able to do this without a farm program free of limitations. Our farm commodity programs today—work because farmers cooperate in diverting acreages from surplus crop production into soil-conserving uses. Many do this at a financial sacrifice because they know balanced supplies are in the best interest of all.

All who cooperate earn, and are entitled to, reasonable compensation for this acreage diversion. Nowhere have I heard of a limitation on payments when a city takes real estate for urban renewal, or when a State takes land for a highway.

The farmer who is asked to divert 100 acres from surplus production expects to be paid about twice as much as what his next door neighbor, with comparable land earns for 50 acres of diversion. And why not? His investment is twice as great, his taxes twice as great, and his risk is twice as great.

Commodity programs are not welfare programs. To be effective in balancing production they must fit into the free enterprise concept that a man is rewarded in terms of the value of his contributions. Program payments reimburse farmers for income they forego and expenses they incur when they divert land from crop production to carry out farm policy. Farm incomes have not attained a parity with nor the stability of incomes in most of our economy. Limited payments and the accompanying disruption in the farm work force and in our rural communities will add further to urban congestion.

And to those who assume that money will be saved by limiting payments, I say that is simply not true if the same result of supply management is to be achieved. If one large farmer who has been foregoing production on 1,000 acres does not cooperate in these programs, that means 100 small farmers will have to forego production on 10 more acres each to maintain supply and demand stability—and I believe that this would cost more, not only in Federal funds, but in further curtailment of opportunity for smaller farmers.

The present farm programs without limitations have accomplished what would have been considered a miracle a few years ago. By encouraging the participation of producers, large and small, we have used these programs to work Commodity Credit Corporation inventories from their peak of \$6.148 billion in October 1960, down to \$1.043 billion as of this past March 31.

The farm program is designed to adjust production and supply, to avoid burdensome surpluses and to strengthen the national economy. Payments are an integral part of the farm program. To impose limitations, is to undermine, if not destroy this important program.

While limitations are aimed to the larger farmers, to impose them will strike hardest at the smaller farmers. With limitations the larger farmers will be forced out of the program, bringing about its collapse and thereby denying its benefits to the small farmers as well. Without the program larger farmers may survive, but the smaller ones could not.

Limitations do not save money for anyone. Burdensome surpluses are the inevitable result with the heavy burden on the smaller farmers. Limitations, therefore, are wrong in principle, are unfair, would be costly to farmers and consumers alike, and if imposed would be a breach of contract our Government has made with those who produce the bulk of our food and fiber.

I reemphasize again that to add a limitation rider to our appropriations bill is the worst possible way to legislate. If it is to be the national policy to discriminate because of size, the issue certainly deserves to be considered on its merits and the Congress should not single out only one segment of the national economy, least of all agriculture which formed the backbone of our American society.

The CHAIRMAN. The Chair recognizes the gentleman from Kentucky (Mr. NATCHER).

(By unanimous consent, Mr. NATCHER yielded his time to Mr. BELCHER.)

The CHAIRMAN. The Chair recognizes the gentleman from Ohio (Mr. VANIK).

Mr. VANIK. Mr. Chairman, I want to take this opportunity to announce that I expect to vote against this appropriation bill which will cost the taxpayers of America \$6.6 billion in this fiscal year. Frankly, I do not believe there is any benefit ratio sufficient to justify this kind of public spending.

In the past, I have supported farm legislation. A healthy farm economy makes for a prosperous nation. Our achievements in the agricultural sciences are the marvels of the world—even dwarfing our achievements in space. No other nation has done so much to produce food.

There is poverty on the American farm in large parts of the country and we must deal effectively with that poverty as we deal with urban poverty. But there are also huge profits for some segments of agriculture which enjoy the benefits of our Federal subsidies—and these profits for the greater part completely bypass the Treasury and the tax collector.

As a member of the Ways and Means Committee, I was shocked to learn of the maneuvers which are employed to avoid taxation.

The ingenious farmer who protests urban programs manages to get every conceivable kind of deduction. The farmer gets depreciation, depletion, investment credit, and long-term gains.

On a cattle ranch, the breeding cattle are owned by the children, who pay ordinary taxes at lower rates, while the steers are owned by the parents who pay taxes on these operations at reduced rates as long-term capital gains. The investment credit extends to orange trees in Florida.

The CHAIRMAN. The time of the gentleman has expired. The Chair recognizes the gentleman from Washington, (Mr. ADAMS).

Mr. ADAMS. Mr. Chairman, I support the gentleman's remarks. I support the amendment of the gentleman from Massachusetts. There are only 1,900 farms in this country, under Mr. Schnitker's

figures, that will be paid subsidies if the limitation is over \$20,000.

(By unanimous consent, Mr. ADAMS yielded the remainder of his time to Mr. VANIK.)

The CHAIRMAN. The Chair recognizes the gentleman from Pennsylvania (Mr. BARRETT).

(By unanimous consent, Mr. BARRETT yielded his time to Mr. VANIK.)

Mr. BARRETT. Mr. Chairman, I rise in support of the amendment offered by the gentleman from Massachusetts (Mr. CONTE) and urge its adoption. At this time when we are all concerned with the ever increasing cost of Government, the need for tax reform and the continuously spiraling cost of living, particularly the cost of food, farm program payments without a ceiling can no longer be tolerated.

We read every day of the millions of our citizens who are poor and impoverished and who are undernourished and suffer from malnutrition. This, in the land of plenty. This is a tragic situation and must be rectified.

The \$20,000 ceiling proposed by this amendment will fairly and justly serve those farmers who are in need of Federal assistance. Certainly these are not the large land holders and large corporate farms who in the past have received hundreds of thousands of dollars under these programs. It was the small farmer who was intended to be benefitted by the agriculture programs when they were first adopted by the Congress.

The adoption of this amendment will return programs to that intended by the Congress.

Mr. VANIK. Mr. Chairman, the conglomerate was born on the farm—and spread to the city.

This bill provides \$6.6 billion to the agricultural industry of America. That is only part of the story. The overwhelming portion of our public works program not related to transportation adds billions more to the agricultural sector. No other segment of American life receives so much and pays in so little.

The testimony before our committee indicated that tax payments by agriculture in America approximate \$1 billion in tax revenues. Somehow or another, these subsidy programs costing billions of dollars should also generate some tax receipts in order to justify their continuance.

It is time for us to stop treating agriculture as a pampered child. The industry has progressed far enough to stand on its own and help pay its own way.

The CHAIRMAN. The Chair recognizes the gentleman from Oklahoma (Mr. BELCHER).

Mr. BELCHER. Mr. Chairman, I might say at the outset that I have differed with a whole lot of these farm programs, and I have not been a frantic supporter of these farm programs. I have always felt that there ought to be some way to keep agriculture alive without any Government subsidy whatsoever.

But I just want to say that when we get really emotional about the farmer getting a million dollars out of the taxes somewhere, and you want to put a \$20,000 limit on the amount a farmer will

receive, we must remember that the same people that yell the loudest about the farm programs vote for foreign aid. One hundred and twenty billion dollars has been spent on foreign aid, and I have never seen any one of these gentlemen get up here and offer an amendment to the foreign aid bills not to let any farmer get more than \$20,000.

So it just depends on where one is conservative and where one is liberal. I am conservative as far as foreigners are concerned, and I am a little bit liberal as far as farmers are concerned.

I might say to the gentleman from Massachusetts that he referred to the gentleman from Illinois (Mr. FINDLEY) as a member of the Agriculture Committee. The gentleman from Illinois (Mr. FINDLEY) was a member of the Agriculture Committee until he joined the Foreign Affairs Committee, because he was more interested in foreign aid than he was in farm programs. So naturally we can understand how these things come about.

The CHAIRMAN. The time of the gentleman from Oklahoma has expired.

(By unanimous consent, Mr. MAHON yielded his time to Mr. BELCHER.)

Mr. BELCHER. Mr. Chairman, now that I have done my song the same as the gentleman has, I do not think my dance would be as good as his, so I am going to discuss the merits of the bill.

At this time, as somebody has pointed out, if this amendment is adopted, it will not hurt cotton. These big payments that go to cotton will revert to another payment and will cost \$160 million, which will be more than it would cost to keep this ceiling off.

In my district I do not believe there was a single farmer who got more than \$20,000. There are not many farmers in Oklahoma who get more than \$20,000. Therefore, this amendment will not save the taxpayer 1 dime. It will cost the taxpayer money. It will not hurt the cotton industry, and as far as other programs, such as wheat and feed grains and so forth, this \$20,000 limitation is not going to save a great deal of money.

There is only one way that we can have a supply program, and that is where we are going to have to buy the reduction in production, and we cannot do that on little farms.

The CHAIRMAN. The time of the gentleman from Oklahoma has expired.

(By unanimous consent, Mr. ABERNETHY yielded his time to Mr. BELCHER.)

Mr. BELCHER. Mr. Chairman, if we drive the bigger farmers out of the program—and a lot of those bigger farmers have not been sold on this program at all and most of them are against it—they will produce so many commodities that the little farmers' allotment will be continuously shrunken and shrunken and shrunken, to the point where he cannot make a living at all.

The gentleman said a while ago that the farm areas do not pay income tax. I will tell Members exactly why they do not. They do not make enough money to pay income tax regardless of what others say about what they get out of subsidies from the Federal Government. A man on a farm with a tremendous investment in many cases does not get as much per

hour for his labor as the minimum wage law provides even for a janitor in the city.

The CHAIRMAN. The time of the gentleman from Oklahoma has expired.

(By unanimous consent, Mr. RHODES of Arizona yielded his time to Mr. MICHEL.)

The CHAIRMAN. The chair recognizes the gentleman from Massachusetts (Mr. BOLAND).

Mr. BOLAND. Mr. Chairman, I rise in support of the amendment offered by my colleague, the gentleman from Massachusetts (Mr. CONTE), which puts a ceiling of \$20,000 on farm program payments to an individual. In my opinion the farm program payments are excessive. The farm program itself, as it now operates, has outlived its usefulness. A major overhaul is overdue.

Since this is an appropriation bill, however, we can only place restrictions on the funds appropriated. This amendment if approved would affect fewer than 10,000 individuals and could save up to \$205 million according to USDA studies.

Mr. Chairman, the large payments to individual producers are usually defended on the grounds that large producers' cooperation in the programs benefit all farmers. We are told that the payments are in lieu of a producer planting his usual acreage of a particular crop. This may have been the situation at one time. But it is no longer true.

Approximately 80 percent of the individuals who received payments in excess of \$20,000 under the 1968 programs were cotton producers. Most of the others were wheat producers. This also will be the case for the 1969 and 1970 programs. Over 90 percent of payments in excess of \$20,000 go to producers of cotton and wheat.

But the cotton program payments are not payments for leaving cotton land idle. Cotton producers may plant their entire historical cotton allotment in 1969 and still collect payments of 14.7 cents a pound on their projected yield on their domestic allotment, 65 percent of their farm allotment.

One cotton producer in California collected over \$4 million in 1967 and over \$3 million in 1968. He will be permitted to plant his full farm allotment in 1969 based on his pro rata share of 16,000,000-acre national allotment, and if he has not sold or rented out a part of his cotton acreage, he will draw over \$3 million in farm program payments.

Cotton program payments in 1969 and 1970 are not needed to keep from over producing cotton at world market prices. We have had such short crops of cotton for the past 2 years that cotton prices were too high. High cotton prices stimulated increased production and use of synthetic fibers and increased production of cotton in other parts of the world.

A \$20,000 limitation on individual farm program payments would not adversely affect the small cotton producers. It would only affect the fewer than 10,000 individuals who have large land holdings and in addition are now receiving payments equal to two-thirds the market

value of their crops. These payments are income supplements or welfare payments—needed perhaps by the small cotton producers.

But I ask you what national purpose is served by giving a cotton producer who produces and sells \$4 million of cotton income supplement or welfare payments of \$3 million?

Wheat producers' payments also have little relation to the acreage diversion required to balance wheat supplies with market outlets at stable prices. In the 1969 wheat program a producer will receive wheat certificates valued at more than \$1.30 a bushel on his domestic wheat allotment, over 40 percent of his total farm allotment.

Under the 1969 program wheat certificate payments to producers will exceed 40 percent of the market value of the crop produced. This is four or five times the payments needed as economic incentives to achieve the acreage diversion program for 1969.

Wheat payments like cotton payments have become primarily supplemental income payments rather than payments for acreage diversion.

Again limiting payments to \$20,000 for an individual wheat producer would have no adverse effects on other wheat producers. Only the few thousand large wheatland owners and operators would be adversely affected.

A limitation on farm program payments is long overdue. A limitation of \$20,000 as proposed in this amendment is a very modest limitation. It will affect fewer than 10,000 producers out of almost 2 million who receive farm program payments. I know of no less painful way of saving up to \$200 million in Government expenditures at a time when other domestic program are being curtailed for lack of funds.

I fully realize that a limitation of \$20,000 on all farm program payments may cause some difficulty in the administration of the several programs. In particular it might require the Secretary of Agriculture to return the cotton program to the provisions of the 1958 act. Let us adopt this amendment, however, and if changes are needed in existing legislation the legislative committees have plenty of time to act before the 1970 crops are planted. Let us make it clear that at a time when educational and health programs are being cut because of a lack of Government funds that we are not going to continue supplemental income or welfare payments in excess of \$20,000 to individual farmers.

(By unanimous consent, Mr. BOLAND yielded the remainder of his time to Mr. CONTE.)

The CHAIRMAN. The Chair recognizes the gentleman from Minnesota (Mr. QUIE).

SUBSTITUTE AMENDMENT OFFERED BY MR. QUIE

Mr. QUIE. Mr. Chairman, I offer a substitute amendment.

The Clerk read as follows:

Substitute Amendment offered by Mr. QUIE: On page 22, line 17, strike the period and insert the following: "Provided further, That no part of the funds appropriated by this Act shall be used to formulate or carry out any price support program on cotton, wheat, or feed grains planted during

the fiscal year 1970 under which payments to any single producer exceed an amount determined as follows:

If total amount of such payments are—	By multiplying by—	The maximum payment shall be—
\$20,000 or less.....	100 per centum..	\$20,000.
More than \$20,000 to \$30,000.	75 per centum..	\$27,500.
More than \$30,000 to \$40,000.	50 per centum..	\$32,500.
More than \$40,000 to \$50,000.	25 per centum..	\$35,000.
More than \$50,000....	25 per centum..	\$35,000 plus 25 per centum of any amount in excess of \$50,000."

Mr. WHITTEN. Mr. Chairman, I make a point of order against the substitute amendment.

The CHAIRMAN. The gentleman will state his point of order.

Mr. WHITTEN. It is legislation on an appropriation bill, and requires additional duties.

The CHAIRMAN. Does the gentleman from Minnesota desire to be heard on the point of order?

Mr. QUIE. Yes, I do, Mr. Chairman. I believe this amendment is in order, because the opening language is identical with that of the Conte amendment. The only difference is that where his cutoff is at \$20,000 mine provides for a graduation or scaling down of the cutoff above that. It applies only to the funds in this act and is a limitation on the funds in this act. Therefore, Mr. Chairman, I believe it is in order.

The CHAIRMAN (Mr. WRIGHT). The Chair is ready to rule.

For reasons declared in a previous ruling the Chair is going to hold that the substitute amendment offered by the gentleman from Minnesota (Mr. QUIE), is a limitation on the appropriation and is therefore in order. The Chair overrules the point of order.

The gentleman from Minnesota is recognized in support of his substitute amendment.

(By unanimous consent, Mr. STEIGER of Wisconsin yielded his time to Mr. QUIE.)

Mr. QUIE. Mr. Chairman, if Members will notice the language, they can tell by hearing the amendment that the Sugar Act is not included in my amendment, either. The Sugar Act already has a limitation on payments on a graduated basis, from 80 cents a pound down to 30 cents a pound. That is a precedent for what I have done.

Rather than take the chance of endangering the program with the amendment of the gentleman from Massachusetts, where there is a cutoff at \$20,000, and the possibility that the larger farmers receiving above that might drop out of the program and therefore cause a glut on the market, my amendment provides a graduation above \$20,000. Each farmer up to \$20,000 would get 100 percent of his payment. For the amount above \$20,000 and less than \$30,000, it would be 75 percent of his payment. However, if he received something between \$30,000 and \$40,000, then he would get \$20,000 plus 75 percent of the next \$10,000 plus 50 percent of the amount between \$30,000 and \$40,000. The same is true with respect to between \$40,000 and

\$50,000. The amount anyone would receive above \$50,000 is he would get 25 percent of his payment.

We are going into this, if it is enacted into law, without the possibility of considering and changing the act under which this would apply. So in order that the pressure would not be too great on the farmers, but making a savings of some amount of money, I believe this would be a wise move to make at this time.

My own feeling is that my figures are extremely high. In fact, a year ago I offered an amendment with exactly half that amount, beginning at \$10,000. I have looked at the act since that time and studied what some economists have come up with in the case of a limitation on payments, and I think the amount could be a lesser amount, but at this time, Mr. Chairman, I believe this is the wisest move we could make. We will not endanger the program and we will save some money.

The CHAIRMAN. The Chair recognizes the gentleman from New York (Mr. REID).

Mr. REID of New York. Mr. Chairman, I rise in strong support for the Conte amendment. I believe it is unconscionable in America that we are paying certain individuals large sums of money not to grow food when at the same time we face serious malnutrition and hunger across the Nation. I emphatically urge your support for the amendment.

(By unanimous consent, Mr. REID of New York yielded the remainder of his time to Mr. CONTE.)

The CHAIRMAN. The Chair recognizes the gentleman from Texas (Mr. POAGE).

Mr. POAGE. Mr. Chairman, I feel that the substitute which has just been offered by the gentleman from Minnesota pretty well shows up the fallacy of this whole procedure.

This is not a well-thought-out program of reductions. It is not based on any study of the effect. It is, frankly, little more than an assessment of what figure could be expected to get the most votes. The real objective is to see that no one gets more than any one else, and even here the whole proposal is predicated on the erroneous assumption that this is a gift, or an income supplement. It is, of course, no more a gift than the payments made the owner of city rental property when that property is taken for Urban Renewal. In such a case the Members all recognize that we should pay each property owner in proportion to what he owns—in proportion to what he gives up.

The owner of farmland who gives up the right to grow a crop has given his property just as truly as the owner of city property who gives up the fee simple—of course, there is a difference in value, but each should be paid for what he gives up for the public. It is this principal, not the amount of the limitation which is vital.

There is no special magic in \$20,000 or in any calculated step up or down. The gentleman has already pointed out that he, himself, feels maybe he will come back here another day and try to change those figures. He just told us he felt his own figures were too high. Of course, if

any of these amendments are adopted, the authors will be back in 2 years seeking to reduce the amount. Every one of us knows it.

Obviously, the proponents of this limitation feel that it is bad to pay more than the average man gets to anybody. To achieve this you have to reduce all of these figures down to the lowest denominator. If you do that, you will have no program at all, and if you can take property or the use of property without paying its full value you have destroyed the institution of private property. It is just as certain to follow as the day the night. Every one of you knows it. The whole question here is are you going to pay for taking property rights or are you going to seek to take them without paying for them? If you do not pay you do not get compliance, and to maintain your programs you must take more land from the very small farmers. On the other hand is you force the large farmer to reduce with no compensation and still pay the small man, are you not guilty of discrimination such as our courts have proscribed? And if you vote to reduce payments, are you not certain to further reduce them in the future.

The CHAIRMAN. The Chair recognizes the gentleman from Texas (Mr. PURCELL).

Mr. PURCELL. Mr. Chairman, I would like to associate myself with the remarks made specifically by my colleague from Arizona (Mr. UDALL), and by my colleague from Oklahoma (Mr. BELCHER).

In each instance the specifics I think that are so important to consider today were pointed out. This is not the way to legislate. I think the other discussions have pointed out how complicated and difficult this matter is. These matters will be and can be gone over in proper time and in proper detail. To emphasize what has already been said once more, to take these limitations or to accept limitations of payments is just exactly like deciding that you are going to pay only a certain amount when land is condemned for a highway or for any other purpose. When land is condemned, if a person has more than one acre, he gets that amount of money per acre.

The CHAIRMAN. The Chair recognizes the gentleman from Illinois (Mr. MIKVA).

Mr. MIKVA. Mr. Chairman, I rise in support of the Conte amendment.

(By unanimous consent, Mr. MIKVA yielded his time to Mr. CONTE.)

The CHAIRMAN. The Chair recognizes the gentleman from New York (Mr. FARBERSTEIN).

Mr. FARBERSTEIN. Mr. Chairman, I believe that this farm subsidy law was originally passed during the days of the depression when farms were being foreclosed. At the time when the small farmer did not have any food we passed this law. I do not believe it was the intention of the Congress to support, maintain, and subsidize factory farmers and commercial farmers. When Job Corps centers are being closed and people are rioting in the streets, how can we reconcile paying hundreds of thousands and maybe millions of dollars to individual commercial farmers in situations of this type?

Mr. Chairman, I believe that the amendment is a good one and should prevail.

The CHAIRMAN. The Chair recognizes the gentleman from Iowa (Mr. MAYNE).

Mr. MAYNE. Mr. Chairman, as my colleagues will recall, I actively supported the 1-year extension of the farm program last year. I resisted all attempts to amend or change the program at that time because it was obvious the adoption of such amendments would endanger the passage of any extension at all.

Although I had very serious misgivings about the huge payments being received by large farm operators, many of which are incorporated, I voted against any limitation of payments at that time. I was persuaded by those who argued that we should not jeopardize winning the 1-year extension by such a limitation, but should defer the question of payments until early this year when there would be more time to explore it in depth.

We are now 5 months into the new year, and I do not believe Members should delay coming to grips with this issue of payments limitations any longer. I concede that it would be preferable to take this matter up in the Committee on Agriculture, of which I have the honor to be a member, and I look forward to the hearings which will no doubt be conducted by our committee on the subject later in the year.

But I am convinced that those Members who are genuinely interested in improving and strengthening our present farm programs can wait no longer, but should act now to end the large payments which are bringing those programs into disrepute and now jeopardize their very existence. The people of this country, urban and rural alike, are fed up with unjustifiable government spending and the relentless increases in taxation which such spending brings in its wake. At a time when the new administration is pledged to bring inflation under control and is asking for a continuation of the surtax to that end, annual payments of \$100,000, \$500,000, \$1 million, yes, even \$4 million to individual corporate farms can no longer be defended. A letter was sent out today by some of our colleagues which suggests that a limitation would jeopardize the already precarious financial situation of family farmers in the United States. I yield to no one in my concern for the family farm and my admiration for the great contribution which independent family owned and operated farms have made to the economic and social security of the United States. But as I see it, annual payments of more than \$20,000 are hurting, not helping the family farmer. They are subsidizing the gigantic agricultural combines, corporate and otherwise, which have been gobbling up family sized farms and driving small farmers from the land by the hundreds of thousands; corporations which are often in direct and unfair competition with the family farmer. So let us not be misled into believing that payments of over \$20,000 a year are helping the little or medium sized farmer in any way. These large payments are discrediting the entire farm program in the eyes of

the public, and must be eliminated if the program is to command sufficiently widespread support for continuance on a reasonable basis.

Certainly the \$200 to \$300 million being spent each year to subsidize our wealthiest farmers can be better used to improve the program for smaller farmers who are hardest hit by the price-cost squeeze plaguing American agriculture. And it also could be better spent on other programs for which there is great need. Serious consideration should also be given to the Federal Government not spending this money at all. This would indeed be a mighty victory in the war against inflation. Why not start turning this \$200 to \$300 million a year back to the taxpayer for a change? Is not it likely the taxpayers who are being separated from this amount by present high tax rates might like to be able to make their own judgment as to how their money should be spent or saved, rather than seeing it paid to organizations or individuals many times wealthier than they are themselves?

Representing the Sixth Congressional District of Iowa, I am most directly interested in improving and strengthening the feed-grain part of this program, which certainly has been woefully inadequate in the past. After inspecting USDA records, it is my considered judgment that a \$20,000 limitation of payments will not have an adverse effect on the feed-grain program. Payees receiving more than \$20,000 in 1967 farmed only 2 percent of the feed-grain base or approximately 2.6 million acres. It is essential that we take prompt action to end subsidization of this very small percentage of large operators in order to go forward with a program which will better serve the interests of the vast majority of American farmers and the entire country. I, therefore, urge all Members to vote for the \$20,000 limitation amendment.

The CHAIRMAN. The Chair recognizes the gentleman from New York (Mr. LOWENSTEIN).

Mr. LOWENSTEIN. Mr. Chairman, I rise to support the amendment that would limit the size of individual agricultural subsidies.

Two of the points made today against the amendment especially deserve comment. The first is the contention that this is a bad way to legislate. What, I wonder, under our present rules and procedures, is a good way?

In any case, that charge is a commentary on the way this body operates, not on the merits of the amendment. Why are we voting on a Monday? Why were we not told we would be voting on Monday until late Friday? What sudden agricultural crisis compelled this dramatic rush despite precedent, and in the face of standards of fair notice?

Should we then begin to amend House rules today? Should we delay changing bad laws until we get rid of bad procedures?

Maybe this episode will help light the fires of reform in the bosoms of worthy Members who have long seemed content with a legislative process whose inefficiency rivals its undemocracy. Meanwhile, we must legislate as best we can, and judge proposals on their merit.

The second is the claim that it is not in the interest of the small farmer to place a ceiling on subsidies for large and corporate farms.

Mr. Chairman, I am filled with wonder when it is said that the way to help small farms is to provide unlimited subsidies for large ones.

I would think we could find better ways to help small farmers, if that is our purpose. Certainly small farmers would think so.

Mr. Chairman, I would hate to see all assistance to agriculture go under in a wave of consumer and taxpayer resentment. The agricultural program is not helped by continuing this endless bounty for the few least in need at the expense of everyone else. The Nation is not helped. Nobody is helped, except those few least in need of help. We are not trying to rob the rich to give to the poor. What we do want is to quit taking from the poor—and those in the middle—to give to the rich.

The CHAIRMAN. The Chair recognizes the gentleman from Illinois (Mr. FINDLEY).

Mr. CONTE. Mr. Chairman, will the gentleman yield?

Mr. FINDLEY. Yes, I yield to the gentleman from Massachusetts.

Mr. CONTE. Mr. Chairman, I urge everyone to vote for my amendment and against the Quie substitute amendment. I have already spoken at length today on my amendment which has passed this House on a previous vote by 230 to 160 and, in view of the fact I have already spoken for 5 minutes, Mr. Chairman, I yield the balance of my time to the gentleman from Illinois (Mr. FINDLEY).

The CHAIRMAN. For what purpose does the gentleman from New York rise?

(By unanimous consent, Mr. OTTINGER yielded his time to Mr. FINDLEY.)

The CHAIRMAN. Does the gentleman from Massachusetts desire to yield all his time together with that which has been yielded to him by previous speakers to the gentleman from Illinois?

Mr. CONTE. I do, Mr. Chairman.

The CHAIRMAN. The gentleman from Massachusetts has 3 minutes at this time which he desires to yield to the gentleman from Illinois.

The gentleman from Illinois (Mr. FINDLEY) is recognized for 5 minutes.

Mr. FINDLEY. I thank the chairman and those who have yielded time to me.

Mr. Chairman, the Conte amendment in all practical effect is precisely the amendment I had formulated and intended to offer myself. It is almost identical to an amendment which I offered on an appropriation bill last year, except as to the amount. It is almost identical to the three previous limitation amendments which I have offered in past years.

In my view, it is much superior to the one offered by my respected colleague, the gentleman from Minnesota (Mr. QUIE). Let me illustrate this with just one example. The Eastland plantation in Sunflower County, Miss., received about \$106,000 in payments last year. As I understand the formula of the Quie amendment, the East plantation would receive something like \$25,000 or \$26,000 in the 1970 crop year. Under what I would describe as the Conte-Findley amendment, the Eastland plantation would instead

have to get by with just \$20,000. In my view \$20,000 is quite enough.

Someone asked:

What could possibly be the rationale for placing a limitation on payments under farm programs which involve land areas of such varying sizes?

Here is the rationale that I shall use to justify this approach. This is a program which provides direct payments to the individual, corporations and partnerships engaged in farming throughout the country, requiring in all over \$3 billion in the course of a year. This can be justified only as income support and nothing else.

To talk about getting an equivalent value for the tax money in land retirement is sheer folly. The only justification that can possibly be rationally advanced is income support, and my idea is that \$20,000 a year per recipient is income support enough.

Mr. EVANS of Colorado. Mr. Chairman, will the gentleman yield on that point for a question?

Mr. FINDLEY. I yield to the gentleman from Colorado.

Mr. EVANS of Colorado. The gentleman has presented this amendment for many years. I know the gentleman has studied it very thoroughly, and has gone into the merits of farm payments, and so forth, to arrive at the figure of \$20,000. I wonder if the gentleman has made any study at any time in regard to the net amount the cotton farmer receives at the end of the year, or the net amount that the wheat farmer receives at the end of the year, what those farmers have as a profit after all expenses? I do not know if the gentleman has that information, but if he does have that information I would appreciate hearing it.

Mr. FINDLEY. I believe the important thing as legislators we must consider is how much do we pay a farmer.

As we heard earlier today, a farmer who received \$50,000 a year from the U.S. Treasury can still go broke. Is this expenditure justified? Does his circumstances justify an investment of still more money?

A lot has been said about the snapback provision. Would it create administrative difficulty? There is no question in the minds of every official I talked with at the Department of Agriculture, that if the Secretary would elect to do so, the \$20,000 limitation—which hopefully we will establish by this amendment—would still be effective after snapback provision takes effect. So we would have the prospect of budget savings under this amendment that former Under Secretary John A. Schnittker says will be as high as \$300 million.

Now, this was not a Republican Under Secretary speaking, but the man who was Under Secretary under Secretary Freeman, and who was one of the architects of these payment programs. This man now states that a limitation of the sort suggested in the Conte-Findley amendment could be effected, gaining these budget savings and without serious advance effect on the commodity programs to which they are attached, and without undue administrative difficulty.

Mr. CONTE. Mr. Chairman, will the gentleman yield?

Mr. FINDLEY. I yield to the gentleman from Massachusetts.

Mr. CONTE. I know that the gentleman would want to have the Record correct in regard to the Eastland plantation subsidy payment. I would like to inform the gentleman that under the Quie amendment he would not receive \$26,000, he would receive \$51,500.

Mr. FINDLEY. So that the difference between the Conte amendment and the Quie amendment is considerable.

It can be said that this has the effect of legislation, and that instead of acting on an appropriation we should wait for the legislative process. I believe it also can be fairly said that we may wait a long, long time for that to happen. And my feeling is that if this limitation on payment accomplishes nothing else, it would be well worth the investment in time and support on our part if it should spur the legislative process. So let us spur the legislative process by accepting this amendment.

The CHAIRMAN. The time of the gentleman from Illinois has expired.

The Chair recognizes the gentleman from New York (Mr. RYAN).

Mr. RYAN. Mr. Chairman, I support the amendment to limit subsidy payments to \$20,000. The House adopted a similar amendment on July 31, 1968, but it was deleted in conference.

At a time when the budget for social programs is being cut back, at a time when our cities are starved for funds for housing and education, this amendment offers an excellent opportunity to save \$300 million in farm subsidies.

Last week the supplemental appropriations bill provided \$40 million for the section 236 rent subsidy program—\$10 million less than the authorization for fiscal year 1969. A reduction in farm subsidies for corporate farms would free money for rent subsidies for ill-housed people.

The gentleman from Illinois (Mr. FINDLEY) suggested that the basic justification for agricultural payments is income maintenance. Income maintenance is the concept embodied in my guaranteed annual income bill. But those who attack a guaranteed annual income for the poor are the first to defend the farm subsidy system of a guaranteed income for the rich.

The farm subsidy program is a classic example of an inverted Federal policy which Michael Harrington has characterized as "socialism for the rich and free enterprise for the poor."

The small marginal farmer, who is often in debt and subsisting on \$1,000 to \$2,000 a year, receives little benefit from the subsidies paid by the Federal Government. The large plantation owner, on the other hand, profits handsomely from this system. Since he has large quantities of acreage at his disposal, he can afford to take a larger amount of land out of production, receiving as much as \$116,978 for his munificence—as Senator EASTLAND did in 1968.

In other words, the richer one is, the more the current subsidy programs benefit him. The small farmers—who need the greatest assistance from the Federal Government—receive the smallest subsidies. The large farmers—the agrarian corporatists—not only receive the largest

subsidies but are also unencumbered by any requirement that they pass on their largesse to the impoverished tenants who often farm much of their acreage.

The U.S. Department of Agriculture study—the Schnittker study—issued last November 27 shows the limitation proposed in the amendment before us would have "no serious adverse effects on production or on the effectiveness of production adjustment programs." The same study reported that a limitation on payments of the level suggested in this amendment would yield "budget savings ranging from \$200 million to nearly \$300 million." Although this limitation may produce certain administrative problems, the USDA study concluded:

Administrative problems . . . are not good reasons for opposing payments limits.

I would point out that this amendment does not propose the abolition of farm payments but rather proposes the elimination of the excessive subsidization of the most wealthy farmers.

Second, those farmers most in need of Federal assistance—those who do not own enough land to profitably take their acreage out of production—would not be affected by this amendment. What this amendment would do is to limit the amount of booty which corporate farms could reap from the program.

Since the \$20,000 limitation proposed today would affect only those crops planted in 1970, both the Department of Agriculture and the farmers will have ample time to make adjustments for this limitation.

The farm payments program as it is now administered is only one example of the inverted policy of socialism for the rich and free enterprise for the poor. Urban renewal, while it was designed to provide for the needs of low- and moderate-income citizens, has too frequently benefited only the real estate developers. Only last year did Congress finally require that a majority of the housing built on urban renewal land be for low- and moderate-income people.

The highway program is another example. While the poor of the inner city have their homes and businesses bulldozed in order to make room for unnecessary and ill-considered highways, the construction, trucking, oil and automotive interests reap enormous profits from this massive public works venture.

The defense and space budgets provide further illustration. Recently the House approved authorization for a \$14 million supplemental appropriation to the Air Force which was nothing more than a subsidy to Northrup Aircraft to build an aircraft which could be sold profitably in the foreign military sales market. Boeing Aircraft has received almost three-quarters of a billion dollars in Federal subsidies for the design and development of the supersonic transport, an aircraft which solves none of our most pressing national transportation needs and which will create still more environmental and atmospheric problems.

Neither of these "projects" could apparently be left to the "invisible hand of the market."

There are countless other examples of the perverse and counterproductive ways in which the Federal Government is sub-

sidizing the rich while leaving the poor to fend for themselves.

I urge the adoption of the Conte amendment which will help to make sense out of our irrational Federal farm subsidy program.

The CHAIRMAN. The time of the gentleman from New York has expired.

The Chair recognizes the gentlewoman from Washington (Mrs. MAY).

Mrs. MAY. Mr. Chairman, I was rather shocked to hear my colleague from Ohio (Mr. VANIK) say very scathingly just a moment ago that the only contribution the farmers make is \$1 billion in taxes.

Mr. Chairman, I submit that the agricultural economy of our country makes the greatest of contributions, and that this is a nation that is the best fed at the lowest cost of any nation in the world. Remember, this is where the food to feed the hungry you plead for comes from. On behalf of this American farmer who makes us the envy of the world, I offer this plea—that we treat in an orderly, responsible way, legislation which affects his livelihood. This, at least, the Congress owes him. It is impossible to change basic national policy with an amendment on the wrong bill without harming the man who feeds and clothes us all.

I am deeply concerned over the proposal to limit payments to farmers under the Federal farm programs. My concern stems from two basic points. First, that this is neither the time nor the place for such a proposal to be presented, and second, that a limitation on farm payments is unlikely to achieve the objectives for which it is offered, and may, indeed, do more harm than good.

Speaking to my first point, although ostensibly a farm payment limitation would affect only the expenditure of funds in the Federal farm programs, the practical effect of such a limitation would be a basic restructuring of the farm programs themselves. Since it is inappropriate under the rules of the House to legislate on an appropriation bill, this proposal should not be brought up at this time.

With reference to my second point, it has been purported that a limitation on payments to farmers under the Federal farm programs would save the Government, and the taxpayer, several millions of dollars annually. Upon closer examination, however, it is evident that this is a questionable assumption, to say the least. In fact, a payment limitation may, in the long run, cost the Government as much or more than could be saved.

How is this possible? In the wheat program, for example, many of the larger operators whose payments would be reduced under this proposal might well choose to go out of the program if no additional incentives to participate were offered. Outside the program, they would be free to plant as much wheat as they wanted, and the economic advantage of expanded acreage under those circumstances would certainly not be overlooked.

We already have more wheat than we know what to do with in this country, and even the slightest increase in production would exert a downward pressure on market prices far in excess of what its weight would be if supply and demand were more nearly in balance.

Under the loan program, the Commodity Credit Corporation is required to assume ownership of all wheat which is not reclaimed by producers who have obtained Government loans on it. So, whenever the market price drops to or below the loan price, large quantities of wheat become the property of the Federal Government. A payment limitation, then, may result in lower market prices and higher expenditures by the Commodity Credit Corporation—expenditures which could substantially offset any savings effected by the limitation on payments. This is only one factor which could cause greater expense, and does not take into account the increased cost of a larger land diversification program which might be required, or other more expensive program modifications which might be necessary.

A payment limitation, it has also been suggested, would help remove inequities between large and small farmers. Actually, just the reverse could occur—a limitation would probably not help small farmers, and could, in fact, be quite harmful. Under the present wheat program, for example, the Secretary of Agriculture must establish a national wheat acreage allotment for program compliers annually on the basis of total anticipated U.S. production. If larger farmers go out of the program because of a payment limitation, and produce more, this means that the acreage of those smaller producers who stay within the program must be cut back to compensate for this expanded production.

Another problem of considerable significance which presents itself here is that of the effect of a payment limitation on the cotton program. Because of the so-called snapback provision in this program, imposition of a payment limitation would result in a major drastic change—reversion to an earlier Federal program, and increased Government expenditures.

I think it is important to point out that even the oft-quoted "Schnittker Memorandum" in support of payment limitations referred to other basic changes in the farm programs which would necessarily have to accompany such a limitation. Walter Wilcox, senior specialist in agriculture in the Legislative Reference Service, also prepared a memorandum on farm payment limitations and in an early draft of that memorandum stated:

A limitation similar to the Conte amendment, however, without other changes in the basic legislation would destroy the effectiveness of the programs.

The amendment referred to was a straight \$20,000 limitation on total payments from all farm programs. I would suggest that both memorandums may be significantly understating the problems which might arise from a limitation on payments, even if the changes to basic farm legislation to which they refer were accomplished.

In short, I feel there are some very serious questions here which have not been satisfactorily answered by the proponents of farm payment limitations. I want to make it clear that my opposition to the payment limitation proposal certainly does not imply my blanket en-

dorsement of the present farm programs—far from it. I have been something less than enchanted with the operation of the current programs—their inequities and failure to meet the income needs of rural America, especially—and feel that a complete reexamination of U.S. farm policy is definitely in order. We need to take a fresh look at just where we are going and how we want to get there. However, this is not the way to do it.

Over the years, Congress has established procedure for consideration of basic national policy—procedure which includes public hearings, committee consideration and due deliberation by this and the other body. I urge my colleagues to choose this course for consideration of farm payment limitations and the other related fundamental farm policy questions, rather than to pursue these important issues in the present situation.

In conclusion, I would like to list a summary of five points which have been made in opposition to this particular limitation amendment:

First. Land diversion and price support payments are an integral part of current voluntary farm programs. They enable farmers to work together to solve some of the economic ills and are an inducement to farmers, both large and small, to make a contribution to supply management. This type of limitation would affect program costs and participation differently.

Second. Payment limitations would prevent paying farmers on the basis of their contribution to balancing production with needs. Payments are not hand-outs or welfare grants. The land diversion payments are compensation for giving up income—production—on those acres diverted to a conservation use. The price-support payments enable farmers to obtain a fair return on the remaining acres used for production while farm prices are at world levels. It is generally recognized that the cost of production in the United States is higher than in other countries with which we have to compete. The price-support payments make it possible to maintain market prices at world levels and still permit our farmers to obtain a fair return. Price-support payments also assist in maintaining fair and equitable prices for domestic consumers.

Third. Cost savings generally would be less than that indicated because (a) many large farmers would continue to participate but would attempt to avoid the payment limitation through participating at the minimum level, splitting up of farm allotments or by other devices, or (b) could result in large farmers—those affected—dropping out of the program which would result in increased unneeded production. This would place a greater share of the burden of balancing production with requirements on small farmers. Any added surplus would increase total price-support operations.

Fourth. In the case of certain commodities such as wool, payments are made to encourage greater production. A limitation on payments would defeat this objective.

Fifth. Price support and related commodity supply management programs are being reviewed by the USDA and in

the review one of the items would be a study of payment limitations. Thus no change should be made in the current programs until this review is completed and specific legislation for improving our farm programs has been developed.

The CHAIRMAN. The Chair recognizes the gentleman from Texas (Mr. PICKLE).

Mr. PICKLE. Mr. Chairman, I certainly want to reiterate the words of the gentlewoman from Washington about this program being one of good bargain to the American taxpayers.

The purpose of the program is to keep supply and demand in balance. I submit that the program we have has basically done that and done it well. We do not spend but about 18 cents, each of us, of our disposable income, for food. If you were to take the actual cost of this program, I suppose less than 2 cents of our Federal dollar is actually going into these funds and into this appropriation for support payments.

We ought to be fair about it and remember that for a man to be able to farm today, he has got to be a little bit bigger than he was when he could take 40 acres and a mule and start into business. He simply must have a larger operation. The investment is terrific. That is why smaller farmers are finding it difficult.

If there are to be changes made and if there are weaknesses in the program, the time to do that is when the legislation is properly brought to this floor.

If we try to put a limitation on the program by putting a limitation on these payments today, you are in effect killing the present programs. It is not fair to do that under the circumstances of an appropriation bill.

The CHAIRMAN. The Chair recognizes the gentleman from Illinois (Mr. PUCINSKI).

Mr. PUCINSKI. Mr. Chairman, I rise in support of the Conte-Findley amendment.

Mr. Chairman, I wish to call attention of the House to the fact that the whole bill before us is a \$6.6 billion package of which \$3 billion involves farm subsidies.

Even if the Conte-Findley amendment is adopted, \$2.7 billion will still continue to flow to small farmers all over the country. But if it is adopted, you will break up the remaining \$300 million that is now being distributed to a select group of fat cat farming corporations. That is what this is all about.

The gentleman from Texas said here earlier today that he received \$393 in farm subsidies. The Conte-Findley amendment does not disturb him nor does it disturb thousands of small farmers around the country. What it does do is address itself to the \$300 million being distributed to less than 500 large farming corporations.

The Committee on Agriculture can never deal with this problem of placing limitations on farm subsidies because whatever they do in terms of helping the smaller farmer will benefit the big farmer more than the small farmer, if the present formula is retained. The way to start toward reforms is by supporting the Conte-Findley amendment. Once limitations are written into the farm sub-

sidy program, we can then move to an orderly revision of all formulas.

The CHAIRMAN. The Chair recognizes the gentleman from Pennsylvania (Mr. MOORHEAD).

Mr. MOORHEAD. Mr. Chairman, I rise in support of the amendment offered by the gentleman from Massachusetts (Mr. CONTE) for the gentleman from Illinois (Mr. FINDLEY) limiting payment support to farmers to no higher than \$20,000 per year per farmer.

I supported a similar amendment in my first term in Congress.

Before I offer my reasons for doing so, I would like to thank the gentleman for his very informative and interesting entry in the record on May 12 of this year.

This excellent comparison study showing which counties receive the most Federal farm handouts—for this is exactly what these payments are—and which counties deny their poor people Federal food programs is quite illustrative of the twisted set of priorities which beset our Federal agriculture program.

It is disheartening to realize that with budget problems and hunger problems in the United States today, there are five farmers being paid a total of \$10,889,036 not to plant their property.

It is even more scandalous to note that 15 more farmers are being paid between \$500,000 and \$1 million each not to plant their property, that 388 farmers are being given \$100,000 and \$500,000 not to plant, that 1,291 farmers are being gifted with between \$50,000 and \$100,000 not to produce crops, and that 4,880 farmers are being subsidized with grants of between \$25,000 and \$50,000 not to plant crops on their property.

To me, it is just plain incredible that with our budget problems and our hunger problems that we are paying payments of more than \$233 million to fewer than 500 wealthy farmers in order to pay them not to produce food and fiber.

Gentlemen, in this period of an overheated economy, where we owe it to every American to tighten our Federal budget wherever possible, I think it is obvious where our Agriculture program can be trimmed. And again let me quote Mr. FINDLEY, we can cut back here with "no serious adverse effects on production or on the effectiveness on production adjustment programs."

A \$20,000 ceiling on payments to any one farmer can save us about \$300 million annually.

It would seem that saving money on this program and applying it to more pressing problems, primarily hunger, housing, and other national necessities, makes more sense than cutting back urban programs for lack of funds.

The CHAIRMAN. The Chair recognizes the gentleman from Louisiana (Mr. WAGGONER).

Mr. WAGGONER. Mr. Chairman, I rise in opposition to the Quile substitute and to the Conte amendment. The gentleman who just preceded me in the well finally placed in proper perspective what you are doing here today. I would agree that perhaps these five farmers out of some 2.9 million total farmers are getting too much. But are you going to back down on the word of the U.S. Congress?

I voted against this bill when it was originally passed and I still have many objections to it because it does have flaws but this past year we agreed that it would be wise and good for agriculture, in view of a change in administrations, to extend this program for 1 year to allow us to rationalize and write a good farm program. We told our farmers what they could count on. But no. Because five people, some people think, are getting too much—and I do, too—we are going to bring the house down on agriculture. Do you think we have confusion today? You have not seen anything. You have not seen confusion compared to what we will have if this Congress goes back on its word. To do what you propose will cost more money, not less. I share your concern for the consumer but take pride in the good job our farmers have done in feeding the Nation. Let the city people get hungry and the top will really blow. Are you going to bring the house down on agriculture that feeds this Nation because you are sore that five people are getting too much money? Yes, the program must be changed but do not do it in the middle of the game after telling them what to plan for. Is it fair when a man owns land and equipment to farm that land, and is farming his land, to be told by the Government that he can no longer do so, to put him out of business without compensating him for his loss until he is free again to do as he chooses? Of course it isn't. If you, by force, put any legitimate man out of business against his will he should be compensated for his loss. This legislation has only 1 year to go. That is the time to make the change. Many farmers have made obligations for this last year because we told them to. There is a real difference in paying a man for not doing something when he has the desire and wants to but is prohibited as compared to paying those who have no desire to work and won't work for not working. The very least you can do is keep your word and that is absolutely all I am asking if it means anything to you.

The CHAIRMAN. The Chair recognizes the gentleman from Texas (Mr. ECKHARDT).

Mr. ECKHARDT. Mr. Chairman, I rise to oppose both amendments, because I still believe the Nelsen amendment is the best approach, and I think, if prepared in a proper manner, simply as a limitation, it would be germane. If the amendments are voted down, I shall attempt to gain the floor to offer such an amendment.

The CHAIRMAN. The Chair recognizes the gentleman from Massachusetts (Mr. O'NEILL).

Mr. O'NEILL of Massachusetts. Mr. Speaker, it is an old adage that when the economy of the farm is going well, the economy of the Nation is going well. I think that holds true today. But I do not think that in giving these tremendous benefits to the wealthy farmer we help the little farmer, in the least bit, or the Nation.

May I also say, Mr. Chairman, that my colleagues from the cities who have any idea of voting against this appropriation bill might be reminded that the school food program and the food stamp program are in this bill. I intend to vote for the Conte amendment.

The CHAIRMAN. The Chair recognizes the gentleman from Minnesota (Mr. LANGEN).

Mr. LANGEN. Mr. Chairman, I rise in opposition to both of these amendments, even though I supported such an amendment when it was offered to this House at the right time and in the right place. This is not the right time nor is it the right place. It is too complex an amendment. I do not think we know what we are doing when we consider this amendment. Let me show you how ridiculous it is. In the first place, the amendment is confined to only crops planted in the fiscal year 1970. There will be no payments out of this appropriation for crops planted in 1970. The moneys that will be paid out in this appropriation are going to be for crops that were planted in fiscal 1969. Consequently, it does not constitute any limitation. This, in reality, could do more harm to small farmers and be of benefit to big farmers, if you will, because they would eventually get their money. The amendment is not complete because it cannot work by the language that it contains.

The Secretary of Agriculture has issued a very strong and meaningful position on this matter. Let me read it for you:

MAY 26, 1969.

POSITION OF THE DEPARTMENT OF AGRICULTURE ON PAYMENT LIMITATIONS AS PROPOSED IN THE FINDLEY AMENDMENT TO THE AGRICULTURAL APPROPRIATIONS BILL

The Department of Agriculture believes it is possible to design a sound farm program that limits the number of dollars that can be paid to any one farmer for programs following the 1970 crop year.

However, to make such a limitation effective, legislative changes are needed. With only the simple amendment that is possible in connection with appropriation bills, the so-called "snap-back" provision for cotton would come into effect. The cotton program would then become subject to a loan-and-redemption or a buy-and-sell-back arrangement that would increase costs while the large producers would escape the intent of the payment limitation.

A simple amendment to the appropriations bill will not suffice. The Department is ready to work with the legislative committees on basic changes in the legislation and has modifications to suggest.

The preferred time for considering these changes would be later in this session or early next session, when consideration must be given to the type of legislation that is to replace present laws. These laws are scheduled to expire after the 1970 crop.

CLIFFORD M. HARDIN,
Secretary.

Inasmuch as I have already stated that the amendment applies only to crops planted in fiscal 1970, since there could be practically no payments related to those crops in this appropriations bill, it would be a meaningless gesture to adopt this amendment.

The CHAIRMAN. The Chair recognizes the gentleman from Illinois (Mr. MICHEL).

Mr. MICHEL. Mr. Chairman, I have some mixed emotions today about being in opposition to this amendment, because I opposed it when it was last considered on last year's appropriation bill. I supported it, however, when it was offered to the legislative extension of the act for a year. Incidentally, I opposed the extension of the agriculture bill for a year

because I did not want to prolong this agony any longer. What we have here is, in effect, for another year, an agricultural production control bill. Make no mistake about it.

One-third of our farmers produce about 85 percent of what is produced.

So it follows that to have any control program be effective, we have to include the biggest operators with the smaller ones. You can't have a control program work any other way.

If you do not like that kind of approach, then we must amend the legislative act. As for me, I would say we ought to move for sure in this session of Congress to enact a new farm bill. It is imperative that we move, and I would hope the Agriculture Committee would get hearings underway soon.

I think this debate is good. It will get the message across to the Agriculture Committee and the administration that we cannot go along this course any more. These mountainous payments are coming under attack and they cannot be ignored. Just as the people are distressed over the machinations of the big foundations and millionaires evading taxes through loopholes, so are they opposed to these outlandish payments in the agricultural program.

I am in full sympathy with what the authors of the amendment and the substitute amendment are trying to do, but make no mistake about it, if the amendment is adopted it will not be the large producers that will be hurt. They have the wherewithal to break the market price for every commodity, and the small farmer will be at their mercy.

The small farmer will not be able to afford selling on the open market and if he is in the program CCC will have to take all his production. Then we are going to have to pay storage charges on these acquisitions of commodities and the price will be so low that even CCC could not afford to dump the accumulated stocks on the open market. That would of course compound the problem.

One final point. There are many increases here for those who want to help the poor and the needy. There is a great deal in this bill which provides for more food, better nutrition, and for food stamps and so on. Instead of getting increases for these food allowances provided in this bill beginning July 1, adoption of this amendment will delay the bill over in the other body and will be operating under a continuing resolution at a lower rate of expenditure. It is another aspect that you ought to think about, for those of you who have been shedding tears for those who need this help so much. Mark my word, we will not have a conference with the other body before Labor Day with this limitation in the bill and as I said, I am for it in principle but not as an amendment to an appropriation bill.

The CHAIRMAN. The Chair recognizes the gentleman from Mississippi (Mr. WHITTEN), to close the debate.

Mr. WHITTEN. Mr. Chairman, having sat in Congress for many years, I find it most disturbing to see this rift developing between regions and sections of the Nation. I think the debate this afternoon is something which the agriculture

legislative committee should consider in connection with any revision of the farm bill.

But I would point out again that, insofar as the present situation is concerned, the Commodity Credit Corporation has, in addition to other funds in this bill, \$5.6 billion on hand or on loan, and it would be obligated to carry out existing payments and to make such payments as the present plans call for.

This proposal does not change what our Agriculture Committee sponsored last year. I would say, if this is adopted, the large producers would get one check from funds in this bill and get the remainder of their payments from other funds available to CCC. Also, I have a statement from Secretary Hardin saying if this limitation is adopted, the snap-back provisions would operate and it would cost the Government a great deal more.

I respectfully suggest we vote down both the substitute for the amendment and the amendment and let our Agriculture Committee work out these amendments in due time.

The CHAIRMAN. All time has expired. The question is on the substitute amendment offered by the gentleman from Minnesota (Mr. QUIN) for the amendment offered by the gentleman from Massachusetts (Mr. CONTE).

The substitute amendment was rejected.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Massachusetts (Mr. CONTE).

The question was taken; and the Chairman being in doubt, the Committee divided, and there were—ayes 93, noes 84.

Mr. WHITTEN. Mr. Chairman, I demand tellers.

Tellers were ordered, and the Chairman appointed as tellers Mr. CONTE and Mr. WHITTEN.

The Committee again divided, and the tellers reported that there were—ayes 112, noes 100.

So the amendment was agreed to.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

CROPLAND ADJUSTMENT PROGRAM
For necessary expenses to carry into effect a cropland adjustment program as authorized by the Food and Agriculture Act of 1965 (7 U.S.C. 1838), \$78,000,000: *Provided*, That no additional agreements are authorized for fiscal year 1970.

AMENDMENT OFFERED BY MR. SCHWENGEL

Mr. SCHWENGEL. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. SCHWENGEL: On page 26, delete everything after the comma on line 2 and all of line 3 and insert in lieu thereof the following: "That agreements entered into during the fiscal year 1970 shall not require payments during the calendar year 1970 exceeding \$99,300,000."

Mr. WHITTEN. Mr. Chairman, I ask unanimous consent that the amendment be reread.

The CHAIRMAN. Is there objection to the request of the gentleman from Mississippi?

There was no objection.

The Clerk reread the amendment.

Mr. SCHWENGEL. Mr. Chairman, the purpose of my amendment is to carry

forward with our cropland adjustment program. The bill as it now stands only provides funds for payments on contracts now in force. It would permit no new land retirement in 1970 under the Cropland Adjustment Act of 1965. To cut back on this program is to achieve a false economy. The leading experts in the field of agricultural policy are placing more and more emphasis on the need for long-term retirement of agricultural land as the solution for our farm problems. Iowa State University, long known for its outstanding contributions to agriculture and agricultural policies, has recently published a document entitled "Farm Programs for the 1970's," which deals with this very question. The Center for Agricultural and Economic Development at Iowa State University, which prepared the document, urges the increased use of long-term land retirement as an alternative to our present unworkable and very expensive programs. The center's position is pretty well summarized in the following statement:

One of the least restrictive types of government programs for agriculture is one which removes all cropland on individual farms from production under a long-term contract. This type of program does not restrict individual crop production, but rather reduces acres of cropland available for planting of crops. Such a program reduces the size of the land input, and if combined with complementary programs, would return less productive cropland to grass, trees or other natural states. Such a program would initiate a reversal of government policies and programs of the last century which continue to shift additional land from a state of low productivity to an advanced state of crop production.

Mr. Speaker, both the Johnson administration and the Nixon administration budgets included the exact amount proposed by my amendment. The committee report indicates that this item was deleted because of our costly commitments in Vietnam, and the allegations of hunger and malnutrition here at home. As to the commitment in Vietnam, I can only say that I am confident that President Nixon will move to drastically reduce our commitment there in the very near future. As for the argument that we cannot take more land out of production when hunger exists here at home, I think a careful analysis reveals the fallacy of this argument. We now have in excess of 40 million acres retired under the various annual programs, in particular, the feed grains program. This 40 million acres is more than adequate to give us any needed flexibility to take care of hunger and malnutrition. If there is a need for rapid increase in production acres, the acres currently in the wheat and feed grain program are the acres to use.

The cropland adjustment program is one of our best investments. Best because it is also a conservation program and in addition, when this program was authorized, 1965, the Congress indicated its belief in this approach by authorizing \$225 million per year for the program. The increase proposed by my amendment is still far below the amount authorized. Of the \$99.3 million appropriation in my amendment, only \$21.3 million would be available for retirement of new acreage. But this would provide for re-

tirement of about 4 to 5 million new acres.

Of particular importance here is the fact that many acres previously retired under the conservation reserve program will again be available for production. It is essential that we have sufficient funds available under the cropland adjustment program to keep this land out of production. By 1973 all of the land retired under the conservation reserve program, some 40 million acres, will again be in production unless we act now. Much of this land is marginal, and should remain in a reserve status. Even with respect to land which is not marginal, by putting it in reserve, we are conserving the land for future use.

In fact, if the suggestions of Dr. Wallace Ogg, extension economist at Iowa State University, are followed, long-term land retirement would result in a lower net cost to the Government. Dr. Ogg suggests that emphasis be placed on retiring land which involves the highest production costs. This is a sound approach.

Mr. WHITTEN. Mr. Chairman, I rise in opposition to the amendment.

May I say that after the vote on this amendment I will propose that the Committee rise.

Mr. Chairman, this is another case of adding money to pay people not to grow crops. This House has just put a limitation on the moneys that can be paid to farmers for complying with programs to take crops out of production. Now, this amendment would authorize additional contracts to take new land out of production.

I trust the amendment will be defeated.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Iowa (Mr. SCHWENGEL).

The amendment was rejected.

Mr. WHITTEN. Mr. Chairman, I move that the Committee do now rise.

The motion was agreed to.

Accordingly the Committee rose; and the Speaker having resumed the Chair, Mr. WRIGHT, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (H.R. 11612) making appropriations for the Department of Agriculture and related agencies for the fiscal year ending June 30, 1970, and for other purposes, had come to no resolution thereon.

GENERAL LEAVE TO EXTEND

Mr. WHITTEN. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days to extend their remarks on the bill, H.R. 11612.

The SPEAKER. Without objection, it is so ordered.

There was no objection.

HEALTH AND SAFETY STANDARDS

(Mr. HECHLER of West Virginia asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. HECHLER of West Virginia. Mr. Speaker, on May 16, the Secretary

of Labor announced certain health and safety standards for industries performing work on public contracts under the Walsh-Healey Public Contracts Act. I think it is very unfortunate that in promulgating these health and safety standards the Secretary of Labor fixed a standard of 4.5 milligrams of coal dust per cubic meter of air, which is 50 percent above the level of 3 milligrams recommended by the U.S. Public Health Service last December as a proper level for the protection of the health of coal miners.

Mr. Speaker, the history of social legislation reveals that it is usually the Federal Government which first makes the great initial advances in wages, hours, and working conditions.

I believe the Secretary of the Department of Labor has missed a great opportunity here to protect the health and lungs and lives of those coal miners working under conditions adverse to their health and safety.

In addition to that, this order was issued as a result of the recommendation of a 15-member National Safety Advisory Committee. When I asked the Department of Labor for the minutes of the meetings of that committee, I was denied access to those official minutes, which I believe is a clear violation of the Freedom of Information Act of 1967.

I would certainly hope, Mr. Speaker, that the Secretary of Labor will reverse his decision and set a standard of 3 milligrams in order to protect the health of the coal miners. In addition, other measures to protect the health and safety of coal miners should be brought in under the protection of the Walsh-Healey Act.

Mr. Speaker, I ask unanimous consent to include the text of a telegram which I have sent to Secretary of the Department of Labor Shultz on this issue.

The SPEAKER. Is there objection to the request of the gentleman from West Virginia?

There was no objection.

The telegram follows:

TEXT OF TELEGRAM SENT MAY 26 BY CONGRESSMAN KEN HECHLER TO SECRETARY OF LABOR GEORGE SHULTZ

Your May 16 announcement of health and safety standards for work performed on Government contracts completely ignores the recommendations of the Surgeon General of the United States on coal dust levels necessary to protect the health of the Nation's coal miners. In promulgating a standard of 4.5 milligrams per cubic meter of air on all coal mined for Federal contracts, you are subjecting thousands of coal miners to fifty per cent more coal dust than the level of 3.0 milligrams recommended last December by the United States Public Health Service. The Surgeon General testified before the Senate Subcommittee on Labor on March 18, 1969 that the health of coal miners will be better protected by the 3.0 milligram level than the 4.5 milligram level. The Surgeon General further testified that there is a straight-line progression of pneumoconiosis related to the level of coal dust, which means that there is fifty per cent more exposure at the 4.5 milligram level than the 3.0 level.

You indicated in your May 16 statement that you had followed the recommendations of the 15-member National Safety Advisory Committee, established by you on April 7. When I made a request to your office to examine the official minutes of the two meet-

ings held by this committee, I was denied access to these minutes. I have lodged an official protest with Congressman John Moss of California, as I believe suppression of these minutes to be a clear violation of the Freedom of Information Act. I find it incomprehensible why you would suppress information on why you have elected to subject a large number of the Nation's coal miners to excessively high levels of coal dust.

I am shocked to learn that your Advisory Committee acted without any public hearings, without any consultation whatsoever with the House and Senate committees currently considering health and safety legislation, and without full consultation with the United States Public Health Service which recommended the 3 milligram standard. Your Committee members could have learned from a 3-page letter written to them on May 1, 1969 by the president of the National Coal Association that "The matter of dust standards has in the course of these hearings received the most careful consideration." There was only a cursory attempt to ascertain the effect of coal dust on the lungs and lives of thousands of coal miners.

The history of most social legislation reveals that it is the Federal Government which usually makes the first advances in wages, hours and working conditions, with the private sector catching up at a later time. You have missed a great opportunity to lead the way in establishing a Federal standard which can later be applied in the 90 per cent of the Nation's coal mines not performing work for Government contracts.

There are many other aspects of coal mine health and safety which can and should be written into regulations governing Federal contracts. I respectfully suggest that in light of the shockingly secret, furtive and arbitrary methods used in arriving at the 4.5 milligram standard, you should reverse your action on the 4.5 milligram standard and institute a standard of 3 milligrams per cubic meter as recommended in December, 1968 by the United States Public Health Service.

CONSTITUENTS CONCERNED ABOUT REPORTS THAT UNITED NATIONS FLAG RATHER THAN U.S. FLAG WILL BE PLANTED ON THE MOON BY OUR ASTRONAUTS IN JULY

(Mr. NICHOLS asked and was given permission to address the House for 1 minute, to revise and extend his remarks and to include extraneous matter.)

Mr. NICHOLS. Mr. Speaker, a number of my constituents are concerned, as I am, about reports that the United Nations flag rather than the U.S. flag will be planted on the moon by our astronauts in July. At first, I thought this was too absurd and had discounted it altogether. But I wrote to the National Aeronautics and Space Administration asking if there was any possibility that some flag other than our own would be taken aboard Apollo 11. Their reply was rather vague and led me to believe that the United Nations flag might be under consideration as a marker on the moon.

Giving further credence to this is the fact that Apollo 10 has 117 United Nations flags aboard it. These flags will be presented to each member of the United Nations, presumably including those nations which are helping the Vietcong kill American men in Vietnam.

The American taxpayers have single-handedly financed the research and experimentation which will lead to this moon landing. It would be an insult to the people of our country if any flag

other than Old Glory should be planted on the moon by the Apollo 11 astronauts.

Mr. Speaker, I sincerely hope that our colleagues in the House will add their opposition to any consideration which might be given to the United Nations flag being planted on the moon by U.S. astronauts. I also include a copy of the letter from NASA in the RECORD at this point:

NATIONAL AERONAUTICS AND
SPACE ADMINISTRATION,
Washington, D.C., May 23, 1969.

HON. BILL NICHOLS,
House of Representatives,
Washington, D.C.

DEAR MR. NICHOLS: We have received your inquiry on behalf of a constituent, concerning the possibility that the first astronauts on the moon may erect a United Nations flag.

As we approach the time when we may attempt the first manned landing on the moon, we are giving consideration to the symbolic articles, such as flags, emblems, or other articles, that should be carried on this historic mission, including articles to be left on the moon to commemorate the landing and those that might be taken to the moon and brought back to earth for permanent display. Before making decisions on these matters, a careful review is being made within NASA, taking account of the many suggestions received from outside the Agency.

We appreciate knowing of your constituent's expression of concern, and assure you that all viewpoints will be seriously considered before decisions are reached.

Sincerely yours,

ROBERT F. ALLNUTT,
Assistant Administrator for Legislative
Affairs.

FINANCIAL DEALINGS OF FEDERAL JUDICIARY SHOULD BE INVESTIGATED

(Mr. RAILSBACK asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. RAILSBACK. Mr. Speaker, serving on the Nation's highest Court is not and can never be a part-time job. And yet, it apparently is considered just that by some of the men who sit on the Supreme Court. We hear a lot of talk about requiring judges to make a full disclosure of their income. We should prohibit our Federal judges who are paid as much as \$60,000 per year from receiving outside earned income for services performed which necessarily detract from their judicial duties.

The resignation of Justice Fortas because of his financial dealings with convicted stock market manipulator Louis Wolfson; the \$12,000 annual payment to Justice William O. Douglas by the Albert Parvin Foundation, which had dealings with the Las Vegas gambling industry; and now the revelation that President Nixon's choice for Chief Justice—Warren Burger—has been paid \$6,000 by the philanthropic Mayo Foundation as a trustee, demand an urgent change in the laws on the Federal judiciary.

Mr. Burger's nomination by the President is a good one. I am not commenting on the interests of this able jurist with this worthy organization—a foundation devoted exclusively to the advancement of medical technology. The President, in

his nationally televised statement, said Burger was a man of "unquestioned loyalty." I concur in this.

But, the fact remains that at least two Justices before him; namely, Fortas and Douglas, have received substantial amounts of outside income for outside work while serving on the Supreme Court, thereby making their duties on the bench part-time responsibilities.

A few days ago I requested EMANUEL CELLER, chairman of the Judiciary Committee, on which I serve, to begin public investigations into the financial dealings of not only Fortas and Douglas, but of other Federal judges as well.

As I said in my letter to the chairman:

My request is not based on wanting to impeach or punish any federal judge, but rather to determine to what extent judges are receiving income from outside sources so that definitive legislation might result in correcting future improprieties.

The inquiry is not a witch hunt. It is to be a constructive investigation aimed at determining the need for legislation which may require Federal judges to reveal outside financial interests, whether in the nature of honorariums, consultant fees or any other remuneration; indeed, the result of our inquiry may be to prohibit entirely payment for work that is not directly related to a judge's responsibilities on the Federal bench.

I am well aware of the meeting called June 10 of the U.S. Judicial Conference to consider financial disclosure rules. It is my opinion that not only Federal judges but Congressmen as well should disclose all income earned while not performing their Federal duties and should be prohibited from earning any outside income whatsoever. They should, however, be able to receive out-of-pocket expenses for lecturing, writing, and so forth. The money which goes into their pockets should end there. This would take away any initiative for them to go gallivanting around the country to subsidize their judicial income.

Members of the Federal judiciary and indeed Members of Congress are being looked at by the public with a critical eye. The opinion by many of many in the Government is already jaundiced by the Fortas affair, by the Douglas matter, and by the sometimes rather disparaging view of "those politicians in Washington."

Let us define the nebulous guidelines of judicial conduct so that there can be no opportunity for "impropriety" in the judiciary much less any question about conflict of interests.

The letter referred to follows:

MAY 16, 1969.

HON. EMANUEL CELLER,
Chairman, House Committee on the Judiciary,
Washington, D.C.

DEAR MR. CHAIRMAN: I have been most concerned about recent developments relating to the federal judiciary. In my opinion, the Fortas case is only one example of judicial indiscretion by federal judges. I am concerned that there are apparently many federal judges who are earning and receiving outside income for diverse reasons. Justice Douglas of the Supreme Court is another example of a persons who is receiving outside compensation for services performed during his judicial tenure, thereby making his duties on the nation's highest court a part time responsibility. Congressman Gross has suggested our Judiciary Committee investigate the Douglas matter. I recommend that we

expand his suggestion and investigate the propriety of any federal judge receiving any outside earned income, whether in the nature of honorariums, consultant fees or any other remuneration. My request is not based on wanting to impeach or punish any federal judge, but rather to determine to what extent judges are receiving earned income from outside sources.

We are paying our Supreme Court Justices \$60,000 per year, which represents a nearly \$20,000 increase over their previous salaries. Certainly this should be a full time job, and the taxpayers ought to be able to expect full time service. I differentiate between income from investments which require no work to be performed, and outside income which is in the nature of compensation for services rendered.

Our public investigation should also relate to requiring a full disclosure of any outside income. I realize that some of the points made above should also properly relate to Members of Congress and I, for one, would support separate legislation prohibiting Members of Congress from receiving outside earned income and requiring an even more comprehensive disclosure of outside income.

With kind regards, I am,
Sincerely,

TOM RAILSBACK,
Member of Congress.

UNITED TRIBES OF NORTH DAKOTA DEVELOPMENT CORP.

(Mr. ANDREWS of North Dakota asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. ANDREWS of North Dakota. Mr. Speaker, at appropriate ceremonies at the Department of the Interior last week, it was announced that an employment training center for Indians from the Northern Plains States will be opened at Bismarck, N. Dak., this September by a corporation composed of the Indian tribes of North Dakota.

The corporation, United Tribes of North Dakota Development Corp., is now in the process of negotiating with Bendix Field Engineering Corp., Owings Mills, Md., a subsidiary of the Bendix Corp., to subcontract the operations of the center and conduct its educational program.

The center will be funded by several Federal sources. The site of the center will be the deactivated Lewis and Clark Job Corps Center operated by the Office of Economic Opportunity. The training center, renamed the United Tribes Employment Training Center, will receive more than \$500,000 worth of equipment from OEO.

Congress passed a supplemental to the 1969 fiscal year appropriations bill, containing an amendment introduced by North Dakota Senator MILTON YOUNG to provide \$700,000 to rehabilitate the center and equip it for the new educational program. The Department of Labor and the Bureau of Indian Affairs of the Department of the Interior will fund the operation of the center.

The initial enrollment will be 25 families, 10 solo parents, 50 single men and 50 single women. Because wives often take training too, a total of 160 people will be entered in the actual training program.

Under the family training center concept, the entire family receives an educa-

tion—basic three R's related to the selected vocation, job skills and a thorough grounding in the techniques of living in urban areas—the places where most of the jobs are.

Two similar centers are being operated under contract by the Bureau of Indian Affairs in Madera, Calif., and Roswell, N. Mex., but this will be the first center initiated by the Indians and with an Indian contractor at the leadership level. Tribes in the development association are the Standing Rock and Fort Totten Sioux, the Turtle Mountain Chippewa, and the Affiliated Tribes of Fort Berthold—Gros Ventre, Arikara, and Mandan.

The board of directors of the United Tribes of North Dakota Development Corp. consists of: Chairman Lewis Goodhouse, Fort Totten Indian Reservation; Ted Jamerson, Standing Rock Indian Reservation; Nathan Little Soldier, Fort Berthold Indian Reservation; J. Dan Howard, Standing Rock Reservation; J. Henry, Turtle Mountain Indian Reservation; and Austin Engle, secretary of United Tribes of North Dakota Development Corp. and coordinator of Indian affairs for North Dakota.

At the time of the announcement that plans for the employment center are now moving through to final stages toward completion, the chairman of the United Tribes of North Dakota presented a resolution they adopted expressing their gratitude to Senator MILTON YOUNG for his efforts in securing this important facility. This resolution reads as follows:

RESOLUTION OF UNITED TRIBES OF NORTH DAKOTA DEVELOPMENT CORP., BISMARCK, N. DAK., MAY 13, 1969

Whereas, the United Tribes of North Dakota Development Corporation comprising the Chairmen of the Standing Rock Sioux, Three Affiliated Tribes, Devils Lake Sioux and the Turtle Mountain Chippewa Indians are a recognized Development Corporation, and

Whereas, said Development Corporation is responsible to the Tribal Councils and members of each tribe represented to promote the socio-economic development of the resources and general welfare of the Indian people, and

Whereas, the United Tribes of North Dakota Development Corporation in a determined effort and long range planning requested the congressional delegation from the State of North Dakota to assist the United Tribes of North Dakota Development Corporation in obtaining the former Lewis and Clark Job Corps Center and converting it into a training center for the Indians, and

Whereas, the aforementioned Lewis and Clark Job Corps Center is now officially named the United Tribes Employment Training Center and sponsored by the United Tribes of North Dakota Development Corporation, and

Whereas, the United Tribes of North Dakota Development Corporation in cooperation with the State and Bureau of Indian Affairs and the Honorable Milton R. Young, Senator from North Dakota, united forces to obtain funds for the United Tribes Employment Training Center, and

Whereas, the Honorable Milton R. Young, United States Senator, by his selfless, untiring, ceaseless efforts guided by dedication, foresight and a sense of fairness to his fellowmen, and

Whereas, the Honorable Milton R. Young introduced an amendment to the appropriations bill constituted the primary motivat-

ing force which guided the worthy piece of legislation through the hallowed halls of the United States Congress to its enactment into law and funds are available.

Now therefore be it resolved, that the United Tribes of North Dakota Development Corporation duly assembled in session takes this means for the Indians of North Dakota to express their immeasurable gratitude and appreciation to the distinguished member of the United States Senate from North Dakota who through his accomplishments has become one of the outstanding legislators from the State of North Dakota.

Be it further resolved, that appropriate action be taken to place a duly executed resolution in the hands of Milton R. Young, United States Senator from North Dakota.

Be it further resolved, that the Chairman from the four Indian Reservations be authorized and instructed to sign this resolution for and on behalf of the Indian Tribes of North Dakota.

CERTIFICATION

We, the undersigned, Chairmen of the United Tribes of North Dakota Development Corporation hereby certify that the Board of Directors is composed of five (5) members of whom 4 constituting a quorum were present at a meeting called and convened and held the 8 day of May, 1969, at Bismarck, North Dakota and that the foregoing resolution was duly adopted by an affirmative vote of 4 with 0 opposing.

A. J. AGAND,

Chairman, Standing Rock Indian Reservation.

PETER MARCELLAIS,

Chairman, Turtle Mountain Indian Reservation.

LEWIS GOODHOUSE,

Chairman, Fort Totten Indian Reservation.

VINCENT MALNOURIE,

Chairman, Fort Berthold Indian Reservation.

AUSTIN ENGEL,

Secretary, North Dakota Indian Affairs Commission.

OHIO STATE UNIVERSITY—ROTC

(Mr. DEVINE asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. DEVINE. Mr. Speaker, in order to correct some information appearing in the CONGRESSIONAL RECORD of May 14, 1969, I am submitting a letter dated May 23, 1969, from William F. Rounds, of the office of public relations, the Ohio State University, together with a press release of May 9, 1969, both of which are self-explanatory:

THE OHIO STATE UNIVERSITY,

Columbus, Ohio, May 23, 1969.

HON. SAMUEL L. DEVINE,
House Office Building,
Washington, D.C.

DEAR CONGRESSMAN DEVINE: The Congressional Record of May 14, 1969, published letters addressed to you and to President Nixon in which an erroneous reference to Ohio State University's ROTC awards ceremony appeared.

The annual awards ceremony took place May 8 in Mershon Auditorium, on the campus. Some demonstrators, both pro- and anti-ROTC, clashed briefly outside the auditorium. Police made one arrest inside the building. The ceremony, however, was not "broken up," but was carried out as scheduled.

It would be appreciated greatly if this information could be published in the Congressional Record to correct the impression given by the earlier letters.

With reference to the same May 8 event, it may be of interest to report also the part played by an Ohio State faculty group in quelling the campus disturbance. The group's work is described in an enclosed news release.

Sincerely,

WILLIAM F. ROUNDS,

Director, News and Information Services.

STUDENT NEWSPAPER LAUDS FACULTY ACTION IN ROLE OF CAMPUS PEACEMAKERS

COLUMBUS, OHIO, May 9.—Ohio State University's student newspaper—as well as university officials—had high praise Friday (5/9) for a group of faculty members who helped avert possible serious violence during a campus demonstration Thursday (5/8).

Sixteen faculty, members of a Green Ribbon Commission, formed a "demilitarized zone" between pro and anti-ROTC demonstrators who gathered near the university's Merston Auditorium.

The "Lantern," campus newspaper, said the commission's action "helped deter a very embarrassing confrontation between university students and law enforcement officers."

The commission was formed in 1963 for the purpose of helping keep peace at demonstrations. However, Thursday's incident was the group's first physical involvement, according to the commission head, Prof. Paul J. Olscamp of the philosophy department.

Identified by green ribbons on the lapels of their business suits, the faculty were punched, kicked and egged as they stepped between the two opposing factions. Student tempers flared, and there were several fist-fights outside the auditorium, where ROTC cadets and midshipmen had gathered for their annual spring award ceremonies.

Olscamp himself said he had been "accidentally kicked" and was hit under the left eye. At least five of the Green Ribbon men were pelted with eggs, he said.

"I don't think this was intentional," Prof. Olscamp added. "We just happened to be in the middle."

The demonstrators eventually moved to the campus Oval for talks, but no more fights occurred. The group finally dispersed when a heavy rainstorm occurred.

Prof. Olscamp praised university officials for restraint in not using police and both John E. Corbally Jr., vice president for academic affairs and university provost, and John T. Mount, vice president for student affairs, commended the Green Ribbon Commission members for their participation.

The student newspaper lauded the courage of the faculty members and commented editorially:

"By placing themselves between angry left wing demonstrators and counter demonstrators, commission members managed to lessen the flammability of a very flammable situation.

"By their action commission members helped deter a very embarrassing confrontation between university students and law enforcement officers.

"Without the Green Ribbon Commission to rely on, Ohio State's administrators might very well have had to rely on police.

"... Green Ribbon Commission members have made a valuable contribution to the image of a university as a place of reason."

The Ohio State commission, now with more than 200 members, is unique as an organization of this kind on university campuses, Prof. Olscamp believes.

EVERGLADES NATIONAL PARK: THE FUTURE

(Mr. ROGERS of Florida asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. ROGERS of Florida. Mr. Speaker, recently I have commented to the House

on the threat to Lake Okeechobee, Fla., because of a decision by the U.S. Army Corps of Engineers to proceed with hearings on a mining permit.

One of the possible casualties to mining in the lake is the Everglades National Park.

Park Superintendent John C. Raftery made an excellent presentation to the Florida Academy of Sciences earlier this year on the future of the park. As he pointed out:

Water is life, and the everglades is truly living. . . . In reality the sawgrass prairie—the true everglades—historically was a broad, shallow river originating at Lake Okeechobee.

He further states:

Not only must the Park's water supply be timely and adequate, but it must also be of high quality.

I include Superintendent Raftery's remarks at this point in the RECORD:

EVERGLADES NATIONAL PARK: THE FUTURE

(By John C. Raftery, superintendent, Everglades National Park, at the 33d annual meeting of the Florida Academy of Sciences, Gainesville, Fla., Mar. 14, 1969)

Man is a strange animal living in a strange and complex world, engulfed by technology and well insulated from the natural environment. Early man must have felt a personal identity with nature, for he derived directly from the environment his basic needs. In acknowledging his dependence on nature, he reached a balance with it and was an integral part of it. His survival rested on his sensitivity to the environmental scheme.

Modern man no longer feels close ties to nature, but rather apart from it. His abuse of the environment indicates an ignorance of his dependence on it. Fortunately, man has not exploited everything. He has set aside parcels of the natural environment, places that have the capacity to restore a feeling of oneness with nature.

National Parks are established to protect natural areas from human exploitation. They are islands of wilderness in a sea of civilization, relatively unspoiled by man's encroachment. We correlate national parks with scenic splendor and solitude that soothes the human spirit. In these places nature is free and only man's actions are disciplined. Here nature's eternal processes are at work, molding and changing an orderly environment inhabited by a myriad of living things.

Every National Park is of prime significance, and Everglades is no exception. Situated on the fringe of the tropics, Everglades exhibits a colossal display of plant and animal communities that combine tropical and temperate characteristics. A blanket of sawgrass, punctuated by elevated tree islands, stretches to the horizon, eventually giving way to a broad mangrove belt, interlaced by a labyrinth of waterways, that lies along the Park's west coast. This is a strange land, a lonely land where the sounds and smells are those of nature. It is a timeless land blending earth, sky, and water. Timeless, but changing; still, but dynamic. Many forces acting with and against one another shaped the everglades region. Of these forces water was most vital.

Water is life, and the everglades is truly living. Perhaps many of you are familiar with Everglades' water problem. The Park's need for water is still of utmost concern. Recurring summer rains and winter drought established in south Florida a water cycle to which all life was bound. In reality the sawgrass prairie—the true everglades—historically was a broad, shallow river originating at Lake Okeechobee. A film of water spilled over the Lake's southern bank during the flood season and coursed imperceptibly seaward. As it flowed, the water picked up nutrients that supported an immense quantity and va-

riety of aquatic life. These organisms, in turn, provided a food supply for the larger forms of wildlife for which the area is renowned. When the 'glades dried up during the winter months, deeper channels and ponds became reservoirs capable of supporting a nucleus of aquatic life that could repopulate the everglades when the summer rains resumed.

The supply of fresh water also produced fertile coastal estuaries that provide nursery grounds for a tremendous array of fish, shrimp, and other marine organisms. In time, a dynamic balance of life, keyed to this annual water cycle, evolved to form the everglades ecosystem. The everglades region became home to an incredible diversity and abundance of living things, each an integral part of the intricate ecological web and each ultimately tied to water, the life blood of the everglades.

Man is bleeding life from Everglades National Park. In the interest of flood control, agriculture, and real estate development, he has constructed an elaborate system of canals, dikes, and levees designed to divert much of this water from its natural course. Drainage has greatly reduced the everglades' phenomenal productivity, destroying habitat and food supplies for many creatures. Aquatic animals that once found refuge in water holes during the short dry season have diminished; their reservoirs become dry. The million and a half wading birds that nested here 30 years ago now number less than 50,000. Curtailment of water flow has permitted inland intrusions of salt water, reducing estuarine productivity.

A bill passed by Congress last year should resolve this problem, but not soon enough. Under the provisions of the plan the Park will receive at least 315,000 acre feet of water annually from the Conservation areas, administered by the Central and Southern Florida Flood Control District, north of the Park. This minimal amount should adequately meet the Park's needs, as its distribution will simulate the seasonal water cycle. Unfortunately, the plan will not be implemented until at least 1976, when the modified project will be completed. In the meantime the interim release schedule, tied to the water level in Lake Okeechobee, remains in effect. Everglades must have a more dependable water supply—and soon—for it is the key to the preservation of its natural values. Water is life, and the living character of the Park is slowly ebbing. As population pressures mount in south Florida and the need for human living space expands, water demands will increase. Let us not forget the needs of this esthetic and biological resource that is so essential to our well-being.

Not only must the Park's water supply be timely and adequate, but it must also be of high quality. As agriculture, housing, and industry expand toward the Park, pollution from pesticides, fertilizers, sewage, and industrial wastes threatens the Park increasingly. Steps must be taken to insure the proper disposal of contaminants that could destroy much life significant to south Florida.

The potential adverse effects of the proposed jetport in Collier County concerns us greatly. The possible impedance of the water flow into the northwest portion of the Park looms ominously. Jet fuels will pollute the air, while fuels, detergents, insecticides used in mosquito control, and industrial wastes may wash into the water that flows into the Park. What will be the effects of noise pollution, created by the new supersonic transports upon the traditional isolation and solitude of the wilderness? We need many answers before construction of this facility proceeds.

Everglades National Park theoretically provides sanctuary for wildlife, but even here some species find little more than statutory protection. Alligator poaching flourishes, as it does throughout the alligator's native

range of the southeastern United States. A relic of the Age of Dinosaurs, whose evolution virtually stopped 100 million years ago, this creature is essential in the everglades system. When water levels drop during the dry winter months, the gator wallows out holes to form reservoirs for aquatic life that provides food for many other animals. As a predator, it helps maintain a balance of life in the community. Despite its status as the first citizen of the everglades, poaching and drainage of wild swamplands have reduced the alligator population at least 95% in the last 20 years. The gator's belly hide furnishes the leather for items such as handbags and shoes. Present laws are ineffective. Risk of capture is slight. Convictions are difficult to obtain. Penalties are light. As you may have recently read, additional funds are being appropriated to increase our patrol efforts, but the ultimate solution is legislation that bans the sale of alligator products. In the meantime, a species vanishes, and once it is gone, it is gone forever.

Additional threats to the integrity of the Park include development of private inholdings; the invasion of exotic plants and, potentially, exotic animals; and canals in the Park, constructed years ago, that have adversely changed brackish estuarine areas by accelerating run off and permitting salt water intrusion.

The problems facing Everglades today categorically relate to one major challenge—to maintain the wilderness character of this area for the enjoyment of people, now and in the future. Why? Why save it? Why should we concern ourselves? Why is Everglades important to people?

Congress has charged the National Park Service with a dual purpose. We must maintain parks in a natural condition while making them available for visitor use and enjoyment. Actually, these two seemingly diverse objectives coalesce, for parks must relate to people. Use must be compatible, of course, with the natural values the area was established to protect.

Development is limited, as to would impair the parks' purpose for being. Easy access to the parks would create such an impact that visitors could conceivably love them to death. But to those willing to accept nature on its terms, the parks offer delightful experiences. Their natural beauty contrasts sharply with the environmental blight spawned by our technology. They offer solitude and serenity that provide spiritual uplift and mental refreshment. They represent outdoor museums, where nature herself is the curator, where we can study the intricate fabric of nature under natural conditions. Recreational benefits afford respite from the impoverished environment in which we live. Most important, national parks furnish the opportunity for man to renew his ties with the land and to understand his relationship to the world around him.

The greatest function of the National Parks lies in their potential to create in man an environmental awareness. Frankly, we are concerned about man's future. His attitude toward the environment has been to exploit it for personal gain, to take more from the earth than he has been willing to give in return. While enacting laws to govern his societies, he has exempted himself from the basic laws of nature. Civilizations have flourished where the earth was bountiful—and perished when the bounty was depleted. Man the conquering animal has divorced himself from nature. Now he is confronted with sobering alternatives. Nature is in revolt; we can no longer take the environment for granted. Unless man achieves harmony with the environment, he will ultimately destroy himself.

The National Parks can restore in man a perception of his profound kinship with nature. In Everglades wilderness trails and miles of navigable waterways, some of which are marked, enable visitors to gain a more

intimate feeling for the natural environment. Accessibility is largely limited to those means that can provide this experience. Our interpretive programs are environmentally oriented, stressing man's place in the ecological scheme of things. A program designed to create in school children an environmental awareness has recently been implemented in the Park. The major element in this new effort is an Environmental Study Area that exhibits natural interrelationships as well as the impact of man. We hope eventually to establish new facilities that will interpret man's role in the environment. These programs hopefully will motivate people to discover nature and thus to discover themselves. Perhaps through their experience here they will ultimately recognize a personal responsibility to the environment, if only because they are a part of it.

The fate of Everglades National Park depends entirely on man's recognition of this responsibility. Outside forces control its destiny. South Florida is changing rapidly—and haphazardly. South Florida desperately needs an environmental design that will strike a balance with the natural environment.

We can no longer afford the luxury of changing the environment without prior planning if we are to assure optimum benefits to all. We must insure that any change we make results in minimal damage to the environment. A systematic management plan based on ecological understanding and environmental responsibility will achieve that end. But it involves the concern of everyone. Only when we learn that we are part of nature's intricate web and not the weavers of it, only when we concede the necessity of environment unity—here, as everywhere—will we preserve the integrity of Everglades National Park, and, subsequently, the quality of our own existence. Indeed, if we lose Everglades, we will have lost a part of ourselves.

The future of Everglades National Park is a challenge to man. A challenge to preserve this great natural reserve not only for his enjoyment but to retain a bit of his natural environment to which he may return to conserve his Soul.

THE HONORABLE DON RUMSFELD

(Mr. STEIGER of Wisconsin asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. STEIGER of Wisconsin. Mr. Speaker, this morning Don Rumsfeld took the oath of office as Director of the Office of Economic Opportunity and a special assistant to the President.

I rise at this time to pay tribute to the record of Don Rumsfeld as a Member of the House and to wish him well as he assumes his new responsibilities.

During his service in this body our colleague from Illinois has made a substantial contribution in congressional and draft reform, freedom of information and enhancing the responsiveness of Government.

Eve Edstrom of the Washington Post wrote an excellent article today which I include at this point for the information of my colleagues.

Don Rumsfeld has undertaken an important and challenging job. I salute his past service and pay personal tribute to him as he moves into the executive branch.

When Donald Rumsfeld is asked about winning—whether it be a wrestling match or the war on poverty—he counters with: "Do you know anyone who likes to lose?"

In much the same way, Rumsfeld's prede-

cessor as head of the Federal antipoverty effort, Sargent Shriver, used to have emblazoned on his office door: "Nice guys don't win ball games."

Like Shriver, Rumsfeld is exuberant, energetic and thinks in terms of winning big. That's why at 10 a.m. Monday, when Rumsfeld is sworn in as director of the Office of Economic Opportunity, the war on poverty becomes a brand new ball game.

When Shriver left OEO in early 1968 to become Ambassador to France, OEO was described as a "sad shop" that had lost its creative zing.

It became even sadder as former President Johnson failed to replace Shriver, and as the Nixon Administration shifted Head Start and the Job Corps to other agencies.

COLLEAGUES PUZZLED

Therefore, some of Rumsfeld's closest colleagues on Capitol Hill wondered why he gave his safe Illinois Congressional seat to become commander of a war on poverty that was being reduced to a skirmish.

But Rumsfeld 36—a former Princeton wrestling champion, an ex-Navy jet pilot and captivator of thousands of young people who have worked for him in his Congressional campaigns—may soon give the war on poverty a visibility and a vitality to match that of the early Shriver days.

President Nixon has already handed Rumsfeld a headline-grabbing issue. In the May 6 hunger message to Congress the President called for a "greatly expanded" role for OEO's Community Action agencies in getting food to the poor.

Rumsfeld, therefore, will be among the chief Administration leaders in the battle against hunger, perhaps the most popular domestic issue of the year.

CABINET RANK

Furthermore, in his new post, Rumsfeld has Cabinet rank and will be a member of the President's Urban Affairs Council.

This means that shortly after he is sworn in at the White House Monday, Rumsfeld probably will be named chairman of the Council's poverty subcommittee, a post that Health, Education, and Welfare Secretary Robert H. Finch has held.

This will give Rumsfeld wide latitude in examining all poverty-related Government programs and in designing new pilot projects to combat poverty.

Rumsfeld already speaks with great enthusiasm for "RPPE"—OEO's Office of Research, Plans, Programs and Evaluation. It is through that Office that the Nation's first experiment in an income-maintenance program is being conducted. It is a program quite similar to one that Finch would like to see replace the Nation's welfare system, which he thinks is outmoded.

FOCUS OF DEBATE

Just as the spotlight is now on hunger, income maintenance plans can be expected to be the focus of national debate in the years ahead. And Rumsfeld's operation will be the test tube for such plans.

Rumsfeld has avoided discussing his concrete ideas for OEO's future until he is officially on the job. But he has done a prodigious amount of homework on OEO since President Nixon appointed him on April 21.

His briefcases over the last few weeks have bulged with hefty reports and books on the Nation's antipoverty efforts.

Government and outside experts that he consulted for the first time said they were amazed at the perception and orderly thrust of his questions. They said he showed a sensitive awareness of the many difficult problems he is inheriting, particularly the conflicts between Model Cities and Community Action agencies and the fights between city halls and state houses over control of OEO funds.

But long before he was OEO director-designate, Rumsfeld had a VISTA sign on his wall. It said: "If you are not part of the solution,

you are part of the problem." Rumsfeld gives every indication that he will provide solutions.

ASSOCIATE JUSTICE WILLIAM O. DOUGLAS AND THE PARVIN FOUNDATION

(Mr. GROSS asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include a newspaper article.)

Mr. GROSS. Mr. Speaker, in a New York Times story of today, May 26, on the Parvin Foundation and Associate Justice William O. Douglas, there is an interesting paragraph dealing with correspondence in the files of Mr. Albert Parvin relative to an investigation that the Internal Revenue Service was conducting of the Parvin Foundation. That paragraph indicates Justice Douglas was giving advice only 14 days ago to Mr. Parvin relative to the tax matters under study by the Internal Revenue Service, and relative to the manner in which the Parvin Foundation could reorganize its activities to eliminate its present tax problems and to limit new difficulties.

I am certain that Parvin must have believed that this was the best legal advice since it came from an Associate Justice of the Supreme Court, and since it dealt with a matter that in the final analysis might be settled before the same U.S. Supreme Court of which Justice Douglas was a member.

It would seem to me that there would be a conflict of interest or a possible conflict of interest in the advice and other actions taken by Justice Douglas. But, I am also told that there are laws that bar a Supreme Court Justice from giving legal advice, and this would certainly apply on Federal tax matters.

The New York Times story does not provide a direct quote from the Douglas correspondence, but it does state:

In Justice Douglas' letter to Mr. Parvin . . . the Justice insists that the allegations of the revenue service must be fought. Mr. Douglas also makes several suggestions in his letter as to how, in the future, the finances of the foundation can be completely and unquestionably set apart from Mr. Parvin's control or the implications of it. His suggestions, Mr. Douglas says, probably won't help the foundation in its present problems with revenue service, but they ought to limit new difficulties.

If this is a correct paraphrase of the Douglas letter, it would appear that there is a law violation and this would certainly be grounds for serious consideration of impeachment. I hope the Internal Revenue Service and the Justice Department have taken appropriate steps to seize this correspondence.

The New York Times story follows:
DOUGLAS SAYS TAX INQUIRY AIMS TO GET HIM OFF COURT

(By Bernard L. Collier)

LOS ANGELES, May 25.—Supreme Court Justice William O. Douglas has privately characterized Internal Revenue Service investigation of the Albert Parvin Foundation as a "manufactured case" intended to force him to leave the bench.

The characterization was included in a letter dated May 12 to Albert Parvin, a multimillionaire Los Angeles business executive.

"The strategy is to get me off the Court," Mr. Douglas wrote. "I do not propose to bend to any such pressure."

When Mr. Douglas wrote the letter, he was still president and a director of the foundation and was earning a \$12,000 annual salary in those posts.

According to foundation records here, he used the salary primarily for travel expenses in connection with foundation business.

Mr. Douglas's resignation was announced Friday in a statement released by the foundation.

The statement said that Mr. Douglas had indicated to other foundation directors more than a month ago that expanding foundation activities posed "too heavy a work load" for him and that his health was also a matter of concern following an operation of appendicitis.

In Washington, Justice Douglas, informed that his letter had been released in California, made no comment.

A spokesman for the revenue service rejected the suggestion that any of the agency's inquiries could be motivated by personal or political considerations.

A memorandum in the files on foundation business maintained by Mr. Parvin—who was for nearly seven years the foundation's finance committee chairman and is still a director—showed that Mr. Douglas on May 1 advised the foundation's board that he wanted to give up his posts after nine years.

It was in a file with that memorandum and numerous other letters and records pertaining to foundation business that Mr. Douglas's letter of May 12 discussing the Federal tax investigations appeared.

The issue of Mr. Douglas's connection with the Parvin Foundation was raised recently because of the controversy surrounding the resignation from the Supreme Court of Justice Abe Fortas, who had been offered a \$20,000-a-year fee by the Wolfson Family Foundation.

Mr. Parvin says that he has known Louis E. Wolfson for many years. Mr. Parvin was named a co-conspirator—but was never tried—in a stock fraud case involving Mr. Wolfson, who is now in prison for violations of the securities law.

Despite the prestige of some of the board members of Mr. Parvin's foundation, critics still point out that the Parvin Foundation was started with the nearly \$3-million in profits Mr. Parvin gained when he sold the Flamingo Hotel and gambling casino in Las Vegas 10 years ago.

RECORDS MADE AVAILABLE

Mr. Parvin made many of his foundation records, which included Justice Douglas's letter, available to the New York Times to show he asserted, that "nothing the foundation had done is in any way wrong."

Also contained in Mr. Parvin's files is a packet of documents pertaining to the Internal Revenue Service investigation of the tax-exempt status of the foundation.

The packet, which Mr. Parvin's lawyers advised him he could not release for publication, included a series of allegations by a revenue service field agent questioning more than a dozen transactions involving Mr. Parvin's investment of foundation funds.

Along with a copy of the allegations were answering letters and documents prepared by Mr. Parvin and lawyers for the foundation, including Miss Carolyn Agger, the wife of Abe Fortas, who recently resigned from the Supreme Court.

Miss Agger is a noted tax lawyer with Mr. Fortas' old Washington law firm of Arnold & Porter.

"I think we will be able to answer every single allegation," said the 69-year-old Mr. Parvin, "and prove that the foundation was never used as any sort of tax dodge for me, my friends, my companies or anyone else."

NO FORMAL CHARGES

Although the revenue service has never made any formal charges against the foundation, its agents have been investigating

Mr. Parvin's and the foundation's books and records for nearly three years.

Correspondence in Mr. Parvin's files indicates that revenue service agents have examined Justice Douglas's files in Washington. Numerous bank records and records of stock transaction have also been investigated.

In Justice Douglas's letter to Mr. Parvin, which says in its opening sentence that the Justice drafted it on yellow foolscap paper on a plane returning from Brazil, the Justice insists that the allegations of the revenue service must be fought.

Mr. Douglas also makes several suggestions in his letter as to how, in the future, the finances of the foundation can be completely and unquestionably set apart from Mr. Parvin's control or the implication of it.

His suggestions, Mr. Douglas says, probably won't help the foundation in its present problems with revenue service, but they ought to limit new difficulties.

Foundation records indicate that Mr. Parvin personally managed the fund for the philanthropy for nearly seven years and increased its initial capital during that time.

When the revenue service became concerned about his financial management, he relinquished control of foundation investments to a New York investment firm.

BOARD CLEARED DEALINGS

During the time Mr. Parvin was chairman of the finance committee, the records show, virtually all of his dealings were cleared by the board of directors—either before or after the transactions were made.

In the minutes of the foundation through 1968 there are several references to the other directors' expressing "complete confidence" in Mr. Parvin's judgment in managing the foundation's cash assets and its stock portfolio.

Besides Mr. Douglas and Mr. Parvin, the directors of the foundation were, until last Friday when Mr. Douglas resigned as president and a director:

Robert F. Goheen, the president of Princeton University; Dr. Robert M. Hutchins, who is also the president of the Center for the Study of Democratic Institutions in Santa Barbara, Calif.; Harvey Silbert, a Los Angeles lawyer and an old friend of Mr. Parvin's, and Sidney Davis, a New York lawyer.

The new president and a director of the foundation is Fred Warner Neal, a professor of international relations and government at the Claremont Graduate School, in Claremont, Calif.

Professor Neal was at one time a consultant in Russian affairs for the State Department and has also served as a consultant for the center of democratic studies.

A letter in Mr. Parvin's files from Harry S. Ashmore, a director of the foundation, details the position of the foundation in relation to investigations by the revenue service in early 1967 when the first stories about the foundation's tax problems came to light in newspapers.

The letter was sent by Mr. Ashmore, a Pulitzer Prize Winner, to newspaper executives he knew.

The letter says in part:

"The other point is the implication by the Internal Revenue Bureau that the foundation has been used by Albert Parvin to serve his own financial interest and to avoid the payment of income taxes.

"No such charges have been filed, but they have been suggested by I.R.S. agents as the basis for inspection of the foundation's records.

"The fact of this investigation, along with selected details from the foundation's private files, obviously were leaked to the newspapers before the I.R.S. even had a chance to evaluate the records it had requested.

"This was in late October [1966], and the board immediately acted to initiate an investigation of its own. The highly competent national firm of independent accountants

that checks out every investment and every expenditure to see that I.R.S. regulations are complied with reaffirmed its clearance.

"However, because the I.R.S. accusation was directed against him personally, Parvin took the position that the other members of the board should arrange for a new investigation by experts without prior association with the foundation.

"In November the board retained Miss Carol Agger, the leading tax authority in the Washington law firm of Arnold & Porter. On her recommendation, the accounting firm of Haskins & Sells was brought in with the instructions to trace every dollar paid into or disbursed by the foundation from the time of its inception.

"And, under the Caesar's wife principle, we had even transferred management of the foundation's assets to an independent investment company, Carl M. Loeb, Rhodes of New York.

"Haskins & Sells began its audit in December, and while the final report is not yet available, the accountants have provided Miss Agger with an interim report in which they state that the most exhaustive investigation they can devise has produced nothing to justify I.R.S. action.

"Even so, rumors are still afloat in Washington, and I presume in Los Angeles, that the I.R.S. is getting ready to move against the foundation and/or Parvin, and the implication, of course, is one of fraud."

The letter went on: "Miss Agger wrote me last week:

"The more difficult problem is the belief, apparently held by the Internal Revenue Service special agents, that in some way not reflected in the foundation's records, Parvin used the foundation for his own benefit. I have been trying to smoke-out what basis, if any, there is for the Internal Revenue Service suspicion. I have invited the Internal Revenue Service to examine the foundation's books and records and the Haskins & Sells draft audit report."

"The point is that we are being systematically frustrated in our effort to deal with the I.R.S. head on and satisfy any legitimate questions, while at the same time, on the basis of leaks that can only come from the I.R.S., Albert Parvin, the foundation and Justice Douglas (who obviously cannot reply) are taking a beating in the newspapers."

Mr. Ashmore, who is also a director of the Center for Democratic Studies in Santa Barbara, added in his letter:

"I apologize for belaboring this at such length, but I think you ought to have all the facts. The Center [for Democratic Studies] has only a minor financial interest in this matter, and I have none.

"My concern is personal; I am convinced that we are up against an outrageous act of persecution by a Federal agency."

The Parvin Foundation, which was founded in 1960, has concentrated mainly on projects in education and international affairs. It is now a substantial sponsor of international meetings of scholars, jurists and politicians under a program called Pacem in Terris Convocation.

Justice Douglas has traveled extensively in Europe and Latin America to support the program, which was named after the Papal encyclical of Pope John XXIII. Pacem in Terris can be translated from the Latin as "peace on earth."

The foundation also sponsors a fellowship program at Princeton University for students from underdeveloped countries and at one time sponsored a similar program at the University of California at Los Angeles.

It has also financed conferences in association with the Center for the Study of Democratic Institutions, and in 1963 it sponsored a literacy program for the government of President Juan Bosch in the Dominican Republic.

When Mr. Bosch was overthrown, the spon-

sorship of the program by the Parvin Foundation was ended.

Professor Neal said in a statement on Friday in discussing the future of the Parvin foundation:

"We expect to carry on and expand the foundation's programs, particularly in the area of small, high-level international conferences, along the lines Justice Douglas initiated.

"The concept of what he called 'private international relations' is an important one, and it often performs a great service in thawing channels frozen by the rigidities of formal diplomacy."

JUSTICE DOUGLAS RESIGNS BUT FROM WRONG BODY

(Mr. RARICK asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. RARICK. Mr. Speaker, many Americans were pleased with the announcement that Douglas had resigned—only to be disappointed on learning that it was from his tax-exempt sinecure and not the Supreme Court.

Douglas' interlocking activities with the Parvin Foundation and Center for the Study of Democratic Institutions are far more damaging to the Supreme Court than were Abe Fortas' indiscretions. Not only are Douglas' personal honor and integrity questioned, but every decision on which he cast a vote as a Justice of the Supreme Court is under suspicion.

Fortas took \$20,000 and paid it back—but it didn't satisfy ethics. Douglas' resignation from the tax-free foundation—even if he pays back his \$72,000 outside income—is wholly unacceptable.

The matter is now beyond Douglas' control. In order to salvage the essential honor of the High Court, he no longer has alternatives. He must resign at once. Continued evasion of the plain moral issues involved in his shocking misconduct can only further damage the Court, and prove more humiliating to Douglas.

Public confidence in the Court's decisions, already badly shaken, must not be permitted to disintegrate further.

Several news clippings follow:

[From the Washington (D.C.) Daily News, May 23, 1969]

JUSTICE DOUGLAS QUILTS PARVIN FOUNDATION JOB

LOS ANGELES, May 23.—Supreme Court Justice William O. Douglas, under fire for accepting \$12,000 a year as the only paid officer of a charitable foundation, has resigned that post, it was announced today.

The Albert Parvin Foundation said Mr. Douglas had indicated early in April that he wished to be relieved as president and board member but an appendicitis operation on the justice delayed a meeting of the board.

The foundation said the board accepted the resignation "with deep regret" at a meeting at Santa Barbara, Calif., on May 21.

Fred Warner Neal, professor of international relations and government at the colleges of the Claremont (Calif.) graduate school was appointed to succeed Mr. Douglas as president of the foundation, a Los Angeles-based philanthropy.

[From the Washington (D.C.) Evening Star, May 26, 1969]

TAX LAW ADVICE TO FUND DISCOUNTED BY DOUGLAS

(By Lyle Denniston)

Supreme Court Justice William O. Douglas today claimed that he "knew very little"

about the tax law problems of a private foundation he headed for nine years.

His statement, issued through the court's press office, was intended as a reply to published reports that he gave the Albert B. Parvin Foundation advice about its difficulties with the Internal Revenue Service.

Douglas has been under increasing criticism for his role as the only paid officer of the foundation. Partly because of that criticism, he resigned from the post last Wednesday.

Several members of Congress have linked the Douglas involvement with the foundation with a somewhat similar relationship that led to the resignation of Justice Abe Fortas from the Supreme Court.

The New York Times reported today that it has been given access to foundation files regarding a tax investigation, and that it had seen a letter by Douglas commenting on the tax inquiry.

"ALL RIGHT WITH HIM"

Douglas said through the court's press spokesman that he would not release any documents himself, that he had turned all records of the foundation over to its new president, and that it was "all right with him" whatever documents the foundation chose to make public.

The May 12 letter discussed in the Times article was alleged to have included suggestions to Albert Parvin about Parvin's financial ties to the foundation and about the tax difficulties that had resulted.

Douglas authorized the court's press officer, Banning E. Whittington, to tell reporters the following about these allegations:

"As far as the tax troubles are concerned, they had tax lawyers and it's up to them, it's their job. He (Douglas) knew very little about these tax troubles."

The foundation's new president, Fred Warner Neal, reached in California by telephone, told a reporter that "I assume that in no case did he (Douglas) ever" advise the foundation or Parvin about tax troubles.

But Neal said he did not know anything about a letter to Douglas discussing the tax difficulties. He said he had been told that Parvin had shown such a letter to the Times reporter but he insisted that he himself had not seen the letter.

Neal acknowledged that the IRS has been carrying on "some kind of investigation into the tax record" of the foundation but has taken no action.

The Times quoted Douglas as saying in the letter to Parvin that the IRS inquiry was a "manufactured case" and that "the strategy is to get me off the court. I do not propose to bend to any such pressure."

Internal Revenue Commissioner Randolph W. Thrower, in response to inquiries, said he is "confident that there is no real justification" for reports that the IRS inquiry of the foundation had "some political or other inappropriate motivation."

Thrower said the examination of the foundation's tax-exempt status "started several years ago" and has been going ahead "in an orderly way since that time."

He vowed to "make every effort to keep the decisional process completely insulated from political and emotional reactions that have been reflected in the press."

Saying he preferred not to discuss the case, Thrower concluded: "I have seen nothing to indicate any political motivation in the examination under the past administration, and give assurance that none exists within the IRS today."

Douglas' resignation last week from the foundation was interpreted as an indication that he does not intend to give up his court seat as Fortas had done.

The foundation, in announcing his resignation, said that it had been under consideration since April, and was postponed until last week only because Douglas had had an emergency operation on March 31.

The reason Douglas gave today for declin-

ing to release any material about the tax matter was that he had "completely divorced" himself from the foundation and had turned over all its records to Neal.

But Neal told a reporter that he personally regarded the May 12 letter as a personal matter from Douglas to Parvin.

The new foundation president said that Douglas had not, to Neal's knowledge, given the foundation advice on how to handle its finances. Those decisions, Neal said, had been made by a finance committee and Douglas was not a member of that committee.

Douglas received \$12,000 a year as foundation president since 1962. However, his association with the foundation goes back to 1960.

[From the Washington (D.C.) Evening Star, May 26, 1969]

PARVIN BOSS CALLS PROBE UNJUSTIFIED

LOS ANGELES.—The chairman of Parvin-Dohrmann Co., in the news because of a link to Supreme Court Justice William O. Douglas, criticized today a Securities and Exchange Commission investigation and told stockholders it was not justified.

Delbert Coleman said the investigation and the suspension twice of trading in the firm's stock on the American Stock Exchange have placed a "cloud" over the company and caused the value of its stock to drop severely.

Yet he said the hotel supplies company has cooperated fully with the SEC and conducted its own study of charges against it and is aware of no wrongdoing "of any consequence."

"I am completely confident that this situation will not change, no matter how long the investigation continues," Coleman said. He said the SEC staff may be "contradicting their own precepts" by having "thrown confusion into the market for our stock."

PLANS CHANGES

He said the firm will soon announce a change in its corporate name "to break more completely with the past and to improve our corporate image."

Parvin-Dohrmann, which owns three Las Vegas, Nev., casinos, jumped into prominence because of its ties to the Albert Parvin Foundation, headed by Justice Douglas until his resignation announced Friday.

The Parvin Foundation recently sold its \$2 million stock holdings in Parvin-Dohrmann.

The Nevada Gaming Control Board launched an investigation of Parvin-Dohrmann after Coleman bought 300,000 of its shares and transferred nearly half of them to a group of 21 "associates," including FOF Proprietary Funds Ltd., based in Geneva.

FOF also had interests in gambling casinos in the Bahamas and this is prohibited by Nevada law. But FOF sold its interest in Parvin-Dohrmann at the gaming board's insistence.

Later it was disclosed Parvin-Dohrmann holds securities readily convertible to nearly 10 percent of the outstanding shares of Resorts International, the same Bahamian casino operator in which the Swiss-based mutual fund held an interest.

Besides the SEC, American Stock Exchange and Nevada investigations, the baseball commissioner is investigating stock holdings in the firm by top officials of the Atlanta Braves and the Oakland Athletics.

Parvin-Dohrmann stock, which had soared earlier this year to 14 1/2, closed at 8 3/4 Friday, off 7 1/4.

"I have no reason to doubt that the market value of our stock, at its highest, fairly reflects the financial condition of the company and its earnings prospects," Coleman said, adding that the firm recorded record earnings of \$1.02 per share in the first quarter of this year.

Mr. HALEY, Mr. Speaker, will the gentleman yield?

Mr. RARICK. I most certainly shall yield to the gentleman from Florida.

Mr. HALEY. I thoroughly agree with the gentleman in the well of the House when he states that Justice Douglas has resigned from the wrong position. He should go a little further.

Mr. RARICK. I thank the gentleman from Florida.

ETHICS IN GOVERNMENT

(Mr. MACGREGOR asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. MACGREGOR. Mr. Speaker, a week ago Saturday, I sent the following letter to the Honorable Earl Warren, Chief Justice of the United States, and to Mr. William T. Gossett, president of the American Bar Association:

HOUSE OF REPRESENTATIVES,
Washington, D.C., May 17, 1969.

Re ethics in Government.

HON. EARL WARREN,
Chief Justice of the United States,
Supreme Court of the United States,
Washington, D.C.

MR. WILLIAM T. GOSSETT,
President, American Bar Association,
Chicago, Ill.

GENTLEMEN: The Library of Congress advises me that the following Canons of Judicial Ethics of the American Bar Association were adopted July 9, 1924, and have not since been revised:

"4. *Avoidance of Impropriety.* A judge's official conduct should be free from impropriety and the appearance of impropriety; he should avoid infractions of law; and his personal behavior, not only upon the Bench and in the performance of judicial duties, but also in his everyday life, should be beyond reproach."

"24. *Inconsistent Obligations.* A judge should not accept inconsistent duties; nor incur obligations, pecuniary or otherwise, which will in any way interfere or appear to interfere with his devotion to the expeditious and proper administration of his official functions."

"31. *Private Law Practice.* In many states the practice of law by one holding judicial position is forbidden. In superior courts of general jurisdiction, it should never be permitted."

"If forbidden to practice law, he should refrain from accepting any professional employment while in office."

In your judgment, are these standards of conduct, adopted nearly 45 years ago, sufficiently precise and adequate in scope to effectively deal with the problems of today?

What investigatory and disciplinary authority exists within the Judicial Conference of the United States or the American Bar Association to determine if federal judges are violating the CANONS and to require adherence to their provisions?

In the New York Times of May 15th Mr. James Reston cites the Fortas controversy as one of several matters which has "dramatized one of the deepest problems and anxieties of our time."

"This is the crisis of belief."

"Where are sincerity and integrity? Where are honesty and plain speaking in the courts, the legislatures, the executive and the press?"

After referring to some of the activities of Associate Justice of the Supreme Court William O. Douglas, Richard Wilson writes on May 15th in the Minneapolis Tribune:

"To what extent can and should Supreme Court justices become involved in activities external to the high court?"

"If Fortas resigns in expiation of his bad judgment in accepting and then returning

a \$20,000 grant, and justice is therefore supposed to have been done, nothing will have been gained from the incident. The issue is what Fortas did, all right, but several of his brethren in the judiciary could well afford to spend a few sleepless nights wondering if what they have been doing equally offends the principle of detached noninvolvement."

On May 15th I introduced the following two bills in the House of Representatives:

Making it a federal criminal offense for anyone to pay or to offer, and for any federal judge, Member of Congress, or policy-making official in the executive branch to receive, any sum greater than \$500 for a speech, published work, professional service, personal appearance, or otherwise by way of honorarium.

Requiring the quarterly disclosure to the Comptroller General for printing by the U.S. Government of the source and amount of all income received by federal judges, Members of Congress, or policy-making officials in the executive branch.

I enclose copies of my remarks made in the House on May 14th and May 15th so that you might better understand the reasons why I feel each of these bills must be enacted.

On the basis of the information which I now have, I feel most strongly that the Canons of Judicial Ethics are imprecise and inadequate, and that the machinery to insure compliance with these standards of conduct is ineffective. I solicit your comments, and should you agree with me in whole or in part, I would welcome your suggestions as to how these matters might be remedied.

I would also deeply appreciate your reaction to the legislation referred to above which I introduced earlier this week.

Best regards,
Sincerely,

CLARK MACGREGOR,
Member of Congress.

While neither the Chief Justice nor Mr. Gossett has to date favored me with a reply, I am pleased to read in newspaper articles that both the Chief Justice and the American Bar Association have agreed to reexamine and clarify the ethical patterns of nonjudicial activities of U.S. judges.

While forward progress on the part of the Judicial Conference and the American Bar Association is both encouraging and necessary, it does not lessen the need to pass the bills referred to in my letter. I am hopeful that the House Judiciary Committee will promptly schedule hearings on this subject. The aforementioned newspaper articles follow:

[From the New York Times, May 23, 1969]

WARREN SEEKING CODE OF ETHICS—JUDGES WILL MEET TOMORROW ON PROPOSED REGULATIONS FOR THE FEDERAL BENCH

(By Fred P. Graham)

WASHINGTON, May 22.—Chief Justice Earl Warren has called a meeting for Saturday of a committee of top Federal judges to begin drafting a code of ethics and financial reporting rules for all Federal judges.

Mr. Warren hopes to have the new regulations formally adopted by the policy-making arm of the Federal judiciary, the Judicial Conference of the United States, before he retires next month.

If so, they will become the first formal standards of conduct ever to be adopted by the Federal judiciary.

The move marks the first concrete sign that Chief Justice Warren and the Federal judiciary feel an obligation to set their house in order in the wake of the recent Fortas controversy, even before the new chief justice takes office.

It sets the stage for a possible conflict with

Congress over who should police the courts and what the standards of conduct for Federal judges should be.

The broad outlines of the proposed rules are already under study. The proposals, if adopted, would require annual reporting of income in extensive detail, but the reports would be kept secret within the judicial branch.

The rules would also prohibit outside employment other than teaching, writing and lecturing on general legal subjects, and compensation for these activities could not be out of line with services rendered.

If these standards are adopted, the result would be to rule out such involvements as former Supreme Court Justice Abe Fortas's receipt of \$20,000 (which he later returned) for advice to family foundation of Louis E. Wolfson.

They would also apparently preclude Justice William O. Douglas from continuing to receive \$12,000 a year as president of the Parvin Foundation.

According to sources here, Chief Justice Warren moved to create a self-imposed judicial code of ethical conduct when it appeared that Congress might react to Justice Fortas's resignation under fire by imposing standards of its own making on the judiciary.

On Friday, May 16, the day after Mr. Fortas's resignation was announced, Mr. Warren called this Saturday's meeting of the Judicial Conference's 11-member committee on court administration. It will draft the proposed standards over this weekend, and Mr. Warren tentatively plans to call a meeting next month of the 25-member Judicial Conference to adopt the rules.

MAKE-UP OF CONFERENCE

The Judicial Conference, a body established by Congress, is headed by the Chief Justice and is composed also of the chief judges of each of the Federal Courts of Appeals and the chief judges of two special Federal courts, plus one district judge from each of the 11 judicial circuits.

It is understood that Mr. Warren hopes to have the new standards formulated before he leaves office and that he does not intend to involve Chief Justice-designate Warren E. Burger in the matter. Judge Burger, a member of the Court of Appeals for the District of Columbia, is not a member of the Judicial Conference.

Judge Burger may be affected, however, by any new code that is adopted in the 11th hour of the Warren regime.

It was disclosed today by an official of the Mayo Clinic in Rochester, Minn., that Judge Burger has been receiving a \$2,000 annual honorarium since 1959 as a member of the Board of Trustees of the clinic. Each of the six public members of the clinic's board, including Judge Burger and former President Lyndon B. Johnson, receives the same salary.

Judge Burger, in a statement issued at his home, said he did not know whether he would remain on the board in view of his nomination. He listed his total payments at \$3,500.

It is understood that Chief Justice Warren hopes to head off Congressional action on ethics in the judiciary by adopting a reporting system similar to the one being used in the Senate, where most of the financial items that are reported are kept secret and only large lecture fees and contributions are made public.

The rules now being contemplated would require detailed annual reporting by all judges—including Supreme Court Justices—of gross income, honorariums, gifts, large debts and assets, trust relationships, shareholdings in closely held corporations, and offices in organizations. These reports would be held in secret by the administrative office of the United States courts, however.

The proposed rules contemplate a code of ethics that would forbid conduct that would

create an appearance of impropriety and would prohibit outside employment except for teaching at established institutions, writing assignments and lectures on general legal subjects.

They would also forbid such embarrassments as political activities, informal contacts with litigants and the receipt of gifts from potential litigants. The committee and the full Judicial Conference have the authority to adopt any standard or to reject the idea of a standard, but the ideas being considered suggest that Mr. Warren, at least, is prepared to accept rather strict self-regulation by judges.

The enforcement of any rules propounded by the Judicial Conference would pose legal and constitutional problems. The status does not specifically give the Judicial Conference the power to set standards for judges, and the Constitution does not suggest that judges could be punished for disobeying any such standards.

Federal judges are theoretically subject to the canons of judicial ethics of the American Bar Association, but these serve only as guidelines for conduct because the bar association has no machinery for enforcing them against United States judges.

The members of the committee that is scheduled to meet at the Supreme Court at 10 A.M. Saturday are: Robert A. Ainsworth Jr. of New Orleans; John Biggs Jr. of Wilmington, Del.; James R. Browning of San Francisco; J. Edward Lumbard of New York and J. Skelly Wright of the District of Columbia, all Circuit Judges.

Also, District Judges Bailey Brown of Memphis, A. Sherman Christensen of Salt Lake City, Bernard M. Decker of Chicago, Elmo B. Hunter of Kansas City, Mo.; Edward T. Gignoux of Portland, Me., and Edwin M. Stanley of Greensboro, N.C.

[From the Washington (D.C.) Sunday Star, May 25, 1969]

U.S. JUDGES WEIGHING ETHICS CODE (By Lyle Denniston)

A committee of 11 federal judges has made a tentative decision to draft a "written code of standards" to guide judges on their out-of-court ethics.

However, it now appears that the code cannot be finished and put into effect in time to head off efforts in Congress to write a new law imposing new ethical strictures on U.S. judges.

Stirred by the financial relationships that led Justice Abe Fortas to resign from the Supreme Court and Justice William O. Douglas to give up a nine-year tie with a private foundation, several members of Congress are intent on getting prompt action on disclosure legislation.

The demand for such legislation and the Fortas controversy led Chief Justice Earl Warren to summon the 11-member judges' committee here yesterday to consider judicial ethics.

While the judges now seem unable to head off the legislation by first acting on their own ethical code, they nevertheless will attempt to influence what Congress does.

The panel is already at work on recommendations that the U.S. Judicial Conference could make about a series of pending bills to force judges to disclose their financial status.

After discussing judicial ethics for more than five hours yesterday, the panel and Warren agreed to summon the Judicial Conference into a special session here June 10.

Then, the 11-member committee—a standing Judicial Conference committee on court administration—will suggest a stand for the conference to take on the disclosure bills.

In addition, the committee will present "an interim report as to what we are trying to do on a written code of standards," according to the panel chairman, Circuit Judge Robert A. Ainsworth Jr. of New Orleans, La.

Ainsworth said his panel did not expect to have "anything definite" on either the disclosure legislation or the interim report about standards, until June 9, the day before the conference meeting. The committee will meet again that day, and put together its conference report he said.

CODE TO TAKE TIME

Preparation of the code of standards, the judge said, is expected to take considerably longer than drafting proposed reactions to the disclosure bills.

This may mean that the code could not be ready for presentation to the full conference until after Chief Justice Warren has retired.

This could hand the sensitive issue over to the conference after the next chief justice assumes its leadership. President Nixon has nominated Federal Judge Warren E. Burger to be chief justice; with that job goes the top post in the conference. He might be confirmed by early July.

Conceivably, the standards code could be an early test of Burger's federal judiciary leadership.

When such a code is written, it presumably will suggest to judges what outside activities they should agree to do and how much they ought to accept in fees or reimbursed expenses. It might also include some suggestions for financial disclosure.

The conference apparently has been uncertain about its power to tell judges what ethical norms should guide them. Over the years, the group has written a few rules of conduct, but these come nowhere near to specifying the full range of noncourt activities considered acceptable.

Federal judges are named to their posts for life. As a result, a strong sense of personal independence frequently develops.

If some judges are likely to react negatively to a full code of standards written by the conference, it is even more likely that they would object to having Congress draft mandatory controls on judicial behavior.

Thus, it is by no means certain that the June 10 conference will endorse any of the pending disclosure bills.

Even as the judges' committee and Warren met, the American Bar Association's top command was taking cautious and hesitant steps towards a possible inquiry into Justice Douglas' ethics.

Without taking a vote, the key ABA officers decided to permit what was described as a "routine referral" of Douglas' case to an eight-member ABA committee on professional ethics.

However, this does not necessarily mean there will be an investigation at all, or even a quick inquiry like the one which last week led to a condemnation of Justice Fortas for violating the ABA judicial ethics code.

Douglas' resignation Wednesday from his \$12,000-a-year post as president of the Albert B. Parvin Foundation has stiffened the resistance of some ABA officials to a probe of his ethics.

COMMITTEE ROLE

Within the ethics committee itself, some members object to investigations of past conduct of individual judges or lawyers. They view their function as advisory only—setting down standards to guide the bench and bar, but not undertaking to enforce them.

Despite the strong demand for a probe of Douglas by Sen. John J. Williams, R-Del., some committee members were described as unwilling to yield.

Still, the officers decided to make an informal referral of Williams' request to the ethics panel. One reason they did so, apparently, was that ABA President William T. Gossett of Detroit had already publicly promised to make such a referral.

Yesterday's action was simply a decision not to interfere with Gossett's intention.

[From the Washington Post, May 25, 1969]
FEDERAL JUDGES MEET JUNE 10 ON FINANCIAL
DISCLOSURE RULE

(By John P. MacKenzie)

In an apparent attempt to clean its own house without help from the bar or Congress, the Federal judiciary yesterday scheduled a top-level meeting to consider rules for financial disclosure and non-judicial activities of judges.

Chief Justice Earl Warren called a meeting June 10 of the United States Judicial Conference, policy and administrative arm of the Federal judiciary, at the Supreme Court. The Conference includes the chief judges of the 11 Federal circuits and selected lower-court judges.

The meeting was recommended by the Conference's 11-judge Committee on Court Administration, which itself had been summoned to a special meeting yesterday in the wake of the resignation of Justice Abe Fortas and the continuing controversy over outside activities of Justice William O. Douglas.

Committee chairman Robert A. Ainsworth Jr., a member of the Fifth U.S. Circuit Court of Appeals, said in a three-sentence statement that by June 10 the Committee will have prepared recommendations for the Conference.

The Conference action had all the earmarks of a crash program to impose new self-regulation on judges and restore confidence in the Federal judicial system before the retirement of Warren at the close of the current Supreme Court term next month after final opinions are announced in the four dozen cases now pending.

If the Conference should delay in arriving at a self-regulation formula, the court term could be stretched to allow Warren to remain on the bench until the Conference acts. This in turn could delay the nomination and confirmation of a successor to Fortas, a process which President Nixon has indicated will not begin until Judge Warren E. Burger is confirmed as the new Chief Justice.

The further possibility arose that a sweeping code of judicial ethics could embarrass Burger and the Nixon Administration especially if it condemns outside income from foundations and sharply curtails extra-judicial service on boards of outside organizations.

Burger has received \$2000 in compensation from the Mayo Foundation in Rochester, Minn., for the past three years. He is reported to deny any trace of impropriety and to be considering dropping the Foundation and many other outside activities upon confirmation.

But Burger also is reported strongly opposed to resigning under any conditions suggesting that propriety was compromised by his service on the Foundation's Board.

Compared with the outcry against the foundation connections of Fortas and Douglas, the relationship between the Mayo Foundation and Burger has drawn only mild criticism. Burger, in fact, has picked up strong defense from influential members of Congress of both parties.

Nevertheless the question of the drafters of ethical codes will be the difficult one of where to draw the line—and whether to treat some foundations and some fees differently from others.

Fortas entered into a lifetime agreement with the Wolfson Family Foundation for a \$20,000 annual fee in return for social research, but returned the first installment after Wolfson was indicted for stock fraud.

Douglas, whose resignation as president of the Albert Parvin Foundation was announced Friday, drew \$12,000 a year for nine years as he directed programs aimed at fostering international goodwill among students. Critics noted that the Foundation drew income from a mortgage on Nevada gambling casinos.

Douglas' resignation did not defer the

American Bar Association's board of governors yesterday from upholding the action of President William T. Gossett in referring the Douglas matter to the ABA's Professional Ethics Committee.

That Committee stirred controversy within the ABA this week by announcing that in its opinion Fortas "clearly violated" ethical rules by actions he admitted in his May 14 letter to Warren explaining his resignation.

Critics said the Committee's report was badly drafted and departed from past practice under which the Committee confined itself to rendering advisory opinions on current questions, not issuing pronouncements on past conduct by lawyers and judges.

The Committee, which ordinarily does not conduct its own investigations, defended its action by saying that Fortas himself had supplied facts sufficient to justify the conclusion that at least the Wolfson-Fortas transaction had the appearance of impropriety.

Some bar officials suggested that the Ethics Committee might balk at passing judgment on a sitting Supreme Court Justice partly on grounds that insufficient facts were on record.

However Douglas, like Fortas, wrote a letter to the Chief Justice defending his foundation work.

[From the Washington (D.C.) Post,
May 25, 1969]

FORTAS CASE MAY STIR QUESTIONS ON HILL'S
DISCLOSURE RULES

(By William Greider)

While Senators and House members have waxed indignant over the subject of judicial purity, the issue promises to raise embarrassing questions about their own rules for disclosing private financial interests.

In the wake of the Fortas affair, about a dozen bills have been introduced on both sides of the Capitol to require some form of financial disclosure for Federal judges, including the Supreme Court. Most of these measures go substantially beyond what the House and Senate now require of themselves. If Congress does take some action on judicial ethics, this double standard is going to be part of the debate.

There currently are no rules requiring Federal judges to report their off-the-bench earnings.

It was a choice coincidence that, at the same time they were condemning impropriety across the street at the Supreme Court building, members of Congress were filing their first statements on their own private financial interests. The House and Senate rules of ethics were requiring limited disclosures, adopted by the last Congress, in the wake of involuntary financial disclosures about Sen. Thomas Dodd and Rep. Adam Clayton Powell.

But if Justice Abe Fortas had been a Senator, he still would not have had to report anything to the public about the \$20,000 he received from the family foundation of Louis Wolfson, now in Federal prison for stock fraud. If Fortas had been serving in the House of Representatives, his report might have said simply, "fee—Wolfson Family Foundation," without any public mention of the \$20,000 figure or the purpose.

This year's Senate reports revealed that many Senators earn impressive fees as after-dinner speakers. The House reports showed, among other things, that one in every five members has a direct interest in the banking industry. But the disclosure rules are riddled with exceptions—the details on earnings and investments that are not made public.

"HYPOCRISY" CHARGED

Sen. Clifford P. Case (R-N.J.), a perennial advocate of full public disclosure, called the Senate reporting this spring "an exercise in hypocrisy." Rep. Philip E. Ruppe (R-Mich.), who himself reported a portfolio of 100

stocks, said the House requirements are "a sham and a facade. A listing of holdings without accompanying financial statements is next to meaningless. Loopholes under the present reporting procedure are legion."

The ambiguities in the House reporting system were illustrated by the fact that 10 members revised their reports after the April 30 deadline, adding private interests that they didn't report the first time around. Several explained that the disclosure rules weren't required by the rules but they were making them anyway.

The group included Rep. J. Irving Whalley (R-Pa.), whose original report said "none." He added later that he is president of the Citizens National Bank in his hometown of Windber, Pa. Seven other Representatives belatedly reported that they own bank stocks, including four who serve as bank directors. Among other exceptions, the rules do not require a House member to report banking interests if his investment is in a state-regulated bank or is less than \$5000.

On the Senate side, the public reports cover gifts and honorariums for speeches or articles, but details on the rest of a Senator's financial interests, including any fees he might receive, are placed in a sealed envelope and sent to the Comptroller General. He must keep the envelope sealed unless the Senate Ethics Committee asks to see it.

Thus, the sticky point for Congress is that in order to design a disclosure rule for judges that would cover something like the Fortas fee, it will have to be tougher than its own standards.

Several Senators and House members, who have advocated full public disclosure for their colleagues appreciate this point and intend to make the most of it when the issue of judicial disclosure comes up.

ACTION EXPECTED

According to current assessments, the outlook for action on judicial disclosure is good. Congressional interest could be dampened if the U.S. Judicial Conference adopts its own set of rules requiring financial reports of Federal judges. However, if the judges adopt a weak requirement that does not involve public disclosure, that probably won't satisfy Congressional critics.

One measure, introduced by Sen. Robert P. Griffin (R-Mich.), takes the present Senate disclosure rules and applies them to the Federal judiciary—with one important addition. Griffin's bill, introduced by several House members, too, would require a judge to report any fee or compensation for services other than his work on the bench. That would have caught Fortas' fee and is more than the Senators must report themselves.

"If Congress does pass the legislation which I have introduced," Griffin said, "I'm confident that Congress will take a new look at its own standards—and I would favor complete disclosure."

Others are coupling judicial ethics with Congressional ethics in a more direct manner. In the House, Rep. Clark MacGregor (R-Minn.) is sponsoring a bill that flatly requires complete public disclosure for all three branches of Government—judges, Congressmen and the top executive officers.

Sen. Case, with 10 cosponsors from both parties, intends to amend his annual bill for complete Congressional disclosure to include the judiciary. Case, who makes annual voluntary disclosures of his own financial interests, has been introducing essentially the same bill since 1958 without success, but he does not consider it a lost cause.

Last year, when the Senate was adopting its narrow disclosure rules, Case offered his amendment for full public disclosure and it came within four votes of adoption, losing 40 to 44. Among those voting against it were some of the Senators who were quick to criticize Fortas—Strom Thurmond of South

Carolina, Carl Curtis of Nebraska, Paul Fanlin of Arizona.

The action on judicial disclosure is likely to begin in the Senate Judiciary Committee and one of Case's cosponsors is Sen. Joseph D. Tydings (D-Md.), chairman of the subcommittee on improvements in the judiciary. Tydings has sponsored his own mild version of financial disclosure for judges, but has indicated he may be willing to go with something stronger.

Sen. Sam Ervin (D-N.C.), chairman of the Judiciary subcommittee on the separation of powers, intends to approach the question of off-the-bench activities by judges from a different and broader angle. Ervin has raised questions about a whole range of extrajudicial activities by Supreme Court Justices in which compensation is necessarily involved—advising Presidents (Fortas), serving on fact-finding commissions (Chief Justice Earl Warren), or plunging into public controversies (Justice William O. Douglas and his conservation crusades).

Ervin's inquiry will probably also look at the questions of outside financial interests. He originally planned hearings for mid-June but is postponing them so that the study will not become a reshuffle of the Fortas affair.

House members are, by no means, burning to amend their own rules and go to a full public confession of where they earn off-the-job income. On the contrary, the first year's experience with reporting produced a lot of cloakroom grumbling to the effect that they have gone too far already. It took years of persuasion plus the Dodd and Powell controversies before the House would take the first, limited step. It is hardly in a mood to rush on to new reforms.

However, according to Rep. MacGregor and others, the ambiguities of this year's reporting increased the support among his colleagues for more complete reporting.

"The source of a lot of unhappiness," MacGregor said, "was that we had taken only a halfway step. Are you clean or unclear? I think there is a lot of feeling that we would be better off with absolute disclosure."

MacGregor said some are also unhappy because they had to report their private interests while others had investments that fall outside the rules and so reported "none."

There are some important differences between a Federal judge and a Congressman that might be used to justify different rules—particularly the fact that Congressmen must face the electorate regularly while judges are insulated from public opinion.

In addition, Congress has found it possible in the past to live with double standards. For example, it requires Executive Branch officers to sell their private investments to avoid a conflict of interest, but hardly stirs at the revelation that 13 members of the House Banking and Currency Committee have investments in the banking industry.

The supporters of full disclosure believe that, if the public considers the two issues of Congressional and judicial ethics as one, it will be hard for members to turn down reforms.

"I just can't believe," said MacGregor, "that we'll make the judiciary pure as the driven snow, but won't do it for ourselves."

U.S. JUDICIAL PANEL CALLED TO WEIGH CODE OF ETHICS—WARREN SCHEDULES JUNE 10 MEETING AFTER SECRET SESSION TO DRAFT PROPOSALS—BAR TO RULE ON FEES TO DOUGLAS

(By Walter Rugaber)

WASHINGTON, May 24.—The Judicial Conference of the United States will meet next month to consider a code of ethics and financial disclosure regulations for all Federal judges.

The meeting was called today by Chief Jus-

tice Earl Warren after an 11-member committee of the Judicial Conference met secretly at the Supreme Court to discuss "nonjudicial activities" by Federal judges.

The Chief Justice, acting on the recommendation of the Committee on Court Administration, scheduled a gathering of the full policy-making body of the Federal judiciary for June 10.

The move toward the first formal standards of conduct established by the Federal bench came in reaction to the outside dealings that led to the resignation of Justice Abe Fortas.

The effort by the judiciary to set its own house in order came amid continuing indications that Congress might impose its own standards on the courts as a result of recent disclosures.

A statement on today's session by the committee on administration gave no details of the meeting and no details of the code that the panel may have worked out.

"... the committee met and considered several matters relating to nonjudicial activities of United States judges and possible financial disclosure rules for the Federal judiciary," the statement said, adding:

"The committee recommended that a special meeting of the Judicial Conference be called to consider recommendations the committee is preparing and will submit to the Conference."

Court officials would not say whether the proposals were completed at today's meeting or whether other sessions would be required in advance of the June 10 meeting.

BAR TO ACT ON DOUGLAS

Also today, the American Bar Association's Board of Governors voted to forward to its committee on ethics a Congressional question on the propriety of Justice William O. Douglas's association with the Albert Parvin Foundation.

Senator John J. Williams, Republican of Delaware, had asked the bar association for an opinion about Justice Douglas's \$12,000 annual salary as president of the foundation. The group's decision to pass along the Senator's inquiry was not considered as indicating that the committee would rule the justice's conduct unethical as it did in Mr. Fortas's case.

Justice Fortas resigned from the Court amid a controversy over his acceptance of \$20,000—which he later returned—from the family foundation of Louis E. Wolfson, the imprisoned financier.

Yesterday, the Parvin foundation announced the resignation of Justice Douglas from its presidency.

The administration committee of the Judicial Conference assembled today behind barriers at the Supreme Court Building and the fact that reporters were barred even from the corridor off which the meeting occurred was symbolic of its sensitivity.

The full Judicial Conference, a body established by Congress, is chaired by the Chief Justice and also includes the chief judges of the Court of Appeals, the chief judges of two special Federal courts, and a District judge from each of the 11 circuits.

It has been reported that Chief Justice Warren would like to forestall Congressional moves in the judicial area by setting up a code of ethics similar to the one established by the Senate.

Under that code, most of the financial information submitted by Senators is kept secret and only large lecture fees and contributions are disclosed publicly.

[From the Washington Sunday Star, May 25, 1969]

JUDGES CAN PUT THEIR OWN HOUSE IN ORDER

Canon 4 of the American Bar Association's Canons of Judicial Ethics declares: "A judge's official conduct should be free from impropriety and the appearance of impropriety... and his personal behavior, not only upon the Bench and in the performance of judicial

duties, but also in his everyday life, should be beyond reproach."

There are other canons, but canon 4 lies at the heart of the standard of conduct which the ABA believes should govern the conduct and behavior of judges, and this certainly applies with particular force to the members of the Supreme Court. If there has been a tendency in the past to look the other way as far as judicial observance of the canons is concerned, and we think there has been, a change for the better appears to be setting in.

At the request of Senator Williams, Delaware Republican, the ethics committee of the ABA measured the conduct of former Justice Abe Fortas against the yardstick of the ethical canons. The committee's findings amounted to a stern rebuke to Fortas. "It is our opinion," the committee reported, "that the conduct of Mr. Fortas, while a Supreme Court justice as described in his statement of the facts, was clearly contrary to the canons of judicial ethics, even if he did not and never intended to intercede or take part in any legal administrative or judicial matters affecting Mr. (Louis) Wolfson."

In other words, the committee thought that Fortas, on the basis of his own explanation, taken at face value, was clearly guilty of unethical judicial conduct.

The committee then took an unusual additional step. Noting that Fortas had resigned from the court, it said it had decided to go ahead with its opinion so "the ethical issues shall be made clear for the legal profession, for members of the judiciary and for the public."

This brings us to the matter of Supreme Court Justice Douglas and his association with the Albert Parvin Foundation.

It was announced on Friday that Justice Douglas had resigned as president and board member of this foundation, something he should have done long ago. Shortly before the announcement of the resignation, Senator Williams had asked that the ABA also look into the link between Justice Douglas and the Parvin Foundation. The request presumably is now under consideration. What will be done in the light of Justice Douglas' resignation from the foundation is uncertain. It is our view, however, that the facts should be studied and a finding made. As in the Fortas case, the ethical issues involved in the Douglas matter should be "made clear for the legal profession, for members of the judiciary and for the public."

The factual situations, of course, are not identical. Wolfson was under criminal investigation when Fortas received a \$20,000 fee from the Wolfson Family Foundation. This was later returned, after Wolfson had been convicted of a criminal offense. Fortas insisted he was not guilty of wrongdoing. But in his letter to Chief Justice Warren he conceded that Wolfson, while Fortas was on the court, had talked to him about his troubles.

There is no suggestion that Douglas did anything wrong in behalf of anyone connected with the Parvin Foundation. What is suggested, and what seems to be the fact, is that the foundation until quite recently was supported in part by revenues from gambling joints in Las Vegas, that since 1962 it paid about \$72,000 to Justice Douglas as the only compensated official of the foundation, and that Douglas rendered rather little in the way of services in return for this money.

Furthermore, it is hardly conceivable that Justice Douglas, as head of the foundation, was not aware of the gambling connection and that he did not know that some of the foundation's sponsors were having their problems with the government.

If he was not aware of these things he should have been. And while we do not consider Representative Gross, Republican of Iowa, a model of self-restraint, we think he was right when he told his colleagues last week: "There is too much similarity between the Fortas and Douglas cases to be sheer coincidence. If Fortas was guilty of gross mis-

conduct, which he most certainly was, Justice Douglas is equally guilty." He went on, however, to say: "I again urge most strongly that the Committee on the Judiciary begin an investigation and I suggest that the committee seek the assistance of the Justice Department and the FBI in carrying it out."

Unless there is some serious intent to begin impeachment proceedings against Justice Douglas and nothing of this sort has been proposed, an investigation by the House Judiciary Committee would be pointless and possibly even harmful. As far as the ethics of the matter are concerned, a finding by the ABA committee would serve much the same purpose without, at the same time, involving Congress in what could be an ugly clash with the judicial branch.

Even assuming that the ethics committee makes a finding in the Douglas case, however, this will not be enough. Something more is needed to re-establish the reputation of our highest court and to fortify that public confidence in its probity which is indispensable to its successful operation.

There is, of course, the remedy of impeachment. But this, as the record shows, is not very satisfactory, except perhaps in the most extreme cases. Another possibility lies in legislation. Congress might require full disclosure of outside income by federal judges. This could help. Senator Tydings has submitted a bill upon which hearings may be held next month. It does not apply to Supreme Court justices, and that is a defect which needs correction. But the bill's basic approach—creation of a commission of judges to investigate complaints, with provision for subsequent procedures looking toward removal in the case of complaints which appear to be well founded—has merit.

There is no good reason under the sun, however, why the problem of what to do about errant judges is not something that can be and should be handled within its own ranks by the federal judiciary.

Responding to a call by Chief Justice Warren, a committee of 11 federal judges assembled here yesterday to study the feasibility of promulgating ethical rules or guidelines which would be applicable to the men and women who preside in our federal courts. We see no reason why this cannot be done, and if an ethical code should be drafted the machinery for enforcement is readily available in the Judicial Conference of the United States.

This conference consists of the Chief Justice and the senior federal circuit judges. Not long ago, after some embarrassing disclosures, the Judicial Conference decreed that federal judges must not serve as bank directors. If the conference can do this, why can it not also forbid federal judges to accept money for any non-judicial work? Or, if this might be too harsh, to spell out the conditions and circumstances under which judges can be paid for extra-curricular activities?

It may be argued that the Judicial Conference would lack the authority to enforce such a rule. We doubt that there is much merit in this, for any judge would be most reluctant to violate a clearly-defined rule that is backed by the moral authority of the conference. In the unlikely event that such a non-conformer should emerge, he might have to be dealt with by other means. Meanwhile, it seems to us that there is a great deal to be said for encouraging the federal judiciary to put its own house in order.

CANAL ZONE AFL-CIO UNIONS SUPPORT PANAMA CANAL MODERNIZATION

The SPEAKER pro tempore (Mr. WRIGHT). Under a previous order of the House, the gentleman from Pennsylvania, Mr. Flood, is recognized for 30 minutes.

Mr. FLOOD. Mr. Speaker, the inter-

oceanic canal question has been under periodic consideration by our Government since the end of World War II. Many improvements have been made in the Panama Canal but they have not been of basic character either as to increase of capacity or for improvement of operations.

During fiscal year 1968 the total number of transits was 15,511. The maximum capacity of the existing canal is about 26,000 vessels and additional capacity will be required around 1985.

In 1939 the Congress, without adequate investigation, authorized the construction of a third set of locks that was suspended in May 1942, which effort involved a total expenditure of \$76,357,405, mostly on enormous lock site excavations at Gatun and Miraflores that are still usable. The current program for enlargement of Gaillard Cut is scheduled for completion in 1970 at an estimated cost of \$81,257,097. These two projects together, totaling more than \$157 million, represent a substantial commitment by our Government for the major modernization of the existing Panama Canal.

Experience over many years of operation has conclusively established that what is needed in such a program is: First, a two-way ship channel in the summit level; and second, ample and logically arranged locks at both ends of the canal. The two-way ship channel will be provided when the enlargement of Gaillard Cut is completed. The proper lock capacity and arrangement will be supplied under the Terminal Lake-third locks plan. The resulting capacity would be a minimum of 39,000 vessels, which would be sufficient for many years to come and, most significantly, would not require a new treaty with Panama.

To meet the resulting situation, bills have been introduced in both the House and Senate for the Panama Canal Modernization Act.

On May 6, 1969, the Panama Canal Subcommittee of the Committee on Merchant Marine and Fisheries held hearings at Balboa when the Canal Zone Joint Labor Committee submitted a prepared statement expressing its views on the subject of a "new sea level canal versus modernization plan". It strongly supported H.R. 3792, 91st Congress, as providing "the best operational canal at least possible cost for the next 75 years or more."

It is noted that the Canal Zone Labor Committee is composed of the officers and members of the National Maritime Union; the Masters, Mates & Pilots Association; and the Central Labor Union and Metal Trades Council, AFL-CIO. The members of these bodies are not impractical theorists with predetermined objectives, but well-informed persons with long experience in the maintenance, operation, sanitation, and protection of the Panama Canal. They know its problems at first hand, cannot be hoodwinked by clever propaganda as regards the canal, however plausible, and can visualize realistically the problems of a so-called sea level canal.

Mr. Speaker, in order that the Congress and the Nation may be adequately informed in the premises, I quote major excerpts from the indicated AFL-CIO

statement and the full text of H.R. 3792 as follows:

STATEMENT OF CANAL ZONE JOINT LABOR COMMITTEE PRESENTED TO THE HOUSE MERCHANT MARINE AND FISHERIES SUBCOMMITTEE ON THE PANAMA CANAL, MAY 6, 1969, BALBOA, C.Z.

Madam Chairman and members of the committee: Thank you for affording us an opportunity to meet and discuss with you and your committee matters which are of vital concern to all employees of Federal agencies on the canal zone. The members of our group here today represent the majority of the employees, both citizens and non-U.S. citizens employed by the Panama Canal Company-Government, and the U.S. military agencies in the Panama Canal Zone.

The Canal Zone Joint Labor Committee, composed of the officers and members of the National Maritime Union, the master, mates and pilots association, and the Central Labor Union and Metal Trades Council, AFL-CIO, is extremely pleased to welcome you and the members of the Panama Canal subcommittee back to the canal zone.

Madam Chairman, it is our unanimous desire to offer to you, and the members of your committee the full support, knowledge, and experience of our entire membership towards maintaining and/or improving the efficiency of each of the U.S. agencies in the Panama Canal Zone.

TREATY

Madam Chairman, it is our desire that the records show it is neither our intent nor our purpose to outline foreign policy. We are fully cognizant that the executive department is charged with the duty of the conduct of our foreign policy, with review by Congress. We accept, and acknowledge that inter-relations of the United States and Panama are not within our purview. Nevertheless, we are charged with representing the workers in the Canal Zone in areas of working conditions, wages and living conditions. When the foreign policy of the United States touches on these areas, we are properly concerned.

Madam Chairman, as you well know, the labor annex of the proposed treaty affects the Canal Zone workers. Therefore, we are asking your assistance in keeping the Joint Labor Committee informed as to the progress of this portion of the treaty.

NEW SEA LEVEL CANAL VS. MODERNIZATION PLAN

The modernization plan outlined in H.R. 3792, 91st Congress, 1st Session, is a technically sound concept which will provide the best operational canal at the least possible cost for the next 75 years or more. It should be noted that all realistic sea level plans have provided for tidal locks or tidal regulating structures and that the proposed waterway would not be a Strait of Magellan but merely a restricted channel canal with tidal locks, which structures would be more complicated than the present locks.

The Joint Committee, after reviewing the various plans, fully supports the Flood, Thurmond, Rarick and Gross bills which provides for the complete modernization of the present waterway.

H.R. 3792

A bill to provide for the increase of capacity and the improvement of operations of the Panama Canal, and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Panama Canal Modernization Act".

SEC. 2. (a) The Governor of the Canal Zone, under the supervision of the Secretary of the Army, is authorized and directed to prosecute the work necessary to increase the capacity and improve the operations of the Panama Canal through the adaptation of the

Third Locks project set forth in the report of the Governor of the Panama Canal, dated February 24, 1939 (House Document Numbered 210, Seventy-sixth Congress), and authorized to be undertaken by the Act of August 11, 1939 (53 Stat. 1409; Public Numbered 391, Seventy-sixth Congress), with usable lock dimensions of not less than one hundred and forty feet by not less than one thousand two hundred feet by not less than forty-five feet, and including the following: elimination of the Pedro Miguel Locks, and consolidation of all Pacific locks near Miraflores in new lock structures to correspond with the locks capacity at Gatun, raise the summit water level to its optimum height of approximately ninety-two feet, and provide a summit-level lake anchorage at the Pacific end of the canal, together with such appurtenant structures, works, and facilities, and enlargements or improvements of existing channels, structures, works, and facilities, as may be deemed necessary, at an estimated total cost not to exceed \$850,000,000, which is hereby authorized to be appropriated for this purpose.

(b) The provisions of the second sentence and the second paragraph of the Act of August 11, 1939 (53 Stat. 1409; Public Numbered 391, Seventy-sixth Congress), shall apply with respect to the work authorized by subsection (a) of this section. As used in such Act, the terms "Governor of the Panama Canal", "Secretary of War", and "Panama Railroad Company" shall be held and considered to refer to the "Governor of the Canal Zone", "Secretary of the Army", and "Panama Canal Company", respectively, for the purposes of this Act.

(c) In carrying out the purposes of this Act, the Governor of the Canal Zone may act and exercise his authority as President of the Panama Canal Company and may utilize the services and facilities of that company.

Sec. 3. (a) There is hereby established a board, to be known as the "Panama Canal Advisory and Inspection Board" (hereinafter referred to as the "Board").

(b) The Board shall be composed of five members who are citizens of the United States of America. Members of the Board shall be appointed by the President, by and with the advice and consent of the Senate, as follows:

(1) one member from private life, experienced and skilled in private business (including engineering);

(2) two members from private life, experienced and skilled in the science of engineering;

(3) one member who is a commissioned officer of the Corps of Engineers, United States Army (retired); and

(4) one member who is a commissioned officer of the line, United States Navy (retired).

(c) The President shall designate as Chairman of the Board one of the members experienced and skilled in the science of engineering.

(d) The President shall fill each vacancy on the Board in the same manner as the original appointment.

(e) The Board shall cease to exist on that date designated by the President as the date on which its work under this Act is completed.

(f) The Chairman of the Board shall be paid basic pay at the rate provided for level II of the Executive Schedule in section 5313 of title 5, United States Code. The other members of the Board appointed from private life shall be paid basic pay at a per annum rate which is \$500 less than the rate of basic pay of the Chairman. The members of the Board who are retired officers of the United States Army and the United States Navy each shall be paid at a rate of basic pay which, when added to his pay as a retired officer, will establish his total rate of pay from the United States at a per annum rate

which is \$500 less than the rate of basic pay of the Chairman.

(g) The Board shall appoint, without regard to the provisions of title 5, United States Code governing appointments in the competitive service, a Secretary and such other personnel as may be necessary to carry out its functions and activities and shall fix their rates of basic pay in accordance with chapter 51 and subchapter III of chapter 53 of such title, relating to classification and General Schedule pay rates. The Secretary and other personnel of the Board shall serve at the pleasure of the Board.

Sec. 4. (a) The Board is authorized and directed to study and review all plans and designs for the Third Locks project referred to in section 2(a) of this Act, to make on-site studies and inspections of the Third Locks project, and to obtain current information on all phases of planning and construction with respect to such project. The Governor of the Canal Zone shall furnish and make available to the Board at all times current information with respect to such plans, designs, and construction. No construction work shall be commenced at any stage of the Third Locks project unless the plans and designs for such work, and all changes and modifications of such plans and designs, have been submitted by the Governor of the Canal Zone to, and have had the prior approval of, the Board. The Board shall report promptly to the Governor of the Canal Zone the results of its studies and reviews of all plans and designs, including changes and modifications thereof, which have been submitted to the Board by the Governor of the Canal Zone, together with its approval or disapproval thereof, or its recommendations for changes or modifications thereof, and its reasons therefor.

(b) The Board shall submit to the President and to the Congress an annual report covering its activities and functions under this Act and the progress of the work on the Third Locks project and may submit, in its discretion, interim reports to the President and to the Congress with respect to these matters.

Sec. 5. For the purpose of conducting all studies, reviews, inquiries, and investigations deemed necessary by the Board in carrying out its functions and activities under this Act, the Board is authorized to utilize any official reports, documents, data, and papers in the possession of the United States Government and its officials; and the Board is given power to designate and authorize any member, or other personnel, of the Board, to administer oaths and affirmations, subpoena witnesses, take evidence, procure information and data, and require the production of any books, papers, or other documents and records which the Board may deem relevant or material to the performance of the functions and activities of the Board. Such attendance of witnesses, and the production of documentary evidence, may be required from any place in the United States, or any territory, or any other area under the control of jurisdiction of the United States, including the Canal Zone.

Sec. 6. In carrying out its functions and activities under this Act, the Board is authorized to obtain the services of experts and consultants or organizations there in accordance with section 3109 of title 5, United States Code, at rates not in excess of \$200 per diem.

Sec. 7. Upon request of the Board, the head of any department, agency, or establishment in the executive branch of the Federal Government is authorized to detail, on a reimbursable or nonreimbursable basis, for such period or periods as may be agreed upon by the Board and the head of the department, agency, or establishment concerned, any of the personnel of such department, agency, or establishment to assist the Board in carrying out its functions and activities under this Act.

Sec. 8. The Board may use the United States mails in the same manner and upon the same conditions as other departments and agencies of the United States.

Sec. 9. The Administrator of General Services or the President of the Panama Canal Company, or both, shall provide, on a reimbursable basis, such administrative support services for the Board as the Board may request.

Sec. 10. The Board may make expenditures for travel and subsistence expenses of members and personnel of the Board in accordance with chapter 57 of title 5, United States Code, for rent of quarters at the seat of government and in the Canal Zone, and for such printing and binding as the Board deems necessary to carry out effectively its functions and activities under this Act.

Sec. 11. All expenses of the Board shall be allowed and paid upon the presentation of itemized vouchers therefor approved by the Chairman of the Board or by such other member or employee of the Board as the Chairman may designate.

Sec. 12. There are hereby authorized to be appropriated to the Board each fiscal year such sums as may be necessary to carry out its functions and activities under this Act.

Sec. 13. Any provision of the Act of August 11, 1939 (54 Stat. 1409; Public Numbered 391, Seventy-sixth Congress), or of any other statute, inconsistent with any provision of this Act is superseded, for the purposes of this Act, to the extent of such inconsistency.

JOHN WESLEY POWELL, 1834-1902: PRINCIPAL FOUNDER OF THE COSMOS CLUB

Mr. FLOOD. Mr. Speaker, one of the truly great clubs of the Nation is the Cosmos Club of Washington, D.C., composed of men distinguished in science, literature, art, a learned profession, or in public service. Incorporated in 1878 under the leadership of John Wesley Powell, its first president, the club has become one of the most important monuments of the great leader after whom it has named its auditorium, and continues to honor as a principal founder.

The May 1969 issue of the Cosmos Club Bulletin featured a brief biographical sketch of Powell by William C. Darrah, professor of biology at Gettysburg College, Pennsylvania. It is accompanied by the following editorial note by Dr. Paul H. Ochser, editor of the bulletin:

AFTER 100 YEARS

[This *Bulletin*, during the time since its first issue in November 1947, has printed a good many words about John Wesley Powell, for among the heroes in the saga of the Cosmos Club his name is at the top. This year, 1969, is a Powell year; and this month, May, is a Powell month; for it was on May 24, 1869, that he set forth on the historic expedition down the Colorado whose centennial the nation now is celebrating. The Club is observing the centennial in several ways—e.g., the lecture by William H. Goetzmann, "The Heavenly Country of John Wesley Powell," on April 14, and another, "Following Powell Through the Canyons in an Open Canoe," by Homer L. Dodge ('42), scheduled for May 26, and the *Bulletin* here adds another bit by a simple retelling of the well-known but still inspiring Powell story. We do this in the words of one of Powell's best biographers, William Culp Darrah, whose book *Powell of the Colorado* was published by the Princeton University Press in 1951 and is now being reprinted in conjunction with the centennial. Mr. Darrah, professor of biology at Gettysburg College, has written extensively in the

of science in America. He also edited, for the Utah State Historical Society, the documents of both the 1869 and 1871-72 Colorado River explorations. The following brief account by Mr. Darrah appeared in the April-May 1969 issue of *National Wildlife*. It is reprinted by permission of the National Wildlife Federation.—P.H.O.]

In order that the indicated biographical sketch may be recorded in the permanent annals of the Congress, I quote it as part of my remarks:

[From the *Cosmos Club Bulletin*, May 1969]

JOHN WESLEY POWELL

(By William C. Darrah)

Explorer, geologist, anthropologist and conservationist, John Wesley Powell a hundred years ago unlocked the secrets and mystery of our great Southwest. The legends of his explorations into this forbidding land will live forever.

Powell was born at Mount Morris, New York, of English parents on March 24, 1834. His father was a Methodist circuit rider who progressively moved his family to Ohio, Wisconsin and finally to Wheaton, Illinois. Wes Powell from early childhood collected minerals, molluscs, insects and plants yet showed little propensity for regular study. After attending several colleges without earning a degree, he began teaching in public school and by 1861 was superintendent of schools in Hennepin, Illinois.

At the outbreak of the Civil War, Powell organized an artillery battery and was elected its lieutenant. During the battle of Shiloh he lost his right forearm but remained in military service until 1865.

After the war Major Powell accepted the professorship of natural history at Illinois State Normal University and at once included outdoor field trips in his instruction. In the summer of 1867 he led a party of students and adult amateurs in the park region of Colorado to study and collect birds, mammals and insects and to study geology. The following summer a more elaborate expedition explored northwestern Colorado, particularly the Colorado River (then known as the Grand River). By then the Major had a passionate ambition to explore the last unknown area of the United States, the Colorado River from Wyoming to Yuma, Arizona, a distance of fifteen hundred miles.

The story of this spectacular expedition is well known. The Powell Centennial Celebration this year commemorates his emergence as a towering public figure. The Major with eight companions set out from Green River Station, Wyoming, on May 24, 1869 in four boats and provisions for three months on the river. Powell had personally raised all the money and other support for the expedition and the only official recognition of the project was the loan of scientific instruments by the Smithsonian Institution and permission to draw rations at Army posts if needed. Mishaps, near starvation and the desertion of three men who climbed out of the canyons only to be slain by Indians, limited the scientific work, but Powell and the others passed through the canyons safely with a wealth of data and a determination to return. Major Powell suddenly found himself a national hero acclaimed for his audacious feat, but he considered it only an unfinished challenge.

The second survey of the Colorado River extended over two years, 1871-1872, with a Federal grant of \$25,000 to study the geology and map the course of the Colorado River. This Powell Survey, under the auspices of the Department of the Interior, was but one of four western surveys, two of which were under the War Department. Powell was an advocate of civilian control of all western land surveying because policies of land use were at stake.

Powell then turned propagandist. His

field work from 1871 to 1877 had led to the concept of land, water, vegetation and man as a delicate balance of nature. The first edition of Powell's *Report on the Lands of the Arid Region of the United States* was published in 1877, a classic in the philosophy of land use. He pleaded for the reform of laws pertaining to the rights to water, grazing, exploitation of the public domain and the necessity of understanding the inherent limitations of a region in which there is insufficient water to irrigate all the land capable of irrigation.

Major Powell remained a public servant, director of the Bureau of American Ethnology from 1879 to 1902 and concurrently director of the United States Geological Survey from 1881 to 1894. He initiated the great irrigation surveys of the Southwest, the geological and quadrangle maps of the United States and fought unsuccessfully for four years for the establishment of a Federal agency or department of science.

John Wesley Powell died quietly after long illness at his summer cottage in Haven, Maine, on September 23, 1902 and was buried with full military honors at Arlington National Cemetery. He bequeathed a great legacy to the nation he served: the Geological Survey, the Bureau of American Ethnology, the Bureau of Reclamation, the Bureau of Mines and the Forestry Bureau (their names have changed from time to time). And there is more. Powell directed, at times single-handed, the course of development of Federal policies in the vast public domain, especially the semiarid West. Above all, his was the vision of man and the land in the broadest sense of their mutual interdependence.

SCANDAL AT SBA—X

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Texas (Mr. GONZALEZ) is recognized for 10 minutes.

Mr. GONZALEZ. Mr. Speaker, today the Federal grand jury meeting at San Antonio, Tex., handed down an indictment charging that Albert Fuentes and others entered into a conspiracy to defraud the Government. So ends speculation as to the seriousness of the charges that I raised against the former special assistant to the Administrator of the Small Business Administration. Now it is up to the courts to determine the final disposition of the case. But as this matter closes one phase, it enters into another, and one with implications going far beyond the actions of Fuentes himself.

Indeed questions must now be raised as to how this man ever got the high post that he was appointed to. Many people have stated that if anyone had just asked, or even listened to warnings about Fuentes, he probably would never have been employed in the first place. For example, the Civil Service Commission reported to me that it had conducted a complete investigation of Fuentes' background and that the result was that "no derogatory information" had been received. But in fact Fuentes had a \$12,246 judgment against him entered by a State court in August 1968—only a few short months before he was appointed to his post. The question is, did the Civil Service Commission know this, or did they not consider it relevant? It might well have not known of the judgment, in which case it is clear that the investigation left much to be desired. And if the Commission did know of the judgment, it

should have known that a man who had such a judgment against him might be tempted to use his position for financial gain.

Or, had the Commission investigated into Fuentes' employment with Johnny Cortez Investments, it would have discovered that the firm engaged in questionable practices, practices which have resulted in charges being brought against one principal of the company for writing bad checks, and his subsequent conviction therefor. And investigation would have shown that the company collected a great deal of money for services that it allegedly never performed. Fuentes himself was paid wages by the company in the form of a hot check. Did the Civil Service Commission consider that association with shady business practices had nothing to do with the character of a man applying for high office? Or did it simply not investigate the man's background?

It is distressing to raise these questions, but the integrity of the Government, and the confidence of the public is what is at stake here. We are supposed to have ways of protecting the Government against employment of questionable character, and the general character of our civil service is magnificent. But Mr. Speaker, one wonders whether precautions taken in the investigation of political appointees is adequate. If in this case the investigation failed to turn up information of the sort I have described, then the investigation was clearly inadequate. But if this information was turned up by the investigators, then it is a great mystery to me how the short and inglorious career of Albert Fuentes in Government service ever got started.

Mr. Speaker, I include for the RECORD newspaper stories from the Washington Star dated today, and the San Antonio Express and News dated May 23 and May 22.

[From the Washington (D.C.) Star, May 26, 1969]

JURY INDICTS FUENTES IN SBA CASE

SAN ANTONIO, TEX.—A federal grand jury indicted Albert Fuentes Jr. and Edward J. Montez today on two counts of conspiracy and seeking to share in a San Antonio business in return for a \$100,000 loan from the Small Business Administration.

The 20-member grand jury met for 30 minutes this morning before reporting its findings to Federal Judge Adrian Spears. Bail of \$2,500 was set for each man.

Fuentes was fired last week as special assistant to SBA administrator Hilary Sandoval for "failing to follow orders and not get involved in events in the Southwest."

The first accusations against Fuentes were made in San Antonio late last month by U.S. Rep. Henry B. Gonzales, of San Antonio.

[From the San Antonio (Tex.) Express, May 23, 1969]

FUENTES JUDGMENT DISCLOSED

(By James McCrory)

Albert Fuentes Jr. was named special assistant to Small Business Administration administrator Hilary Sandoval while he still had a \$12,246 judgment against him in state district court.

Ironically, that judgment grew out of two loans made to Fuentes in his 1964 campaign for lieutenant governor—as a candidate for the Democratic nomination before he turned Republican.

U.S. Rep. Henry B. Gonzalez, whose accusation of impropriety against Fuentes based on an affidavit by San Antonio businessman Emanuel Salaz wound up with a federal grand jury investigation, had complained earlier that Fuentes' background had not been thoroughly checked before he was hired.

The suit which was the basis of the \$12,246 judgment was brought in 1967 by E. B. Taylor of Dickinson, Galveston County, against Fuentes. Taylor complained that on March 21, 1964, Fuentes for a valuable consideration executed and delivered to Taylor his promissory note for \$3,000, payable on or before Sept. 21, 1964. On April 24, 1964, he said, Fuentes for valuable consideration executed and delivered to him his promissory note for \$9,246, payable on or before Oct. 24, 1964.

Although he made repeated demands on Fuentes for payment, Taylor complained, Fuentes refused to pay.

In his answer to the suit, Fuentes denied the allegations and asked that a take-nothing judgment be entered.

On Jan. 26, 1968, a district court in Bexar County entered judgment holding that Taylor was entitled to recover \$12,246, the original sum total of the two loans, plus accrued interest of \$690 and \$2,427.48, plus attorney fees of \$1,536.

On Aug. 27, 1968, Judge Robert Murray issued an order returnable Sept. 28, 1968, for Fuentes to show cause why he should not answer Taylor's interrogations as to what property Fuentes held that could be attached for satisfaction of the debt. The proposed interrogation was to determine if Fuentes owned any acreage, personal property, businesses, savings association accounts or rental property, and his income tax report.

That order came after Taylor asked on Aug. 23, 1968, that Fuentes be required to appear for a hearing on his property holdings. That application pointed out that the judgment had never been satisfied. In the pleading, Taylor said he had information and belief that Fuentes has ample property subject to execution to satisfy the judgment, and that Fuentes willfully and fraudulently concealed the property from Taylor.

The case apparently is in a state of abeyance. There is no record that the questions contained in the interrogation were ever answered, and the judgment remains unsatisfied.

Fuentes Thursday explained that the loans came about during a "political situation," and he said the agreement was if he won the race of lieutenant governor, he would pay the money back and if he lost he wouldn't have to. He lost, and so did Taylor.

[From the San Antonio (Tex.) News,
May 22, 1969]

FUENTES' OLD FIRM IS GONE (By Kemper Diehl)

The last business position Albert Fuentes, discharged this week as special assistant to the administrator of the Small Business Administration, held before taking over the post of leader of the Viva Nixon campaign, was as an executive assistant for the head of a firm which in the words of one associate "has evaporated."

At the time of the Republican National Convention last August Fuentes was a member of the Johnny K. Cortez Investments Organization.

It was during this period that President Nixon visited Houston during his campaign and met with 40 Mexican-American leaders, Fuentes and Cortez among them. The meeting was on Sept. 6 at the Shamrock-Hilton Hotel, and served as a platform for Nixon to tell the Mexican-American leaders that they represented the "forgotten people" and that he would remember them.

Cortez is now charged in two grand jury indictments with having written lavish hot checks—one on Sept. 20 for \$1,379 to finance

a trip for two to Rome where the San Antonian hoped to meet with the Pope.

Fuentes in February notified the hot check section of the district attorney's office that he had received a \$300 check from Cortez, also dated Sept. 20, which was returned for insufficient funds reasons. It was payment of wages.

Charges of theft by bailee over \$50 have also been filed by the district attorney's office against Cortez and are pending before the grand jury.

The Cortez investment firm operated at 310 East Ashby for a number of months last year, taking over the building which had housed Radio Station KBAT.

One of its activities was to serve as "money-finder" for various projects throughout the Southwest. It is understood that fees for such a money-finding operation are at issue in the case before the grand jury.

When he led the pledge of allegiance at the fourth session of the Republican convention in Miami on Aug. 7, Fuentes was executive assistant for the firm.

On July 30, Cortez had filed an assumed name certificate with County Clerk James W. Knight for the firm of Johnny Cortez Investments.

It listed Fuentes, James Damron and one other man as persons conducting or transacting or intending to conduct or transact business under the name along with Cortez.

Damron pleaded guilty on May 12 to a charge of paying Shaw's Jewelers for two diamond rings with a \$400 hot check. He faces a three year penitentiary sentence, but is under review for possible probation.

Fuentes was with the firm only briefly, it appears, since he was named to the Nixon campaign post in the early part of September. Following the election, Fuentes was a director of development for the Mexican-American Legal Defense Fund.

A former police patrolman, Cortez was dismissed from the force following an incident in which he was charged with pistol whipping a man in a tavern when he was off duty.

The incident was provoked by an Indian-wrestling match in which Cortez allegedly was bested.

The district attorney's office has listed a number of hot check convictions against Cortez in recent years.

THE MANPOWER ACT

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Michigan (Mr. O'HARA) is recognized for 30 minutes.

Mr. O'HARA. Mr. Speaker, 105 Members of this House have joined together today in the introduction of legislation to create a comprehensive, flexible and effective active manpower mechanism by which the people of the United States can undertake to "assure an opportunity for employment to every American seeking work and to make available the education and training needed by any person to qualify for employment consistent with his highest potential and capability." The several identical bills which are being introduced for this purpose are entitled the Manpower Act.

The Manpower Act, Mr. Speaker, is the logical culmination of 7 years' experience with the Manpower Development and Training Act, of the experience we have had with title I(b) of the Economic Opportunity Act, and of the research and evaluation that have been directed to the achievements, the strengths and the weaknesses of these important legislative milestones.

The proposed Manpower Act begins

with a statement of congressional intent, which holds that "it is within the capability of the United States to provide every American who is able and willing to work, full opportunity, within the framework of a free society, to prepare himself for and obtain employment at the highest level of productivity, responsibility and remuneration within the limits of his abilities." This, I suggest, is the heart of the legislation, and a goal which the times we live in have made a necessity.

Since 1962, when the Manpower Development and Training Act was first enacted, through the present day, the field of manpower legislation has become one in which there has been constant activity. The Manpower Development and Training Act has been amended a total of five times since its first appearance on the statute books in 1962. Title I of the Economic Opportunity Act, another major component of our national manpower system, has been amended twice since its original enactment. And these changes, these legislative alterations in the manpower structure have been only the most obvious and formal steps in the evolution of a national manpower training and employment system. By Presidential initiative, and by administrative practice, other segments of the system have been designed and put to work.

Throughout this evolutionary process, there has been one virtually uninterrupted theme. At every step, we have sought, with more or less success, to make manpower legislation and manpower institutions more flexible, more interchangeable, more able to be fitted to given situations and capable of adjustment to changing times and changing demands. I think that there is a broad, bipartisan consensus in support of the notion that our national manpower needs are too large, too complex and too volatile to be neatly met and wholly solved by any one of the programs we have thus far developed. MDTA, title I(b) of the Economic Opportunity Act, the JOBS program, the concentrated employment program, the working of the Federal-State public employment service system, the contributions of other agencies and yet other programs—all of these, Mr. Speaker, have been designed with specific problems in mind, and all of them have contributed to solving those problems—yes, and they have all, as they have been amended over the past several years, contributed to meeting problems which were unimagined when the legislation or the programs were first launched.

In summary, Mr. Speaker, the thrust of manpower legislation over the past several years has been toward a more flexible, multipurpose, and interchangeable manpower system. This principle is now sufficiently accepted, in my judgment, to warrant the enactment of a basic Manpower Act, designed to provide the people of the United States with a single system by which they can achieve the manpower goals I believe they generally accept.

The Manpower Act begins, as I have said, with a declaration of policy, to the

effect that we will do what we can do, and must do, to guarantee every American who is willing and able to work an opportunity for a job, and for training so that the job he gets may be a meaningful one.

This simply stated, that may seem like a rather ambitious guarantee. But years ago it was assumed that a healthy and expanding economy required a pool of unemployed workers—that the suffering which unemployment might visit upon these individuals, while difficult for them to bear, was simply a price we had to pay for fiscal stability and economic good health.

Years ago, Mr. Speaker, the received wisdom of the time was that periods of massive unemployment were inescapable aspects of an unchangeable economic cycle, and that they were the price we all had to pay for the subsequent periods of high employment.

I think these theories have seen their last days. I believe, at least I hope, that responsible public leaders no longer accept the concept of a necessary level of unemployment or even of "acceptable levels of unemployment." Today, in a time when overall employment figures are at a record high, we nonetheless realize that we must make a very substantial national effort to eliminate that concentrated unemployment which affects certain areas and certain segments of our people. We realize that unemployment is never "acceptable" and that we can and indeed, must, eliminate it.

I think, too, we are beginning to realize that the productive, the economically and socially useful work that must be done in the years ahead is substantially in excess of the number of hands and brains that are presently equipped to do it. The problem of providing every American with a useful and productive job is not the major one before us. Our problem, rather is going to be to assure that we have enough people trained to do the work we are going to have to do.

The Manpower Act, Mr. Speaker, seeks to implement this goal by the use of techniques and institutions that we have at hand, and have used with great success.

The act vests in the Secretary of Labor the right to provide training opportunities and other needed manpower services, through contracts with the States, with local governments, with private nonprofit agencies and organizations, and with private businesses. The act does not specify a clientele because it is not envisaged as meeting only the special needs of a single clientele. It does not require concurrent approval by a host of Federal agencies, because our experience under MDTA and OEO has shown that such a requirement can often be nothing but an occasion for unnecessary and unprofitable delay. It is my hope in sponsoring this act that no unemployed or underemployed American, no citizen facing unemployment, no worker who has the ambition to seek to upgrade his own skills, will be left to await the outcome of some interdepartmental struggle for status and power. If there has been avoidable delay under the existing programs, much of it has stemmed from the friction of Washington "empire building." This bill seeks to insure, in

this way, at least, that our manpower policies will continue to be focussed on the worker, not on the interest of the agencies by which he is supposed to be helped.

Another major aspect of the Manpower Act is the provision of a broad program of public service employment opportunities. I would agree wholly with those who contend that the vast majority of Americans will find their best employment opportunities in the private sector. Working in the factories and offices and stores and service establishments of this Nation is the route most Americans will take to earning their daily bread. But there are jobs to be done which private enterprise, under any circumstances, simply would not be interested in undertaking. And there are people available who can be gainfully employed doing these jobs.

There is work to be done in conservation, in law enforcement, in public transportation, in beautification, in health and education, and other areas besides—work which desperately needs doing, and there are people who are ready and willing to work who have not found opportunities in the private sector. Years ago it was commonplace to point with scorn at the sight of food being destroyed while people went hungry. Today it is even more indefensible to be able to see significant numbers of Americans unemployed, while at the same time, vitally needed public services go unperformed because "we have not the people to perform them." A meaningful national manpower system seems to me to call irresistibly for a program by which these needed public services can be performed, and the unemployed can be trained to perform them. The cost of such a program will be substantial. The cost of not having such a program will be incalculable. We will count the cost of finding jobs for the hard-core unemployed in dollars. The cost of ignoring hard-core unemployment and ignoring needed public services can be counted in terms of city blocks destroyed and neighborhoods blighted.

I submit, Mr. Speaker, that whatever may be our domestic needs or our foreign needs, we can no longer afford not to have a major program of public service employment. The Manpower Act offers such a program as an integral part of a national manpower system.

The Manpower Act offers other elements of such a system.

It makes provisions for the provision of training, job counseling, and the whole range of supportive services to make the guarantee of a job a realizable one, even for those who have never been able to find a place in the permanent labor market. It provides for training allowances, based on the minimum wage. It spells out an upgrading program so that persons already in the labor force can learn new skills and move upward, thus not only improving their own lot, but vacating entry-level jobs for those whose skills are more rudimentary.

In summary, Mr. Speaker, the proposed Manpower Act would seek to provide the Nation with the integrated, broad-gage, flexible, and comprehensive manpower system that the manpower needs, not

only of 1969, but of the years ahead require.

Mr. Speaker, the 105 Members of the House who have thus far indicated their support by joining in the sponsorship of this legislation do not stand alone in their view that our manpower programs should be strengthened, and a public service employment opportunities program launched. I received today, for example, a letter from Mr. John Gardner, former Secretary of Health, Education, and Welfare, and chairman of the Urban Coalition. While Mr. Gardner does not specifically endorse the provisions of H.R. 11620, he does state that legislation "designed to give every American who wants to work an opportunity for a decent job has been a basic goal of the Urban Coalition Action Council since its beginning." Under unanimous consent I include the full text of Mr. Gardner's letter at this point in my remarks:

THE URBAN COALITION ACTION COUNCIL,
Washington, D.C.

HON. JAMES G. O'HARA,
House of Representatives,
Washington, D.C.

DEAR MR. O'HARA: I have been informed that you will introduce on May 26 a Comprehensive Manpower bill designed to give every American who wants to work an opportunity for a decent job. This has been a basic goal of the Urban Coalition Action Council since its beginning.

In its original statement of principles, the Coalition called for an emergency work program that would concentrate on the huge backlog of employment needs in parks, streets, slums, countryside, schools, colleges, libraries and hospitals. The aim was to put at least one million of the presently unemployed or underemployed into productive work at the earliest possible moment.

I understand that this concept of public service employment is embodied in the measure you are introducing. I commend you for it. Your bill is a long step toward making meaningful, productive employment available to everyone willing and able to work.

Sincerely,

JOHN W. GARDNER.

At a press conference held this morning to announce the introduction of this bill, there was a very encouraging show of support from the community in the form of the presence of representatives from a number of organizations concerned with the crisis in our cities, and with full employment as an answer to that crisis. As with the Urban Coalition, I would not presume to interpret the interest shown by these organizations as equivalent to specific endorsements of H.R. 11620 in all its details. But I think I can say that these organizations, which are listed below, share interest in or a general commitment to legislation along these lines:

ORGANIZATIONS REPRESENTED AT PRESS CONFERENCE ON H.R. 11620

AFL-CIO.
Alliance for Labor Action.
Amalgamated Clothing Workers of America.
Amalgamated Meat Cutters and Butcher Workmen.
American Ethical Union.
American Jewish Committee.
American Jewish Congress.
American Veterans Committee.
Anti-Defamation League of B'nai B'rith.
A. Philip Randolph Institute.
Council for Community Affairs.
Friends Committee on National Legislation.

General Board of Christian Concern—United Methodist Church.
Hadassah.

Improved Benevolent and Protective Order of Elks of the World.

Industrial Union Department—AFL-CIO.
International Ladies' Garments Workers Union.

International Union of Electrical Radio and Machine Workers.

Iota Lambda Phi Sorority, Inc.

Leadership Conference on Civil Rights.

League of Women Voters.

Lutheran Church in America—Board of Social Ministry.

National Alliance of Postal and Federal Employees.

National Association of College Women.

National Association of Colored Women's Clubs, Inc.

National Association of Negro Business and Professional Women's Clubs, Inc.

National Community Relations Advisory Council.

National Council of Jewish Women.

National Council of Negro Women.

National Urban League.

Transport Workers Union of America.

Unitarian-Universalist Association.

United Automobile Workers of America.

United Steelworkers of America.

Urban Coalition Action Council.

Young Men's Christian Association.

Zeta Phi Beta Sorority.

I do not pretend, Mr. Speaker, that the Manpower Act cannot be improved, not that it is a panacea. I hope that we can soon have hearings on this and related proposals, including whatever proposals may in the future come from the administration. I hope that we can carefully explore all the experience we have accumulated in the past 7 years, and the experience other free nations have had with comprehensive manpower systems, and that, before this session ends, we will be able to take another long step toward the realization of the goals which, a generation ago, we began to reach for when we enacted the Full Employment Act—the goals which in 1962, we saw dimly beyond the horizon with the Manpower Development and Training Act—the goals which the Economic Opportunity Act have brought us appreciably closer to in the past 4 years—the goal of a job for every American, and a trained worker for every job that needs being done.

Mr. Speaker, under unanimous consent, I include the text of H.R. 11620, and its companion bills at the conclusion of these remarks, together with a list of the sponsors of each of these five identical bills:

H.R. 11620

A bill to assure an opportunity for employment to every American seeking work and to make available the education and training needed by any person to qualify for employment consistent with his highest potential and capability and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as "The Manpower Act."

STATEMENT OF PURPOSES

SEC. 2. The Congress finds and declares that—

(a) To attain the objective of the Employment Act of 1946 "to promote maximum employment, production and purchasing power" we must assure an opportunity for a gainful, productive job to every American who

is seeking work and make available the education and training needed by any person to qualify for employment consistent with his highest potential and capability.

(b) It is within the capability of the United States to provide every American who is able and willing to work, full opportunity, within the framework of a free society, to prepare himself for and obtain employment at the highest level of productivity, responsibility, and remuneration within the limits of his abilities.

(c) The growth of the Nation's economic prosperity and productive capacity is limited by the lack of sufficient skilled workers to perform the demanding production, service, and supervisory tasks necessary to the full realization of economic abundance for all in an increasingly technical society, while, at the same time, there are many workers who are working below their capacity and who with appropriate education and training could capably perform jobs requiring a higher degree of skill, judgment, and attention.

(d) The human satisfaction and sense of purpose so important to employment cannot be fulfilled unless employees have a reasonable opportunity to advance in employment to positions of greater responsibility, status, and remuneration.

(e) The placement of unemployed or underemployed workers in private employment is hampered by the absence of a sufficient number of appropriate entry level employment opportunities to satisfy the need therefor and that the preparation of workers now occupying such places for, and their employment in, more responsible positions would increase the number of appropriate entry level employment opportunities.

(f) It is in the interest of workers, employers, and of the Nation to promote the filling of skill requirements in industry and to provide for the upward mobility of industrial workers by a program that will enable employers to educate and train their employees for positions of greater responsibility, to provide opportunities for advancement to industrial workers, and to create employment opportunities for the unemployed.

(g) The guarantee of meaningful employment opportunities for all Americans requires public investment to the extent the private sector is unable to provide such opportunities.

(h) There are great unfilled public needs in such fields as health, recreation, housing and neighborhood improvement, public safety, maintenance of streets, parks, and other governmental facilities, rural development, transportation, beautification, conservation, and other fields of human betterment and public improvement and that to meet these urgent public needs it is necessary to devote greater resources to public service and to expand public service employment.

(i) The organization and delivery of manpower training services is increasingly complex, the technological nature of the services is expanding, and the trained staff to provide such services is scarce, thus requiring an intensive program of technical assistance and staff training to public and private agencies providing manpower services.

(j) The economic prosperity of the United States and the well-being and happiness of its citizens would be enhanced by the establishment of a comprehensive manpower policy and program designed to assure every American an opportunity for gainful productive employment and to provide the education and training needed by a person to qualify for employment consistent with his highest potential and capability.

TITLE I—MANPOWER SERVICES PROGRAM

GENERAL RESPONSIBILITIES

SEC. 101. (a) The Secretary of Labor (hereinafter referred to as the Secretary) shall develop and carry out a program of compre-

hensive manpower services under this title that will—

(1) provide for the prompt referral of all those persons who are qualified and are seeking work to suitable employment opportunities;

(2) guarantee training and related manpower services to all other persons who are unemployed, in danger of becoming unemployed, employed in public service jobs authorized in title III, or employed in low-paying jobs who could through further training qualify for job opportunities that would provide an adequate standard of living for themselves and their families;

(3) provide appropriate training and related manpower services for persons in correctional institutions to assist them in obtaining suitable employment upon release;

(4) provide appropriate training and related manpower services for persons who have recently been or will shortly be separated from military service;

(5) develop an early warning system and standby capability that will assure a timely and adequate response to major economic dislocations arising from changing markets, rapid technological change, plant shutdowns, or business failure;

(6) promote and encourage the adoption of employment practices by public agencies, nonprofit agencies, labor organizations, and private firms that will remove unreasonable barriers to employment, without reducing productivity, and expand opportunities for upward mobility;

(7) reduce the level of youth unemployment by improving the linkages between educational institutions and job markets; and

(8) support and encourage the development of broad and diversified training programs by public, non-profit and private employers designed to improve the skills and thereby the promotion and employment opportunities of employed workers.

(b) The Secretary shall be responsible for the co-ordination of the activities of other Federal agencies that may contribute to the accomplishment of the purposes of this Act, for promoting the maximum possible coordination of State and local public agencies and private agencies and for recommending to the President and to the Congress combinations of programs or shifts in responsibility that facilitate the achievement of the purposes of this Act.

COMPONENTS OF MANPOWER SERVICES PROGRAMS

SEC. 102. (a) In meeting the responsibilities imposed on him by section 101, the Secretary shall, to the extent needed in each State and local area, provide a comprehensive manpower services program for all those eligible under this title which shall include but shall not be limited to the following:

(1) Occupational counseling and testing services to the extent needed by each individual.

(2) Basic education as needed to remedy the absence of or obsolescence of earlier schooling.

(3) Outreach to find the discouraged and undermotivated and encourage and assist them to enter employment or programs designed to improve their employability.

(4) Prevocational orientation to introduce those of limited experience to alternative occupational choices.

(5) Short-term work experience with public and nonprofit agencies for those unaccustomed to the discipline of work.

(6) Communication and employability skills for those pursuing, subsequently or concurrently, courses of occupational training who require such other preparation to render them employable and for those with sufficient skills for suitable employment who require such preparation to become employable.

(7) Occupational training designed to improve and broaden existing skills or to develop new ones.

(8) On-the-job training provided by public, nonprofit and private employers.

(9) Part-time training for employed persons where such training would lead to improved employment opportunities.

(10) Programs to provide part-time employment, on-the-job training, or useful work experience for students from low-income families who are in the ninth through twelfth grades of school (or are of an age equivalent to that of students in such grades) and who are in need of the earnings to permit them to resume or maintain attendance in school.

(11) Special programs for jobs leading to career opportunities including new types of careers, in programs designed to improve the physical, social, economic, or cultural conditions of the community or area served in fields including but not limited to health, education, welfare, neighborhood redevelopment, and public safety, which provide maximum prospects for advancement and continued employment without Federal assistance, which give promise of contributing to the broader adoption of new methods of structuring jobs and new methods of providing job ladder opportunities, and which provide opportunities for further occupational training to facilitate career advancement.

(12) Programs to provide incentives to private employers, nonprofit organizations, and public employers to train or employ unemployed or low-income persons, including arrangements by direct contract, for reimbursement to employers for the costs of recruiting and training such employees to the extent that such costs exceed those customarily incurred by such employer in recruiting and training new hires, payment for on-the-job counseling and other supportive services including transportation, and payments for other extra costs including supervisory training required by the program.

(13) Skill training centers wherever a consolidation of occupational training and related manpower services would promote efficiency and provide improved services.

(14) Supportive and followup services to supplement work and training programs under this and other Acts, including health services, counseling, day care for children, transportation assistance, and other special services necessary to assist individuals to achieve success in work and training programs.

(15) Employment centers and mobile employment service units to provide recruitment, counseling, and placement services, conveniently located in urban neighborhoods and rural areas and easily accessible to the most disadvantaged.

(16) Special job development efforts to solicit job opportunities suited to the abilities of the disadvantaged job seeker and to facilitate the placement of individuals after training.

(17) Job coaching for a limited period to assist the employer and the worker to insure job retention.

(18) Relocation payments and other special services as needed to assist unemployed individuals and their families to relocate from a labor surplus area to another area with expanding employment opportunities where a suitable job has been located. Preference for such assistance shall be provided those who have been provided training before relocation or have been accepted for on-the-job and other types of employer-directed training.

(b) Where appropriate, the services authorized by this section may be provided, in whole or in part, through residential programs.

MANNER OF PROVIDING SERVICES; ALLOWANCES

SEC. 103. (a) The Secretary shall carry out section 102 either directly or through contracts with public or private agencies and organizations. Section 3709 of the Revised

Statutes of the United States (41 U.S.C. 5) shall not apply to such contracts.

(b) The Secretary, in the case of programs he carries out directly, and contracts entered into under subsection (a), may where appropriate provide for the payment of weekly allowances to individuals receiving services under section 102. Such allowances shall be a rate prescribed by the Secretary which when added to amounts received by the trainee in the form of public assistance or unemployment compensation payments shall approximate the minimum wage for a workweek of forty hours, under section 6(a)(1) of the Fair Labor Standards Act of 1938 or, if higher, under the applicable State minimum wage law, or where the trainee is being trained for particular employment, at a rate equal to 80 per centum of the weekly wage for such employment, whichever is greater. In prescribing allowances, the Secretary may allow the additional sums for special circumstances such as exceptional expenses incurred by trainees including but not limited to meal and travel allowances or he may reduce such allowances by an amount reflecting the fair value of meals, lodging, or other necessities furnished to the trainee. The Secretary shall take such action as may be necessary to insure that such persons receive no allowances with respect to periods during which they are failing to participate in such programs, training, or instruction as prescribed herein without good cause. Notwithstanding the preceding provisions of this subsection, the Secretary may, in the case of programs carried on outside the continental United States, make appropriate adjustments in allowances which would otherwise be payable under this Act to reflect the special economic circumstances which exist in the area in which the program is to be carried on. Allowances shall not be paid for any course of training having a duration in excess of one hundred and four weeks.

(c) For purposes of subchapter 1 of chapter 81 of title 5, United States Code, persons receiving services under section 102 shall be deemed civil employees of the United States within the meaning of the term "employee" as defined in section 8101 of title 5, United States Code, and the provisions of that subchapter shall apply, except that in computing compensation benefits for disability or death, the monthly pay of such a person shall be deemed to be his allowance for a month, if he is receiving one, but in no event shall the monthly pay be deemed to be less than the minimum wage for four workweeks of forty hours each under section 6(a)(1) of the Fair Labor Standards Act of 1938, or, if higher, under the applicable State minimum wage law.

(d) (1) No allowance shall be paid to any person for any period for which a money payment has been made with respect to the need of that person under a State plan which has been approved under title I, IV, X, XIV, or XVI of the Social Security Act and which meets the requirements of the first sentence of paragraph (2) of this subsection. The Secretary is authorized to pay to any such person (A) such sums as the Secretary determines to be necessary to defray expenses of that person which are attributable to receipt of services pursuant to the provisions of this Act and (B) an incentive payment of not more than the difference between such money payment and the amount of the allowance to which such person would have otherwise been entitled.

Notwithstanding the provisions of titles I, IV, X, XIV, and XVI of the Social Security Act, a State plan approved under any such title shall provide that no payment made to any person pursuant to paragraph (1) of this subsection shall be regarded (A) as income or resources of that person in determining his need under such approved State plan or (B) as income or resources of any other person in determining the need

of that other person under such approved State plan. No funds to which a State is otherwise entitled under titles I, IV, X, XIV, or XVI of the Social Security Act for any period before the first month beginning after the adjournment of the State's first regular legislative session which adjourns more than sixty days after the enactment of this subsection shall be withheld by reason of any action taken pursuant to a State statute which prevents such State from complying with the requirements of this paragraph.

CRITERIA FOR SELECTION OF MODE OF OPERATION

SEC. 104. (a) In exercising his authority under section 103, the Secretary shall select that mode of operation which, in his judgment, will—

(1) enable him to achieve the objectives of this Act most economically or efficiently, or, where services are urgently needed, to provide such services most quickly and effectively;

(2) assure that these services will be provided without discrimination on the basis of race, creed, sex, age, or national origin;

(3) enable persons seeking manpower services to be served by the smallest number of suppliers of such services, and most conveniently for the individual being served; and

(4) assure that services provided each individual will be tailored to meet his individual needs and capacities.

(b) In carrying out a program of the type described in paragraph (8) of section 102(a) the Secretary shall make such arrangements as he deems necessary to insure adherence to appropriate training standards, including assurances—

(1) that the training content of the program is adequate, involves reasonable progression, and will result in the qualification of trainees for suitable employment;

(2) that the training period is reasonable and consistent with periods customarily required for comparable training;

(3) that adequate and safe facilities, and adequate personnel and records of attendance and progress are provided; and

(4) that the trainees are compensated by the employer at such rates, including periodic increases, as may be deemed reasonable under regulations hereinafter authorized, considering such factors as prevailing industry practices and trainee proficiency.

TITLE II—OCCUPATIONAL TRAINING IN INDUSTRY

CONTRACTS FOR UPGRADING PROGRAMS

SEC. 201. The Secretary is authorized and directed to enter into contracts with private or public employers under the terms of which the employer undertakes to provide the necessary education and skill training to prepare employees for positions of greater skill, responsibility, and remuneration in the employ of such employer.

REQUIREMENTS FOR CONTRACTS

SEC. 202. Any such contract must contain assurances satisfactory to the Secretary that:

(a) the positions for which employees will be trained are positions that cannot with reasonable effort be filled by the employer with unemployed or underemployed workers already possessing such skills and willing to accept such employment;

(b) the selection of trainees shall be based upon merit, ability, and length of service, and that no person shall be selected as a trainee until such person has been in the employ of the employer for a period of not less than six months;

(c) the training content of the program is adequate, involves reasonable progression, and will result in the qualification of trainees for suitable employment in a recognized skill or occupation in the service of that employer and of other employers in the same industry;

(d) the training period is reasonable and consistent with periods customarily required for comparable training;

(e) adequate and safe facilities, and adequate personnel and records of attendance and progress are provided;

(f) successful completion of the employee's training program can reasonably be expected to result in an offer of employment in the employer's own enterprise in the occupation for which he will be trained at wage rates not less than those prevailing for the same or similar occupations in that industry;

(g) the training and placement of such employees is part of a program that can reasonably be expected to lead directly to the employment of an equivalent number of new employees in entry level employment; and

(h) the trainees are compensated by the employer at such rates, including periodic increases, as may be deemed reasonable under regulations hereinafter authorized, considering such factors as industry practice and trainee proficiency, and that in no event shall the wages or employment benefits of any trainee be less than those received by him immediately before his starting such training program.

PAYMENTS TO EMPLOYERS

SEC. 203. Such contracts shall provide for payment to the employer undertaking a training program under this title in an amount equal to—

(a) ninety per centum of the instructional expense, other ordinary and necessary training costs, and trainee wage payments for time spent in training, less the value of productive services rendered by such trainees, plus:

(b) a bonus payment to reward the efforts of employers whose programs under this title have resulted in substantial upgrading and high retention, to be computed as follows:

(1) at the end of the first twelve months following the completion of a program authorized under this title, twenty per centum of the sum arrived at by multiplying the number of employees upgraded under such program by the average increase in annual earnings of these upgraded employees; and

(2) at the end of second twelve months following the completion of a program authorized under this title, ten per centum of the sum arrived at by multiplying the number of employees upgraded under such program by the average increase in annual earnings of these upgraded employees.

MANPOWER UTILIZATION STUDIES

SEC. 204. The Secretary is authorized to provide financial support for studies of the utilization of manpower and of job design by an employer or group of employers in industries where there are a large number of unskilled employees, with a view to redesigning and rearranging the work patterns involved in the jobs, so that career ladders may be created where they do exist, or are clearly inadequate.

TITLE III—PUBLIC SERVICE EMPLOYMENT

CONTRACTS FOR PUBLIC SERVICE EMPLOYMENT

SEC. 301. The Secretary may contract with any Federal, State, or local governmental agency, or with any private nonprofit organization, to provide useful public service employment to unemployed persons.

REQUIREMENTS FOR CONTRACTS

SEC. 302. Each contract entered into under section 301 shall provide that—

(a) all persons employed thereunder, other than necessary technical, supervisory, and administrative personnel, will be selected from among eligible unemployed persons;

(b) to the maximum extent possible, technical, supervisory, and administrative personnel shall be recruited from among eligible unemployed persons;

(c) persons employed under such contracts will be paid at rates comparable to the rates of pay prevailing in the same labor market area for persons employed in similar occupations, but in no event shall any person employed under such contract be paid at a rate less than that prescribed by section 6(a)(1) of the Fair Labor Standards Act of 1938, as amended; and

(d) all persons employed under such contracts will be assured of workman's compensation, retirement, health insurance, unemployment insurance, and other benefits at the same levels and to the same extent as other employees of the contractor, and to working conditions no less favorable than such other employees enjoy.

INFORMATION FOR EMPLOYERS

SEC. 303. Every person employed under contract under section 301 shall be advised, prior to entering upon employment, of his rights and benefits in connection with such employment.

ENTITLEMENT TO EMPLOYEE BENEFITS AND PROTECTION

SEC. 304. No contract shall be entered into under section 301 with a contractor who is, or whose employees are, under State law, exempted from the operation of the State workmen's compensation or unemployment compensation laws, generally applicable to employees, unless the contractor shall undertake to provide either through insurance by a recognized carrier, or by self-insurance as allowed by State law, that the persons employed under the contract, shall enjoy workmen's compensation and unemployment compensation and unemployment compensation coverage equal to that provided by law for covered employment.

MAINTENANCE OF EFFORT

SEC. 305 (a) No contract shall be entered into under section 301 unless the Secretary determines that the execution of the contract will result in an increase in employment opportunities over those which would otherwise be available and that it will not result in a reduction in the employment and labor costs of the contractor or the displacement of persons currently employed, including partial displacement resulting from a reduction in hours of work or wages or employment benefits.

(b) Where a labor organization represents employees who are engaged in similar work so that performed under the contract in the same labor market area, such organization shall be notified by the Secretary prior to the awarding of the contract.

SAFE AND HEALTHFUL WORKING CONDITIONS

SEC. 306. All contractors under section 301 shall provide their employees with safe and healthful working conditions.

EVALUATION OF CONTRACT PROPOSALS

SEC. 307. In evaluating contract proposals received under this title, the Secretary shall consider the cost to the Government in relation to—

(a) the number of eligible unemployed persons who will be provided with suitable employment under the contract;

(b) the need of the community for the services to be provided under the contract;

(c) the nature and extent of unemployment in the community in which the contract is to be performed;

(d) the extent to which employment under the contract will prepare eligible unemployed persons for regular private or public employment or for other programs conducted pursuant to this Act;

(e) the degree to which effective linkages to other programs under this Act are provided so that enrollees are able to secure needed training and other services necessary to prepare them for regular private or public employment; and

(f) the extent to which effective systems have been developed to provide priority to

enrollees for entry into occupational training or directly controlled employer training programs designed to lead to regular employment.

PREFERENCE

SEC. 308. (a) Preference shall be given to any prospective contractor who is operating an upgrading program authorized in title II and is prepared to assure maximum opportunity for enrollees to qualify for the entry level positions that become available as a consequence of the upgrading program.

(b) Preference shall also be given to prospective contractors in accordance with the proportion of the total cost they are prepared to assume.

OBLIGATIONS OF THE SECRETARY TO ENROLLEES

SEC. 309. The Secretary shall on behalf of the enrollees be responsible for—

(a) assuring that every reasonable opportunity to find suitable regular employment or to enter a program authorized by title I has been explored before the individual is certified for public service employment; and

(b) maintaining a continuing review of the status of each enrollee to assure that he is receiving consideration of referral to suitable regular employment or to programs authorized by title I.

DEFINITIONS

SEC. 310. For purposes of this title—

(a) The term "eligible unemployed person" means any individual aged eighteen to sixty-five, inclusive, who has demonstrated that he is able and willing to work and (A) has been unemployed for five or more weeks; or (B) is employed, though able and willing to accept full-time employment, on a part-time basis.

(b) The term "part-time basis" means less than thirty-five hours a week for a continuous period of ten weeks or more.

(c) The term "private nonprofit organization" means any nonprofit educational institution, or any private nonprofit hospital, or any private nonprofit organization certified by the Secretary to be engaged in appropriate public service activities in the community or area to be served.

TITLE IV—EVALUATION; TECHNICAL ASSISTANCE; STAFF DEVELOPMENT

STAFF DEVELOPMENT

SEC. 401. (a) In carrying out his duties under this Act, the Secretary shall—

(1) Survey, at regular intervals, the various training programs and opportunities available to or utilized by staff of manpower service programs, including both managerial and technical staff;

(2) Analyze the manpower programs, operating or planned, including the conceptual basis, the operating structure, and the clientele to be served, in order to determine current and future staff training requirements thus correcting or avoiding deficiencies in staff performance and enhancing the impact of programs;

(3) Plan for and provide directly or by contract an integrated system of short term and intermittent staff training and instruction in managerial and technical matters relating to the conduct of manpower training programs and services, including but not limited to on-the-job training, the establishment and maintenance of fellowships and traineeships, exchange programs, and such other devices as are deemed necessary or appropriate. The staff training system thus established shall be aimed at and include manpower training and service staff at Federal, State, and local levels funded directly or indirectly by this Act and special attention shall be given to the utilization of this staff training system in a manner which will increase the number and effectiveness of previously disadvantaged persons serving in career staff capacities. Training under this section shall provide for such stipends and allowances (including travel and subsistence allowances) as may be deemed necessary, except that no such training or instruction (or fellowship

or scholarship) shall be provided for any one course of study for a period in excess of four years.

TECHNICAL ASSISTANCE

SEC. 402. The Secretary shall—

(a) Plan for, establish, and maintain, directly and through contracts, a program of technical assistance to public and private agencies, institutions, and employers in order to assist such organizations in operating programs more effectively and providing service under this Act, in the most effective and efficient manner possible;

(b) Provide for, directly and through contract, the development and distribution of technical manuals and guides in order to assure the early dissemination of information concerning advanced or improved techniques related to manpower services and their delivery. Such information shall include techniques developed both as a result of this Act and through other resources;

(c) Make, upon appropriate request, the special assignment of personnel to public or private agencies and employers to provide technical guidance with regard to programs funded under this Act; but no such assignments shall be for a period of more than two years;

(d) Without regard to the civil service laws or the classification provisions of title 5, United States Code, employ highly specialized or qualified personnel from public or private agencies and institutions, and assign them to units of the Department engaged in work under this section, for purposes of technical guidance or assistance. Such special assignments shall be limited to five per year and shall not exceed nine months in any two years for any individual and such persons shall not hold, or exercise the authority of, any policy or supervisory position. The Secretary may arrange for payments for subsistence, travel, and wage or salaries for individuals thus assigned: Provided, That such wage or salary payments shall not exceed the wage or salary that said individuals would otherwise receive had the assignment not been made.

EVALUATION

SEC. 403. The Secretary shall—

(a) Provide for the systematic evaluation of the management and impact of manpower programs and services provided under this Act. Such evaluation may be conducted directly or by contract and shall include the comprehensive analysis of programs and analyses of particular program or service components, cost effectiveness, and impact upon and receptivity of the trainee and the community.

(b) Compile the findings of such evaluations, with the recommendations for corrective action and a list of such actions as are implemented. This compilation, together with such supportive documents as may be required, shall be submitted by him to Congress annually by April 1;

(c) Allocate 1 per centum of the sum appropriated in any fiscal year to carry out titles I, II, and III for the purpose of this section.

TITLE V—MANPOWER RESEARCH AND DEVELOPMENT

SEC. 501. For the purpose of achieving the objectives set forth in this Act, the Secretary shall—

(a) Conduct (directly, or through grants or contracts) permanent and on-going programs of research and evaluation of—

(1) the impact, benefits, and problems created by technological progress and other changes in the structure of production and demand on the use of the Nation's human resources;

(2) practices of employers and labor organizations which tend to impede or facilitate the vertical, lateral, or geographical mobility of workers; and

(3) the adequacy of the Nation's public and private manpower development efforts,

not limited to those carried on under this Act, to meet foreseeable manpower needs.

(b) Establish a program of experimental, developmental, demonstration, and pilot projects, directly, or through grants or contracts, for the purpose of improving the techniques and demonstrating the effectiveness of specialized methods of achieving the objectives of this Act. In carrying out such programs, the Secretary may, where appropriate consult with other agencies of the United States Government.

SEC. 502. The Secretary, serving as the President's principal adviser on manpower, shall report to the President on the manpower implications of the Federal budget, and shall make recommendations to the President in regard to the budget and to manpower programs generally.

SEC. 503. In carrying out the responsibilities under this Act, the Secretary shall provide, directly or through grants, contracts, or other arrangements, training for specialized or other personnel and technical assistance which is needed in connection with the programs established under this Act or which otherwise pertains to the purposes of this Act. Upon request, the Secretary may make special assignments of personnel to public or private agencies, institutions, or the Vocational Rehabilitation Act, the Demonstration Cities, and Metropolitan Development Act of 1966, and other relevant Federal statutes.

SEC. 504. (a) The Secretary shall develop a comprehensive system of labor market information on a National, State, local, or other appropriate basis, including but not limited to information regarding—

(1) The nature and extent of impediments to the maximum development of individual employment potential including the number of characteristics of all persons requiring manpower services.

(2) Job opportunities and skill requirements.

(3) Labor supply in various skills.

(4) Occupational outlook and employment trends in various occupations.

(5) In cooperation and after consultation with the Secretary of Commerce, economic and business development and location trends. Information collected under this subsection shall be developed and made available in a timely fashion in order to meet in a comprehensive manner the needs of public and private users, including the need for such information in recruitment, counseling, education, training, placement, job development, and other appropriate activities under this Act and under the Economic Opportunity Act of 1964, the Social Security Act, the Public Works and Economic Development Act of 1965, the Wagner-Peyser Act, the Vocational Education Act of 1963, the Vocational Rehabilitation Act, the Demonstration Cities and Metropolitan Development Act of 1966, and other relevant Federal statutes.

(b) The Secretary shall develop and publish on a regular basis information on available job opportunities throughout the United States on a National, State, local, or other appropriate basis for use in public and private job placement and related activities and in connection with job matching programs conducted pursuant to this subsection. The Secretary is directed to develop and establish a program for matching the qualifications of unemployed, underemployed, and low-income persons with employer requirements and job opportunities on a National, State, local, or other appropriate basis. Such programs shall be designed to provide a quick and direct means of communication among local recruitment, job training and placement agencies and organizations, and between such agencies and organizations on a National, State, local, or other appropriate basis, with a view of the referral and placement of such persons in jobs. In the development of such a program, the Secretary shall

make maximum possible use of electronic data processing and telecommunication systems for the storage, retrieval, and communication of job and worker information.

(c) The Secretary is authorized to and shall plan, establish, and operate directly or through contract, an information service, to make available to agencies, organizations, and other groups and persons concerned with manpower programs and services, information on resources, techniques, and concepts useful in the conduct of training programs covered by this Act. Such information shall include that derived from research, experimental and demonstration programs, and the evaluated experience of Federal, State, and local operations. The information shall be so designed as to be helpful in the establishment and improvement of training programs and related activities covered under titles I, II, and III.

SEC. 505. Not less than 2 per centum of the sums appropriated in any fiscal year to carry out titles I, II and III of this Act shall be available only for carrying out the provisions of this title.

SEC. 506. The Secretary shall make such reports to the President as he shall deem appropriate or the President shall require and the President shall submit to the Congress, not later than April 1 of each year (beginning not less than nine months after the effective date of this Act) a report pertaining to manpower requirements, resources, utilization, and training.

TITLE VI—MISCELLANEOUS

AUTHORIZATION OF APPROPRIATIONS

SEC. 601. There is hereby authorized to be appropriated such sums as may be necessary to carry out this Act. Funds appropriated under this Act shall remain available for one fiscal year beyond that for which appropriated.

ADVANCE FUNDING

SEC. 602. To the end of affording responsible Federal, State, and local officials concerned, adequate notice of available Federal financial assistance for programs provided for under this Act, appropriations for carrying out this Act are authorized to be included in the appropriation Act for the fiscal year preceding the fiscal year for which they are available for obligation. In order to seek a transition to this method of timing appropriation action, the preceding sentence shall apply notwithstanding that its initial application under this Act will result in the enactment in the same year (whether in the same appropriation Act or otherwise) of two separate appropriations, one for the then current fiscal year and one for the succeeding fiscal year.

OTHER AGENCIES AND DEPARTMENTS

SEC. 603. (a) In the performance of this function under this Act, the Secretary, in order to avoid unnecessary expense and duplication of functions among Government agencies, shall use the available services or facilities of other agencies and instrumentalities of the Federal Government. Each department, agency, or establishments of the United States is authorized and directed to cooperate with the Secretary and, to the extent permitted by law, to provide such services and facilities as he may request for his assistance in the performance of his functions under this Act.

(b) The Secretary shall carry out his responsibilities under this Act through the maximum utilization of all possible resources for skill development available in industry, labor, public and private educational and training institutions, State, Federal, and local agencies, and other appropriate public and private organizations and facilities.

PROHIBITION ON RELOCATING ESTABLISHMENTS

SEC. 604. The Secretary shall not use any authority conferred by this Act to assist in relocating establishments from one area to

another. Such limitation shall not prohibit assistance to a business entity in the establishment of a new branch, affiliate, or subsidiary of such entity if the Secretary finds that assistance will not result in an increase in unemployment in the area of original location or in any other area where such entity conducts business operations, unless he has reason to believe that such branch, affiliate, or subsidiary is being established with the intention of closing down the operations of the existing business entity in the area of its original locations or in any other area where it conducts such operations.

LABOR STANDARDS

SEC. 605. All laborers and mechanics employed by contractors or subcontractors in the construction, alteration or repair, including painting and decorating of projects, buildings and works which are federally assisted under this Act shall be paid wages at rates not less than those prevailing on similar construction in the locality as determined by the Secretary in accordance with the Davis-Bacon Act, as amended (40 U.S.C. 276a-276a-5). The Secretary shall have, with respect to such labor standards, the authority and functions set forth in Reorganization Plan Numbered 14 of 1950 (15 F.R. 3176; 64 Stat. 1267; 5 U.S.C. 133-133z-15), and section 2 of the Act of June 13, 1934, as amended (48 Stat. 948, as amended; 40 U.S.C. 276(c)).

ADVISORY COMMITTEES

SEC. 606. (a) The Secretary shall appoint a National Manpower Advisory Committee which shall consist of ten members and shall be composed of representatives of labor, management, agriculture, education, and training, and the public in general. From the members appointed to such Committee the Secretary shall designate a Chairman. Such Committee, or any duly established subcommittee thereof, shall from time to time make recommendations to the Secretary relative to the carrying out of his duties under this Act. Such Committee shall hold not less than two meetings during each calendar year.

(b) For the purpose of making expert assistance available to persons formulating and carrying on programs under this Act, the Secretary shall, where appropriate, require the organization of a community, State, and/or regional basis of labor-management-public advisory committees.

(c) The National Manpower Advisory Committee may accept gifts or bequests, either for carrying out specific programs or for its general activities, or for its responsibilities under subsection (b) of this section.

(d) Appointed members of the National Manpower Advisory Committee shall be paid compensation at the rate of \$100 per diem when engaged in the work of the National Manpower Advisory Committee, including travel time, and shall be allowed travel expenses and per diem in lieu of subsistence as authorized by law for persons in the Government service employed intermittently and receiving compensation on a per diem, when actually employed, basis.

DEFINITION

SEC. 607. For the purposes of this Act, the term "State" includes the District of Columbia, Puerto Rico, the Virgin Islands, Guam, American Samoa, and the Trust Territory of the Pacific Islands.

REPEAL OF EXISTING LAWS

SEC. 608. Titles I, II, III, and V of the Manpower Development and Training Act of 1962 and part B of title I of the Economic Opportunity Act are repealed, effective June 30, 1969.

EFFECTIVE DATE; TRANSITION PROVISIONS

SEC. 609. (a) This Act shall take effect July 1, 1969.

(b) Notwithstanding the repeals made by section 608, in order to permit an orderly

transition from programs carried out under the provisions of laws repealed, to programs carried out under this Act, the Secretary may continue to use the authority provided in such repealed provisions of law for such period of time as may be necessary, but not in excess of two years beyond the effective date of this Act.

CALIFORNIANS HONOR COMMUNIST ERRAND BOY

(Mr. RARICK asked and was given permission to extend his remarks at this point in the Record and to include extraneous material).

Mr. RARICK. Mr. Speaker, the California taxpayers are now forced to perpetuate the memory of an international communism errand boy.

Their new University of California law building was dedicated as the M. L. King, Jr., Law Building, appropriately by outgoing Chief Justice Earl Warren.

Perhaps it is a fitting tribute to a man whose only claim to fame was disobedience of the law—save those which served his own ends and conveniences. Or was this action by the regents felt necessary to prevent the building from being burned? Makes about as much sense as UNESCO's eulogizing the bloody dictator, Lenin, as a humanist.

Perhaps this is the beginning of a trend in the naming of law schools and buildings after others infamous in connection with the law—such as the James brothers, John Dillinger, or Bonnie and Clyde.

Many wonder why the present administration does not authorize the Department of Justice to tell the American people the truth about King and his lifetime of subversion and immorality and exploitation.

Or does it, too, fear it has more to gain by suppression of the truth than by telling the American people the facts.

A clipping from Parade for May 25 follows:

Q. I understand that California's Governor Ronald Reagan would not permit a new law building at a University of California campus to be named in honor of the late Martin Luther King Jr. Is this so?—Henry Ackerman, Berkeley, Calif.

A. The governor voted against naming the building after King. The reason, he explained, was because King had not been a lawyer. The majority of the regents, however,

outvoted the governor, and the new law building at the Davis Campus of the University of California is now known as the Martin Luther King Jr. Law Building. The building was dedicated by U.S. Supreme Court Chief Justice Earl Warren.

SILENCING OF THE PUBLIC'S VOICE

(Mr. WALDIE asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. WALDIE. Mr. Speaker, in the past 8 years there has been a period of unmatched progress in the efforts to correct the problems of water pollution that threaten the rivers, lakes, and estuaries of this Nation. Much of the credit for this progress must be given to the policies of former Interior Secretary Stewart L. Udall and the provisions of the Federal Water Pollution Control Act of 1965.

Mr. Speaker, many of the water quality standards for interstate waters and other waters under Federal jurisdiction have been reached by agreements reached by the State and Federal agencies following public hearings in which the voice of the concerned public was heard and heeded.

It is my understanding that this voice may be stilled not by a lack of concern, but by the action of the Department of the Interior.

Mr. Speaker, I would like to submit an article in the New York Times of Sunday, May 18, 1969, which tells of the proposed change in policy from public hearing to "informal, behind the scenes negotiations between Federal and State water officials."

Nowhere, Mr. Speaker, would such a policy have a more detrimental effect than in my State of California. California is unique among the States of the Union, Mr. Speaker, in that the agency charged with the responsibility for conserving the water resources of the State is also given the responsibility to sell that water to customers of the California State water project.

Only through the avenue of the public hearing has the voice of conversationists, sportsmen, and the concerned public been given the opportunity to comment on the proposals of water customers and the purveyors of California's water resources.

Only last week did the Governor of our great State override the wishes of water customers and the State-run water utility, the department of water resources, and postpone consideration of an ill-advised dam and reservoir on the middle fork of the Eel River.

It is generally acknowledged that the Governor responded to the voice of the conservationists of California in halting this unwise project.

What would have resulted if there had been no public forum? What would have been the result if there had been only "informal, behind-the-scenes negotiations"?

The answer, I think, is that Dos Rios Dam would have been approved by the State.

I sincerely hope, Mr. Speaker, that the Secretary of the Department of the Interior will recognize the real need for retention of the public's role in determination of water quality standards. It is possible that agreement between State and Federal agencies reached after pub-

lic hearings may take more time, but the results may be much more valuable in the long run.

The article from the New York Times of May 18, 1969, follows:

WATER POLLUTION FIGHT TO SHIFT FROM HEARINGS TO NEGOTIATIONS

(By Gladwin Hill)

DULUTH, MINN., May 16.—The Department of the Interior is about to shelve its 12-year-old program of formal water pollution abatement actions.

Instead, it will shift to a strategy of informal, behind-the-scenes negotiations between Federal and state water officials in an effort to speed rehabilitation of the nation's generally dirty waterways.

This major policy switch was confirmed by Assistant Secretary of the Interior Carl L. Klein in an interview.

The department opened the last of the pending abatement hearings—concerning Lake Superior—which were inherited by Interior Secretary Walter J. Hickel. His predecessor, Stewart L. Udall, credited the now-side-tracked statutory enforcement program with producing a great improvement in national water quality.

The program stemmed from a law of 1956, giving Federal officials power to dictate clean-ups of interstate water contamination under the threat of court action after a prescribed series of hearings.

This approach, however, was termed a "yelling and screaming" process by Mr. Klein. Mr. Hickel's aide for water quality and research.

"We think it will be much more effective to work on the level of informal conferences," Mr. Klein said.

"My idea is to just talk problem situations out with officials in the states. I think we can get action that way, cutting through the red tape without all these cumbersome formal proceedings."

Some national water pollution experts, while publicly reserving judgment, think this effort at "expediting" may prove illusory. They feel that it has been the harsh spotlight of publicity, focused on municipal and industrial water polluters through the public hearings, that has prodded offenders into cleaning up. The proceedings have involved more than 1,000 communities and 1,000 industrial establishments.

Secretary Udall estimated there was about \$26-billion worth of work to be done over a five-year period to clean up the nation's waterways—many times what is being spent. Two thousand communities still discharge raw sewage.

Mr. Klein still has the statutory abatement-action weapon up his sleeve. But the Lake Superior hearing, he said, is the last such proceeding for the time being.

"We don't intend to initiate any new formal actions at this time," he said. "But that doesn't mean we're slacking off. I have a list of about 40 problem areas that I intend to attack as fast as I can get at them."

LAWYER AND LEGISLATOR

Mr. Klein, 52 years old, is a lawyer and former Illinois legislator. When he was named a Hickel assistant, one Chicago paper identified him in its headline simply as "Carl Klein of the 15th Ward," where he was Republican state committeeman.

Mr. Klein said he intends to press for much more stringent sewage treatment standards than the current norm of "secondary treatment," in which bacteriological fermentation neutralizes up to 80 per cent of the most objectionable components.

The new goal, Mr. Klein said, will be "tertiary," or third-stage treatment, which chemically removes from sewage residue most of the nitrogen and phosphorus, which promote the growth of odorous, seaweed like algae in waterways. Tertiary treatment restores sewage, which is largely water, to almost potable

purity. The process is now in use in only a few places experimentally.

"Acceptable quality for the Potomac River, for instance, can be met only by exotic tertiary treatment," he said. "Chicago and some cities in Ohio are working on it. If we don't go to it generally, we're going to choke to death on nutrient pollutants."

His 40 "problem areas," he said, correspond with many of the pollution situations on which previous Administrations initiated abatement actions where fulfillment is still pending.

The Lake Superior proceeding was the 45th such action initiated since 1957. Under the law, after Federal investigators collected detailed evidence of pollution, state water officials and individual polluters were given a forum for stating their case, along with spokesmen for citizen groups. Then an explicit, scheduled clean-up program was formulated.

The crux of the process was persuading state officials to subscribe to and execute such programs voluntarily, short of Federal court action—a maneuver in which the Federal Water Pollution Control Administration's assistant commissioner for enforcement, Murray Stein, had gained renown for his dexterity. Only one of the 45 actions—involving St. Joseph, Mo.—has gone to the stage of court action.

Mr. Klein hopes through his informal-negotiation strategy to minimize a problem produced by the Federal effort to get every state to adopt satisfactory, hand-tailored water quality standards to obviate so much Federal policing.

Twenty-five states last year produced satisfactory formulations. But the draft standards submitted by 25 other states were deficient, raising the possibility that in one case after another, formal enforcement proceedings might have to be initiated. Mr. Klein said he thought this could be obviated by off-record discussions.

The three-day Lake Superior hearing, involving the states of Minnesota, Wisconsin and Michigan, centered on the suspected danger that Minnesota iron-mine tailings could ruin the only remaining one of the Great Lakes that generally retains its pristine purity. Extensive testimony on this was contradictory.

Water Pollution Control Commissioner David Dominick, who presided at the hearing, said the parties would be given about a month to digest the data presented, and then the hearing would be reconvened to decide what needs to be done.

THE SST—AN ANALYSIS

(Mr. WALDIE asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. WALDIE. Mr. Speaker, I would like to share the wisdom of a learned and most articulate gentleman, Mr. Charles L. Johnson, with the Members of Congress, on a subject of vital importance to all Americans—the proposed supersonic transport.

Mr. Johnson, a resident of Moraga, Calif., has many years of experience behind him and many years of wise study in diverse disciplines. I value his opinions and I would at this time like to share his thoughts on the SST with all the Members of Congress, as follows:

MORAGA, CALIF.,

April 24, 1969.

HON. JEROME R. WALDIE,
Cannon House Office Building,
Washington, D.C.

DEAR CONGRESSMAN WALDIE: Because the SST program seems to contain the elements of a sociological Vietnam, I have taken the

liberty of replying to your questionnaire in a more extended form than your inquiry requests.

Some of my comments may already be familiar to you, and others may even be fallacious in the light of your more intimate knowledge of the situation. But I believe that all of your constituents should share the burden of the many difficult decisions you are called upon to make and not let the responsibility for them rest on your shoulders alone. In this spirit, I have submitted to you these remarks on the SST, which, I trust, you may find useful in your deliberations on its future.

Most immediate among my reactions to the information in your questionnaire is the thought that the real economic unit to be considered, in addition to the staggering 1.5 billion dollars to be spent on the prototype, is the commercial air-fleet itself—the number of SST's an airline must possess to satisfy the demands of its traffic. Assuming that each of the four leading American airlines will require one hundred of these aircraft, the total cost, at present, would be 150 billion dollars per airline; and for the four of them combined, 600 billion dollars. Even if each company required as few as twenty such airplanes, the total cost to all of them would be 12 billion dollars, a financial sum that can produce hysteria among the most experienced airline executives.

The only alternatives to such expenditures seems to be deep and continuing assistance from the Federal government. And thus the decision to build the SST is unavoidably a decision to ultimately finance a larger adventure—the underwriting of airline fleets—and to sustain it indefinitely. Whether we like it or not, if the Congress votes affirmatively, the United States Government will find itself inextricably involved in the air-transport business, committed to a socialistic venture of astronomical proportions, which would not benefit all of the people and would, moreover, compel the government to guarantee private profits to commercial corporations, if only to protect its own huge investment.

Those persons who object to the high percentage of Federal participation in this enterprise are well justified in their position. If this unethical and unsupportable involvement continues, it may eventually become necessary for the United States Government to build and operate these aircraft outright and to inaugurate a new branch of the civil service. For it seems notoriously true that preliminary estimates of construction costs are always understated or somehow exceed the projected figures by exorbitant sums. If this is also true for the SST, the initial amount of 1.5 billion dollars may have to be drastically increased, resulting in a corresponding commitment by the Federal government.

And once the decision is made to complete this program, further complications must be immediately faced:

The SST's in themselves are inoperational without large airbase facilities. Consequently, immensely expensive overseas installations must be provided, as well as modern airports at home. But can foreign governments at whose countries our super-sonic aircraft will touch down afford to construct and maintain such terminals? Where, for example, will India get the billions of dollars to erect these structures? Where, indeed, but from the American taxpayer?

And how can the so-called developing nations compete for SST traffic without foreign assistance?

The answer, currently, seems to be that they simply can not—unless they receive enormous subsidies from somewhere else.

Suppose, for instance, that the Soviet Union offers to build a modern SST airport in Dahomey. Shall we be compelled for some neurotic reason to construct a bigger one at

our own expense in Sierra Leone? Are we, then, to embark on another pernicious round of foreign aid, this time to encourage tourism so that we can supposedly stop Communism?

Nor can commercial overseas airports, however peaceful their intent, be dissociated from military bases and support installations. The inevitable Air Force version of the SST, conceived perhaps as a cargo transport, but particularly as a troop-carrier, will inexorably require terminal facilities on foreign soil. These bases must be of sufficient size to cope with the logistical problems of such huge aircraft. And they must be strategically located and adequately defended.

Does this not imply continued involvement in Asia?

Must not our foreign policy throughout the Orient be linked to the loyalties of the larger Asian countries, meaning in particular India?

Such bases must be operational prior to the landing of SST's and to the commitment of American troops, should that unhappy contingency arise despite our fervent desire for noninvolvement.

Thus once we build a commercial SST, we must build overseas facilities for them. Then we must construct a military SST and acquire foreign bases as well—simply because the Air Force will insist on it. And so, starting with what were purely commercial considerations, we shall be confronted almost immediately with serious questions of foreign policy.

In this context, I trust that you will investigate the SST capabilities of our publicly-secret airbases in Thailand. If these installations can support super-sonic operations, as seems likely, does such foresight imply a permanent mutual-assistance pact with the Thai government, about which the American people have not been informed by the present, and previous, Administration? If they can not, are these bases now obsolescent in view of our possible reinforced presence in Southeast Asia when the British withdraw from Singapore in 1971, leaving behind a military vacuum in that region?

These questions are not irrelevant: We must have a Singapore policy—right now.

And the SST must certainly be implicated in it.

Is it necessary to win in Vietnam in order to protect Singapore and the surrounding archipelago? Should we not build an even larger SST than the one contemplated, say an aircraft capable of transporting troops by the brigade? Will Australia help construct airports for these airplanes? What would be the anticipated response of the Chinese to the implied threat of SST's serving Southeast Asia close to China's frontiers?

Again, these queries may suggest nothing but good, healthy political paranoia among your constituents. Yet I hope they will not be ignored during Congressional discussions.

Other matters than cost and foreign policy, however, are involved in the question of whether to complete the SST program.

As you no doubt know, any advantage gained by shortening transoceanic trips on SST's can be readily nullified by the disruption of the circadian rhythm. The biological dislocations which are induced by rapid changes in time zones produce corresponding psychological disorientations. Many American business firms will not, even now, permit their representatives to transact business immediately after disembarking from such flights. Their personnel are required to rest for a minimum length of time before conducting company affairs. The high speed of the SST can only aggravate such perceptual imbalances. These side effects can diminish the efficiency of rapid transit: Two sunrises within two hours can be a rather disconcerting experience. A thorough inquiry into these phenomena should be completed before a final decision to proceed with the SST is reached.

Sociologically, too, the SST can produce severe domestic dislocations.

Fleets of such aircraft will require completely modern facilities, which, as I have remarked, can be incredibly expensive. Certain cities, because of their strategic situations, must have these installations within their environments; for others, this will not be possible and new sites must be found. In the former cases, the familiar and irritating traffic congestion will certainly not be alleviated and very probably will be aggravated by super-sonic airplanes. In the latter cases, the construction of entirely new airports will necessarily entail the emergence of entirely new cities.

When the passenger-carrying SST is supplemented by the freight-carrying SST, and by larger jumbo-jets than are presently planned, a traumatic rerouting of railroads and highways and the relocation of many businesses will be mandatory. The resulting shifts in population, the alteration in municipalities, and the impact on industry—to mention a few more obvious consequences—will change the economic, physical, and social character of the American nation. Unless these are provided for in the projected SST era that Congress is considering, sociological disasters can be expected, which may well prove irremedial. It is perhaps worth noting in passing that such pressing problems as poverty, racial tensions, and concomitant urban blight may be made insoluble—and irrelevant—simply because the centers of social energy have been shifted elsewhere: such problems will be merely left behind, as they will have to be, when SST airports are located far outside the boundaries of our classical cities, the very sites of much contemporary discord.

Indeed, the SST is quite capable of dividing American society into two cultures, a new one and an old one, with a corresponding separation of political power. If SST airports are located concentrically around the middle third of the country, as transportation economics seems to indicate, several of our states which are now regarded as electorally small or middle-sized may emerge as the large states of the future. Favorable weather conditions over the southern United States may make the South a predominate region in national affairs.

And yet, when all these implications have been considered, a very humane question remains to be answered: Is the SST really the most desirable way to fly?

True, the super-sonic aircraft reduces the passenger's fatigue by getting him to his destination faster. But could not fatigue be lessened by getting him there more pleasantly? And why the fanatical insistence on annihilating space and time? What ultimate human purpose does this serve?

It seems that we have forgotten the leisurely and healing uses of time and are continually urging ourselves onwards at heart-stressing paces, ignorant of the fact the world is round and that we will eventually return to where we started from anyway, whether we blitz around the earth or travel across it more slowly. Agreed that there are important reasons for speed. Does this require an entire culture to be based on a technological treadmill?

Some of our more iconoclastic engineers have already concluded that if our buildings were made of light-weight materials, they could be transported through the air by jet-powered engines. As implausible as this vision may seem to many persons, such a possibility may well transpire in the near future. It is, at any rate, a suggestion worth examining. Instead of prematurely investing in the SST, it may perhaps be wiser to encourage these engineers to construct hotels that can be lifted across oceans or flown from city to city. After all, H. G. Wells wouldn't laugh; why should we? At least they might not produce sonic booms.

As for these unpleasant disturbances, it should be acknowledged that they are social problems of some importance.

Sonic booms can not be dismissed as unfortunate inconveniences—as part of the price we must pay for technological advances. Sound is a destructive force.

It is an environmental pollutant just as much as are smoke and contaminated water. And only now is research into the damaging effects of noise becoming public knowledge.

At a time, therefore, when legislation seems necessary to achieve some measure of noise abatement to protect the personal and domestic environment of the individual citizen, the sonic boom should not be made an unremovable part of the public scene as it will be if the SST is approved without adequate regard for civic well-being. For once this program is authorized, noise pollution and its attendant evils will become a permanent fact of daily existence, and another devious element will have been introduced into American life, pitting those whose concern is for public and private dignity against those who prefer to place selfish financial gain above the common good. If it is later shown that the sonic boom is a menace to health and an intolerable irritant, the Congress will have placed itself in a moral crisis similar to the one confronting it in the field of cigarette advertising, where unfortunately its members have responded in a cowardly manner that is becoming all too characteristic of a legislature which is falling in its functions. Faced with the morality of the sonic boom, the Congress will no doubt again espouse private profit against public good.

I, for one, however, hope that this time the electorate will not be so apathetic.

If the Congress approves the SST without scientific knowledge of the adverse physical and psychological effects such daily harassment may induce, then its members deserve the wrath of hysterical mothers whose infants are shocked awake, screaming in their cribs; of irate citizens, whose sleep has been devastated; or riotous homeowners, whose sagging houses are full of cracked walls and ceilings; of mutinous merchants, who are tired of replacing glass windows; and of the nervous gentry of our major cities, who will pervasively continue to interpret sonic booms as Russian missile attacks. (In fact, amigo, how do you tell the difference, especially in the middle of the night?)

Certainly, one of the responses which Congress must make to the SST is to legislate better safety regulations and to require the installation of more efficient safety equipment than it has evidently been willing to do so far. The crash of an ordinary jet liner almost always results in the loss of scores of lives—a tragedy which is stark enough. But the loss of possibly a thousand or more lives in an SST crash would be simply harrowing. And such equipment, it should be noted, must be installed not only within the United States, but on foreign bases as well.

The argument that we must always be first may have a certain emotional appeal to many of our citizens; but it should be remarked that we were the first to produce the atomic bomb and the Chinese entered the competition very much later. Yet, by taking advantage of our knowledge and that of others in the field, they are now emerging as a military menace of planetary magnitude.

Similarly, if we have the patience, and perhaps the wisdom, to let the French, British, and Russians pioneer in the development of the SST, we may be able to leap-frog into the lead in the near future by learning from their experiences.

And if we also pursue our inquiries into the deleterious consequences of noise and not act until convincing scientific data support our decisions, we may avert an irreparable national crisis.

Whatever advantages the French, British,

and Russians reap from their early entry into the field of super-sonic transportation need not be permanent. We should not be panicked into believing that our loss of leadership would be catastrophic. Perhaps it may seem that way to the fanatical patriot. And it surely will be charged by those who stand to gain financially from inciting such fear.

But far too much is at stake to hurry foolishly.

Let us wait a little longer, then, until all the vital questions have been asked—and answered—paying the price of this delay in dollars if necessary, rather than in future social turmoil and irreparable failure.

Permit these foreign governments to prove that this gigantic enterprise is economically feasible; allow them to correct the technical defects that usually inhere in such adventures; and let them face the problem of overcoming our competition—when we can build a bigger, faster, and safer SST.

Sincerely yours,

CHARLES L. JOHNSON.

(Glad to have helped. As they say in politics, any time I can be of service, just let me know.)

CIGARETTES MAKE A FINE WHIPPING BOY—AND AUTO EXHAUST INCREASES

(Mr. PERKINS asked and was given permission to extend his remarks at this point in the RECORD and to include an editorial.)

Mr. PERKINS. Mr. Speaker, I insert in the CONGRESSIONAL RECORD the article taken from the Licking Valley Courier of West Liberty, Ky., entitled "Cigarettes Make a Fine Whipping Boy—and Auto Exhaust Increases."

CIGARETTES MAKE A FINE WHIPPING BOY—AND AUTO EXHAUST INCREASES

It's been over two years since a government-named board of doctors and scientists reported that hydro-carbons from automobile exhaust constitute the second most potent causative agents of chest cancer. The board reported after a 28-month study. But the government hasn't yet commenced to eliminate the hydro-carbons from the air.

An Associated Press story from Washington last week stated the National Air Pollution Control Administration had finally decided a way to test auto exhausts—"just collect them in bags and measure them."

But the Air Pollution Administration said its new methods for controlling auto exhausts on new cars would not go into effect until 1972.

And in the meantime, the big corporations that will be affected are doing a fine job fooling the public into thinking cigarette smoking is the cause of the "great increase in chest and respiratory diseases."

Gift of \$3,400,000 to 12 reputable foundations to conduct "an educational campaign against smoking" should be investigated.

Cigarette smoking has declined since the 12 foundations started their "educational campaigns" with a \$3½ million slush fund, but chest diseases continue to increase—increase at about the same rate autos are increasing on the highways. The 12 foundations using the \$3½ million gift fail to say a word about the scientific report that hydro-carbons from auto exhaust is the second most potent cause of chest disease—second after radiation fallout from nuclear fission. And bear in mind the scientists couldn't find that cigarette smoke was a "known causative agent" in the increase of chest diseases.

Radio active elements was first, auto exhaust second and strontium 90 was third as known causes of chest cancers, according to the report of the 28 doctors and scientists who studied the problem.

CRISIS IN MILITARY LAWYER RANKS

(Mr. PIRNIE asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. PIRNIE. Mr. Speaker, if anyone questions the need to retain qualified military lawyers at a rate higher than 12 percent per year for the Army, 14 percent for the Air Force, and 6 percent for the Navy, I would urge the reading of a fine article which appeared in the December 1968 American Bar Association Journal entitled, "A Lawyer's Day in Vietnam." This informative observation was written by four Army JAG officers who comprised the legal staff of an Army headquarters in Vietnam. Those who brush off the need to have experienced military lawyers would do well to note the services rendered daily, even during combat, by judge advocates in Vietnam. They handle everything from legal counsel in capital cases to family relation problems of the servicemen who are fighting in that war.

For years I have been trying to get the Department of Defense to recognize the need for experienced, well-qualified military lawyers. For 10 years, DOD officials have procrastinated and shoved the problem "under the rug." The implication has been that the need of lawyers was not critical since they were not involved on the front lines. If anyone thinks that military lawyers are away from the scene of battle, they will learn otherwise by reading the article to which I have referred, and which I append as follows:

A LAWYER'S DAY IN VIETNAM

(By Irvin M. Kent, Jon N. Kulish, Ned E. Felder, and Herbert Green)

(NOTE.—Does the military need lawyers in Vietnam? Repeatedly asked this question by their fellow lawyers in the United States, the authors, who comprise the legal staff of an Army headquarters in Vietnam, determined to let American lawyers decide for themselves. The authors selected in advance a day on which each would keep notes on his activities. This article is the description of that day—March 11, 1968.)

Do Judge advocates practice law? Why do we need lawyers in Vietnam?

These are two questions all four of us have frequently heard from fellow lawyers in the states. Perhaps this, the outline of one of our days in Vietnam, may provide an answer.

We constitute the lawyer complement of the Office of the Staff Judge Advocate, Headquarters, II Field Force, Vietnam. This is a corps-level headquarters that has operational control of several United States divisions and many nondivisional units and is responsible for military operations in the Vietnamese III Corps Tactical Zone, which includes the most heavily populated areas of the country and surrounds its capital city. We are authorized six lawyers, but only four are assigned. The office is also staffed by a warrant officer for office administration, a sergeant major as chief legal clerk, a sergeant first class as claims clerk and three specialists who are, respectively our court reporter, stenographer and clerk typist. The enlisted men also take their share of duty on perimeter guard and must be as handy with their rifles as with their typewriters. The captain and our warrant officer also take their turns as officer of the guard for the headquarters area.

We represent the Bars of California, Colo-

rado, Massachusetts, South Carolina and Texas as well as of several federal courts. We received our law training at Georgetown, Harvard, South Carolina State and Texas. One of us is Catholic, one Jewish, one Protestant, and one is nondenominational. Three of us are Caucasian and one is a Negro. Three of us are career military men and one is fulfilling his military obligation. The three career officers, all ROTC graduates, have all had military service in other branches—Armor, Finance, Infantry or Ordnance—before becoming judge advocates. Two of us are married with a combined total of six children. While all of us perform other duties, as required, Lieutenant Colonel Kent is assigned as staff judge advocate, Major Kulish as deputy and also as chief, international affairs, and legal adviser to the units located in and around the headquarters company, Major Felder as trial counsel (prosecutor) of the general court and also as claims officer, and Captain Green as defense counsel and legal assistance officer.

For this description of one of our days in Vietnam, we chose in advance a day that turned out to be neither our lightest nor our heaviest. We deliberately picked a day on which no general court martial was scheduled since we suspect that everyone will acknowledge that the prosecution or defense of a felony is the practice of law. It was just one of the 365 days of our tour here—the office is open and manned seven days a week from 7:30 a.m. to 6 p.m. Our mission is to provide total legal services for the commanding general, his staff and subordinate commanders and all other members of this command.

This was the day—Monday, March 11, 1968. The Staff Judge Advocate: After a quick check of the office and a short conference with his deputy, the staff judge advocate, Colonel Kent, accompanied by the chief legal clerk, left by helicopter for the base camp of one of the II Field Force artillery groups and elements of two of its battalions. They had been alerted to notify all personnel that a legal assistance officer would be available. Every trip away from the headquarters is also a legal assistance trip. We have a one-briefcase legal assistance kit which contains interview cards, form clauses for wills and powers of attorney, income tax forms and instructions and applications for military ballots.

A QUESTION OF PROMPT JUSTICE

This visit was based on a complaint by a soldier of an apparently undue delay in the disposition of charges against him. These allegations, if substantiated, would raise the issue of the right to speedy trial.¹ Colonel Kent wished to discuss this with the group commander and to indicate that if investigation revealed that these allegations were true, the best interests of justice might be served by a dismissal of the charges. Further, as on all such trips, he wanted to re-emphasize some of the rules concerning the imposition of nonjudicial punishment² and to emphasize the Army claims program, particularly with regard to losses of personal property caused by hostile action.³ A supply of claims forms was taken along and distributed to the units with instructions for their use. The staff judge advocate has authority for the approval of such claims up to \$1,000.

By 11 a.m., these matters accomplished, Colonel Kent set up shop for legal assistance. In the meantime the chief legal clerk was providing instruction on the administrative processing of courts-martial papers, nonjudicial punishment actions, and claims investigations for the clerical personnel of group headquarters. Except for a thirty-minute lunch break the legal assistance program continued until 3 p.m. During this time there were five requests for assistance on federal income tax problems. Four of these were relatively simple inquiries pertaining to combat zone pay exclusions, but the fifth

came from a soldier who wanted to complete his return for 1967. Rapid calculations revealed that he was due a substantial refund, and therefore he was advised to file immediately.

There were two requests for powers of attorney, one in connection with the settlement of an insurance claim and the other for a real estate transaction. A judge advocate has the powers of a notary.⁴

One soldier wanted information on the legality of his becoming a candidate for public office while still in the military service. The aspiring young politician was assured that "greetings from his friends and neighbors" did not deprive him of his civic rights in this regard.

Finally, two men with serious marital problems sought help. The apparent solution was the institution of divorce proceedings. One of them knew a lawyer in his home town and was helped with the drafting of a letter to that lawyer. The other man's case was complicated by a matter of choice of forum. His home was in one state and his wife had since moved elsewhere. The facts were noted, and arrangements were made to provide him with information on the grounds for divorce in each of the two states and then, if he wished, to work with bar referral agencies to obtain counsel in the better forum.

By 4 p.m. the circuit riders were home. A problem had arisen under the provisions of Article 5 of the Geneva Convention Relative to the Treatment of Prisoners of War⁵ and the Regulations of the Military Assistance Command, Vietnam promulgated to implement this convention. A wounded Vietnamese had been brought into a United States military medical facility under obscure circumstances. He had no identification papers, denied being a Viet Cong, but admitted to being a draft dodger from the Vietnamese Armed Forces. There was no indication that he had committed a hostile act. The problem at hand was to determine whether he was to be declared an innocent civilian and released, a civil defendant and turned over to the Vietnamese police or a prisoner of war. Such cases require the decision of the staff judge advocate of the command which has custody of the individual. In the light of the evidence, Colonel Kent determined that he was a civil defendant to be turned over to the Vietnamese police.

By this time it was almost 5 p.m. and time for the staff judge advocate to attend the daily intelligence and operations briefing.

The Defense Counsel/Legal Assistance Officer: The defense counsel/legal assistance officer, Captain Green, as usual, saw the greatest variety of clients. The combination of these positions in one officer saves many possible conflicts of interests. In an overseas command where civilian counsel are unavailable, legal advice on the broadest possible variety of matters must be provided if the individual soldier is to receive total legal service.⁶

Captain Green's first client was awaiting trial by summary court martial. He had heard that, since he had not been offered nonjudicial punishment under Article 15 of the code, he could refuse trial by summary court martial.⁷ Captain Green corroborated this, explained the alternatives, including the much wider range of punishments imposable by a special court martial,⁸ and advised him to accept trial by summary court martial, outlining for him an appropriate line of defense.

A newly promoted major had just been appointed a summary court-martial officer. No advice had been provided about the disposition of any specific sets of charges or about the accused. Captain Green gave the major a copy of the "Guide for Summary Court-Martial Trial Procedure,"⁹ which is comparable to the guides for justices of the peace published in several states. Then he gave him a thorough briefing on procedure,

rights of the accused, the doctrine of reasonable doubt and his sentencing powers.

The next clients were two soldiers recently transferred to Vietnam from Thailand. While there both had fallen in love with Thai girls, and they wanted advice on marriage procedures. The Army's requirements and methods of submitting applications to marry aliens residing outside of CONUS were explained.¹⁰ Both soldiers decided to await completion of their overseas tours and then invite their fiancées to come to the United States as "tourists" and proceed from there.

Another pair of soldiers walked in as our loveorn swains left. They were seeking advice on application for early discharge to attend college. The provisions of the regulations¹¹ were explained, and they were referred to their unit commanders.

Mail call presented a welcome break as well as some news for clients. A few weeks earlier two soldiers involved in divorce proceedings had asked for legal advice. In both cases they had no objection to a divorce but wanted to ensure that they would not have heavy financial burdens imposed upon them for life. Correspondence with the attorneys for their spouses brought replies that fully met the desires of these two men. Documents were included for them to execute. Telephone calls were made to their units asking that they be sent to the legal assistance office.

Another letter was a response to an earlier motion for a stay of proceedings in a civil suit under the Soldiers' and Sailors' Civil Relief Act.¹² The attorney for the plaintiff wrote that his client had agreed to drop the soldier as a party to the action.

About this time Major Kulish handed Captain Green a copy of the staff judge advocate's review of a general court-martial case which had been tried two weeks before. This written review is required by Article 61 of the Code¹³ in each general court-martial case for consideration by the convening authority prior to his action on the case. It provides a complete written summary of all of the evidence adduced at the trial and of the applicable law as well as a personal history of the accused based on the official records concerning him and a personal post-trial interview with him. The convening authority has plenary power to set aside or reduce the findings of guilty and the sentence.¹⁴ The accused and his counsel are given the opportunity to see the review prior to its submission to the convening authority and to submit matter in rebuttal.¹⁵ Captain Green felt that certain additional facts about the accused's military record should be brought out.

After lunch, Captain Green accompanied Major Kulish to the stockade, where the latter served a copy of the review on the accused. While the Major interviewed another man, Captain Green conferred with the accused, explaining his rights and reached agreement with him that a particular rebuttal should be submitted. Captain Green prepared the rebuttal, obtained the signature of the accused and delivered it for attachment to the review.

The Captain then conferred with an upset young officer who was afraid that he might owe several hundred dollars on his 1967 income tax. He had used the standard deduction. After recomputing his return with proper deductions for interest, state and local taxes and charitable contributions, it appeared that he had a refund of nearly \$100 coming to him.

Captain Green had been told earlier by the staff judge advocate that he was assigned to defend a suspected homosexual who was being brought before a board of officers that would consider discharging him from the military service.¹⁶ The initial interview with this respondent took the better part of an hour, as the man denied any such tendencies and wanted to fight the allegation. Captain

Green made an outline of the interview, prepared requests for witnesses on the accused's behalf and made appointments to interview them.

ADVICE FOR COUNSEL FOR A SPECIAL COURT

The next visitor was a young officer who had been appointed defense counsel for a special court martial. The Army did not then have enough judge advocates to provide them as trial and defense counsel in most special courts martial, but did provide technical assistance to the officers so appointed. It has a military justice handbook called "The Trial Counsel and The Defense Counsel".¹⁷ Captain Green gave a copy of this book to this officer, showed him how to use it as a procedural guide and then analyzed with him the evidence and probable questions of law in three cases then pending. Military law requires that an accused and his counsel be given copies of all statements made by the witnesses and of reports of investigation that are available to the prosecution.¹⁸ This occupied most of the remainder of the afternoon.

Before Captain Green could leave, he found two more clients waiting. One had been offered nonjudicial punishment but was uncertain whether to accept it or demand trial by court martial. Captain Green outlined the law pertaining to the alleged offense and his rights under the code. After this discussion the client felt that he would be far better off to accept nonjudicial punishment than to demand trial. The other client had been tried by a summary court martial and wanted to know how to file an appeal. Captain Green explained that the officer who appointed the court martial had to review the case before the sentence could be ordered into execution¹⁹ and that after this review the case would automatically be reviewed again by our office.²⁰ He also advised the client that anything he wished to have considered by the reviewing authorities should be attached to the record of trial,²¹ outlined for him an approach and provided citations of law which tended to support his position and technical assistance in the preparation of his appeal.

The Trial Counsel/Claims Officer: Captain (now Major) Felder's day started earliest of all. He was our "on call" lawyer and was awakened by the military police at 2:10 a.m. They had a suspect in an aggravated assault case who, after being warned under Article 31 of the code,²² had requested counsel prior to interrogation.²³ At the military police station, Captain Felder consulted privately with the suspect and advised him to make no statement and to refuse any further interrogation in the absence of counsel. The client wanted advice as to the legality of the seizure by the military police of his wristwatch. Captain Felder advised him that a search and seizure made in connection with a lawful arrest was proper²⁴ but that he would inquire as to the seizure of the watch. After a short discussion the military police agreed to return the watch if the client would sign a receipt for it. At 4 a.m. Captain Felder returned to bed.

Captain Felder arrived at the office at 9 a.m. He informed Captain Green of his attorney-client relationship with this suspect—then to work on a revision of the II Field Force, Vietnam, Military Justice Circular. Command circulars direct compliance with the rulings of the United States Court of Military Appeals by means of clear, simple and directory language which unit commanders and military policemen can understand and follow. On March 11, Captain Felder worked on the following:

(1) The problem of having a suspect utter words for voice identification. While this has the approval of the United States Supreme Court,²⁵ the United States Court of Military Appeals has held that the protections afforded to military personnel by Ar-

ticle 31 of the code are broader than those accorded to the remainder of the population by the Fifth Amendment,²⁶ and military suspects may not be legally ordered to utter words for this purpose.

(2) The problem of "speedy trial", a difficult one in a theater of operations. Recent decisions of the Court of Military Appeals²⁷ indicate that restriction to the limits of a military installation imposes upon the Government a duty to proceed with due dispatch.

(3) Additional guidance required for the omnipresent problem of nonjudicial punishment under Article 15 of the code. We want to ensure that everyone understands that the acceptance of Article 15 by an accused is not the equivalent of a plea of guilty but merely an acceptance of the forum and that commanders must still have proof of an offense cognizable by the code before they may administer punishment.

At 10:30 a.m. two criminal investigation agents came in for guidance. Since he had no attorney-client relationship with the suspect they had under surveillance, Captain Felder proceeded to examine the file and consider a proposed search. In this case, an order from an appropriate commander takes the place of a civilian search warrant²⁸ and must be obtained prior to a search. Captain Felder drafted a document for the signature of the company commander. He advised the agents that they must provide the commander with sufficient information for probable cause to order such a search. Otherwise his order, and hence the search, would be unlawful.²⁹

After lunch, a helicopter pilot wanted information about a claim. The same enemy shell that had sent him to a hospital had also ruined his camera. Captain Felder explained the operations of the Military Personnel and Civilian Employees Claims Act of 1964³⁰ and Army Regulation 27-29 which implements it. Captain Felder provided the forms and indicated the evidence necessary to support the claim.

A sergeant arrived for help with his income tax.

A soldier interested in acquiring United States citizenship came in. He had read about a new "law" which would make it easier for those on active duty to acquire citizenship. The new "law" was H.R. 15147 which passed the House of Representatives on March 4, 1968, and which would amend the present Immigration and Nationality Act.³¹ After explaining the current status of the bill, Captain Felder gave him the necessary forms and told him to return when he had gathered the information required.

The mail contained three records of trial by special courts martial in our units. These had already been approved by the respective convening authorities and had arrived for the required review.³² One of the cases involved the offense of sleeping on post while on duty as a sentinel.³³ As the offense had occurred in an area subject to "hostile fire", the maximum punishment was a dishonorable discharge and confinement at hard labor for ten years.³⁴ Most such cases, however, are disposed of by special courts martial, in which the maximum punishment is limited to confinement at hard labor and a forfeiture of two thirds' pay for six months. The other two cases both involved vehicles—one charge was "joy riding" in a government vehicle³⁵ and the other reckless driving.³⁶ In each case Captain Felder determined that the evidence of record supported the finding of guilty, that the sentence was within legal limits and that there were no grounds for further clemency action. He recommended to Major Kulish that the cases be stamped "legally sufficient". While the law merely requires review by "a judge advocate", in this office all such records of trial are reviewed by at least two judge advocates, and if they disagree the matter is

determined by the staff judge advocate. It was now 4 p.m. and Captain Felder was able to return to work on his circular.

THE DEPUTY STAFF JUDGE ADVOCATE

Major Kulish, the deputy staff judge advocate, came in early to finish his draft review of a general court-martial case. He wanted to discuss the recommendation on approval of the sentence with the staff judge advocate prior to his projected departure. This case involved two counts of aggravated assault under Article 128 of the code.³⁷

By the time Colonel Kent left, the draft was completed, approved and in the hands of the typist. As the staff judge advocate departed, an artillery battery commander walked in. His unit, an automatic weapons battery, would soon be fragmented into sections to provide protection for several fire support bases of heavy artillery in widely separated areas. The previous night there had been an assault with a deadly weapon involving two of his men. Major Kulish advised him to secure detailed written statements at once from each witness and pointed out that despite the use of a deadly weapon there had apparently been no real intent to inflict serious injury. The battery commander decided to recommend trial by a special court martial.

Major Kulish received a telephone call from the legal clerk of one of the battalions asking for help in phrasing an order vacating a suspension of a sentence to confinement. The battalion commander had ordered into execution only a forfeiture of pay and had suspended execution of the confinement since the accused was a first offender. The current misbehavior was a repetition of disrespect to a noncommissioned officer.³⁸ The clerk was guided to Appendix 15e of the *Manual for Courts-Martial*.

AN AFFIDAVIT NEEDED AT HOME

The next client was a soldier who while on his pre-embarkation leave had witnessed a conversation between his father and a forest ranger regarding the appropriate time for trash burning. Now his mother had been cited for improper burning during those hours. An affidavit concerning the conversation which he had heard was executed for mailing to this soldier's parents.

While this affidavit was being typed another client came in who needed a special power of attorney for his wife so that she could settle with his automobile insurance company.

The remainder of the morning was occupied by proofreading the final draft of the general court martial review, and a copy was given to Captain Green so that he could read it before it was served on the accused. The telephone rang. A battalion legal clerk needed reassurance. He had drafted some court martial charges and wanted Major Kulish's approval. This particular clerk happened to be the most competent but least self-assured on the base. Major Kulish gave him a verbal pat on the back, a mental kick in the pants and went off to lunch.

Upon his return to the office, Major Kulish skimmed the daily reading file to look at changes in regulations and to see from the serious incident reports what sort of military justice "business" might be in the wind. Then off to the stockade with Captain Green. While the defense counsel was interviewing his client, Major Kulish conducted a post-trial interview with another accused whose general court martial had been completed recently. Prior to this case, the man had had no serious trouble but it was obvious that he had a quick temper that he had not learned to control. Major Kulish checked with the confinement facility personnel to determine the man's behavior in the stockade. Major Kulish concluded that rehabilitation was possible and decided to recommend that the punitive discharge imposed by the court martial be suspended.

Footnotes at end of article.

The Major returned to the office at 2:30 p.m. to find a unit commander waiting for assistance in the drafting of charges. One soldier in this commander's unit decided to supplement his income by engaging in private enterprise—i.e., the cigarette business. Unfortunately, regulations already promulgated made his efforts illegal. Cigarettes are rationed items in the post exchanges and may not be resold or bartered lawfully. The soldier had cajoled his nonsmoking friends into buying their rations for him. He also had discovered a means of erasing the check mark on his own ration card so that he was able to reuse each ration block several times. As the man had no history of prior offenses, the unit commander was interested only in a special court martial. Therefore, it was decided to ignore the more sophisticated offense involving falsification of a government document, which would have been tried under Article 134 of the code,³⁰ and charges dealing with the violation of a lawful general regulation under Article 92 of the code,⁴⁰ were drafted.

Major Kulish started to arrange his post-trial interview notes but was interrupted by a sergeant who had signed an option to purchase a home in a new development in his native Louisiana. His wife was to complete the deal armed with a special power of attorney which had been prepared by the attorney for the financing institution. The sergeant had this instrument and wanted it notarized. Asked if he had read it, he said no because he wouldn't understand it anyway, but he knew he had to sign it to get the house. After a careful reading of the document and inquiry of the sergeant as to the state of title and financial responsibility of the developer, Major Kulish suggested that he retain an attorney in Louisiana to represent him. The sergeant replied that he did not need a lawyer—and that he wanted to execute this document now. Since the power was a very restrictive one and only allowed the wife to sign for the amount and rate of interest to which the sergeant had already agreed, Major Kulish notarized his signature.

It was about 3:40 p.m. when a corps intelligence agent arrived with a file for examination. Major Kulish was preparing a memorandum analyzing the evidence in the file when Colonel Kent walked in. Major Kulish gave him the memorandum and the file and sat in on the discussion.

After that, the trial counsel of one of the special courts martial came in for consultation on the method of submission of an official document into evidence as an exception to the hearsay rule. Major Kulish explained the law on the subject and the manner in which the trial counsel should submit the document and prove its official nature and authenticity. Finally, back to the interview notes until time to close the office for another day.

This, then, was our day. Other days would have shown other problems, some similar and some different. There might well have been a contract to draft or review and probably a great deal more claims business. But we chose this day in advance, not knowing what it would bring, and determined to report it without embellishment. We consider ourselves to be part of what Mr. Justice Brennan has called the "public Bar"⁴¹ but we shall leave to our civilian colleagues the answers to our original questions. In turn, however, we would ask two: (1) If we are not practicing law, what are we doing? (2) If they don't need lawyers in Vietnam, what do you suggest they replace us with?

MORE MILITARY WASTE

(Mr. HARSHA asked and was given permission to extend his remarks at this point in the Record and to include extraneous matter.)

Mr. HARSHA. Mr. Speaker, on Thursday, May 15, I called attention of this body to the continuing fact that military procurement procedures within the Department of Defense restrict free competition and waste taxpayers' money.

I noted that the Army Electronics Command, one of the most consistent offenders, if not the worst, grants about 85 percent of its contracts behind closed doors and, in the bizarre process, protects favored companies two ways: First, where possible, it permits no competitive bidding under cover of a noncompetitive, sole-source contract, and second, where necessary, it permits competitive bidding, but frequently ignores the low bidder, even the next lowest, and sometimes even the third lowest, under such flimsy claims as "urgency of need"—any lack of such urgency notwithstanding.

I cited a simple, yet completely typical example of this process; a case which, in purposeful conservatism, I computed

to have cost \$853,125 in sheer waste although, as experts have pointed out, by carrying my computation back to point of origin of the reported problem, it would not have been unfair to have placed the waste at \$6,000,000.

This was the case in which, from 1960 to 1962, the Army Electronics Command paid Packard Bell Electronics Corp., a Teledyne subsidiary, \$119,515 to develop a transponder test set—AN/APM-123—designed to field test airborne radio sets already in use. After providing these funds for research and development of this item the Army, in 1965, negotiated the first of a series of noncompetitive contracts with Packard Bell which, by last January, cost something in the order of \$8,000,000 including about \$2,000,000 for a so-called competitive data package.

During that 3½-year period, the Army Electronics Command prohibited competition to Packard Bell thus eliminating an opportunity for cost savings to the taxpayer. The Army never paid that company less than \$5,000 per unit and, in a final award January 22, 1969, paid the company \$6,450 per unit for an additional 195 units.

This was done despite the fact that the Army Electronics Command held an unsolicited—and obviously unwanted—lower bid, dated November 11, 1968, of \$4,784 per unit from another qualified manufacturer—some \$1,660 less than Packard Bell's bid. Acceptance of this lower bid would have saved the taxpayers almost \$330,000 on that one order.

As it developed however, the Army Electronics Command could have saved \$853,125 on this same relatively small order; for, on April 28, 1969, finally withering under considerable heat imposed from within the electronics industry, the Army Electronics Command issued an invitation—DAABO5-69-B-0348—for competitive bidding for an additional 241 units. The bids, from 26 manufacturers, averaged \$3,700 per unit, with a low bid of \$2,074 for the identical article the Army paid \$6,450 for 3 months earlier.

I now call attention to an infinitely more complex and costly example of competition restricting and money wasting by the Army Electronics Command. It involves nearly \$75,000,000, of which, again conservatively, at least \$30,000,000 was waste, in all reality, and by all sane standards of good business procedure.

Here are the circumstances as I have found them:

On April 11, 1962, at Fort Monmouth, N.J., procurement officers of the Army Electronics Command secretly opened bids on a contract to develop a communication system described as "a secure forward area pulse code modulation terminal." This equipment, which was to be developed in accordance with confidential Signal Corps technical requirement SCL-4357, included multiplexers, power supplies, and telephone signal converters.

The bids came from seven companies: General Dynamics, Philco, Bendix Radio, Raytheon, RCA, Stelma, and ITT.

The lowest bid was \$370,024; it came

from General Dynamics. The fourth lowest bid was \$652,673; it came from Raytheon. Raytheon, the fourth lowest bidder or, if you will, the third highest bidder in a field of seven, got the contract with its bid of almost twice the amount of the lowest bidder, General Dynamics.

After giving this award to Raytheon for \$282,649 more than the Electronics Command had to pay, the command immediately instituted a series of negotiations for changes, increases and modifications in the design. This resulted in the doubling of the Raytheon price which was nearly twice as much as the Electronics Command had to pay in the first place.

But this was only the beginning of a fascinating escalation of a series of contracts for the communications system and related components; an escalation which has hit a point of nearly \$75,000,000—including such follow-on equipment as AN/TCC-45, AN/TCC-46, TD-353, TD-202, TD-204, CV-1548, TD-660, TD-754, and many others bid secretly, opened secretly, and awarded secretly as non-competitive, sole-source contracts under the routine justification of lack of drawings or urgency for delivery.

Specifically, the original contract with Raytheon—DA-36-039-SC-90768, purchase order 001100-PM-62-91-91—included a fixed fee of \$45,600. This "fixed fee" of \$45,600 meant that, at the outset, Raytheon assured the Army Electronics Command, and the command accepted, that, of the \$652,673 that Raytheon was to receive for this basic contract, Raytheon's profit would be \$45,600. But, as it developed, that was nothing more than a launching pad for a cost skyrocket which swiftly hit \$1,366,858 as but one minor milestone in an ever-escalating cost flight.

In May 1964, Raytheon was given a contract for the AN/TCC-45 and the AN/TCC-46, components of the same family of radio sets. This contract began at \$22,774,088.

One of this system's specific components was the TD-660 multiplexer. It contained 11 plug-in panels and six sub-assemblies housed in a frame and case which measured just 10½ inches high by 12 inches deep by 17¼ inches wide and weighed only 49 pounds—Federal stock No. 5820-930-8079.

This little item is carried in the Army inventory at a price of \$13,800 per unit. This means, simply, that, under one of these many contracts, this unit was purchased at a price of \$13,800. However, under the follow-on, noncompetitive, sole-source negotiations, Raytheon, in what presumably was a magnanimous gesture, sold it to the Army Electronics Command for about \$8,000 under such arrangements provided in a contract negotiated in November 1966—DAABO7-67-C-0167. This one started as a "letter contract" for \$2,000,000; but, at this time, we have no idea of how much this will really cost, since this "letter contract" is yet to be "definitized." The latter is a neat term in the Army Electronics Command glossary. But, as demonstrated by a long pattern of performance, a "letter contract," when "definitized," will

usually cost twice as much as its original face value.

On June 28, 1968, the Army Electronics Command gave Raytheon a new contract—DAABO7-68-C-00332. This one started at \$4,615,000; it covered the multiplexer known as TD-660. Because the Electronics Command's terse official release of this action suppressed such vital information as the number of units this \$4,615,000 was supposed to buy, we have no idea exactly how much per unit the command will ultimately pay for this yet-to-be-definitized contract.

On May 1, 1969, after overwhelming pressure from within the electronics industry for competitive bidding, the Army Electronics Command did so for 993 units under invitation DAABO5-69-B-0674.

Faced for the first time with competition on this equipment, Raytheon came in with a bid of \$4,130 per unit for this same item for which noncompetitively, it charged as high as \$13,800 per unit and as low as \$8,000 per unit. Yet, in a field of four bidders, Raytheon's competitive bid of only \$4,130 was not sufficiently competitive to win the contract. In a field of four bidders, Raytheon's bid was next to the highest. The highest, and only slightly at that, was \$4,298; it came from General Atronics Corp. The second lowest bid came from Cosmos Industries, Inc., at \$3,399. The lowest bid came from Honeywell Tampa at \$3,092—\$1,038 less per unit than the best Raytheon could offer against its first brush with competition on this package. That best from Raytheon, at \$4,130, was roughly \$4,908 less than the roughly \$8,000 low figure Raytheon charged on the former non-competitive, sole-source basis—and it was \$10,708 less than the \$13,800 high figure Raytheon charged during the same luxury ride through the Army Electronics Command's taxpayer-provided wonderful wonderland.

Even as all of this is typical, true to form, almost standard procedure for the close-to-the-best, loose-with-the-money manner in which the Army Electronics Command restricts free competition and wastes taxpayers' billions, it is also typical that this tragically belated matter of low-bidding competition has not really knocked Raytheon out of the picture—and the profits—for this same piece of equipment. Not at all. Under invitation DAABO5-69-R-0676, the Army Electronics Command, whose commanding general is Maj. Gen. W. B. Latta, is, at this moment, negotiating with Raytheon for another sole-source, noncompetitive contract for another 425 units of this TD-660 multiplexer.

The tired, old official alibi for this outrage is, of course, "urgency for delivery"; it is used despite the fact that, under this very same procurement, delivery will not be required from Raytheon until some 300 days—nearly 1 full year—after the contract has been officially given to Raytheon at a rate of only 100 units per month.

To those who, considering this, ask the proper question, "Why?" I shall offer only this answer at this time:

The kindest thing that can be said for those responsible for this condition would be, "incredible indifference," or "inordinate stupidity." To brand it more

severely would tend to suggest the possible propriety of the indictment and prosecution of someone, somewhere, inside the Army Electronics Command.

Though that proposition has its temptations, and perhaps, should be seriously considered, my purpose at this time is not exposition for exposition's sake, but exposition for the sake of pointing up the need for remedial legislation.

In the interest, and in response to that need, I am drafting such legislation at this time, and will soon introduce it before this body.

A STIRRING COMMENCEMENT ADDRESS

(Mr. SAYLOR asked and was given permission to extend his remarks at this point in the Record and to include extraneous matter.)

Mr. SAYLOR. Mr. Speaker, St. Francis College of Loretto, Pa., from which I received an honorary degree, is a small liberal arts institution located in my congressional district. The 1969 graduates were honored recently to be addressed by Fred C. Foy, chairman of the board of Koppers Co.

The temper and tone of Mr. Foy's remarks were well timed for this period of history when campus radicals and militants get more headlines in the Nation's news media than the serious, quiet, and hardworking students who are there to gain an education.

I, too, am concerned with the laxity of college administrations to bring tranquility to the campuses, and many of our citizens cannot understand why responsible administrators continue to tolerate disruptions when the goals of the "new left students" are so plain.

There are, of course, constructive solutions to the problems of today, but they will not be solved by persons who would tear down our society. I particularly echo Mr. Foy's sentiments when he challenged those present to help make changes and improvements within the framework of our democratic processes.

Mr. Speaker, I believe my colleagues will find Mr. Foy's remarks of timely interest, and I insert his speech following these brief remarks:

ADDRESS AT THE COMMENCEMENT EXERCISES OF ST. FRANCIS COLLEGE, LORETTO, PA., MAY 11, 1969

(By Fred C. Foy)

I am here today because I wanted to talk to you about colleges. As I see it there are three types of colleges and in them perhaps three kinds of students.

One type is the large, mostly state-supported institution, offering a variety of college education at low cost. An added advantage, or disadvantage, is that a student can get educated or get lost, without the faculty getting close enough to him to know which he is doing.

Another type is the prestige institution. Here, too, one can become educated. But such institutions seem to me frequently to have the disadvantage of an over-emphasis on faculty research and publication, with the result that students often have limited exposure to the most brilliant professors.

And the third type consists of the smaller colleges and universities, staffed with dedicated teachers who want to teach, peopled with eager students who want to learn, in an environment which makes both a reality.

From what I have seen here and heard about Saint Francis, it is in this latter category. We owe this group of schools much for they may become the only true teaching centers left in the world where imparting knowledge is becoming centralized and mass-produced.

I suppose I could also have given as a reason for wanting to come here the fact that Saint Francis has not had a sit-in, nor has the President's office been occupied or the school records "liberated"!

However, it is this phenomenon—this crisis on our campuses which moved me to want to talk with you today.

As I studied Saint Francis of Loretto I learned that Father Vincent has introduced new concepts in administration within the last year or two; that he has brought into the college administration new people of advanced viewpoints to help him discharge his duties and that the result has been a responsiveness to what is happening not only on the campus here but elsewhere in the academic world.

Responsiveness to change is important on a college campus and equally so in the business world. Unless we in business and industry adjust to changing market conditions and demands as well as to changing manufacturing processes, we run the risk of being left at the starting post in the race to serve our customers.

The concept of change is one we have been hearing a great deal of in recent years; it seems you must be either for change or against it. But I contend there is a middle ground—ground which is occupied and guarded jealously by thoughtful people.

These are the people with whom that great English parliamentarian, author and philosopher, Edmund Burke, joined himself when he used these words to describe his particular philosophy in life. He regarded himself, he said, as one "having an ability to reform with a disposition to preserve."

This must be the philosophy of the thoughtful man; a philosophy eminently suited to the times we live in.

Saint Paul puts it another way when he enjoins us to "Test all things, hold fast to that which is good."

I like to think that these tenets are the moving force behind the great majority of America's students—that these same tenets in fact also reflect the guiding principles of the thoughtful middle-ground American public, that body which, swinging from one to the other, keeps both of our political parties on the track of reasonability.

You are now entering a world of frequent dramatic change. When you leave here I hope you will join this select group of those who think and vote with reason. This is important because you will become part of the problem or part of the solution of many of the problems which as students you have studied in the abstract or experienced superficially at best.

And it is a world beset by apocalyptic problems.

You will find racial conflict, you will hear claims of poverty and malnutrition in an age of unparalleled prosperity and seemingly unlimited promise, and disagreement as to how widespread they really are or what causes them. You will hear of environmental pollution and be concerned by the threat of war. And in many of our people you will sense a vague, but widespread discontent with the general quality of life.

Rational men and women are aware of the existence of these problems but are not always sure of their scope. Fortunately more and more of these thoughtful citizens are trying to involve themselves in mature and workable solutions.

There is in America a great body of people, in business, industry, government and the universities who are earnestly trying to solve

our problems within the limitations imposed by time and the availability of resources. These are the people of reason who seek to understand the problems created by an on-rushing technological and population explosion and are urgently trying to cope with them.

Then there are the impatient men and women, irrational and unreasoned, whose first impulse and final objective is to smash, to destroy. This was the approach of the Jacobins of 18th Century France. That age too had its problems, its deep social unrest and its urban convulsions. As you know, the would-be reformers of that age solved them violently, in a manner from which that great nation has not yet entirely recovered.

Should we learn therefore, from history? Burke tells us that we cannot possibly know how to travel the road ahead unless we travel in retrospect the highway of history. And somewhat more ominously, Santayana tells us that those who ignore the lessons of history are condemned to repeat them.

Violence is not new. Throughout history hot-headed and irresponsible advocates of change have used it as the ready route to their objectives. And on many of our campuses their descendants are at it again today.

I, for one, am appalled at what is happening at many of our leading colleges and universities. I see a frightful desecration of the true values and purposes of higher education taking place on many campuses throughout America.

Scholars and educators have always envisaged the ideal university as a place aloof from the transient pressures of the day, a place where professors and students are partners in the search for truth, a place where debates and discussions are carried on with reason and courtesy, where studies are pursued in an atmosphere of true inquiry, where all sides of all questions—past, present and future—are explored without preconception.

Perhaps this perfect university has never existed; but on both sides of the Atlantic movement is away from, not toward, its ideals. Students whose qualifications in scholarship must often be extremely dubious because of the amount of time they devote to extracurricular activities such as harassing college administrators with peremptory demands often backed up by the crudest forms of physical coercion are turning campuses into arenas.

The quarrelsome brawling that goes on under the most trivial pretexts, the endless demonstrations on university property, often over subjects which are quite outside the university's jurisdiction, the general atmosphere of bedlam, such as took place at Harvard last month, would be calculated to drive Socrates, St. Thomas Aquinas, Erasmus, or any other great teacher to take off for the nearest available retreat, leaving behind an invitation to his most promising and rational students to follow him.

The students of the American "New Left" pride themselves on being builders of a new order in America and throughout the world. And students should be, for education should widen, not constrict, the student's view of the world around him. Education should lead to sound judgments for bettering the conditions of people or nations.

But the students of the New Left seem gravely deficient in many of the qualities essential to building a new order, in qualities which only intensive and reflective study and guidance can develop.

For example, they seem strikingly devoid of humility or humor. They are never deterred from staging demonstrations, confrontations and whatnot, up to and including occupation of college property, manhandling of college officials and provoking clashes with the police. Nor are they deterred by the reflection that their aims might be wrong or that they are going about attaining

them in the wrong way. Insistent on free speech for themselves, they are unwilling to grant it to others.

And like their prophets Herbert Marcuse and Karl Marx, they are intent on tearing down whatever displeases them, from college regulations to the American government or society itself, without offering more than the vaguest suggestions of what they would put in its place.

Nor is there anything fresh or original or constructive in the suggestions they do offer. It never seems to occur to them that in a modern industrial society of 200 million people work must be done, political and economic decisions must be made, priorities must be set, all sorts of problems of organization must be faced.

As I read what they write and listen to what they say, I hear spokesmen for the Students for Democratic Society noisily denouncing poverty, discriminatory treatment of blacks and other racial minorities, ROTC on the campus, the draft, the Vietnam War, and condemning what they portentously call the Establishment for all of these ills and for a world which they reject but for which they offer no constructive substitute.

What they completely overlook or choose to ignore is that there must be correlation (and this is true under any conceivable system) between individual diligence and ability and individual reward. Instead somehow there lurks in the background the implication that if they were in charge, presto, a society of equals would emerge.

Speaking at a dedication of a new library at Swarthmore, an excellent small liberal arts college much like Saint Francis, George F. Kennan, himself a liberal dissenter from many conventional positions, drew this caustic contrast between Woodrow Wilson's concept of an ideal university, removed, but not shut off, from the cares and clamor of the outside world, and the state of mind and behavior of the radical left enrolled in student bodies today. To quote from Kennan's speech:

"We have people utterly absorbed in the affairs of this passing world. And instead of these affairs being discussed with knowledge and without passion, we find them treated with transports of passion and with a minimum, I fear, of knowledge. In place of slowness to take excitement, we have a readiness to react emotionally, and at once, to a great variety of issues. In place of self-possession, we have screaming, tantrums and brawling in the streets. In place of the 'thorough way of talk' that Wilson envisaged, we have banners and epithets and obscenities and virtually meaningless slogans."

"And in place of bright eyes 'looking to heaven for the confirmation of their hope', we have eyes glazed with anger and passion, too often dimmed as well by artificial abuse of the psychic structure that lies behind them, and looking almost everywhere else but to heaven for the satisfaction of their aspirations."

"The world seems to be full today, of embattled students. The public prints are seldom devoid of the record of their activities. Photographs of them may be seen daily; screaming, throwing stones, breaking windows, overturning cars, being beaten or dragged about by police, and, in the case of those on other continents, burning libraries. That these people are embattled is unquestionable. That they are really students, I must be permitted to doubt."

Here, at the end of the quotation, I must take issue with one point made by Mr. Kennan. I am convinced that the world is not full of such people nor are the colleges or the universities. They are there, but I believe they are a minority, yet they seem to be having their way. Why?

What is the end result of all this? What the logical consequences of the rule of mobs,

the despoliation of our colleges and universities, the disruption of the learning process?

I am not sure I can answer my own questions. But, with others, I am seeking the answers. As you go forth in the world today, I invite you to join us. You have the opportunity to become involved or to be swept along by tides beyond your control.

I believe a renaissance of personal, individual responsibility and moral accountability, points of view espoused by Saint Francis himself, is the thing most needed today.

Some day we shall have to stop blaming "society" for our failures, stop blaming the other fellow when our personal affairs go haywire. Government can only solve one person's problem by adding to the problem of another. It cannot get at the root of your difficulty, or my trouble, never has, never will.

The proponents of social control by the state collide as directly with the teachings of Christ as would two trains running toward each other on the same track.

Jesus was so uncompromising in his insistence that responsibility be placed upon the individual both for his personal life and for his attitude toward others that Jesus never suggested that an institution of any kind could take the place of such individual responsibility.

Nevertheless this fatal temptation—the temptation to believe that functions which are spiritual can be transferred to the secular state because it possesses the necessary force and power to "get things done"—continues to confront both religious and social effort.

The strength and virility of our society depend fundamentally on the character of our people and productivity of our private economic system. Instead of whittling away private decision-making and strangulating private effort, our public policies should encourage more effort, more innovation and more enterprise relying on competition to pass gains of productivity on to the people in many forms.

It is this system which already has conquered poverty as no other system can and will. We may, by government definition, have 30 million people "living at poverty level" but in many countries I have visited over the world most of them would be considered affluent. It is this system which is under challenge today.

Just as any journey begins with a single step, so the fight to preserve our liberties must begin with each of us as individuals, for once we become well informed, articulate and persuasive spokesmen, we become a center of influence.

The most competent golfer, the most eloquent clergyman or the most gifted actor, naturally draws to himself observers who are interested in their own self-improvement. Uncommon men always have possessed influence by virtue of their excellence. For this reason, excellence in whatever we do must be your and my most important goal. As our people once again accept this principle, our values, which have been built on it through the years, need not go down the drain.

Let history testify. This country was not built by men and women who relied on somebody else to take care of them. It was built by men and women who relied upon themselves, who dared shape their own lives, who had enough courage to blaze new trails—enough confidence in themselves to take the necessary risks.

Self-reliance is our American legacy. It is the secret of "that something" which stamped Americans as Americans. Some call it individual initiative; others backbone. But whatever it is called, it is a precious ingredient of our national character—one which we must not lose.

The time has come for us to re-establish the rights for which we stand—to reassert our inalienable rights to human dignity, self

respect, self-reliance—to be again the kind of people who made America great.

Such a crusade for renewed independence will require a succession of inspired leaders—leaders in spirit and in knowledge of the problem not just politicians whose leadership sometimes seems to follow the winds of change, but men who will preserve the distinctive way of life that is America, adding to it only changes which will make America even stronger.

If there be one point that I would ask you to remember today, it is simply that society is only as good as the individuals who live within it. As each individual is strong, so is society. When each individual is willing to give up his freedom, so will society be eager to take it away.

Above all else, we must not take our society for granted. Each of us owes our freedom and prosperity to the courage, the good judgment and the devotion of our predecessors.

Will we continue in the same tradition?

Who can answer? However, we can be certain that as today becomes history the praise, or blame, will rest with the individual. And the collective individuals from today on will be you here and the thousands of others on hundreds of campuses who at this moment step forth into a world which is theirs to improve or destroy.

Thank you.

DOES THE NEW INCOME TAX FORM HELP TAXPAYERS?

(Mr. FASCELL asked and was given permission to extend his remarks at this point in the RECORD.)

Mr. FASCELL. Mr. Speaker, last Monday the Internal Revenue Service held a press conference to announce a revised Form 1040 income tax form, and the discontinuance of Form 1040A. The new form is scheduled for use next year unless, of course, the Congress should meanwhile make such changes in the income tax laws so that the form will have to be revised.

IRS's announcement of the new form was widely heralded in the press as a simplification of income tax forms. As chairman of a House subcommittee that for years has been striving for simplification of income tax forms and procedures, I have serious doubts that the new form is, in fact, a simplified form.

The Legal and Monetary Affairs Subcommittee of the House Committee on Government Operations for several years has sought through the Internal Revenue Service and through numerous associations of accountants, auditors, and tax experts to ease the tax-reporting task of the 77 million taxpayers who file Federal tax returns. In that time there have been some improvements in the makeup of the forms, but because of the numerous complications, qualifications, exemptions, and special provisions that our tax laws contain, it has proven almost impossible to do much toward simplification.

That there is a continuing need to simplify the forms, both to lessen the burden and expense of the taxpayer and to decrease the costs of processing returns, is clear. The need, however, has generally proved greater than the ability to fulfill that need under existing laws. It is gratifying, however, that the Internal Revenue Service has not abandoned its efforts to assist the taxpayers through revisions of its forms just because the task is most difficult.

The new IRS Form 1040 is a one-sided single sheet containing 24 numbered portions, one less than the Form 1040 millions struggled with last month. From my review of the new form I am not convinced that it materially lightens the task of the middle- or high-income taxpayer. Almost without exception all of these will be required to file separate schedules on which they will report itemized deductions, dividend, interest, other incomes, and a separate computation sheet called Schedule T. The chief improvement as far as these taxpayers are concerned is that the schedules provide about twice the former space on which to make entries.

The IRS claims that there is another benefit from the redesigned format. As stated by the IRS:

Because a taxpayer need only add the schedules applying to his particular tax situation he does not have to fill out inapplicable lines and items.

Taxpayers using old Form 1040 only filled out the schedules that applied to their tax situation and did not fill out inapplicable lines and items, so that this claimed benefit seem to be without substance.

The biggest advantage claimed for the new form is that it combines old Form 1040 and the former short Form 1040A, and does away with Form 1040A. A short form has been in effect for a quarter of a century. It was first printed on the back of W-2 withholding statements. Twenty years ago it was issued as a separate full-page sheet, but not as long and complex as the Form 1040. For the past decade it has been in the form of a simple card.

Its use is limited to taxpayers whose incomes are less than \$10,000 from wages and no more than \$200 from other sources, and who do not itemize their deductions. While its use has been declining because average incomes have been rising and more taxpayers are itemizing their deductions, more than one out of every four taxpayers still uses the short form.

The reasons IRS advances for doing away with the punch card 1040A are that the taxpayers are confused by the existence of two forms, the long form and the short form, and also that many taxpayers who use Form 1040A penalize themselves because this form does not permit them to take advantage of such provisions as the sick pay exclusion, retirement income credit, or large deductions.

Combining Forms 1040 and 1040A hardly dispels the confusion that small income taxpayers face. In fact, the ponderous new 1040, with its added lines instead of the simple card form psychologically is bound to present even greater confusion. I would guess that more small income taxpayers would throw up their hands and seek the advice of professional tax advisers, for a fee. Not only that, but once a taxpayer filled out Form 1040A that was that. Now he will in most cases, also have to fill out a new form, the schedule T tax computation form, which is to be attached to Form 1040. That seems to complicate the tax forms for the small income taxpayer.

Our income tax laws are in a transi-

tional stage. The Congress is fast proceeding toward making the Federal income taxes more equitable for all taxpayers. I have made my contribution to that effort by my recommendations to the Ways and Means Committee. It is altogether possible that the new form IRS has announced may never be used because changes may soon be made in the tax laws, and, of course, any changes will dictate the kinds of forms that ultimately will be required.

As I have said, it is commendable that the IRS and the Treasury Department continue to keep before them the fact that income tax forms and procedures must be made as simple as possible, if we are to lessen the burden of taxpayer compliance with our self-assessment tax system, and if we are to decrease governmental costs of administering the income tax laws. However, I wonder whether its new Form 1040 instead of being beneficial does not actually make it harder and even costlier to the small income taxpayer to comply with the tax laws. Perhaps it might prove more beneficial if instead of abandoning the card form IRS would try its hand at revising the short form so as to permit its users to take advantage of the exclusions, credits, and deductions to which taxpayers are entitled.

PROJECT CONCERN MONTH

(Mr. BRADEMAS asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. BRADEMAS. Mr. Speaker, I am pleased to join my distinguished colleague, the gentleman from California, the Honorable Bob WILSON, in sponsoring a resolution authorizing the President to proclaim the month of February 1970 as Project Concern Month.

"Project Concern" is the name coined by Dr. James Turpin for the international medical relief organization he began 6 years ago when he gave up a lucrative medical practice in California to devote all of his time to treating people around the globe who have no hope of freedom from suffering without such assistance as he and the people he trains offer.

Today Project Concern has an international staff of 156 persons and has established continuing medical programs in Hong Kong, South Vietnam, Mexico, and, most recently, in Appalachia here in our own country.

Mr. Speaker, I strongly urge favorable consideration of this resolution because of the much-deserved attention and support it will provide Project Concern.

I am convinced that efforts such as Project Concern are a most effective means of putting this Nation's technological advances at the service of some of the world's people who have little defense against the sickness and suffering which has been their lot through the ages.

Efforts like Project Concern provide one of the most effective roads to world peace. For there cannot be peace in the world when half its population suffers

from disease which the technology and knowhow of the rest of the world can combat.

By declaring February 1970 Project Concern Month the President, Congress, and the American people can provide heartening support to an organization that brings a message of hope to those parts of the globe that are most in need of it.

A U.S. JUDGE SPEAKS OUT ON CAMPUS DISORDER

Mr. BARRETT. Mr. Speaker, I insert at this point in the RECORD an excellent speech by the Honorable Judge Thomas A. Masterson, of the Federal Court in Philadelphia, on the matter of campus disorder.

The SPEAKER. Without objection, it is so ordered.

There was no objection.

Mr. BARRETT. Mr. Speaker, Judge Masterson's speech is as follows:

THE PERMISSIVE UNIVERSITIES: A U.S. JUDGE SPEAKS OUT ON CAMPUS DISORDER

I think that one of the principal causes of campus lawlessness is the uncertain notes being sounded on the trumpets of persons in positions of authority and responsibility at many of our large universities.

As a Harvard graduate and a lawyer, I think these events, and most particularly the reactions to them of the college administration and of the faculty, raise most fundamental and confusing questions as to the place of the university and the place of the university students in the larger society.

The first thing that appalled me . . . was the statement attributed to President Pusey that he called police "because the student invaders had already begun to rifle and duplicate the faculty personnel files and financial records."

A MINORITY

It is significant to me that he did not say that he called the police because the students forcibly took over the administration building and because they forcibly ejected five deans thereby interrupting the functioning of the university administration, as well as seriously interfering with the personal freedom of the ejected deans.

What is the significance of this apologetic statement made in the wake of a forceable occupation of a building by a minority of dissident students?

What kind of a note is President Pusey sounding for the next lot of student radicals?

It seems to me he is saying "take over our buildings, eject our deans, refuse to leave and, as long as you don't touch our confidential files, we will negotiate with you."

I submit such an uncertain note in the context of this factual situation sounded by a president of a great university is an invitation to anarchy.

The next question that these events raise in my mind is whether or not a university has a right to drop criminal charges against students who violate the law by seizure of university property.

SIMPLE FACT

In the narrowest sense, the public has a direct interest in these proceedings because of its support of the local police who eventually have to be called in to clear the building; but, it seems to me, that the public has a much greater interest than that.

By failing to prosecute these students for highly publicized acts which amount to trespassing, assault and battery, illegal arrest and kidnapping, the university community is saying to the world, as well as to its own stu-

dents, that there are entirely different standards to be applied in criminal cases to students than are applied to others. What does this simple fact do to respect for "law and order" in the public at large?

The most astonishing and incredible part of this sad affair to me was the faculty reaction and its resolution.

It is interesting to note that in all of these student outbreaks from Berkeley through Columbia to Harvard, the faculty always attempts to disassociate itself from the administration of the university.

This itself is a somewhat disturbing phenomenon, for it is hard for an outsider to see where there could be a responsible basis for disagreement between an administration and a faculty on a question as simple as whether or not students should be permitted to use force and violence to take over university buildings and impose their will on the university.

MORAL EQUATION

In any event, the Harvard faculty, in vogue with all the others, apparently quickly acted to publicly disassociate itself from the university administration by passing a resolution condemning both the students for occupying the building and the administration for calling the police to have them ejected.

It is impossible for me to understand how a faculty which describes itself as "a community committed to rationality and freedom" can with such blissful impartiality say "a curse on both your houses" to students lawlessly taking over a building by force and violence and an administration using lawful force to recover possession of its own building.

The moral equation of the student action and the action of the administration suggests to me a total bankruptcy of social values.

When I read of that resolution, I wondered how many of the 395 faculty members who voted to approve it would be happy to have their students forcibly eject them from class every time they disagreed with something the faculty members said, and, if they didn't think this is the way a university should be run, how do they distinguish between the need to have authority to run their own classes peacefully and the university's need to run itself free of forcible attacks by any of the students?

SHOCKING NOTE

The fact of this faculty resolution was deeply upsetting to me but the language of it was even more disturbing: "... as members of a community committed to rationality and freedom we also deplore the entrance of police into any university."

That language sounds the most offending note of this whole dissident cacophony of trumpets' blast from those who are presumably the trustees of the minds of America's future leaders.

What it suggests is that the university, its faculty and students should be exempted from the processes of law which bind everyone else.

It suggests that the university somehow clothes its members with a special form of holy orders making them immune from prosecution by public authorities for acts committed on the campus.

This, in turn, suggests that the university is a special and separate political entity responsible only to its own governing body. This concept has ramifications which go far beyond episodic campus violence.

As you know, many of the campuses of our largest universities are hotbeds of illegal drugs.

VITAL PROBLEM

Recently, an official of a large eastern university estimated that at least 50 percent of its students were experimenting with am-

phetamine and barbituates; that a high percentage of students were experimenting with marijuana and a smaller but still significant percentage of students were going on to heroin.

This is a vital problem for the future of this country.

Here we have the fountain of our most talented youth being polluted at the source by trafficking in illegal drugs.

Now, some of the academics think that marijuana isn't really bad and its use should be legalized. I don't happen to agree with that because most heroin addicts I have had before me began on marijuana, but in any event, our form of society has not left it to the university professors or presidents or boards of trustees or to judges to determine what drugs may or may not be legally consumed.

This determination is made by the Congress and by the state legislatures.

Yet, to my knowledge, not a single major university has joined with the local, state and federal officials in cracking down on the sale and use of narcotics on the campus.

Aside from the real pollution of the nation's youth by the use of drugs, what does the fact that illegal narcotics are easily available on the campus say to the student-user and non-user alike?

Doesn't it say there is one law for the "lesser breeds" outside the campus and an entirely different one inside the university cloister.

A similar but not identical question is presented by the changes in parietal rules which have been sweeping almost all of the campuses lately.

ACTIVE AGENTS

Here the university administrators claim not to be changing any conventional standards of behavior, but merely permitting the students to act on their own.

It seems to me the fact is that the university does stand "in loco parentis" to the undergraduate student body, and most certainly to the teen-age freshmen and sophomores.

Failure on the part of the administrative officials to identify with and support minimum conventional standards makes those officials active agents in changing those standards whether they admit it or not.

In any event it adds many more uncertain notes to the dissident symphony we are hearing from university officials all over the country.

In my opinion much of today's student unrest stems from the failure of the university administration and faculty to implement the most fundamental tenets of organized society.

Those of you who studied political theory in college will remember Thomas Hobbes who stated that man's life outside of organized society must be "poor, mean, nasty, brutish and short."

Hobbes' observation is as sound today as when he made it.

ORGANIZED SOCIETY

Life is literally intolerable outside of the ordered fabric of society. The rational life to which the faculty and administration is professionally committed is impossible without adherence to the basic concepts of an ordered society.

... These basic concepts mean at least this:

(1) That no violence or violent demonstrations will be tolerated;

(2) Any demonstrators who attempt to occupy university buildings will be quickly ejected with any reasonable force necessary to eject them promptly and without any bargaining;

(3) All violators will be criminally punished; there will be no amnesties. In addition, the university will suspend or expel students participating; and

(4) The university will as a matter of policy regularly and actively cooperate with police in enforcing on the campus other criminal laws, most importantly the laws with respect to the sale of narcotics.

It seems to me that the parents, as well as the students, can expect at least that much respect for law and order from the administration and faculties of the universities.

TRIBUTE TO THE LATE HONORABLE CHARLES ANDERSON WOLVERTON

(Mr. McCORMACK (at the request of Mr. CAFFERY) was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. McCORMACK. Mr. Speaker, my dear friend for more than 40 years, the Honorable Charles Anderson Wolverton, passed to his eternal reward on Friday, May 16. Friendships across the aisle are not unusual in this Chamber, but perhaps Charlie Wolverton deservedly had more of them than most of us do. That may have been because he was one of the most likeable and generous-spirited men I have even known. He came to the House with the 70th Congress and retired at the end of the 85th, representing the First Congressional District of New Jersey with great distinction.

He was born at Camden, N.J., on October 24, 1880, the son of Charles S. Wolverton and Martha Wolverton. He was educated in the public schools of Camden and was graduated from the Camden High School. He obtained a law degree from the University of Pennsylvania in 1900 and gained admission to the New Jersey bar in 1901.

In 1903, he codified the ordinances of the city of Camden; from 1904 to 1906 he was assistant city solicitor of Camden; from 1906 to 1913, assistant prosecutor of Camden County; from 1913 to 1914, special assistant attorney general of New Jersey; from 1915 to 1918, a member of the New Jersey House of Assembly from Camden County; in 1918, he was elected speaker of the New Jersey House of Assembly; from 1917 to 1919, he served as Federal food administrator; and, from 1918 to 1923, he was prosecutor of the pleas of Camden County.

He was an eminently successful campaigner as a Member of Congress. He was elected to 16 consecutive terms. In the 1936 election, and in the 1940 and 1944 elections, when FDR was carrying Charlie Wolverton's congressional district by more than 60,000 votes each time, Charlie was retaining his seat as a Republican Member of Congress by more than 10,000 votes in each election.

He even made friends and supporters of those he defeated. One of them said:

Every one of Charlie's former opponents should join in giving a dinner in his honor. He murdered all of us at the polls, but never once did he launch a personal attack on an opponent. As a matter of fact, he always went out of his way to pay tribute to us as men. He is a truly fine gentleman.

He was chairman of the House Committee on Interstate and Foreign Commerce during two Congresses, the 80th, and the 83d. His leadership of his committee was characterized by vast com-

petence, unfailing helpfulness, and courtesy, and legal sagacity. As a member of the House Legislative Oversight Committee, he introduced a code of ethics for Federal agencies regulating television. In 1954, when his Commerce Committee was studying President Eisenhower's proposed health-reinsurance program, he indignantly accused the American Medical Association of offering nothing to help solve the problem of rising medical costs. Long ago, Charlie Wolverton, in his incisive and insightful way, knew what was wrong with TV and the AMA.

At the time of his retirement at the close of the 85th Congress, his colleagues paid tribute to him in words that should be recalled today. That great Congresswoman from Massachusetts, the late Edith Nourse Rogers, said of him:

He has always been keenly interested in all legislation that would help the less privileged. His concern and interest in their welfare has been most pronounced. His interest in promoting the welfare of veterans and their dependents has been so outstanding that it has been recognized, time and again, by the honors veterans and other organizations have conferred upon him and the support they have always given to him when he has been a candidate for reelection.

His Republican colleague in the New York delegation, the Honorable Kenneth Keating, said this:

The gentleman from New Jersey, Mr. Wolverton, embodies what seem to me to be the most essential elements for a good legislator. He has great sincerity of purpose, he has a standard of ethics second to none, he has an ability to deal in a friendly and cooperative manner with his colleagues. He has always been willing to hear the other side of any problem on which he may have had views.

As a lawyer and a legislator, Charles Wolverton knew well how to speak his mind. As a man who had achieved wisdom by the experience of a lifetime, he also knew when not to do so. A cherished bit of advice that he offered to junior Members of Congress was that their political opponents could never use, against them, what they had not said.

As he stood in the well of the House Chamber to say farewell on the 18th of August 1958, Charlie Wolverton spoke as follows:

I wish to say that it has been a great privilege to serve for such a long period of years in this House, not only because of the importance of the matters that have claimed our attention and consideration, but also because of the opportunity it has given me to be associated with such a grand body of men and women of character and ability. I wish all the people of this Nation could know, as I do, the sincerity of purpose and high ideals that actuate those who serve as their Representatives. It would create a feeling of respect and a confidence in the future welfare of this Nation. I have found them to be God-fearing men and women dedicated to the cause of good government and with a sincere desire to be helpful to their fellow man, and to make certain the security of this Nation and principles upon which it has been founded.

His praise for his fellow Representatives may now be taken as his own, well-earned, richly merited epitaph.

He ended his farewell remarks by saying:

In the days that are ahead, whether they be many or few, it will always be a pleasure for me, with the golden key of memory, to unlock the treasure house of the past and live again its scenes and events.

Those "days ahead" were many, to be sure, yet, for those of us who were so fond of this great American, they were all too few.

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted as follows to:

Mr. WOLD (at the request of Mr. GERALD R. FORD), for the week of May 26 on account of official business.

Mr. BLATNIK (at the request of Mr. Boggs), for Monday, May 26, Tuesday, May 27, and Wednesday, May 28, on account of official business.

Mr. MACDONALD of Massachusetts (at the request of Mr. HAYS) from May 26 through June 5, on account of official business.

Mr. GETTYS (at the request of Mr. HAYS), for Monday, May 26 and the rest of the week, on account of official business.

Mr. CORBETT (at the request of Mr. GERALD R. FORD), for the week of May 26, on account of official business.

Mr. GOLDWATER (at the request of Mr. GERALD R. FORD), for the week of May 26, on account of official business.

Mr. RANDALL (at the request of Mr. Boggs), for May 26 and May 27, 1969, on account of official business.

Mr. CORMAN May 26, May 27, and May 28, 1969, on account of official business.

Mrs. CHISHOLM (at the request of Mr. Boggs), for Monday, May 26, Tuesday, May 27, and Wednesday, May 28, 1969, on account of official business.

Mr. BINGHAM (at the request of Mr. Boggs), for today, on account of illness.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

Mr. PATMAN, for 45 minutes, on May 27; to revise and extend his remarks and include extraneous matter.

(The following Members (at the request of Mr. CAFFERY), to revise and extend their remarks and to include extraneous matter:)

Mr. FLOOD, for 30 minutes, today.

Mr. GONZALEZ, for 10 minutes, today.

Mr. O'HARA, for 30 minutes, today.

EXTENSIONS OF REMARKS

By unanimous consent, permission to revise and extend remarks was granted to:

Mr. EDMONDSON in three instances.

Mr. MADDEN in two instances.

Mr. ZABLOCKI in two instances.

Mr. MICHEL to revise and extend his remarks in connection with agriculture appropriation bill and to include various tables.

Mr. GRAY in two instances.

Mr. STEIGER of Wisconsin, immediately following the remarks of Mr. QUIE during

discussion of the POAGE amendment in the Committee of the Whole today.

Mr. VANIK to extend his remarks on the agriculture appropriation bill.

(The following Members (at the request of Mr. FREY) and to include extraneous matter:)

Mr. BUSH.

Mr. BROWN of Michigan in three instances.

Mr. PETTIS.

Mr. MORSE in two instances.

Mr. QUILLEN in four instances.

Mr. BROCK in five instances.

Mr. SMITH of California.

Mr. BOB WILSON in two instances.

Mr. ASHBROOK.

Mr. GUDE.

Mr. McDONALD of Michigan.

Mr. NELSEN in two instances.

Mr. TAFT.

Mr. MIZE.

Mr. HANSEN of Idaho.

Mr. DERWINSKI in three instances.

Mr. RUPPE.

Mr. CRAMER.

Mr. MILLER of Ohio.

Mr. BROYHILL of Virginia.

(The following Members (at the request of Mr. CAFFERY) and to include extraneous matter:)

Mr. GARMATZ.

Mr. DANIEL of Virginia.

Mr. CASEY in two instances.

Mr. O'HARA.

Mr. PUCINSKI in 10 instances.

Mr. POWELL.

Mr. MATSUNAGA.

Mrs. CHISHOLM in two instances.

Mr. RARICK in four instances.

Mr. NICHOLS in two instances.

Mr. DIGGS in two instances.

Mr. PEPPER.

Mr. SATTERFIELD.

Mr. MOORHEAD in five instances.

Mr. YATRON in two instances.

Mr. OTTINGER in two instances.

Mr. FLOWERS in three instances.

Mr. GALLAGHER.

Mr. HAWKINS.

Mr. GONZALEZ in two instances.

Mr. BROWN of California in two instances.

Mr. BEVILL.

Mr. EVINS of Tennessee in two instances.

Mrs. MINK.

Mr. RODINO.

Mr. STUCKEY in two instances.

Mr. BOLLING.

Mr. DINGELL.

Mr. ROGERS of Colorado.

Mr. BURKE of Massachusetts.

Mr. VANIK in two instances.

Mr. BRADEMAs in six instances.

Mr. DOWNING.

Mr. WILLIAM D. FORD in two instances.

Mr. FOUNTAIN in two instances.

Mr. BURLISON of Missouri.

Mr. ROSENTHAL.

Mr. ECKHARDT.

SENATE BILLS AND CONCURRENT RESOLUTION REFERRED

Bills and a concurrent resolution of the Senate of the following titles were taken from the Speaker's table and, under the rule, referred as follows:

S. 126. An act to designate certain lands in the Pelican Island National Wildlife Refuge, Indian River County, Fla., as wilderness; to the Committee on Interior and Insular Affairs.

S. 574. An act to authorize the Secretary of the Interior to engage in feasibility investigations of certain water resource developments; to the Committee on Interior and Insular Affairs.

S. 1046. An act to protect consumers by providing a civil remedy for misrepresentation of the quality of articles composed in whole or in part of gold or silver, and for other purposes; to the Committee on Interstate and Foreign Commerce.

S. 1519. An act to establish a National Commission on Libraries and Information Science, and for other purposes; to the Committee on Education and Labor.

S. 1611. An act to amend Public Law 85-905 to provide for a National Center on Educational Media and Materials for the Handicapped, and for other purposes; to the Committee on Education and Labor.

S. 1652. An act to designate certain lands in the Monomoy National Wildlife Refuge, Barnstable County, Mass., as wilderness; to the Committee on Interior and Insular Affairs.

S. Con. Res. 21. Concurrent resolution to print additional copies of parts 1 and 2, thermal pollution, 1968 hearings; to the Committee on House Administration.

SENATE ENROLLED JOINT RESOLUTION SIGNED

The SPEAKER announced his signature to an enrolled joint resolution of the Senate of the following title:

S.J. Res. 99. Joint resolution to authorize the President to issue a proclamation designating the first week in June 1969 as "Helen Keller Memorial Week."

ADJOURNMENT

Mr. CAFFERY. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 6 o'clock and 47 minutes p.m.), the House adjourned until tomorrow, Tuesday, May 27, 1969, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

796. A letter from the Comptroller General of the United States, transmitting a report on the examination of the financial statements of the Virgin Islands Corporation (in liquidation), Department of the Interior, for the fiscal years 1967 and 1968 (H. Doc. No. 91-119); to the Committee on Government Operations and ordered to be printed.

797. A letter from the Assistant Secretary of the Interior, transmitting notification of the receipt of a project proposal and loan application from the Water Supply & Storage Co., Fort Collins, Colo., pursuant to the provisions of section 10 of the Small Reclamation Projects Act of 1956; to the Committee on Interior and Insular Affairs.

798. A letter from the Assistant Secretary of the Interior, transmitting a determination on deferment of the 1969 construction payment due the United States from the San Angelo Water Supply Corp. in connection with the San Angelo reclamation project, Texas, pursuant to the provisions of the act of September 21, 1959 (73 Stat. 584); to the Committee on Interior and Insular Affairs.

799. A letter from the Postmaster General, transmitting a draft of proposed legislation to readjust the compensation of the Advisory Board for the Post Office Department; to the Committee on Post Office and Civil Service.

800. A letter from the Secretary of the Interior, transmitting the first annual report on the National Visitor Center, pursuant to the provisions of Public Law 90-264; to the Committee on Public Works.

801. A letter from the Administrator of General Services, transmitting prospectuses proposing alteration of public buildings at various locations, pursuant to the provisions of section 7a of the Public Buildings Act of 1959 (73 Stat. 480); to the Committee on Public Works.

802. A letter from the Administrator of Veterans' Affairs, transmitting a draft of proposed legislation to authorize the Administrator of Veterans' Affairs to sell at prices which he determines to be reasonable under prevailing mortgage market conditions direct loans made to veterans under chapter 37, title 38, United States Code; to the Committee on Veterans' Affairs.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, pursuant to the order of the House of May 22, 1969, the following bill was reported on May 23, 1969:

Mr. WHITTEN: Committee on Appropriations. H.R. 11612. A bill making appropriations for the Department of Agriculture and related agencies for the fiscal year ending June 30, 1970, and for other purposes (Rept. No. 91-265). Referred to the Committee of the Whole House on the State of the Union.

[Submitted May 26, 1969]

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. PEPPER: House Resolution 424. Resolution waiving points of order against H.R. 11582, a bill making appropriations for the Treasury and Post Office Departments, the Executive Office of the President, and certain independent agencies, for the fiscal year ending June 30, 1970, and for other purposes (Rept. No. 91-266). Referred to the House Calendar.

Mr. PATMAN: Committee on Banking and Currency. H.R. 10931. A bill to provide for the striking of medals in commemoration of the 150th anniversary of the founding of the State of Alabama (Rept. No. 91-267). Referred to the Committee of the Whole House on the State of the Union.

PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of rule XXII, pursuant to the order of the House of May 22, 1969, the following bill was introduced on May 23, 1969:

By Mr. WHITTEN:

H.R. 11612. A bill making appropriations for the Department of Agriculture and related agencies for the fiscal year ending June 30, 1970, and for other purposes.

[Submitted May 26, 1969]

Under clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. BIAGGI:

H.R. 11613. A bill to amend subchapter III of chapter 83 of title 5, United States Code, relating to civil service retirement, and for other purposes; to the Committee on Post Office and Civil Service.

By Mr. PERKINS (for himself and Mr. QUITE):

H.R. 11614. A bill to amend the National School Lunch Act, as amended, to provide funds and authorities to the Department of Agriculture for the purpose of providing free or reduced-price meals to needy children not now being reached, and to provide funds for the special milk program; to the Committee on Education and Labor.

By Mr. BIAGGI (for himself, Mr. CAREY, Mr. DULSKI, and Mr. WALDIE):

H.R. 11615. A bill to provide for the protection of children against physical injury caused or threatened by those who are responsible for their care; to the Committee on Ways and Means.

By Mr. BUSH:

H.R. 11616. A bill to rename the Houston Veterans' Administration Cemetery as the "Albert Thomas Veterans' Memorial Cemetery"; to the Committee on Veterans' Affairs.

By Mr. CHAMBERLAIN:

H.R. 11617. A bill to amend the Internal Revenue Code to designate the home of a State legislator for income tax purposes; to the Committee on Ways and Means.

H.R. 11618. A bill to amend the Internal Revenue Code of 1954 to provide the same tax exemption for servicemen in and around Korea as is presently provided for those in Vietnam; to the Committee on Ways and Means.

By Mr. CLARK:

H.R. 11619. A bill to amend section 127 of title 23 of the United States Code relating to vehicle width limitations on the Interstate System, in order to increase such limitations for motorbuses; to the Committee on Public Works.

By Mr. O'HARA (for himself, Mr. THOMPSON of New Jersey, Mr. BRADENAS, Mr. HAWKINS, Mr. ADAMS, Mr. ADDABO, Mr. ANDERSON of California, Mr. ANNUNZIO, Mr. BARRETT, Mr. BIAGGI, Mr. BINGHAM, Mr. BLATNIK, Mr. BOLAND, Mr. BROWN of California, Mr. BURKE of Massachusetts, Mr. BUTTON, Mr. BYRNE of Pennsylvania, Mr. CLARK, Mr. COHELAN, Mr. CONYERS, and Mr. CORMAN):

H.R. 11620. A bill to assure an opportunity for employment to every American seeking work and to make available the education and training needed by any persons to qualify for employment consistent with his highest potential and capability, and for other purposes; to the Committee on Education and Labor.

By Mr. DANIELS of New Jersey (for himself, Mr. PERKINS, Mr. DENT, Mr. PUCINSKI, Mr. DIGGS, Mr. DINGELL, Mr. DULSKI, Mr. EDWARDS of California, Mr. ECKHARDT, Mr. EILBERG, Mr. FARBERSTEIN, Mr. FASCELL, Mr. FOLEY, Mr. FRASER, Mr. GALLAGHER, Mr. GIBBONS, Mr. GILBERT, Mr. GONZALEZ, Mr. GRAY, Mr. GREEN of Pennsylvania, and Mr. HALPERN):

H.R. 11621. A bill to assure an opportunity for employment to every American seeking work and to make available the education and training needed by any persons to qualify for employment consistent with his highest potential and capability, and for other purposes; to the Committee on Education and Labor.

By Mr. WILLIAM D. FORD (for himself, Mr. CAREY, Mr. SCHEUER, Mr. POWELL, Mr. MOLLOHAN, Mr. MURPHY of Illinois, Mr. MOORHEAD, Mr. MORGAN, Mr. NEDZI, Mr. NIX, Mr. OBEY, Mr. OLSEN, Mr. O'NEILL of Massachusetts, Mr. OTTINGER, Mr. PEPPER, Mr. POBELL, Mr. PRICE of Illinois, Mr. REES, Mr. REUSS, Mr. RODINO, and Mr. ROONEY of Pennsylvania):

H.R. 11622. A bill to assure an opportunity for employment to every American seeking work and to make available the education and training needed by any persons to qualify for employment consistent with his highest potential and capability, and for other purposes; to the Committee on Education and Labor.

By Mr. PERKINS (for himself and Mr. QUITE):

work and to make available the education and training needed by any person to qualify for employment consistent with his highest potential and capability, and for other purposes; to the Committee on Education and Labor.

By Mr. MEEDS (for himself, Mr. STOKES, Mr. CLAY, Mr. ROSENTHAL, Mr. RONAN, Mr. ROYBAL, Mr. RYAN, Mr. SHIPLEY, Mr. SLACK, Mr. SISK, Mr. ST. ONGE, Mr. TIERNAN, Mr. TUNNEY, Mr. UDALL, Mr. VANIK, Mr. VAN DEERLIN, Mr. WALDIE, Mr. CHARLES H. WILSON, Mr. WOLFF, Mr. YATRON, and Mr. ZABLOCKI):

H.R. 11623. A bill to assure an opportunity for employment to every American seeking work and to make available the education and training needed by any persons to qualify for employment consistent with his highest potential and capability, and for other purposes to the Committee on Education and Labor.

By Mr. HATHAWAY (for himself, Mrs. MINK, Mr. BURTON of California, Mr. GAYDOS, Mrs. HANSEN of Washington, Mr. HAYS, Mr. HECHLER of West Virginia, Mr. HELSTOSKI, Mr. HICKS, Mr. HOWARD, Mr. HOLIFIELD, Mr. JOELSON, Mr. KARTH, Mr. KOCH, Mr. KYROS, Mr. LEGGETT, Mr. MADDEN, Mr. MATSUNAGA, Mr. MIKVA, Mr. MILLER of California, and Mr. MINISH):

H.R. 11624. A bill to assure an opportunity for employment to every American seeking work and to make available the education and training needed by any persons to qualify for employment consistent with his highest potential and capability, and for other purposes; to the Committee on Education and Labor.

By Mr. DERWINSKI:

H.R. 11625. A bill to authorize appropriations to be used for the elimination of certain rail-highway grade crossings in Cook County, Ill.; to the Committee on Public Works.

By Mrs. DWYER:

H.R. 11626. A bill to carry out recommendations of the Joint Commission on the Coinage, and for other purposes; to the Committee on Banking and Currency.

By Mr. FOLEY:

H.R. 11627. A bill to prevent the importation of endangered species of fish or wildlife into the United States; to prevent the interstate shipment of reptiles, amphibians, and other wildlife taken contrary to State law; and for other purposes; to the Committee on Merchant Marine and Fisheries.

By Mr. FRIEDEL:

H.R. 11628. A bill to transfer from the Architect of the Capitol to the Librarian of Congress the authority to purchase office equipment and furniture for the Library of Congress; to the Committee on House Administration.

By Mr. FULTON of Pennsylvania:

H.R. 11629. A bill to prohibit the use of interstate facilities, including the mails, for the transportation of salacious advertising; to the Committee on the Judiciary.

H.R. 11630. A bill to prohibit the use of interstate facilities, including the mails, for the transportation of certain materials to minors; to the Committee on the Judiciary.

H.R. 11631. A bill to adjust the postal revenues and to afford protection to the public from offensive intrusion into their homes through the postal service of sexually oriented mail matter, and for other purposes; to the Committee on Post Office and Civil Service.

By Mr. HALPERN:

H.R. 11632. A bill to amend title II of the Social Security Act to provide a substantial liberalization in the retirement test; to the Committee on Ways and Means.

By Mr. HARSHA:

H.R. 11633. A bill to amend the Communications Act of 1934 so as to prohibit the granting of authority to broadcast pay television programs; to the Committee on Interstate and Foreign Commerce.

By Mr. KING:

H.R. 11634. A bill to amend the Railroad Retirement Act of 1937 to provide for cost-of-living increases in the benefits payable thereunder; to the Committee on Interstate and Foreign Commerce.

H.R. 11635. A bill to amend title II of the Social Security Act to provide cost-of-living increases in the insurance benefits payable thereunder; to the Committee on Ways and Means.

By Mr. LIPSCOMB:

H.R. 11636. A bill to continue for 2 years the authority for the regulation of exports; to the Committee on Banking and Currency.

By Mr. MACDONALD of Massachusetts:

H.R. 11637. A bill to provide for computation of disability retirement pay for members of the uniformed services; to the Committee on Armed Services.

H.R. 11638. A bill to amend title II of the Social Security Act to provide a 15-percent across-the-board increase in monthly benefits, with subsequent cost-of-living increases in such benefits and a minimum primary benefit of \$80; to the Committee on Ways and Means.

H.R. 11639. A bill to provide for orderly trade in footwear; to the Committee on Ways and Means.

By Mr. MEEDS (for himself, Mr. PELLY, Mr. HICKS, Mr. ADAMS, Mr. FOLEY, and Mrs. MAY):

H.R. 11640. A bill to amend titles I, X, XIV, and XVI of the Social Security Act, and part A of title IV of such act, to permit a State to provide a part of the assistance payable thereunder in the form of food stamps instead of cash when requested by the recipient of such assistance; to the Committee on Ways and Means.

By Mr. NICHOLS:

H.R. 11641. A bill to exempt from the anti-trust laws certain joint newspaper operating arrangements; to the Committee on the Judiciary.

By Mr. PODELL:

H.R. 11642. A bill to reclassify certain positions in the postal service, and for other purposes; to the Committee on Post Office and Civil Service.

By Mr. PODELL (for himself, Mr. BURTON of California, Mr. LUKENS, Mr. MACDONALD of Massachusetts, Mr. PEPPER, Mr. GAYDOS, Mr. CLAY, Mr. SCHEUER, Mr. OBEY, Mr. UDALL, Mr. VIGORITO, Mr. POWELL, Mr. MIKVA, Mr. OTTINGER, Mr. KASTENMEIER, Mr. VAN DERLIN, Mr. ANDERSON of California, Mr. TIERNAN, Mr. REUSS, Mr. FRIEDEL, Mrs. MINK, Mr. ASHLEY, Mr. HAMILTON, Mr. BROWN of California, and Mr. YATRON):

H.R. 11643. A bill to amend the Legislative Reorganization Act of 1946 to provide for annual reports to the Congress by the Comptroller General concerning certain price increases in Government contracts and certain failures to meet Government contract completion dates; to the Committee on Government Operations.

By Mr. PRICE of Illinois:

H.R. 11644. A bill to modernize the U.S. Postal Establishment, to provide for efficient and economical postal service to the public, to improve postal employee-management relations, and for other purposes; to the Committee on Post Office and Civil Service.

By Mr. ST. ONGE:

H.R. 11645. A bill to amend the Communications Act of 1934 to prohibit the granting of authority by the Federal Communications

Commission for the broadcast of pay television programs; to the Committee on Interstate and Foreign Commerce.

By Mr. SAYLOR:

H.R. 11646. A bill to amend the Railroad Retirement Act of 1937 to provide a full annuity at age 60 for men (as well as women) who have completed 30 years of railroad service; to the Committee on Interstate and Foreign Commerce.

By Mr. SKUBITZ:

H.R. 11647. A bill to amend the Communications Act of 1934 to establish orderly procedures for the consideration of applications for renewal of broadcast licenses; to the Committee on Interstate and Foreign Commerce.

By Mr. VANIK (for himself and Mr. ECKHARDT):

H.R. 11648. A bill to amend title II of the Social Security Act to provide a 15-percent across-the-board increase in monthly benefits, with subsequent cost-of-living increases in such benefits and a minimum primary benefit of \$80; to the Committee on Ways and Means.

By Mr. WALDIE:

H.R. 11649. A bill to amend chapter 44 of title 18, United States Code, to exempt ammunition Federal regulation under the Gun Control Act of 1968; to the Committee on the Judiciary.

By Mr. WOLD (for himself, Mr. POLLOCK, Mr. CAMP, Mr. ADAMS, Mr. EDMONDSON, Mr. DIGGS, Mr. ESHLEMAN, Mr. DULSKI, Mr. DERWINSKI, Mr. ANDERSON of Illinois, Mr. ANDERSON of California, Mr. COUGHLIN, Mr. TUNNEY, Mr. GUDE, Mr. KLUCZYNSKI, and Mr. SCHEUER):

H.R. 11650. A bill to amend title I of the Land and Water Conservation Fund Act of 1965 (78 Stat. 897), and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. PERKINS (for himself and Mr. QUITE):

H.R. 11651. A bill to amend the National School Lunch Act, as amended, to provide funds and authorities to the Department of Agriculture for the purpose of providing free or reduced-price meals to needy children not now being reached; to the Committee on Education and Labor.

By Mr. BROWN of California:

H.R. 11652. A bill to amend the public assistance provisions of the Social Security Act to increase the Federal share of a State's expenditures under the public assistance programs (including administrative expenses) to 90 percent, to provide for the establishment of nationally uniform minimum standards for aid or assistance thereunder and to repeal the freeze on the number of children with respect to whom Federal payments may be made under the aid to families with dependent children program; to the Committee on Ways and Means.

By Mr. CHAPPELL (for himself, Mr. SIKES, Mr. HARSHA, Mr. GRIFFIN, and Mr. HALEY):

H.R. 11653. A bill to require the suspension of Federal financial assistance to colleges and universities which are experiencing campus disorders and fail to take appropriate corrective measures; to the Committee on Education and Labor.

By Mr. CLAY:

H.R. 11654. A bill to amend the U.S. Housing Act of 1937 to require that average rentals in any low-rent housing project be kept at a level below 25 percent of the average income of persons eligible to occupy units in such project, and to increase the annual contributions which may be paid with respect to such project to the extent necessary to permit rentals to be kept at such level; to the Committee on Banking and Currency.

By Mr. DUNCAN:

H.R. 11655. A bill to amend the Railroad

Retirement Act of 1937 to provide for cost-of-living increases in the benefits payable thereunder; to the Committee on Interstate and Foreign Commerce.

By Mr. ECKHARDT (for himself, Mr. CAHILL, Mr. CONYERS, Mr. EDWARDS of California, Mr. HALPERN, Mr. HUNGATE, Mr. MIKVA, Mr. ROSENTHAL, Mr. RYAN, and Mr. SCHEUER):

H.R. 11656. A bill to improve judicial machinery by providing Federal jurisdiction for certain types of class actions, and for other purposes; to the Committee on the Judiciary.

By Mr. EDWARDS of California:

H.R. 11657. A bill to require quarterly disclosure to the Comptroller General of the United States of the source and amount of all outside income received by any person serving as a Federal judge, a Member of Congress, or a policymaking official in the executive branch of the Government, and for other purposes; to the Committee on the Judiciary.

By Mr. ESHLEMAN:

H.R. 11658. A bill to amend title 18 of the United States Code to require common carriers for hire to keep records of the names of persons transported by such carrier in interstate or foreign commerce, and to make it a criminal offense for any person so transported to travel under a false or fictitious name; to the Committee on the Judiciary.

By Mr. FINDLEY:

H.R. 11659. A bill to promote the foreign policy and security of the United States by providing authority to negotiate a commercial agreement with Czechoslovakia, and for other purposes; to the Committee on Ways and Means.

By Mr. HECHLER of West Virginia:

H.R. 11660. A bill to provide for public disclosure including income tax returns by Members of the House of Representatives, Members of the U.S. Senate, justices and judges of the U.S. courts, and policymaking officials of the executive branch as designated by the Civil Service Commission, but including the President, Vice President, and Cabinet Members; and by candidates for the House of Representatives and the Senate, the Presidency, and the Vice-Presidency; and to give the House Committee on Standards of Conduct, the Senate Select Committee on Standards of Conduct, the Director of the Administrative Office of the U.S. Courts, and the Attorney General of the United States appropriate jurisdiction; to the Committee on the Judiciary.

By Mr. KYROS:

H.R. 11661. A bill to amend title II of the Social Security Act to reduce from 20 to 15 the number of quarters of coverage which an individual must generally have had within a specified 10-year period in order to qualify for disability insurance benefits and the disability freeze; to the Committee on Ways and Means.

By Mr. LOWENSTEIN (for himself, Mrs. CHISHOLM, Mr. ADDABO, Mr. BINGHAM, Mr. BUTTON, Mr. CAREY, Mr. CONYERS, Mr. DIGGS, Mr. FARRSTEIN, Mr. FRIEDEL, Mr. FULTON of Pennsylvania, Mr. HALPERN, Mr. HAWKINS, Mr. KOCH, Mr. MIKVA, Mr. OTTINGER, Mr. PODELL, Mr. ROSENTHAL, Mr. RYAN, and Mr. STOKES):

H.R. 11662. A bill to amend titles I, X, XIV, XVI, and XIX of the Social Security Act, and part A of title IV of such act, to increase the Federal share of a State's public assistance expenditures to 90 percent, to provide for the establishment of nationally uniform minimum standards for aid or assistance thereunder, and to repeal the freeze on the number of children with respect to whom Federal payments may be made under the AFDC program; to the Committee on Ways and Means.

By Mr. McFALL:

H.R. 11663. A bill to amend section 603(3)

and section 608c(6)(1) of the Agricultural Marketing Agreement Act of 1937, as amended, so as to authorize production research under marketing agreement and order programs; to the Committee on Agriculture.

By Mr. MINISH:

H.R. 11664. A bill to provide for a study of the extent and enforcement of State laws and regulations governing the operation of youth camps; to the Committee on Education and Labor.

H.R. 11665. A bill to amend the Internal Revenue Code of 1954 to extend the head-of-household benefits to unmarried widows and widowers, and individuals who have attained age 30 and who have never been married or who have been separated or divorced for 3 years or more, who maintain their own households; to the Committee on Ways and Means.

By Mr. NEDZI:

H.R. 11666. A bill to amend chapter 55 of title 10 of the United States Code to provide that entitlement to health insurance under title XVIII of the Social Security Act shall not bar the availability of certain contract health services under such chapter in the case of certain members and former members of the uniformed services and their dependents; to the Committee on Armed Services.

By Mr. PUCINSKI:

H.R. 11667. A bill to require contractors of departments and agencies of the United States engaged in the production of motion picture films to pay prevailing wages; to the Committee on Education and Labor.

H.R. 11668. A bill to amend the act entitled "An act to promote the safety of employees and travelers upon railroads by limiting the hours of service of employees thereon," approved March 4, 1907; to the Committee on Interstate and Foreign Commerce.

H.R. 11669. A bill to amend title 28, United States Code, section 753(e), to eliminate the maximum and minimum limitations upon the annual salary of reporters; to the Committee on the Judiciary.

By Mr. STUCKEY:

H.R. 11670. A bill to amend the Glass-Steagall Act, as amended, to authorize commercial banks to maintain collective investment funds of managing agency accounts, and for other purposes; to the Committee on Banking and Currency.

By Mr. TALCOTT (for himself, Mr. ANDERSON of Illinois, Mr. BEVILL,

Mr. BUCHANAN, Mr. COLLINS, Mr. CORBETT, Mr. DERWINSKI, Mr. HOSMER, Mr. McCLEURE, Mr. MYERS, Mr. POWELL, Mr. SANDMAN, Mr. WALDIE, Mr. WHELEN, and Mr. WIGGINS):

H.R. 11671. A bill to amend the Legislative Reorganization Act of 1946 to provide for the inclusion of certain cost estimates of certain measures reported by the standing committees of the House of Representatives; to the Committee on Rules.

By Mr. CAHILL:

H.J. Res. 742. Joint resolution proposing an amendment to the Constitution of the United States relative to equal rights for men and women; to the Committee on the Judiciary.

By Mr. GUDE (for himself and Mr. SCHWENGLER):

H.J. Res. 743. Resolution to establish a commission to conduct a study of the adequacy of the financial resources available for the operation of the government of the District of Columbia; to the Committee on the District of Columbia.

By Mr. PRICE of Illinois:

H.J. Res. 744. Joint resolution proposing an amendment to the Constitution of the United States relative to equal rights of men and women; to the Committee on the Judiciary.

By Mr. BOB WILSON (for himself and Mr. BRADEMAMAS):

H.J. Res. 745. Joint resolution authorizing the President to proclaim the month of February 1970 as "Project Concern Month"; to the Committee on the Judiciary.

By Mr. ROSENTHAL (for himself and Mr. KOCH):

H. Con. Res. 275. Concurrent resolution expressing the sense of the Congress with respect to the effectiveness of State and local rent control laws notwithstanding any inconsistencies which may exist between such laws and FHA requirements; to the Committee on Banking and Currency.

By Mr. SCHEUER:

H. Con. Res. 276. Concurrent resolution expressing the sense of the Congress with respect to the application of the equal-time provisions of the Communications Act of 1934 in cases where one or more of the candidates for a public office refuses to participate in a broadcast debate; to the Committee on Interstate and Foreign Commerce.

By Mr. FRIEDEL:

H. Res. 425. Resolution, transfer of funds within the offices of the Clerk and the Sergeant at Arms of the House of Representatives, and for other purposes; to the Committee on House Administration.

MEMORIALS

Under clause 4 of rule XXII, memorials were presented and referred as follows:

186. By the SPEAKER: Memorial of the Legislature of the State of Tennessee, relative to appropriations for the low-income home purchase and rent programs for fiscal year 1969; to the Committee on Appropriations.

187. Also, memorial of the Legislature of the State of Hawaii, relative to the anti-ballistic-missile system; to the Committee on Armed Services.

188. Also, memorial of the Legislature of the State of Tennessee, relative to perpetuation of the Reserve Officers Training Corps programs in the colleges and universities of America; to the Committee on Armed Services.

189. Also, memorial of the Legislature of the State of California, relative to a water reclamation facility in the Sepulveda Dam Basin; to the Committee on Interior and Insular Affairs.

190. Also, memorial of the House of Representatives of the Commonwealth of Massachusetts, relative to Dr. John H. Knowles; to the Committee on Interstate and Foreign Commerce.

191. Also, memorial of the Senate of the Commonwealth of Massachusetts, relative to Dr. John H. Knowles; to the Committee on Interstate and Foreign Commerce.

192. Also, memorial of the Senate of the Commonwealth of Massachusetts, relative to providing a civil remedy for misrepresentation of the quality of articles composed in whole or in part of gold or silver; to the Committee on Interstate and Foreign Commerce.

193. Also, memorial of the Legislature of the Commonwealth of Massachusetts, relative to recognition of the 100-mile seaward boundary of the Commonwealth of Massachusetts; to the Committee on the Judiciary.

194. Also, memorial of the Legislature of the State of Minnesota, relative to including censuses of school districts in the Federal census; to the Committee on Post Office and Civil Service.

195. Also, memorial of the Legislature of the State of Tennessee, relative to creation of the "Circle-the-Smokies Scenic Drive"; to the Committee on Public Works.

196. Also, memorial of the Legislature of

the State of Colorado, relative to restoration to the States of adequate tax sources for the support of State and local government; to the Committee on Ways and Means.

197. Also, memorial of the Legislature of the Commonwealth of Massachusetts, relative to the sharing of Federal income taxes; to the Committee on Ways and Means.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred to as follows:

By Mr. FALLON:

H.R. 11672. A bill for the relief of Dr. M. Zia Borhan; to the Committee on the Judiciary.

By Mr. HECHLER of West Virginia:

H.R. 11673. A bill for the relief of Dr. Gerardo P. Gonzalez; to the Committee on the Judiciary.

By Mr. KYROS:

H.R. 11674. A bill to authorize and direct the Secretary of the Department under which the U.S. Coast Guard is operating to cause the vessel *Macaboy III* to be documented as a vessel of the United States with coastwise privileges; to the Committee on Merchant Marine and Fisheries.

By Mr. MAILLIARD:

H.R. 11675. A bill for the relief of Aparicia Santiago; to the Committee on the Judiciary.

By Mr. MORSE:

H.R. 11676. A bill for the relief of Philip C. Riley and Donald F. Lane; to the Committee on the Judiciary.

By Mr. NIX:

H.R. 11677. A bill for the relief of Dr. Mohammad Zahir; to the Committee on the Judiciary.

By Mr. POWELL:

H.R. 11678. A bill for the relief of Oswaldo Oliveros Lagman; to the Committee on the Judiciary.

H.R. 11679. A bill for the relief of Oswaldo Selsomondo Lagman; to the Committee on the Judiciary.

H.R. 11680. A bill for the relief of Rogelio Lagman; to the Committee on the Judiciary.

By Mr. WYATT:

H.R. 11681. A bill for the relief of Hossein Anoushirvani-Tafreshi; to the Committee on the Judiciary.

PETITIONS, ETC.

Under clause 1 of rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

120. By the SPEAKER: Petition of the Village Assembly, Kamimotobu, Okinawa, relative to the return of Okinawa to Japan; to the Committee on Foreign Affairs.

121. Also, petition of Robert H. Roloff, Carson City, Nev., relative to the return of a portion of the lands to Nevada to the State of Arizona; to the Committee on the Judiciary.

122. Also, petition of Vincente Gatica Startti, Huntsville, Tex., relative to impeachment of a Federal district judge; to the Committee on the Judiciary.

123. Also, petition of Henry Stoner, Billings, Mont., relative to proposed amendment to the Constitution of the United States; to the Committee on the Judiciary.

124. Also, petition of the City Council, El Segundo, Calif., relative to the creation of a commission to control the flow of narcotics and dangerous drugs between the United States and Mexico; to the Committee on Ways and Means.

125. Also, petition of the City Council, City and County of Honolulu, Hawaii, relative to the tax exemption on municipal bonds; to the Committee on Ways and Means.

EXTENSIONS OF REMARKS

SISTER SERAPHINE

HON. ALAN BIBLE

OF NEVADA

IN THE SENATE OF THE UNITED STATES

Monday, May 26, 1969

Mr. BIBLE. Mr. President, one of Nevada's most beloved citizens is Sister M. Seraphine, O.P., of Reno, who this year marks her 50th year in the congregation of the Dominican Sisters of San Rafael, Calif. Thirty-eight of those years have been devoted to service to the people of northern Nevada, who accord her the highest possible measure of respect and admiration.

More than any other person, Sister Seraphine is identified with the growth of St. Mary's Hospital in Reno from a small 52-bed facility to one of the great medical centers of the West. Since her arrival as hospital administrator in 1931—just a year after the facility was opened—St. Mary's has added two wings and grown fivefold. Plans for additional expansion are underway.

Over the years, Sister Seraphine has become something of a legend to the thousands who received treatment at St. Mary's. During her long and successful tenure as administrator, she never permitted the burden of official responsibility to diminish the direct personal contact that is the pulse of a great hospital. Indeed, she candidly admits her role as administrator "included such things as bookkeeper, relief telephone operator, personnel officer, purchasing agent, maid, and lending a hand wherever needed."

"Lending a hand," according to those who were there, meant ministering to the sick through many long and sleepless nights. It meant assisting in the joyful ritual of birth as well as the sorrowful rite of death. It meant calming the fearful, soothing the child, and performing countless other little acts of tenderness and compassion.

Today, Sister Seraphine continues in an active role at St. Mary's. The present administrator, Sister Dominga, depends upon her to supervise the St. Mary's Hospital cancer, heart, and charity fund, which has received and disbursed \$57,000 since it was created in 1955. Moneys from the fund are used to assist long-term patients.

Equally important, Sister Seraphine maintains her visiting schedule with hospital patients, "trying to help them in little personal ways." It is a tradition that spans nearly four decades—a smiling lady in white, softly walking the corridors of a great hospital, bearing the gift of love. She has been a lifelong and dear friend of mine. I have often said that if there is an angel on earth she is that angel.

Recently, the women's editor of the Nevada State Journal, Mrs. Liz Wheeler, paid tribute to the many achievements of Sister Seraphine. I ask unanimous consent that Mrs. Wheeler's article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SISTER SERAPHINE HONORED DURING GOLDEN JUBILEE YEAR

(By Liz Wheeler)

In observance of National Hospital Week, May 11-17, it is fitting that we pay tribute to a lovely lady who has worked very hard over the years for Reno and St. Mary's Hospital.

She is Sister M. Seraphine, O.P., who this year is celebrating her Golden Jubilee as a religious Sister in the congregation of the Dominican Sisters of San Rafael, Calif.

Thirty-eight of those 50 years have been spent serving the community of Reno.

As part of the many events planned in her honor, St. Mary's Hospital has issued a special edition of its house organ, the St. Mary's News Bulletin, which has combined observance of National Hospital Week with personal tributes to their beloved Sister Seraphine.

Born in Oakland, the third child in a family of nine girls and four boys, Sister Seraphine entered the Dominican Convent at San Rafael in 1917.

Sister Seraphine says that she succeeded Sister Xavier who built the first unit of the present St. Mary's Hospital building.

"Sister Xavier came here in 1925 as administrator," Sister Seraphine said, and "the hospital was across the street from the present one, in a red brick building, now St. Mary's Convent."

Construction of the main section of the present hospital was completed in 1930—having 52 beds. "I came to Reno as administrator in 1931," Sister Seraphine recalled, "and at that time, Sister Xavier became the director of nurses, and later surgical supervisor for approximately 25 years. Sister Gerard was here too," she said. Sister Gerard was supervisor of Maternity Department for many years.

"The three of us are often referred to now as 'the old guard' because we have followed along through 38 years."

In 1965, Sister Dominga was made administrator, after having been business office supervisor here for 10 years," she said. "We have seen many changes in hospital procedure during my years here," said Sister Seraphine as she reflected on her years in Reno.

"When I came here, some of the nurses boiled their hypodermic needles on a long spoon over an alcohol lamp; where today's procedure is to use only new, disposable hypodermic needles, used once and then destroyed."

One of the most interesting things to Sister Seraphine is the change in the mode of travel.

When she arrived here, she said, there was only a wooden building serving the Southern Pacific Railway Station—and today there is a modern railroad station as well as the huge Reno Municipal Airport.

"I arrived here in the summer of 1931," Sister Seraphine said, and "on Nov. 1, 1932, awoke to the fact that there was a bank moratorium declared on the banks in Nevada."

"Those were very trying days, when most of our Nevada people lost great sums in the bank that never opened," she said.

The depression years followed and Sister Seraphine recalled that "it was actually necessary to accept produce from many of our patients' ranches in lieu of cash."

"Somehow we survived, though, and our great Nevada people survived, too."

In 1936 it was necessary to add the East Wing of the main building, adding 25 more beds.

"In 1942 we were planning to add a few more rooms when World War II was declared, so it was 1949 before we were able to add more bed space in the East Wing and start planning for a new West Wing to the hospital," she related.

During the days of rationing, it was very difficult to obtain enough supplies, especially on goods that were needed for the Armed Services, she said.

"However, due to help from our faithful salesmen, they kept us safe on many items, such as linens, paper goods, etc."

"We always managed to pay our bills," Sister Seraphine remembered.

She said in 1950 they received help from the federal Hill-Burton funds and by 1951 they had completed the West Wing of the hospital—a basement and two stories with the third floor shelled in. By 1955, it was necessary to complete the third floor.

"This," Sister Seraphine said, "was made possible by an unexpected grant from the Ford and Fleischmann Foundations."

The St. Mary's Hospital Guild that was formed in 1951 furnished the third floor with 14 pediatric beds and 12 adult beds, she said.

Sister Seraphine reflected that, "the Guild has remained a great source of help since then, in supplying furnishings and equipment for the hospital as well as wonderful help through its Volunteer Services."

She recalled how the hospital's needs called for additional wings and growth and how the East, North and West wings were completed with the help of federal funds, Fleischmann Foundation, donations and gifts. They also found it necessary to increase the size of the service units of the hospital.

She said the hospital has grown from the 52 beds, when she came, to today's size of 265 beds, and "as of today, we are again facing a real shortage of space and should complete the 4th and 5th stories."

"However, this seems impossible until we reduce our present debt," she said.

"Maybe some kind friends will come to our assistance. Who knows?"

Sister Seraphine remembers the days when she was administrator, that her job "included such things as bookkeeper, relief telephone operator, personnel officer, purchasing agent, maid, and lending a hand wherever needed."

"Now that I am relieved as administrator, I still find plenty of work to do," she said, "visiting the patients daily and trying to help them in little personal ways."

"In 1955, a kind friend gave us a donation to be used to help a cancer patient," she said.

"Since then, we have started an account, calling it St. Mary's Hospital Cancer, Heart and Charity Fund," Sister Seraphine related.

"This is one responsibility which I have been allowed to carry through the years and it has been a source of comfort to me—as well as those who need it. We are very grateful to our generous friends for this," she said.

She keeps the books for this fund and said "over the years, we have received many, many donations; all of which have been used to help long-term patients. This direct aid has grown, and to date we have received and distributed approximately \$57,000," she added.

Sister Seraphine wishes to pay tribute to the wonderful staff of physicians, nurses and employees for their loyal cooperation; and the St. Mary's Hospital Guild, Fleischmann Foundation, many friends and doctors who have contributed to help the hospital in furnishing of patients' rooms and other departments.

"Alone, we never could have done it, but with the guidance and help from Almighty God and our good friends, St. Mary's has grown to its present stature.

"They were strenuous years—hours long and tiring—but looking back, I would not want to change any one of them for an easier life," Sister Seraphine concluded.

WELFARE REFORM, A BEGINNING

HON. SHIRLEY CHISHOLM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 26, 1969

Mrs. CHISHOLM. Mr. Speaker, time has long since passed for public assistance to become a national responsibility. Welfare is a national problem, having its origins in the continuing economic and technological transformation of this country and requiring effective national action.

Shortsighted and unjust public and private policies have drained the disadvantaged poor into cities, but the weight of social service costs is too great for our cities, or even our States, to carry. Their shrinking tax bases and obsolescent property taxes are inadequate to withstand the strain. As a consequence, the Nation's cities are staggering under the costs of responding to their citizens' needs.

Few persons would deny this, and fewer each day would avoid the conclusion that the remedy is a greater Federal role in public assistance. In many fields greater Federal participation is unwise, but the economics of the welfare problem make increased Federal contributions particularly appropriate.

Many proposals to radically alter the welfare system have been put forward. Many should be studied carefully, and some, after examination, should be tried. But pending adoption of major changes, we must urgently make critical improvements. What we propose today is the minimum that must be accomplished immediately. Drastic reforms are needed to begin to ease the despair of our disadvantaged, but we recommend intermediate steps to save our cities from bankruptcy and the citizens from hopelessness.

Our congressional districts include constituents of all levels of affluence. The obvious fact of recent years that public assistance has been of no help to the disadvantaged and a burden to those of middle incomes shows us that those with both low and middle incomes must work together to achieve a more equitable welfare system.

The bill that the gentleman from New York (Mr. LOWENSTEIN) and I are introducing today would require the Federal Government to bear 90 percent of the costs of public assistance and 90 percent of the cost of Medicaid. It would give the Secretary of Health, Education, and Welfare power to set minimum welfare standards and uniform criteria for all States.

The creation of a national standard is imperative in light of the recent Supreme Court decision on welfare and

rapid mobility toward the North and the West. According to estimates of the Department of Health, Education, and Welfare, 100,000 to 200,000 additions will be on the welfare rolls as a result of the Court's striking down State residency requirements. The burden is compounded by the continuing influx of the poor into cities located in the traditionally richer and more industrial States, an influx helping to create the impression of a divergence between those of low and those of middle incomes.

The bill would also remove the limitations restricting the number of children who may be eligible for payments under the aid to dependent children program, the so-called AFDC "freeze."

In summary, the thrust of this bill is to begin the process of removing the worst injustices of the present law and establish a more equitable base of support for social service programs.

Cosponsors of the bill are JOSEPH P. ADDABBO, JONATHAN B. BINGHAM, DANIEL E. BUTTON, HUGH L. CAREY, JOHN CONYERS, CHARLES C. DIGGS, LEONARD FARRSTEIN, SAMUEL N. FRIEDEL, RICHARD FULTON, SEYMOUR HALPERN, AUGUSTUS F. HAWKINS, EDWARD KOCH, ABNER MIKVA, RICHARD L. OTTINGER, BERTRAM L. PODELL, BENJAMIN S. ROSENTHAL, and WILLIAM F. RYAN.

A summary of the bill's provisions follows:

SUMMARY OF BILL AMENDING THE PUBLIC ASSISTANCE TITLES UNDER THE SOCIAL SECURITY ACT

TITLE I

Title I of the bill provides for an increase in Federal matching grants to the States for the Federally-aided cash public assistance programs, including Old-Age Assistance, Aid to the Blind, Aid to the Permanently and Totally Disabled, and Aid to Families with Dependent Children. Assistance to recipients under these programs will be matched by the Federal Government at 90 percent, up to a maximum payment level. The maximum established by the bill is \$125 per month per recipient under the adult programs, and \$70 for recipients under Aid to Families with Dependent Children. States could make payments above these levels, but they would not receive Federal matching funds for them.

Under present law, Federal matching is based upon complicated formulae which resulted in fiscal year 1968 in a Federal contribution varying from 82.4 percent in Mississippi to 42.4 percent in New York. Thus the Federal contribution for all States would be increased under the proposed bill.

The bill would also eliminate the present Federal payment limitations for Puerto Rico and the Virgin Islands. Instead of having specified dollar restrictions, Puerto Rico and the Virgin Islands would receive the same matching as the various states. The dollar limitations would be retained for Guam.

The Federal contribution to the States for Title XIX—Medicaid—programs would also be increased under the bill. The Federal matching would be made 90 percent for all States, instead of the variable formula based on per capita income, which is in present law. Federal matching currently ranges from 50 to 83 percent.

TITLE II

The bill would also provide for uniform minimum standards and eligibility requirements for all cash public assistance programs. Under Title II, the Secretary of the Department of Health, Education and Welfare is to establish the minimum amount of assistance which the States must pay to

recipients under the cash assistance programs. The Secretary is also to determine eligibility requirements for the various programs, such as permissible amounts of income and resources.

The minimum standards and eligibility requirements are to apply uniformly to all States. They are to be based on full need of recipients. Provision is made for variation among the programs to take into consideration different requirements of individuals under the various programs. Provision is also made for taking into account differences in costs in different geographic areas. Standards and requirements are to be up-dated annually.

The Federal Government would pay the cost of expenditures made by the States which were made necessary in order to comply with these new standards and requirements.

The bill provides for the standards and requirements to be effective beginning January 11, 1970.

Under present law States are free to establish their own standards of payment and of eligibility. The States vary widely in the amount which they pay to public assistance recipients. For example, the average monthly payment for a recipient of AFDC in January 1969 was a low of \$9.50 in the State of Mississippi, compared with a high of \$65.45 in Massachusetts. The conditions which are now established for eligibility also have wide variation. Areas of differences among the States include amount of income allowable, the value of real property which may be held, or of other resources, such as insurance. Another difference is the liability of relatives, for support, as well as many others.

TITLE III

Title III of the bill provides for the repeal of the AFDC freeze, which is now scheduled to become effective July 1, 1969. Under the freeze provision, the Federal Government would limit matching to the proportion of all children under age 18 who were receiving AFDC payments on the basis of a parent's absence from the home in each State as of January 1, 1968.

SKEPTICAL VIEW OF MILITARY BUDGET

HON. HARRY F. BYRD, JR.

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Monday, May 26, 1969

Mr. BYRD of Virginia. Mr. President, I ask unanimous consent to have printed in the Extensions of Remarks an editorial entitled "Viewing With Skepticism," published in the Philadelphia, Pa., Bulletin, of May 6, 1969.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

VIEWING WITH SKEPTICISM

The Pentagon must feel, as the "most unkindest cut of all," criticism that has emanated from the usually friendly Senate Armed Services Committee about its handling of money.

There was Senator Harry F. Byrd, Jr., saying that the concern of the American people over the cost of government and the competence of those handling tax monies applied to the Department of Defense as well as to the Office of Economic Opportunity and other welfare programs. Imagine such a thing.

"I for one," he said, "expect to view with skepticism the entire military budget."

That kind of skepticism is growing with every indication of ballooned expenses. It is something to which the military is going to have to adjust. Time was when it would have been viewed as odd to question—although a President Eisenhower could effectively do so—the claims of the military on national resources.

There were reasons for this beyond the postwar fright of the country over the Communist menace. The scientific revolution in military technology clearly demanded large outlays, clearly required the facilities of a huge defense industrial complex. It still does.

Leaders and citizens who remembered the unpreparedness of the pre-World War II era, when American soldiers trained with mock tanks because they lacked the real thing, did not forget that lesson. Young agitators against the military today are no more acquainted with those circumstances than they are with the depression days.

Nonetheless, the military outlays have become so vast, and other national needs so pressing, that there would have to be increased legislative questioning as to the scale of military spending even if there were not considerable public unease over the wisdom of military policies.

When even the Senate Armed Forces Committee becomes a forum for the expression of disquiet, it should be notice to army generals to pull up their socks, for admirals to batten down the hatches, and for aerial commanders to avoid stunting.

ABOVE THE SENATE BABEL

HON. DAVID E. SATTERFIELD III

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 26, 1969

Mr. SATTERFIELD. Mr. Speaker, the Richmond News-Leader recently carried an editorial which termed "incisive" and "inspiring" an address by the Honorable HARRY F. BYRD, JR., to the annual awards banquet of the Richmond-First Club. This editorial points out, quite graphically, some of the observations of the senior Senator from Virginia which are worthy of note. The editorial follows:

ABOVE THE SENATE BABEL

In an incisive and, at times, inspiring address before the Richmond-First Club's annual award banquet Tuesday evening, Senator HARRY F. BYRD, JR. cut through the confusing jungle of issues confronting the American people and discussed three specific crisis areas: crime, inflation and foreign affairs.

Senator Byrd brought out these facts, which seemed all the more startling when presented in his own low-key way:

Crime: 1. One in 50 Americans this year will be the victim of a serious crime.

2. Department of Justice statistics indicate that 97 out of every 100 retail businesses in the so-called ghetto areas of U.S. cities were robbed last year.

3. Not counting murders, assaults and rapes, there were 8,662 robberies in Washington, D.C. last year.

4. Crime is costing the American people \$31 billion annually or more than 40 per cent of the total outlay for national defense.

5. The Supreme Court of the United States has contributed to the crime crisis in America by over-zealous protection of criminals at the expense of society.

Inflation: During eight years of the Kennedy-Johnson Administrations, Federal spending doubled.

Foreign affairs: 1. America's world-wide commitments include mutual defense treaties with 44 nations.

2. Not counting naval forces on the move in the Pacific, Atlantic and Mediterranean, the United States has 550,000 troops in Vietnam, 225,000 in Europe and 56,000 in South Korea.

3. Russian-made MIGs operated by North Koreans shot down the American reconnaissance plane in the Sea of Japan. Without Russian aid, which is responsible for so many American deaths, North Vietnam could not long continue the war in Southeast Asia.

4. The Russians are responsible for the crises in the Middle East, in Czechoslovakia and in Asia. The United States, therefore, runs great risk in putting faith in Russian promises about peace.

5. Since President Lyndon Johnson ordered a drastic limitation in the bombing of North Vietnam a year ago, 12,867 Americans have been killed in Southeast Asia and 83,012 have been wounded. There have been more battle deaths during the past year of peace talks in Paris than during the two years of peace talks preceding the Korean armistice. The Paris peace talks have lulled the American people into a false sense of security.

In approaching the nation's problems, Senator Byrd is not beguiled by the fear and wishful thinking which seem to paralyze so many Americans today. His clear-headed approach to a given situation, now all too rare in Washington, is needed as never before. Because he stands for something and because he has something significant to say, Senator Byrd's voice is increasingly heard and heeded above the Senate babel. Once more in a critical time in our nation's history, Virginia is making an unusual contribution to national affairs through its able representation in Washington.

STUDENT DISORDERS

HON. GORDON ALLOTT

OF COLORADO

IN THE SENATE OF THE UNITED STATES

Monday, May 26, 1969

Mr. ALLOTT. Mr. President, an article reprinted in the Washington Post of May 18, 1969, discusses some of the disturbing, long-range effects which may result from the contemporary disruptions of our college and university campuses. The author, Sociology Prof. Robert A. Nisbet, of the University of California, at Riverside, points out the historical affinity between boredom, nihilism, and brute violence, and the present inability of campus activists to distinguish between authority and power. Our failure to maintain the underlying authority of the basic values of our Western culture may indeed result in destruction of those fragile institutions so vital to our culture. Replacing the authority of the university's academic dean with the power of a police riot squad or the power of an undisciplined mob is abhorrent to that great tradition of liberal education and academic freedom nurtured in this country. We must not let the same forces which destroyed the intellectual freedom of the German and Austrian universities during the thirties succeed in the sixties and seventies in the United States of America.

Mr. President, I ask unanimous consent that Dr. Nisbet's article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHEN AUTHORITY FALTERS, RAW POWER MOVES IN

(By Robert A. Nisbet)

(NOTE.—Nisbet is professor of sociology at the University of California, Riverside. His article is excerpted from the Montreal Star and the magazine Public Interest.)

The most striking fact in the present period of revolutionary change is the quickened erosion of the traditional institutional authorities that for nearly a millennium have been Western man's principal sources of order and liberty. I am referring to the manifest decline of influence of the legal system, the church, family, local community and, most recently and perhaps most ominously, of school and the university.

There are some who see in the accelerating erosion of these authorities the beginning of a new and higher freedom of the individual. The fetters of constraint, it is said, are being struck off, leaving creative imagination free to build a truly legitimate society. Far greater, however, is the number of those persons who see in this erosion the specters of social anarchy and moral chaos.

I would be happy if I could join either of these groups in their perceptions. But I cannot. Nothing in history suggests to me the likelihood of either creative liberty or destructive license for very long in a population witnessing the dissolution of the social and moral authorities it has been accustomed to.

I should say, rather, that what is inevitable in such circumstances is the rise of power; power that invades the vacuum left by receding social authority; power that tends to usurp even those areas of traditional authority that have been left inviolate; power that becomes indistinguishable in a short time from organized violent forces, whether of the police, the military or the paramilitary.

The human mind cannot support moral chaos for very long. As more and more of the traditional authorities seem to come crashing down, or to be sapped and subverted, it begins to seek the security of organized power. The ordinary dependence on order becomes transformed into a relentless demand for order. And it is power, however ugly its occasional manifestations, that then takes over.

To see the eruption of organized power as the consequence of a diminishing desire for liberty is easy. What requires more knowledge or wisdom is to see such power as the consequence of loss of authority in a social order. Authority and power: are these not the same, or but variations of the same thing?

They are not, and no greater mistake could be made than to suppose they are. Throughout human history, when the traditional authorities have been in dissolution, or have seemed to be, it is power—in the sense of naked coercion—that has sprung up.

A TISSUE OF AUTHORITIES

Authority, unlike power, is not rooted in force alone, whether latent or actual. It is built into the very fabric of human association. Civil society is a tissue of authorities. Authority has no reality save in the allegiances of the members of an organization, be this the family, a political association, the church or the university.

Authority, function, membership: these form a seamless web in traditional society. The authority of the family follows from its indispensable function. So does that of the church, the guild, the local community and the school. When the function has become displaced or weakened, when allegiances have been transferred to other entities, there

can be no other consequence but a decline of authority.

Culture, too, as Matthew Arnold wrote memorably a century ago, is inseparable from authority. There is the authority of learning and taste; of syntax and grammar in language; of scholarship, of science and of the arts. In traditional culture, there is an authority attaching to the names of Shakespeare, Montaigne, Newton and Pasteur in just as sure a sense of the word as though we were speaking of the law. There is the authority of logic, reason and genius.

Above all, there is the residual authority of the core of values around which Western culture has been formed. This core of values—justice, reason, equity, liberty, charity—was brought into being through the union of the Greek and Judaic traditions 2000 years ago. Until the present age, it has managed to withstand all assaults upon it. In the 18th and 19th centuries, conservatives, liberals and radicals, however passionately they may have fought each other, nevertheless recognized the authority of such values.

The most dangerous intellectual aspect of the contemporary scene is the widespread refusal of thinking men to distinguish between authority and power. They see the one as being as much a threat to liberty as the other. But this way lies madness—and the ultimate sovereignty of power.

There can be no possible freedom in society apart from authority. "Men are qualified for civil liberty," wrote Burke, "in exact proportion to their disposition to put moral chains upon their own appetites." It is out of this disposition toward fruitful self-discipline that authority emerges and its legitimacy is recognized. Abolish the disposition and you equally abolish the capacity for liberty.

There are those, chiefly political romantics and sentimentalists, who think these "moral chains" are a part of man's own nature and that there is consequently no need to worry about their dissolution. But the horrors of our century should have taught us the precariousness of the virtue that romantics think to lie in man's germ plasm. In truth, man's virtue is inseparable from—is as precarious as—his culture.

THE DANGER IN BOREDOM

Boredom is one of the most dangerous accompaniments of the loss of authority in a social order. Between boredom and brute violence there is as close an affinity historically as there is between boredom and inanity, boredom and cruelty, boredom and nihilism. Yet boredom is one of the least understood, least appreciated forces in human history.

Nothing so engenders boredom as the sense of material fulfillment, of goals accomplished, of affluence possessed. It is such a boredom that goes furthest, I think, to explain the peculiar character of the New Left.

I do not deny that youth brings idealism in some degree to this movement; that disenchantment with the more corrupt manifestations of middle-class society plays its part. Youth is beyond question idealistic. But in our present society, youth is also bored. And it is from boredom that so much of the intellectual character of radical political action today is derived.

I should more accurately say nonintellectual character, for it is the consecration of the act, the cold contempt for philosophy and program and the increasingly ruthless behavior toward even the most intellectual parts of traditional culture that give to the New Left its most distinctive character.

It is boredom born of natural authority dissolved, of too long exposure to the void; boredom inherited from parents uneasy in their middle-class affluence and who mistake failure of parental nerve for liberality of rearing; boredom acquired from university teachers grown intellectually impotent and

contemptuous of calling that explains the mindless, purposeless depredations today by the young on that most precious and distinctive of Western institutions: the university.

We do well to take seriously the university and what happens to its authority in our culture. For among its prime functions traditionally has been that of serving as arbiter to that age group that has, at least temporarily, outgrown the authorities of family, church and neighborhood. Potentially, this age group is the most revolutionary of all groups in society, far more revolutionary than, say, the workers, the unemployed, the impoverished.

High in intelligence, emotionally buoyant, at full physical tide, this is the age group that is channeled by the university into the several areas of the professions, that provides the intellectual leaders of society. In the university is acquired lasting motivations toward learning, toward profession, toward high culture, toward membership in the social order. But, by the same token, it is this age group in the university that has largely furnished the West with its steady supply of revolutionaries.

Who is to say that our society does not require its occasional infusion of revolutionaries? But in the present age, the revolutionaries have turned on the university itself, and, and this is not only destructive but totally self-destructive.

The university is the institution that is, by its delicate balance of function, authority and liberty and its normal absence of power, the least able of all institutions to withstand the fury of revolutionary violence. Through some kind of perverted historical wisdom, the nihilism of the New Left has correctly understood the strategic position of the university in modern culture and also its constitutional fragility.

Normally, there are no walls, no locked gates and doors, no guards to repulse attacks on classroom, office and academic study. Who, before the present age, would have thought it necessary to protect precious manuscripts from the hands of revolutionary marauders?

The New Left is free to say all that it wishes, but it has nothing to say. Its program is the act of destruction; its philosophy is the obscene word or gesture; its objective, the academic rubble.

FEAR OF THE VOID

It would all be a transitory charade, a tale told by an idiot, were it not for one thing: the fears aroused in a middle-class society that has lost its anchoring in natural authority. Fear of the void is for human beings a terrible fear, one that will not long be contained. And in this state of mind, it is only power that can seem redemptive, however stained with blood it may be.

The entire country watched last summer's confrontation between New Left and police in Chicago. It was violent, ugly, and could only have aroused the chill of fear in those who had chanced to see the rise of Nazism in Germany, the burning of the Reichstag and the beginnings of a police system that was in time to enfold the German society like a straitjacket.

But I know of no national poll or study that has shown other than approval of police actions by a large majority. The size of this majority will grow. Human beings, I repeat, will tolerate almost anything but the threatened loss of authority in the social order: the authority of law, of custom, of convention. The void does not have to be great, or seem great, for the fears it arouses to become sweeping, for sanity in politics to disintegrate.

We are told by the polls that a large number of people watching their television screens that night in Chicago found even the berserk actions of police and pseudo-police gratifying, reassuring, healing to the

sense of security. Let us not forget that there is a strong upswell of boredom in affluent middle-class society, too. And power, as history tells us, is as often the antidote to boredom in society as to anxiety.

We need, as Max Lerner recently wrote in a thoughtful column, a new social contract in our society, one that will do for our violence-torn social order what the doctrine of the social contract in the 17th century sought to do in that age, fresh as it was from the horrors of the religious wars. But the task will be far more difficult.

The institutions of Western society are less solid and encompassing than they were then. Two centuries of convulsive social change and of remorseless increase in centralized political and economic power have seen to that. We are plagued even by our achievements, for material progress has inevitably taken toll of traditional culture.

Above all, at this moment, we need a liberalism that is able to distinguish between legitimate authority—the authority resident in university, church, local community, family, language and culture—and mere power. Failure to make this distinction between authority and power can only result in the ever-wider replacement of the former by the latter.

If our liberalism can see no profound difference between the authority of an academic dean, however fallible this may sometimes be, and the power of the police riot squad, we shall find ourselves getting ever greater dosages of the latter. The impulse to liberty can survive everything but the destruction of its contexts; and these are contexts of authority—a legitimate authority that is inseparable from institutions.

OUR INCREDIBLE SUPREME COURT

HON. W. E. (BILL) BROCK

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, May 26, 1969

Mr. BROCK. Mr. Speaker, it never falls. Just when it seems that the Warren court has achieved the ultimate in imprudent jurisprudence, that august body tops itself again. Fortunately, change is well on the way, and we can soon hope for better performance.

However, the present tendency was highlighted again on April 1 when the Court ruled that it was right and proper for a union to fine any member who tries to work harder than the union says he should. Apparently such believers in free enterprise and personal endeavor are discriminating against their union bosses by trying to do a conscientious job.

I suppose the next logical step would be to set a speed limit on track meets so that slow participants will not feel slighted and no one will finish first or last. This seems to be the Court's idea of democracy in action—perhaps inaction would be a better word.

The April 2 issue of the Chattanooga Times included an article on this decision. In its latest effort to "color everyone gray," the Court has attacked the basic premise of American initiative. I can think of no more compelling argument for a change in this body whose senility seems to be compounded by a general lack of experience in and knowledge of the greatest economic and political system devised by man.

The article referred to follows:

COURT HOLDS UNION RIGHT IN FINING RAPID WORKERS—IT RECOGNIZES "LEGITIMATE RIGHT" IN HOLDING PRODUCTION DOWN—TO CONSIDER NEGROES' RIGHT TO USE PRIVATE POOLS

WASHINGTON.—The Supreme Court Tuesday endorsed the power of labor unions to ease "competitive pressure" among pieceworkers by fining them for going over production quotas.

The 7-1 decision dismissed the argument that the discipline system in a Milwaukee motors plant is illegal coercion and recognized, instead, that unions have "legitimate interest" in trying to hold production down.

If they did not do so, Justice Byron R. White said for the court, the competitive pressure generated by an unlimited pay system could endanger workers' health, foment jealousies and reduce the work force.

However, the court cautioned, the fines must be reasonable and not the "mere fiat" of a union leader and membership in the union must be voluntary.

The decision, which provoked a dissent from Justice Hugo L. Black, shared attention with another case, the court's willingness to consider the claim that Negroes cannot be barred from private all-white community parks and swimming pools.

A Negro family in Fairfax County, Va., is suing to gain rights to recreational facilities available to white neighbors in the subdivision. The family rented its house from a white government worker.

Last spring the court gave Negroes protection against discrimination in the sale or rental of private houses. The new case, to be heard next fall, could make suburban living more appealing to Negroes by opening to them some of its side advantages.

The labor decision overrode complaints by four machine operators at the Wisconsin Motor Corp. in Milwaukee—which makes internal combustion engines—that they were being kept from working at the top of their capacity and ability.

The piecework rate, said White, is established in collective bargaining, is geared to the average competent worker and is designed to assure adequate rest periods. He suggested industrious workers who object are free to try to persuade the union—the United Auto Workers—to change the rate in future negotiations with the company.

"If the company wants to require more work of its employees, let it strike a better bargain," White said. "The labor laws as presently drawn will not do so for it."

The quota system allows pieceworkers to produce as much as they can each day but sets a ceiling on how much pay they may draw. Wages for over-production are "banked" by the company and paid to the worker for days when he doesn't reach the production ceiling.

If a worker insists, the company will pay him immediately for his over-production, but he may be fined up to \$100 by the union and expelled for nonpayment.

In other actions the court:

Turned down an appeal by Louis E. Wolfson, a multimillionaire industrialist, sentenced to a year in prison for selling a large block of unregistered stock owned by Wolfson interests.

Rejected an attack by sanitation workers in New York City on a state law barring strikes by public employees.

Threw out, by 5-4 vote, the robbery conviction of a California man, Walter B. Foster, on grounds police arranged two lineups so that his identification was "virtually inevitable."

That last ruling appeared to point toward an eventual conflict with Congress. Last year's Crime Control Act, in reaction to court rulings, directed that testimony of an eyewitness shall be admissible in evidence in federal criminal trials.

CARDINAL WRIGHT OF PITTSBURGH, PA., A MAN OF HUMBLE SPIRIT

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 26, 1969

Mr. FULTON of Pennsylvania. Mr. Speaker, it is a pleasure to insert in the CONGRESSIONAL RECORD the good article by Thomas O'Neil of the Pittsburgh Post-Gazette, dated Saturday, March 29, 1969, regarding my very good friend, John Cardinal Wright of Pittsburgh, Pa.

CARDINAL WRIGHT OF PITTSBURGH, PA., A MAN OF HUMBLE SPIRIT
(By Thomas O'Neil)

Until yesterday, it was Bishop John J. Wright, prelate of the Roman Catholic Church, humanitarian, beloved leader of his flock, equally comfortable among the world's intellectuals as he is among the steelworkers to whom he ministers, and possessor of a finely honed Irish drollness delivered with an unmistakable Boston accent.

Yesterday Bishop Wright became John Cardinal Wright, a Prince of the Roman Catholic Church. And despite his elevation as one of the top men of Catholicism, the humble spirit of John Wright, pastor to his flock, will not change. This was evident as he received members of the secular press in his Victorian Morewood Heights mansion.

Intermixing humor and seriousness in a manner in which only he can do, the new cardinal told the assemblage that he had been informed of the honor in a telephone call about 6 a.m. from Apostolic Delegate Luigi Raimondi from Washington, D.C.

"I have nothing in writing, so this may well be just a rumor," he remarked. "If so, a lot of you have been terribly inconvenienced."

With his elevation, Cardinal Wright became the first American ever to be elevated directly from bishop to cardinal. All of the other newly-named cardinals were archbishops, and elevation from other than archbishop has happened only rarely in the centuries-old tradition of the Roman Catholic Church.

Asked his first reaction on hearing the news, Cardinal Wright said he was "amazed and astonished," and had no hint that the appointment was impending, even though he had been in Rome as recently as Ash Wednesday (Feb. 19).

As the interview began, the new cardinal was interrupted by a telephone call from John Cardinal Dearden, Bishop Wright's immediate predecessor in Pittsburgh and now Archbishop of Detroit who was named a cardinal at the same time by Pope Paul VI.

The cardinal shortly returned to his audience, and noted, again with his humor showing, that "Pittsburgh has given two cardinals in the past 15 years but the Pirates haven't done so well."

Becoming serious, he noted that his new position would enable him to carry on the duties closest to his heart—ecumenism, peace, and human rights.

His humor surfaced again as he noted with a chuckle that he now becomes "a source close to the Vatican," and he went into an aside telling how the American reporters in Rome would congregate at a certain tavern directly across from the Pope's residence.

"Every day at five o'clock," he said, "the bartender would translate the Roman newspapers, and every story the reporters wrote would quote the bartender as 'a source close to the Vatican.'"

Commenting on the Pope's selection of new cardinals, he noted that the list is in line with the tradition of the past 20 years of

"internationalizing" the College of Cardinals. The list announced yesterday includes four Americans, eight Italians, three Frenchmen, two Brazilians, two Spaniards and one each from China, the Philippines, Scotland, New Zealand, Mexico, Korea, Germany, Holland, India, Madagascar, Canada, Guatemala, the Congo and Ecuador.

The college now includes ten American cardinals, the largest number in history.

Bishop Wright became a cardinal immediately upon notification, although he will not be formally invested until April 28 when a ceremony will be conducted in Rome by Pope Paul.

The cardinal was born in Boston July 18, 1909, the oldest of six children. His mother was of Irish descent, his father Scotch.

In his younger days, he worked as a copyboy and later as police reporter for the now-defunct Boston Post.

He was graduated from Boston Latin School and received a bachelor of arts degree from Boston College and studied for the priesthood at American College in Rome, where he was ordained in 1935. He earned a doctorate in theology three years later with highest honors from Gregorian University in Rome. It was there he continued his lifelong custom of seeking out unfortunate individuals to help. He was at the bedside of a notorious American hoodlum, who had been deported to Rome, when he died.

Cardinal Wright, who is 59 years old, returned to Boston where he taught philosophy at St. John's Seminary, then was named secretary to William Cardinal O'Connell and Archbishop (later Cardinal) Richard J. Cushing. He was appointed in 1947 auxiliary bishop of Boston and in 1950 was named the first bishop of Worcester, Mass., a position he held until being named head of the Pittsburgh Diocese in January, 1959.

Considered one of the church's leading intellectuals, Cardinal Wright is also one of its leading authorities on Joan of Arc. His private library is crammed with some 4,100 books and artifacts on the martyred French saint.

Press service reports from Rome indicate that Cardinal Wright is in line for a position on the Vatican Curia, central administrative agency of the Vatican. If appointed, he would be the only American on the Curia.

However, because of the absence of official word from Rome on such an appointment, Cardinal Wright declined comment. It appears likely, however, that the cardinal will be forced to leave the diocese he has served for the past ten years.

(The last American to hold a post on the Curia was Francis Cardinal Brennan of Shenandoah, Schuylkill County, who died July 2, 1957.)

The Cardinal emphasized that until such changes are forced upon him by reason of his new office, he will continue to function as shepherd of the diocese with as little interruption as possible in his daily routine.

Perhaps the unique personality of this newest of the church's princes is best summed up in the following anecdote spoken by the cardinal yesterday.

"Last weekend I spoke at an ecumenical service at Harvard University. Tonight I will speak to a group of women in McKeesport. To be sure, I am more at home in McKeesport than I am with them."

WRIGHT'S SERVICE PRAISED

Members of the district's Protestant and Jewish community were among the many who offered congratulations and good wishes to John Cardinal Wright on his elevation.

The Rev. W. Lee Hicks, executive director of the Council of Churches of the Pittsburgh Area telegraphed: "Your tireless efforts on behalf of all men towards peace, justice and love have been a constant source of encouragement to us... We your Christian brethren are greatly honored to share with

you in the work of the kingdom in Pittsburgh. Our prayers go with you in your new office."

The Rev. Dr. William F. Ruschhaupt Jr., Pittsburgh Presbytery executive, said that the new status for the cardinal is "in keeping with the outstanding leadership he has demonstrated in Pittsburgh religious and secular affairs."

He added, "I am fearful that his elevation to the rank of cardinal presages his leaving the Pittsburgh Diocese. While this would open up avenues for greater service, it would be a severe loss to the Pittsburgh religious community."

"It is an honor richly deserved," commented Dr. Solomon B. Freehoff, retired spiritual leader of Rodef Shalom Temple. "From the moment he came among us, the general community knew it had a religious leader of friendliness and genuine humility."

Bishop Roy C. Nichols, resident head of the Western Pennsylvania Area of the United Methodist Church, praised Cardinal Wright as "a very good friend," adding that he was pleased with the new honor. "We shall be praying for God's blessing and guidance in his new work," Bishop Nichols said.

Mayor Joseph M. Barr remarked that "those of us in public life who have been privileged to be closely associated with this distinguished church leader are well aware of the exceptional qualities which obviously prompted this pronouncement from the Vatican . . . Bishop Wright shared with the people of Pittsburgh his rare combination of wisdom and wit. Above all, he demonstrated a sincere interest in the affairs and problems of this community and its people."

FAMILY PLANNING SERVICES

HON. AUGUSTUS F. HAWKINS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 26, 1969

Mr. HAWKINS. Mr. Speaker, I am pleased to join in the sponsorship of H.R. 11550. The relationship of poverty and family size is indisputable. One of every five American children lives in poverty. Forty-three percent of all families with six or more children live in poverty compared to only 21 percent of families with four children. The Social Security Administration determines poor and near-poor status according to the amount of money a family has to spend per person per day for food. This is a reasonable determination and points out vividly the ever worsening plight of a poor family that continues to increase in size each year while its income remains stable. It also demonstrates how a family living on the edge of poverty can be pushed over the brink by unwanted births.

I think we all realize that the choice of number and spacing of children must be one that is made by each family according to the dictates of conscience. When a middle-class family makes such a decision the way is easy. They go to private physicians. For the poor and the near poor there may be no real choice. Every study has shown that the poor express a desire for the same family as the middle class. In fact, though, the poor have more children than they want. The difference seems to be access to family planning services and if you cannot afford to see a private physician the chances are you will not receive family

planning help. There are today an estimated 5 million American women who want but cannot afford family planning services.

In Los Angeles County there are approximately 159,000 low-income women who are in need of family planning help. Only 32,500—less than 26 percent—are receiving aid. According to one study over one-third of the women in California who are in need of family planning services live in Los Angeles County. In its report to the Governor, the State of California Population Study Commission stressed the critical need to gain and maintain a compatible balance between the population growth rate, and the development of economic and natural resources of the State of California. This report indicates that there is a fundamental need for a massive injection of additional funds for family planning services from both local and Federal Government if this balance is to be achieved. As a result of the investigation and recommendations of this commission, the California Interagency Council on Family Planning was formed and consists of members representative of all relevant disciplines from the various parts of the State. Among the council's activities have been the assessment of needs and interest by local agencies—private and public—in expanding local family planning programs. Of the metropolitan areas in the State of California, Los Angeles County was identified as the area requiring priority attention—State of California Population Study Commission: report to the Governor, August 11, 1966.

In order to make Federal aid more readily available, I joined in 1967 in sponsoring an amendment to the Economic Opportunity Act that provides for grants to establish family planning projects in poverty areas. One of these projects was recently initiated in Los Angeles County. It combines the efforts of the health department, two county hospitals, two planned parenthood affiliates, and five community action agencies to increase services and conduct an outreach program. The project is expected to reach an additional 15,000 women in its first year of operation. The need, however, is still not met. Over 100,000 women remain outside the scope of all programs.

Some of them, no doubt, could be reached through the special family planning project grants authorized by title V of the Social Security Amendments of 1967. This legislation set aside a minimum of 6 percent of all funds authorized under title V for family planning project grants. Congress in the Health, Education, and Welfare Appropriations Act stipulated that 9 percent of fiscal year 1969 funds go for this purpose. Title V was passed in 1967 and has been in effect for almost 1 year. No grants were made until March. Only a fraction of available funds have been obligated. Not one woman has received family planning services under the program. Los Angeles made application several months ago but it and many other cities are still waiting. The children's bureau has not been receptive to the program. It has no full-time staff either in Washington or in regional offices to process applications or

to advise interested communities. Confused and conflicting policy statements regarding the program have been issued. Guidelines were not made public until January 1969 and were given only limited circulation. There are several other programs administered by HEW under which family planning services could be rendered. None of them function effectively, primarily because responsibility in this area is so diffused.

I believe the problem of providing family planning services to low-income women is far too important to be dropped between the bureaucratic cracks. The legislation we are introducing today will establish a Center for Population and Family Planning under the Assistant Secretary for Health and Scientific Affairs to administer all family planning project grants and all population research to coordinate and evaluate all other family planning programs within HEW, to support training of manpower for this field and to provide liaison with other Federal agencies that have programs relating to population and family planning.

I believe this is an important first step toward making family planning services available to all.

PROSPEROUS RIVERSIDE READY TO REAP EVEN MORE BENEFITS

HON. BILL NICHOLS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 26, 1969

Mr. NICHOLS. Mr. Speaker, here in Congress we hear so many requests for Federal aid that it is refreshing to a community doing something without help from the Government. Such a town is Riverside, Ala., which is located in my district. A recent article in the Birmingham News outlined the progress Riverside is making under the direction of Mayor W. A. Coleman.

Mr. Speaker, I include this article in the RECORD.

PROSPEROUS RIVERSIDE READY TO REAP EVEN MORE BENEFITS

(By Thomas F. Hill, News Staff Writer)

Mayor W. A. Coleman probably wears more hats than anyone else.

He wears one as a railroad engineer, one as mayor, one as a sportsman, one as a businessman and one as a farmer.

In addition to this, he probably could wear still another as being a person who does things differently.

For instance, Mayor Coleman is planning to build a new city hall without federal assistance!

And more important, he plans to pay for the new municipal building without negotiating a loan, floating bonds or seeking a grant.

Mayor Coleman plans to pay cash for the new city hall!

This is but another chapter in the political life of Coleman, who is serving his third term as mayor of Riverside—a political career that has seen him break rules, win poker games with large utility firms, and parlay a \$1,200 plot of land into a million-dollar complex.

When Coleman took term as mayor of Riverside which had been incorporated since

1883, he found about \$326 deposited in the bank to the municipal government account. Today, the balance is over \$20,000.

Once a big sawmill town with over 30 cars of lumber a day being loaded up for transportation to other areas, Riverside's economy had dwindled to almost nothing. The 1960 census showed about 126 persons living there.

The city limits of Riverside extended a radius of one mile from the mayor's home, which was built in 1946.

The city limits have now been extended six miles, taking in the tourist development of Logan Martin Lake, and stretching into the perimeter of the rich potential of the Talladega Speedway.

Through some rather heavy "eye-ball-to-eye-ball" negotiating, the mayor succeeded in swapping a plot of land he owned with a 10-acre tract owned by Alabama Power Co. on an even trade.

The Power Company had the tract for a possible steam plant construction site, but later decided to build at Wilsonville. The company needed the land the mayor owned for some gas valves.

The even exchange of land valued at less than \$2,000 then has inflated tremendously in Mayor Coleman's favor. Today, his 10-acre tract contains the Riverside Marina, where hundreds of expensive boats tie up, a Holiday Inn, two filling stations and a candy specialty shop.

The mayor isn't selling, but his less-than \$2,000 land now is worth more than \$1 million!

When not acting as mayor, or running his milling or poultry industry, or overseeing the Marina, which he leases, Mayor Coleman dons a railroad cap.

As second oldest seniority employee of Southern Railroad, Mayor Coleman is engineer on the Southerner's run from Birmingham to Atlanta. He owns Riverside Milling Co., has over 200,000 laying hens, operates Riverside Milling Commissary, Riverside Investment Co., and is vice president of Aniston Production Credit Corp.

Although he leases Riverside Marina to someone else, he still maintains an active interest in it.

He feels when the speedway fans throng to the Talladega International Speedway, Riverside will reap the profits.

"We are operating in the black, too," said the mayor. "We have police protection, street lights, natural gas service, fire protection, and free garbage pick-up."

Drawings have been OK'd for the new city hall, which will have 3,200 square feet and house all the functions of municipal government.

The mayor is working to prepare Riverside for speedway and water recreation prosperity.

As a negotiator, financier, engineer, executive and fisherman, he is sure to land the catch he is seeking.

And he insists he is going to do it in his own way—no loans, no grants, only old-fashioned cash-on-the-barrelhead.

THE NEW DEAL AND THE STATES— FEDERALISM IN TRANSITION

HON. RICHARD BOLLING

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, May 26, 1969

Mr. BOLLING. Mr. Speaker, I have previously called to the attention of my colleagues in the Congress, the good work of Prof. James T. Patterson. His book, "Congressional Conservatism and the New Deal," published in 1967 is an excellent study of a tumultuous period which

left such a large and lasting imprint on this Congress, particularly upon the House of Representatives. This year, Mr. Patterson, associate professor of history at the University of Indiana, has had published a book, "The New Deal and the States—Federalism in Transition." Once again, Professor Patterson has give us an informative and useful study. This book informs us about Federal-State relationships prior to the New Deal administrations of Franklin Roosevelt and how these were radically altered, particularly by social security and work relief programs. The account of varying reactions by the States during the first 100 days of the first Roosevelt administration is fascinating.

TRIBUTE TO THE LATE GOVERNOR OF TENNESSEE, PRENTICE COOPER— A GREAT AMERICAN

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, May 26, 1969

Mr. EVINS of Tennessee. Mr. Speaker, I want to take this means of honoring the memory of the late Prentice Cooper, a distinguished Tennessean and a great American who served his beloved State and Nation with dedication and devotion.

Prentice Cooper, my friend and constituent, passed away recently following an outstanding career of public service that included three terms as Governor of Tennessee and service as Ambassador to Peru.

This distinguished public servant will be missed but his name will be recorded in the annals of Tennessee history among those who stood foursquare for high principle and sound government.

I want to extend to Mrs. Cooper, their three fine sons and other members of the family a further expression of my deepest and most heartfelt sympathy in their loss and bereavement. Mrs. Evins joins me in these sentiments.

In this connection, I place in the Record herewith an editorial from the Nashville Banner concerning the life and service of Prentice Cooper:

PRENTICE COOPER

Although nearly a quarter of a century has elapsed since Prentice Cooper's tenure as Chief Executive of Tennessee—and another generation has come of age—the memories of a beneficial service linger, along with policies of fiscal strength he helped instill. The constructive endeavors marking his three terms at that helm vastly outweigh the personal and political vendetta waged by his antagonists.

He is remembered with respect by the state he served; a man possessed of the courage of his convictions—and who never retreated from a principle espoused, or from a challenge. Times has vindicated many of the policies that were his, in controversy then. It has brought into clearer focus the value of objectives once subjected—out of spite work—to sharp dispute. In the total picture, the administration of Prentice Cooper is seen as one of able, progressive stewardship.

He did not believe in fiscal legerdemain—and sought, successfully, to establish the state's financial affairs on a sound base of

balanced budgets, forgoing excessive public debt, and enforcing insofar as possible adherence of cost level to the taxpayers' ability to pay. That was not shortsightedness respecting necessities of progress, but a due concern for the state's welfare. And it occurred, notably, at a time when fiscal recklessness at the national level was in its early innings. Subsequent developments have justified Governor Cooper's judgment in that vital particular, and subsequent administrations have found in it a salutary, helpful standard.

He was a stickler for law and order as the premise of responsible government at any level. By instinct a conservative, he opposed excessive departures—step by step—from the constitutional pattern.

By those convictions his concept of duty was shaped, and no man of his time was subjected to wilder abuse by his critics—the target of lampooning, vicious political assault and innuendo.

The Banner did not always agree with Governor Cooper, but respected the sincerity of his position—and his profound regard for faithful discharge of the trust three times committed to him. Quite obviously, the constituency of Tennessee shared that faith.

He honored the assignment, proud of his state and of the national heritage of which it was—and is—to every Tennessee citizen, a proud component. Latterly by President Harry S. Truman's appointment, he served as U.S. Ambassador to Peru.

A patriot, he served his country in uniform—a soldier in World War I. Active in American Legion work, he was elected as state commander in 1931.

His passing shocks and saddens the state that knew him as distinguished son and public servant.

BOOBYTRAPPED HIGHWAYS

HON. JACK H. McDONALD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, May 26, 1969

Mr. McDONALD of Michigan. Mr. Speaker, 2 years ago I introduced legislation designed to eliminate fixed hazards along our Federal-aid highways. Such hazards as wall-like bridge abutments, spearlike guardrails, concrete footings, and rigid signposts kill and maim thousands of Americans each year.

As a result of hearings before the Public Works Committee, State highway officials and the Bureau of Public Roads have acted in such a forthright manner to correct this situation without the enactment of this legislation.

I would like to commend to the attention of other Members the following press release from the Insurance Institute for Highway Safety which announces the publication of "Booby Trapped Highways," a booklet released by the Federation of Insurance Counsel which accurately points out the seriousness of this problem:

BOOBYTRAPPED HIGHWAYS

"Booby Trapped Highways" owes its origins to Congressional investigations and hearings held in 1967. They disclosed the enormity of a public health problem that threatens the life of every highway traveler—the problem of the fixed hazards indiscriminately placed alongside our nation's roads.

These hazards—wall-like bridge abutments, rigid signposts, concrete footings, spearlike guardrails and many others—kill

and maim thousands of Americans each year. In the currency of human and property waste their costs are astronomical and senseless—and avoidable.

"Booby Trapped Highways," a publication of the Federation of Insurance Counsel, explains this pressing public health problem and some ways in which the highway environment can be changed to correct it.

Your copy of "Booby Trapped Highways" has been made available by the Insurance Institute for Highway Safety. The Institute believes that roadside hazards which aggravate crashes, and the deaths, injuries and property losses resulting from crashes, can be:

Designed out of newly planned and built highways across the nation.

Removed from existing highways by intensive, systematic programs to correct spending, maintenance and replacement policies at the Federal, State and local levels that have contributed to the roadside hazard problem or that fail to guarantee its immediate correction.

Next time you drive on a familiar highway after reading this publication, look for the booby traps. When you see a thick steel I-beam signpost planted next to the road, ask yourself what would be the consequences of crashing into it. Then, ask why it hasn't yet been replaced by a breakaway signpost designed to yield safely in crashes instead of destroying a car and its occupants.

Or when you see a guardrail's sharp spear-like end pointed at your oncoming car, ask yourself whether the "guardrail" wasn't misnamed—and then ask why its threatening pointed tip hasn't been angled back from the roadway and safely buried underground.

Keep looking. Keep asking why you and your family must be threatened with the death penalty if, for any reason, your car should veer or be forced off the roadway for even a moment. Ask how *this* environmental problem was allowed to happen.

A motoring public aware of our highway system's booby traps will, we believe, be unwilling to tolerate the kind of highway spending, planning, construction and maintenance that produced these hazards and that fails to eliminate them throughout the country. We hope this publication will contribute to public awareness and demand for changes that will save many, many lives now being needlessly wasted along America's highway.

HOUSING NEEDS OF POOR PEOPLE

HON. WILLIAM (BILL) CLAY

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, May 26, 1969

Mr. CLAY. Mr. Speaker, on December 11, 1968, the President's Committee on Urban Housing transmitted its findings and recommendations to then President Lyndon Johnson. As directed in June 1967, the committee spent 16 months studying all aspects of this Nation's housing problem and then concluded:

We believe that the primary purpose of housing programs should be to meet the housing needs of today's urban poor.

Mr. Speaker, I, too, am primarily concerned with that objective and I am seriously disturbed by the failure of past and present efforts to effect that purpose.

Major Federal housing efforts have taken place since World War II and they were stimulated by the postwar demand for housing—rather than by any other

need. However, housing laws of all sorts and shapes and sizes have come forth from this legislative body since 1934—but still it is a battle to put the emphasis on the housing needs of poor people.

It was in 1937 that Congress set up its first long-range program of public housing for low-income families. Like today, it was based on Federal loans and annual subsidy payments assisting local housing authorities. But it was not until 1949 that Federal responsibility to the housing needs of poor people was firmly stated to be an objective or a responsibility of the Federal Government. The National Housing Act of 1949 called for "the realization as soon as feasible of the goal of a decent home and a suitable living environment for every American family."

After nearly 20 years, the statement had demonstrated only a rhetorical value and it was former President Johnson who took it upon himself to reaffirm that commitment so long overdue. Sufficient concern was stimulated within the 90th Congress to bring about a statement of Federal intent to make good the pledge of 1949.

Today, I look at those words and I am skeptical that the "decent home for every American family" carries any meaning for this Government. It is one more in a long list of commitments to poor people which, I fear, will go unfulfilled. As I survey past pledges and relate them to current housing conditions of the urban poor—it seems these verbal commitments are designed only to placate the press and to calm public concern from the affluent. These pledges have not formed the foundation for action. There is lots of "glorified intent" but there is no followthrough. There is lots of time spent bill writing and little time spent putting the law to work. And I am tired—like all the poor people who have been waiting—tired of having persons tell me there is a law which provides the assistance we seek.

I am no expert on housing matters but I can tell you from firsthand knowledge what the housing problem is for the urban poor. Because I can do that and because I am a Member of this Congress where the needs of people are supposed to be recognized—I must speak out against the further toleration of the present housing tragedy which exists in our cities. I can only conclude that my witness to the housing problems in St. Louis, Mo., must be fairly representative of all metropolitan problems. And I need no housing expertise to make the judgment that Federal efforts have failed miserably to meet the needs of poor people.

It is astonishing that so little has been done to make good past pledges for housing. If the Members of this body have not digested the report of the President's Committee on Urban Housing, let me call to your attention several of its noteworthy findings:

First. More than 12 percent of American families cannot afford decent housing.

Second. In numbers, that means 7.8 million American families or one in every eight, cannot now afford to pay market

price for standard housing which would cost no more than 20 percent of their total incomes.

Third. At least 10 percent of the Nation's existing shelters are in substandard condition.

Fourth. The average ratio of housing costs to gross income total population is 15 percent.

Fifth. One half of the 7.8 million families in need of housing are surviving on less than \$3,000 a year.

Is this body unaware or does it merely choose to ignore the following truth. In 1949, the men who occupied these seats in the Congress pledged to build 810,000 public housing units over the ensuing 6-year period. Twenty years have elapsed since then and still we have not met that goal. May I further note that until 1967—we had met only a few more than one-half the number of units pledged in 1949. It was not until the activity of the past 2 years that this Government brought the number of public housing units to 800,000—still 10,000 short of the 6-year goal set in 1949. The Committee report on urban housing summarizes it this way:

In other words, after more than one-third of a century, Federal efforts have met only one-tenth of the Nation's subsidized housing need.

What meaning then, does the law have for poor people? This is the question being asked with increasing regularity whenever poor people start marching. "Work within the law, respect the law and obey the law," they are told, "for this is a nation of laws and not of men." But what of the law to implement the decent home pledged in 1949. Why was that law not respected and what men are they who have kept that law from honoring its commitment? The convenient cliché relied upon to taunt the poor people has no meaning when applied to laws for poor people. Men then assert themselves over law and no one seems to notice.

Last year, the legislative body of this Government took a firm stand in committing itself to meet the Nation's most urgent housing needs. The Housing Act of 1968 helped to remind the forgetters that we are still determined to provide that "decent home." President Johnson called it the "Magna Carta to liberate our cities."

Indeed, the law gives this Government the authority to solve our problems, but the law cannot enforce itself. Let us not kid ourselves that the law of 1968 will carry us near the necessary objectives—for, at the rate we are going, it will have to be rewritten and reaffirmed in another 10 to 20 years, just like the law of 1949 was rewritten and reaffirmed last year.

The reason is simple. Men are taking precedence over law—a law which cannot be implemented without funds. Money, for the crucial programs made law by the act of 1968, simply is not there and, as such, the law is nullified and void. There are no funds to enforce the open-housing provisions of the law—and only token funds for the grandeur efforts planned through rent supplement, model cities, and urban renewal. The program cannot bring the change they

were intended to bring—and when they fail to make good the promises publicized, the law becomes more and more meaningless for poor people.

Our priorities are sadly amiss. According to the committee report, the Federal Government spent \$303.7 million in fiscal 1968 to subsidize the existing 800,000 housing units for low- to moderate-income families. A miscalculation in the Pentagon in the amount of a measly \$300 million probably would not even be considered a serious mistake.

How can we overlook the meaning of our spending habits from fiscal 1962 through fiscal 1967?

In the period, the following amounts were spent: \$356.3 billion for national defense, \$33.2 billion for stabilizing farm prices and income, \$24.2 billion for space exploration, \$22.2 billion for Federal highway construction, \$8.1 billion for all housing and urban renewal programs, and \$1.25 billion for Federal housing subsidies.

Again we ask: "How long must the poor people wait for these programs endorsed by, but not supported by, this Government?" The newspaper byline reads "Congress Passes Landmark Housing Law"—the people read, the people wait, and nothing happens because funds were never budgeted nor sought.

I register my vigorous opposition to the forces—and they are human forces—who stand in the way of this law to provide decent housing.

Today, I come not only to protest those efforts which are made only in the books—but to protest one particular aspect of the feeble subsidy effort which is being made.

Let me cite the case in point which, I believe, is typical of cases existing in all metropolitan areas of the Nation. The city of St. Louis reaped the rewards of the brief spurt of public housing activity generated by the Federal Government in the 1950's. In other words, we have in St. Louis one of the high-density, minimum-comfort projects now cited as a landmark and tribute to the lack of foresight in public housing. It has been inspected by persons from all over the country who come to show others how public housing should not be built. Pruitt-Igoe was erected to replace a slum—but it is a monster which should have been torn down the day it was built.

The slum replaced by Pruitt-Igoe housed 5,000—whereas Pruitt-Igoe put 12,000 people in the same area—7,000 to 9,000 of whom were children—in 33 high-rise structures which now—14 years later—stand 30-percent vacant because of the combination of blunders which created it.

Pruitt-Igoe is the subject of a rent strike at this time which I support because rents in Pruitt-Igoe are not reasonable for the kind of structural deficiency and present rehabilitation and repair needs which plague the project. Tenants in Pruitt-Igoe are asked to pay a disproportionate share of their incomes for housing below reasonable standards.

Aside from the structural problems which cannot be altered but which might be dealt with, Pruitt-Igoe suffers from a serious lack of operating funds and the

inability of tenants to finance with their rent the operation and maintenance of these buildings.

Under present law, Federal annual contributions are made to the local housing authority to cover the full costs of retiring the bonds. The Federal Government is now authorized to pay an additional \$120 per year for first, elderly; second, persons displaced by urban renewal; third, the extremely poor; and, fourth, extremely large families. The cost of project development is financed by tax-exempt local bonds and payment in lieu of tax, not more than but usually at 10 percent of shelter rent—is financed by tenant rent.

Tenant rent is pegged to cover all operating, maintenance, and payment in lieu of tax costs. Tenants of projects like Pruitt-Igoe, built in 1954 and suffering from the structural as well as from inflationary problems, cannot afford that rent.

The obvious need is for a greater subsidy in order to lower the rents and to provide for the necessary maintenance and repair which will make these buildings as livable as possible. The obvious source for these funds is the Federal Government and based on the commitments written into law, the Federal responsibility for assistance is clear. Only four States have adopted State-aid programs of any size and the State of Missouri, while it is currently debating such a housing assistance program in its legislature, is not prepared to provide the funds needed by Pruitt-Igoe.

There must be an additional subsidy from the Federal Government. To date, the policy has been to categorize a target group in need of special assistance and allow them an additional payment of \$120 per year to the local housing authority. Today, I present legislation calling for an additional subsidy in the amount necessary to hold rents in public housing projects at and preferably below an amount which is 25 percent of tenant income.

Additional Federal funds must be provided if projects like Pruitt-Igoe are to be used. Unless more realistic finances are provided many public housing projects will go vacant and provide other scars on the inner city. That is precisely what will happen if these projects are not given the benefit of the additional funds necessary to take the pressure off rents. Rents cannot now meet the skyrocketing maintenance and operating costs of these 1950 structures.

It is my understanding that only two or three men in the country have any working knowledge of the annual contributions formula as such—and I have been advised to seek additional funds through an amendment to that formula. My bill calls for a new subsidy based on an additional formula which will be applicable to those public housing projects starting to suffer from age in addition to their innate defects. A project would be required to hold rents at a level which would not exceed 25 percent of the average income of all persons eligible for residence in that particular project. Recently constructed projects would not be effected as their rent requirements

would not be in excess of that 25 percent of income factor. If the average income for persons eligible for residence in a particular unit were \$5,000, rents could not be pegged at levels which would exceed an average \$1,250 per year rental. If, however, as in the case of Pruitt-Igoe, operating, maintenance, and payment in lieu of tax requirements exceed that average yearly rental, additional Federal contributions would be made to the local housing authority in an amount to cover that additional cost beyond the 25 percent of income average.

To restate my purpose, it is to keep the rents for these tenants down to a reasonable level. Twenty-five percent is the absolute limit of reasonableness, particularly when we consider that the national average of percent of income paid for housing is only 15 percent.

I do not hold my bill up as the perfect solution to the problem—but I will not yield on the necessity for providing some solution to this specific problem as soon as possible.

I submit this bill to my colleagues and to the Committee on Banking and Currency not as a prototype for action but as an urgent statement of the need for their expertise and experience to be directed to this specific problem area. It is clear to me that there must be an additional subsidy for those projects like the St. Louis Pruitt-Igoe. These tenants are entitled to the same rent and housing benefits as tenants occupying units through other kinds of housing and rental programs, financed with Federal funds. Whatever the best means, I hope we shall pursue it.

Most in need of amendment is the entire record of Federal efforts in behalf of the poor—whether it be housing or hunger or jobs. This legislation is an attempt to correct only one injustice in only one aspect of the housing needs and problems of this Nation.

The report of the President's Committee on Urban Housing must not go the way of the Kerner report. It is not enough to build new units for the poor—but to seek fair utilization of existing public housing units which is what I seek in the bill I present to this body.

GERMAN SOCIAL SECURITY HAILED

HON. JAMES A. BURKE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 26, 1969

Mr. BURKE of Massachusetts. Mr. Speaker, the statement by the Honorable WILBUR MILLS, chairman of the House Ways and Means Committee, made a few weeks ago, indicating there would be no increase in social security benefits this year, came as a distinct shock to many of us. The need for an increase this year is apparent to everyone. The meager checks many of our elderly are existing on today is a blot on our Nation's history. At the beginning of this year, I filed H.R. 55, a bill calling for

a 50-percent increase to all social security recipients. This bill provides that the formula for the collection of social security taxes be changed from the present system which requires a 50-percent tax on the employer and 50 percent on the employee to a new formula providing that a third of the tax be paid by the employer, a third by the employee, and a third by the Federal Government. This would result in hundreds of thousands of the elderly who are now forced to apply for old-age assistance through their welfare departments back home to supplement their meager checks in order to survive, to receive their pension allotments in a dignified manner. The bill would also provide for realistic social security payments more in line with the needs of the elderly.

I take leave to include in the RECORD a news column that appeared in today's Boston Globe, written by Joseph B. Levin, entitled "German Social Security Hailed." The article points up why the social security payments in Germany are higher. I trust the Members of Congress will read this article and join with me in the passing of legislation that would go part of the way in bringing relief to an intolerable situation that exists today and with no outlook for the relief in the future.

The article follows:

GERMAN SOCIAL SECURITY HAILED
(By Joseph B. Levin)

United States and West German Social Security systems are compared in the following extraordinary letter from a Massachusetts woman who receives old age pensions from both. She has asked that her name and address be withheld. She writes:

"This letter is a comment on your open letter to Mr. Nixon May 15. I am a widow of 72, somewhat better off than many of my age, but no thanks are due SS or the private pension system.

"My late husband died in 1958 and at the time had been for 10 years a full professor at Brandeis. From this \$111 per month from Social Security and \$20.45 per month from the Teachers Insurance.

"He was previously for seven years professor at the Berlin Music Academy. After his death, I received from the German government a monthly pension of \$156; and in 1966, this was raised to \$213; and in 1969, to \$287 to compensate for the increased living costs. In addition, I received in 1967 a lump sum of \$1700 to compensate for the rise during the years until 1966.

"During this period my SS income increased 10 percent and the Teachers Insurance pension went from \$15.08 to \$20.45. Certainly I could not live on my American income and I hope that these comparative figures may emphasize what can be done for the elderly by the governments and certainly could be done more easily in this rich country."

SENIOR SET

A: This writer is deeply indebted to this lady for passing along the information. The German pensions are higher because the German government makes a substantial contribution from its general revenues to Social Security whereas the U.S. government contributes nothing except for a pittance to certain special categories, like those who have become 72 but have no Social Security. Otherwise, SS is paid for entirely by the employer and employee, and the self-employed.

Social Security has worked out a system using electric data processing to speed action

on initial and subsequent claims. According to John Rynne, district manager of the Boston office, the system can cut days off the processing time. For an initial claim to fall into the speed-up category, the applicant must present certain important documents, like his Federal W-2 form, SS tax data, wedding and/or death data. Consult your SS office.

ALBERT RAINS SPEECH CONTEST

HON. TOM BEVILL

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 26, 1969

Mr. BEVILL. Mr. Speaker, for the past 10 years, former Congressman Albert Rains has sponsored the Albert Rains Speech Contest at Snead State Junior College in Boaz, Ala. This event has been most beneficial to the young people of Alabama in the development of forensic talent. At a time in our history when so much depends on the sheer ability to communicate, giving young people the opportunity to translate their thoughts and feelings into a cohesive, easily understood discourse is an invaluable experience.

At this time, I place in the RECORD copies of the three winning speeches from this year's contest, and congratulate first place winner, Larry R. Buchanan, 1600 O'Brig Avenue, Guntersville, Ala.; second place winner, Maylon Andrew Blythe, Route 2, Springville, Ala.; third place winner, William Henry Barnett, Route 3, box 137, Blountsville, for their outstanding efforts in this year's contest:

FIRST PLACE: CAMPUS DISORDERS
(By Larry Buchanan)

I have risen rung by rung on the ladder out of poverty. I have had a taste of freedom. I have seen visions of prosperity. Most of all, I see the goal for which I have striven so long and so hard now within the grasp of my hand.

When I was a child of about six years old, my father had an average income of about thirty five dollars a week. Despite the poverty of my family, I had the chance to set my goals. I, despite my poverty, had the chance to live in America and enjoy seeing myself progress toward my life's dream. That dream is now in sight.

Clouds of gloom are now rising around my dream. These clouds are those students who are seen locking college administrative boards in the administration building. These clouds are the students who have an all-night so-called sit-in in the gym on their campus. These clouds are the professors standing before their classes saying that he believes the United States deserves to be defeated in the Vietnamese conflict.

Clouds that are darker than these are those that are represented in the wall of the state trooper's siren and the sight of the convoy of our national guard rolling out as they are called to fight the "nutty" students who are challenging the very basis on which the United States is founded.

They are in truth waging an internal war on the United States. This is a war against me. It is a war against my dreams. It is a war being waged against my heritage and my future. It is war being carried out in full scale against my life and the hard work through which I have had the chance to come to college and take my place in the world.

Yes, it's a war against me, but what do I do? Do I acquaint myself with the problem well enough to suggest some possible solution? No, I do just as most other Americans do. I say, "I am not a college official; therefore, it is not my job to try to think of a solution. So I am not going to." Since when have I written my congressman a letter about the situation? I have done just as most complacent Americans have done, I have not written him.

I do just as other Americans do. By my complacency, I am doing just as other complacent Americans are doing, I am inviting those "nuts" to come right in and ruin the country.

Just as other Americans, by my complacency, I invite those freaks who are rioting on our campuses to run off the best educators we have. And just as other Americans, I haven't walked up and socked one of those "nuts" just because he cheered Ho Chi Minh and his Viet Cong. And as most Americans I have become alarmed at the rampant rise of Communism on our campuses, but what I have done is simply to sit around and be complacent waiting for others to take the lead.

I, as other Americans, have hidden behind this excuse, "I just don't want to get involved." But I and other Americans are involved. Our future is at stake. Our present life is in question. Complacency is causing the defeat of our past because we are not even defending it.

If we would get involved could not we defeat those rioters on our campuses?

If we don't get involved, one of these days, it will be too late. These scatterbrain idiots who are burning our colleges will have completely burned our society, and then it will be too late to get off our course of complacency.

SECOND PLACE: CURRENT CAMPUS AGITATION
(By Malan Andrew Blythe)

Instead of displaying a state of intellectuality and respect for the officials, students on many of the college campuses of today's America shed an air of unethical bitterness and physical brutality toward their superiors. The interpretation of the word "authority" has greatly contributed to riots and demonstrations in college campuses throughout the nation. Currently, the educational systems of America are in a state of turmoil, and the nation itself is in a state of instability.

If one has observed the steady progression of campus agitation in American colleges, he has undoubtedly found a group which calls itself "Students for a Democratic Society", commonly referred to as SDS. Michael Klonsky, national secretary of the SDS, openly stated that "our primary task is to build a Marxist-Leninist revolutionary movement." F.B.I. Director, J. Edgar Hoover, told a Congressional committee, "If anything definite can be said about the 'Students for a Democratic Society,' it is that it can be called anarchist." SDS has been involved in over two hundred campus disputes during the present school year.

The SDS is influential on the American college student in many ways.

The Society encourages the burning of draft cards; it encourages the protest against ROTC, and it is active in instigating the organization of demonstrations and sit-ins. In effect, this society works on the emotions of the student in order to obtain its selfish goals.

Psychologically defined, the student of American colleges is starving for a mental state of balance or homeostasis. These young people are increasingly upset; and, truthfully (although contrary to popular opinion), they have every right to be upset. For there is a great behind-the-scene reason for disturbances such as campus agitation in the

fields of ROTC training, draft control, and school facilities. The cause of this agitation is none other than the forced stress—both physical and mental—brought on by the "Students for a Democratic Society." Zbigniew Brzezinski, professor of government at Columbia University stated, "no doubt what is involved here is not so much a crystallized political revolution as a psychological expression of frustration, alienation, an unwillingness to confront systematic tests."

The SDS has used strong psychological tactics in order to create aggressive behavior in the typical American college student. While racial disturbances existed in full force which were probably kicked off by its own agents, the "Students for a Democratic Society" used this trouble in order to gain its purpose—that of encouraging anarchy. The misuse of draft cards, and the complaints against ROTC programs were also started by the SDS in an attempt to build in America the needed contempt necessary for a Marxist-Leninist revolutionary revolt.

Most of the militants and student revolutionaries are of high-class or high-middle-class social status. Why, then, do these students revolt? Why do they despise authority? Perhaps the answers to these questions date back to the childhood of many of the students' parents. The parents of these students grew up in a time when life itself was a struggle. The fathers of this present generation helped build up the society that is now being torn down. Why do these students yield to the forces of SDS? Not because this generation is a low-class, rebellious generation, but rather because this is a generation which is starving for responsibility. The fathers of these students had the responsibility of pulling this nation together and making it a highly educated, and highly cultured country. Until the present time, the teen-age society knows little of the meaning of real responsibility. Yet, they seek responsibility. Since SDS realizes this important fact, it will, as it has in the past, provide a pseudo-responsibility for these students who are having life easy because "daddy had to struggle to get by." This pseudo-responsibility in simple explanation is anarchy.

Who then is to blame for the unfavorable atmosphere of the college campuses of today? Just where should the blame be placed? There is no person, there is no organization, which we can totally blame for this unorthodox behavior. The blame falls upon an abstract concept in the minds of the people. The reformation of this inner feeling alone can save American college campuses from total destruction. The inner feeling most prevalent is that of emotional instability (because of lack of wholesome responsibility) which constantly haunts the minds of today's college students. The lack of sufficient student-teacher and parent-child communications has resulted in a mental war between the two generations. The facial problems offered the student a way to exercise responsibility—though false it was—and thus prove to his superiors that he could and would fight for position in society. Using the conflict of the generation gap, SDS has terrorized over two hundred colleges throughout the nation. The crises of the generation gap have offered fulfillment to Klonsky's hope of building a Marxist-Leninist revolutionary movement.

As a solution to instability in the student, mental homeostasis may be established as follows: (1) The general public must become aware of the sly tactics of the Students for a Democratic Society. (2) The parents and teachers must realize that today's college student is literally starving for responsibility. If parents and teachers do not provide this needed "wholesome" responsibility, the SDS will supply the student with pseudo-responsibility in abundance. (3) The general public

must realize that the college student, like everyone else, is seeking a place in society, and if the students are not accepted in this society, they can find acceptance in the SDS Communist society.

THIRD PLACE: STUDENT RIOTING AND DISTURBANCES ON THE CAMPUS

(By William Barnett)

President McCain, members of the faculty, my fellow students, and guests:

What has happened when many centers of learning have become the welcome gathering place for revolutionaries, that the campus has become a perpetual battleground? How did we get it so confused?

President Nixon recently stated that college administrations must "have the backbone to stand up" against student violence "if free education is to survive in the United States. College officials must recognize that there can be no compromise with lawlessness and no surrender to force." But our leadership seems to have contradicted itself, for the president of the Association of High Education declared that, "Colleges are not churches, clinics, or even parents. Whether or not a student burns a draft card, participates in a civil rights march, engages in sexual activities, becomes pregnant, attends church, sleeps all day or drinks all night, is not really the concern of an educational institution."

The trend toward disorder and lawlessness on American college campuses has aroused great controversy and confusion. The problem exists almost everywhere in the university world today. The central problem seems to be concerned with what we can do about this world's wrongs, and in what manner we can heal rather than destroy. Youth has much to offer in this respect—idealism, generosity, dedication, service. But the last thing a shaken society needs is more shaking. The last thing a noisy, turbulent, disintegrating community needs is more noise, turbulence, and disintegration.

Five years ago, at Berkeley, student activists resorted to the well-tried method of sitting-in to win from the administration the absolute right to speak. Exactly one year ago at Columbia University, student aggressors turned sit-ins into forcible seizure and "liberated" buildings in order to force a redistribution of university power. Several weeks ago at Cornell, the seized building became an armed camp where students claimed they were willing to die and take others with them. Faced with this situation Cornell officials signed an amnesty agreement "to prevent a growing and imminent threat to life."

The majority opinion on large campuses admits that the community recognizes the validity of protest regarding the current burning issues of our society: such as war and peace, especially Vietnam; and civil rights, especially of minority groups. There is also virtual agreement that the university cannot continue to exist as an open society, which is dedicated to the discussion of all issues of importance, if protests are of such a nature that the normal operations of the university are in any way impeded, or if the rights of any member of this community are infringed upon, peacefully or violently. Violence is especially deplored as a violation of everything that the university community stands for.

The days when college presidents reigned as scholars and patriarchs over an intellectual community are long gone, destroyed in part by the exploding number of megaverst, and in part by the accelerating social demands of the young. Now many college presidents have bodyguards, and are just as likely to be judged for their behavior at sit-ins as they are to be judged by their knowledge in riot control. The nightly TV and newspaper battle reports show students and police engaged in pitched street battles, or

young rebels sitting in a university president's office or standing on the balcony of a "liberated" administration building under a picture of Malcolm X. All these upheavals have increased the demands by parents, politicians, and taxpayers that somehow law and order must be restored on the campus. The university presidents are thus caught in the cross fire between radical demonstrators demanding changes which the schools often cannot give and angry trustees and taxpayers fighting movements which the schools frequently cannot control. And administrators now realize that if they do not try to control radical protests themselves, they will lose much of their authority to law forces outside the campus, which will further excite students, and thus continue the vicious circle.

It was the insight of President Kennedy which caused him to say, "These are extraordinary times. We face an extraordinary challenge. But our strength as well as our convictions have imposed" upon us "the long and exacting test of the future of freedom—a test which may well continue for decades to come." Therefore, one may define a student movement as an emancipated mass of students deeply inspired by aims which they try to develop in a free political assertion, and moved by an emotional rebellion in which there is always present a disillusionment with and rejection of the values of the older generation. Moreover, the members of a student movement have the conviction, openly and freely, that their generation has a special mission to fulfill whereas others have failed. But this necessary freedom of ideas gives the students no authority to threaten the liberty of others.

From New England to the West Coast, radical students stepped up their spring offensive against U.S. universities last month, seizing buildings, shutting down schools, often provoking violence—and nowhere were the strife's complexities in clearer focus than at three of the nation's most influential and liberal schools: Harvard, Columbia, and Chicago.

Strongly against these radical activities, the Attorney General of the United States declared that the Nixon Administration's patience was at an end and that "violence-prone aggressors will be prosecuted to the fullest extent." He called "for an end to minority tyranny on the nation's campuses and for the immediate re-establishment of civil peace and protection of individual rights. If arrests must be made, then arrests there should be; if violators must be prosecuted, then prosecution there must be." Therefore, "It is no admission of defeat, as some may claim, to use reasonable physical force to eliminate physical force."

We may sum up the situation in the words of Senator Everett Dirksen, "We are the legatees of a great, strong land. We received it from those who were here before us. The state of our land includes our leadership of the free world, our relations and our respects for law, our devotion to peace, and our willingness to sacrifice even as others have done before us. It includes reason and realism in a world of tumult and confusion."

MR. PUCINSKI ANNOUNCES THE AMOUNT OF IMPACTED AID MONEY IN EACH CONGRESSIONAL DISTRICT

HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 26, 1969

Mr. PUCINSKI. Mr. Speaker, the Appropriations Committee is presently con-

sidering the fiscal year 1970 budget for all federally supported education programs.

Since the General Subcommittee on Education, which I serve as chairman, has legislative jurisdiction over the impacted aid program, I requested the Of-

fice of Education to prepare a listing of the fiscal year 1969 appropriations for each congressional district under Public Law 81-874.

I am inserting this listing in the RECORD in order to define more clearly the effects of this program throughout

the country. Let me emphasize that this is a listing of the fiscal year 1969 appropriations of \$400 million, when the entitlement was approximately \$650 million.

Mr. Speaker, the chart follows:

CHILDREN AND PAYMENTS UNDER PUBLIC LAW 874

State	District	A children	B children	A amount	B amount	A plus B amount	District school
Alabama	01	234	5,179	\$59,853	\$662,342	\$722,195	4

TRAVELS FOR TRADE

HON. CHESTER L. MIZE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 26, 1969

Mr. MIZE. Mr. Speaker, Secretary Maurice Stans of the Department of Commerce, has been engaged in what he calls "Travels for Trade" in both Europe and the Far East. He reported on these travels and their significance in implementing the trade policies of the Nixon administration when he addressed the Upper Midwest Conference on U.S. International Trade Policies in Minneapolis, Minn., on May 21, 1969. As chairman of the Task Force on International Trade for the House Republican Conference, I found these remarks most enlightening and I am honored to bring them to the attention of my colleagues. Secretary Stans' "Travels for Trade" address follows:

TRAVELS FOR TRADE

(An address by the Honorable Maurice H. Stans, U.S. Secretary of Commerce, Before the Upper Midwest Conference, U.S. International Trade Policies, Minneapolis, Minn., May 21, 1969)

May I say first what a very great pleasure it is to be back home in Minnesota.

The chance to visit with you here is always welcome, but coming home this week has particular meaning to me in view of the fact that just two days ago I completed Travels for Trade which took me more than half way around the world.

TRIPS ABROAD

In two separate trips between April 11 and May 18 our mission flew more than 30,000 miles to eleven countries and twelve cities in Europe and the Far East. We spent 17 working days abroad, and a count of my schedule shows one hundred and ten public and private meetings in that time.

Throughout these very extensive travels, we discussed the Nixon Administration's policies toward trade and international commerce with government leaders, American and local businessmen and the press. We told them of some specific problems we face, and invited them to join with us in a search for solutions.

But above all, the main purpose of my trips to Europe and Asia was to express President Nixon's great friendship and deep interest toward every country I visited. We carried to each government and to each people the message that our Nation, under President Nixon, is firmly committed to follow the road of international cooperation in commerce and investment.

We extended a hand of friendship across the borders of the world.

I can report to you here tonight that our hand was accepted. It was welcomed. I believe that we are on the threshold of a new day of trading partnerships with Europe and with the countries of the Far East.

REPORT TO THE NATION

Tonight I will discuss my missions abroad with you, and I will offer an assessment of what the future may hold in our efforts to improve and strengthen our economic relations with other countries.

I am especially pleased to make this report to the Nation here in my home state during World Trade Week. I am very grateful to the Minnesota World Trade Association and the Greater Minneapolis Chamber of Commerce for giving me this opportunity, and particularly so since this is my first appearance in Minnesota as Secretary of Commerce.

I might add as an interesting coincidence that the Minnesota World Trade Association got started (as the Export Club) just about the same time that I was first introduced to international commerce. Right after I graduated from Shakopee High School in 1925,

I went to work in Chicago as a stenographer for a company that imported sausage casings from Turkey.

Today the community of major trading nations has become very interrelated—or perhaps in view of all the discussions about textiles on my recent trip I should say interwoven. No longer does a nation have any significant trade problem unto itself. What affects one affects another, and most often the problems of one are the problems of many.

This is one of the reasons why, in every country I visited, there was such great interest in learning about the Nixon Administration, its views and its policies.

TOWARD PROGRESS

I have reported to our friends abroad that after four months in office, the pattern has been set for four years of progress.

The President has taken steps toward Peace, offering a realistic proposal for a settlement in Vietnam which we hope will break the logjam in Paris.

The President has revived our friendships in Europe, he has exercised "preventive diplomacy" in the Middle East crisis, and he has opened new channels of communication with the Soviet Union.

He has made progress toward National Security, with a courageous proposal for a modified anti-ballistic missile system. All of the facts were available to him in this matter, and he made the considered judgment that it is needed for America.

Throughout the Administration there has been progress toward Responsible Government. The National Security Council has been revitalized. We have a new Urban Affairs Council, and a new Cabinet Committee on Economic Policy. Steps have been launched to take the Post Office Department out of politics.

INFLATION

As for the fight against inflation, I have told our friends abroad that President Nixon regards this as the most urgent domestic matter in America today.

We are now paying the price for inflationary pressures which have been building up for four years—but he has put into effect the right mixture of fiscal and monetary policies to bring the matter under control.

He has reworked the federal budget into a surplus of nearly six billion dollars.

He has asked for a limited extension of the surcharge on income taxes.

He has recommended repeal of the 7 percent investment credit.

He has offered extensive tax reform proposals to reduce inequities which contribute to social unrest.

At the same time, the Federal Reserve System is holding down the growth of the money supply.

Already there are signs that these and other steps being taken have begun to reverse the inflationary psychology in our country.

Let me assure you that our friends abroad listened to this report with the greatest of interest. The trading world depends on the strength of the American dollar—and those with whom we deal understand, as we do, the grave threat posed by inflation in the United States.

Gradually it has begun to price us out of their markets. It has helped reduce our balance of trade from five billion dollars three years ago to less than one billion last year—and this year we face the threat of a trade deficit. In 1968, mostly because of inflation, our imports went up 23 percent while our exports grew only 9 percent.

We need a large favorable balance of trade to help offset other needs in our balance of payments. Our travel deficit is two billion dollars a year. Our overseas investment requirements run to another two billion or more. We need a healthy balance of trade, in addition, to help finance our military activities and our aid programs overseas.

And so it is obvious that we must curb inflation.

We will do so.

GROWING PROTECTIONISM

But at the same time other factors also are seriously affecting our balance of trade and our position as a major trading force in the world. These matters developed rapidly in recent years, and I went abroad early in the history of this new Administration because President Nixon wanted to repair those relationships which had been damaged and begin to resolve the frictions which existed before they became unmanageable.

There are several such problems.

Protectionist trends are growing in every major area of the world, including Europe, Asia and the United States.

In Europe, American businessmen are confronted with increasingly complex and costly non-tariff barriers.

Border taxes and export subsidies are one example.

In many countries it is difficult if not impossible for Americans to sell to the government or to its controlled business entities.

Artificial technical restrictions are placed on American products in the name of safety or other standards.

Some of our agricultural products face the threat of taxes which would cause extensive damage to American producers.

We are seriously concerned about protectionist aspects of the common agricultural policy in Europe.

In Japan there are rigid restrictions on American investments which effectively block United States companies from any meaningful participation in the second largest economy in the free world.

These and many other barriers to freer trade have contributed greatly to the growth of protectionist efforts in the United States. Some three hundred bills to limit or control trade in one way or another have been introduced in the Congress this year alone.

FREER TRADE

But President Nixon does not believe that protectionism is the answer to America's needs or the solution to the trading problems of the world.

The commitment of this Administration is to build a two-way street instead of a one-way wall on the path of global commerce.

In every country I visited, I expressed the United States dedication to freer trade in the strongest possible terms.

Our record in this direction over the past 35 years has no equal among the major nations of the world. Since 1934 our tariffs have dropped from an average of 47 percent to 11 percent today—and the level will drop even lower when the Kennedy Round reductions take full effect in 1972.

But tariffs are no longer our main problem. We must deal now with the wide variety of non-tariff barriers that increasingly impede the pipelines of international commerce.

To this end I have proposed an "Open Table" principle for all countries under which all non-tariff barriers will be brought fully into the open, be measured, probed and diagnosed, and finally dealt with in the same reciprocal manner as was done so effectively with tariffs in the Kennedy Round.

I can report to you tonight that this proposal was enthusiastically received in almost all of my discussions in Europe and Asia. Across two continents hope was expressed to me that the United States would continue its initiative along this line.

FOUR FREEDOMS

But the American pursuit of freer trade is only one cornerstone of the principles and policies I have expressed abroad. There are, in fact, four economic freedoms which I believe describe the tone of the Nixon Administration's commitment to a more open world, freedoms which can serve as highways across the borders to a better life for all. These are:

Freedom to Travel.

Freedom to Trade.

Freedom to Invest, and Freedom to Exchange Technology.

These freedoms already have proved their great value, to the extent that they have been used. They have the power in the years ahead to build a society of human comfort and security for all.

Again, in each country, our own American commitment to the four economic freedoms has been welcomed almost without reservation. Only in Japan, where resistance runs high to free and open investment and to free markets, did I sense reservation.

This is the kind of reality we must face in the pursuit of these freedoms.

To those who resist freedom to invest, I expressed an American challenge to open their borders to foreign investment up to one hundred percent.

To those who have restrictions on travel, I reaffirmed the Administration's pledge not to impose restraints on international travel by the American people.

And in each of our discussions the response was encouraging for a freer exchange of technology among all peoples, limited only by the property rights of owners and investors.

Our commitment to the four economic freedoms does not mean, however, that there could not be exceptional cases in which it becomes necessary for us to act in the best interests of a major American industry suffering from an abuse of the freedom to trade.

TEXTILES A PROBLEM

Today there is such an industry in the case of American textiles. Our industry apparently is expected by low-cost producers in other parts of the world to survive a swiftly rising flood of imports whose share of the American market is growing by the hour. This it cannot do, without growing jeopardy to a tremendous industry of 36,000 plants and 2½ million employees.

As a Nation determined to move toward freer trade, we have asked other countries to join us in an international conference to discuss ways and means of governing the world flow of man-made fibre and wool textiles into the United States.

We do not seek and we do not want to close our borders to imported textiles.

We want every country to have the privilege of sharing in the growth of our market.

We ask only that the rate of growth be slowed by voluntary agreements, so that we will not face sudden disaster for hundreds of American companies and thousands of employees.

This is a reasonable solution to a problem that affects us all.

The Congress is very alert to this particular problem. Restrictive legislation on imports of textiles has been introduced, and whether we like it or not the chances are that such legislation will be adopted if a voluntary agreement is not reached to slow down the growth of imports.

The Nixon Administration is fully aware of the hazards of legislative quotas. They provoke retaliation from other nations. They tend to spread from one item to another. We believe that if we were to get a textile quota law, it could become a "Christmas tree" bill limiting the imports of a broad scope of other products and commodities.

Furthermore, if we do not reach a voluntary agreement among the textile-producing nations of the world, our own chances of moving toward freer trade will be severely limited.

A package of proposed trade legislation soon will be submitted to the Congress. Much of it will be based on recommendations that stem from my mission to Europe and Asia. We hope this package will liberalize our trade policies in many respects.

But realistically we cannot expect passage of trade liberalization bills as long as the textile question threatens a basic American industry.

PROGRAM FOR EXPORTS

The road we seek is the road to a more open international economy. Not only does this road lead to broad benefits for all nations, but very practically it gives American companies wider access to the markets of the world.

In recent weeks we have heard other nations say they must export or die. I believe the United States must export more or decline.

The challenge we face is enormous.

For too many American companies, exporting is not much more than a sideline. Satisfied with a prosperous market at home, they see no reason to tackle markets overseas.

Look at the result.

Imports into the United States have grown much faster than exports for the past three years.

Our trade surplus has virtually vanished and this year we ran the first quarterly trade deficit since 1950.

We urgently need American business to allocate money, staff and determination to develop overseas markets just as they do domestic markets.

Unless our business community orients itself to the export markets of the world, we will find ourselves seriously out of step with the new age of international business.

President Nixon has reactivated the Cabinet Committee on Export Expansion, of which I am Chairman. All of the agencies in the Executive Branch concerned with foreign trade are represented in the Committee.

We have set an export goal of \$50 billion by 1973. This compares with \$34 billion in 1968. The Department of Commerce, for its part, will do everything possible to stimulate and help the marketing campaigns of those who seek a greater share of the markets of the world. There are many things we can do for medium- and small-sized companies. Ask us!

CONCLUSION

President Nixon has called for "an open world . . . open to the exchange of goods and people."

The expansion of American exports is a meaningful response to that call.

So is our commitment not to impose restraints on American travel abroad.

It is in the spirit of that call that we have invited other countries to join us in pursuit of the Four Economic Freedoms, and have offered the "Open Table" principle to eliminate barriers to world trade.

We want to see highways of commerce, not walls of protectionism, between us and our trading partners around the world. This is the message I have conveyed in my travels for trade in Europe and Asia.

If we succeed in tearing down restrictions, and in building up the flow of goods and people among nations, we will have gone far to build a better world in which all people live in comfort, peace and security.

ETHICS GROUP WOULD SERVE AS WATCHDOG FOR ALL MEDIA

HON. W. C. (DAN) DANIEL

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 26, 1969

Mr. DANIEL of Virginia. Mr. Speaker, I am sure that every man in public life, at one time or another, has felt that his comments had either been misquoted or else slanted out of context so as to provide a completely different shade of meaning than what he had actually intended. Sometimes this could be attributed to just plain sloppy reporting but,

more seriously, too often it is the result of deliberate and biased motives. In recent years this tendency to slant the news has grown to alarming proportions, so much so that dedicated and objective newsmen have determined that some effort must be made to restore fairness and objectivity to reporting by all media.

Frank L. Kluckhohn, longtime correspondent for the New York Times, has taken the lead in this effort to set up a "watchdog" organization for all media of news reporting. In announcing this movement, Kluckhohn writes:

News coverage in America has become so one-sided that it is almost impossible to get anything approaching the truth from newspapers, TV, or radio.

He adds:

If our American way of life is to survive, then something must be done—and done soon—to correct this problem of one-sided reporting.

Mr. Speaker, I commend Mr. Kluckhohn and those serving with him in this effort. The May 17 issue of Publishers' Auxiliary, a trade paper for newspapermen, features a story by Ed Seneff describing the efforts of this group. I commend this article to my colleagues and insert it at this point in the RECORD:

[From Publishers' Auxiliary, May 17, 1969]
ETHICS GROUP WOULD SERVE AS WATCHDOG FOR ALL MEDIA
(By Ed Seneff)

WASHINGTON, D.C.—"If our American way of life is to survive, then something must be done—and done soon—to correct this problem of one-sided reporting."

So states Frank L. Kluckhohn, long-time correspondent for the New York Times, in announcing the formation of a Press Ethics Committee "to serve as a 'watchdog' organization for all media of news reporting."

In a letter soliciting support for the Committee, which has its headquarters in the offices of the Committee to End Aid to the Soviet Enemy (CEASE) in the National Press Building here, Kluckhohn writes that "news coverage in America has become so one-sided that it is almost impossible to get anything approaching the truth from newspapers, TV or radio."

"The constant stream of propaganda poured out daily is, to say the least," says Kluckhohn, chairman of the new press watchdog committee, "sickening and disgusting."

"Sadly, there are millions of Americans who still believe what they read or hear on TV or radio and who are being brainwashed without mercy by the subversive and anti-American forces who dominate the media."

He points out that the news media "glorify rioters, demonstrators, hippies and yuppies . . . we see pleas for surrender in Vietnam, while draft card burners are publicized nation-wide . . . we see declarations that the U.S. has no right to defend itself against nuclear bombs. . . . we see heroes made out of Black Power advocates who openly cry for revolutions and incite riots . . . we see yells of 'police brutality'—our policemen as vicious bullies, while lawless mobs receive sympathetic treatment. . . ."

Included in Kluckhohn's letter, which states ". . . and those in authority have demonstrated that they cannot, or will not, take steps to restore objective reporting," is a folder containing objectives of the new committee, a code of ethics and biographical data on founding members.

Objectives include:

To establish an Assn. of Weekly Newspaper Editors who will subscribe to the Code

of Ethics. "Such an association will be able to get our statements and denunciations," so says the folder, "to the public if the electronic or mechanical media refuse to do so. . . ."

To condemn, publicly, all instances of slanted reporting which is brought to the Committee's attention. "By the use of press releases and press conferences," says the folder, "those who 'create' news or push sociological theories as news will be exposed."

To present annual awards to those in the profession for outstanding accomplishments or work in the field of journalism.

To keep all supporters of the Press Ethics Committee advised of the work being done, to issue "periodic ratings exposing those in the profession who are constantly misusing their trust," the folder continues, and to advise the public how they can help "by bringing coordinated pressure to bear upon advertisers in newspapers or sponsors of TV and radio programs which are obviously slanted."

"I recognize that our free American society depends upon our citizens getting full and accurate information upon which to make decisions," the Code of Ethics begins. "I therefore regard the providing of such information as my honored responsibility and trust."

The code then asks members of the committee "as far as humanly possible" to:

Provide unbiased news, acknowledging that there are two sides to most issues and problems.

Get all essential facts and not suppress any of them in connection with news published.

Keep my own opinions out of news reports and to confine them to the editorial page or to label them editorial.

Place the news in proper perspective, recognizing that playing news up or down is a most important editorial responsibility.

Apply these principles to the reporting of all forms of news—local, national or international.

"I believe a people must be informed to be free," the Code concludes, "and that no misinformed people are free. Our Republic can be destroyed if our people base their decisions upon one-sided propaganda instead of facts."

Serving with Chairman Kluckhohn, who emphasizes in his biographical material that he was both a Washington and Foreign Correspondent of the New York Times "in the days when the Times had an international reputation as a newspaper of record," on the new committee are:

John Chamberlain, syndicated columnist and former editor of Life magazine and The Freeman.

John M. Fisher, editor and publisher of the Washington Report of the American Security Council.

Horace Greely Jr., a New York physician and grandson of the pioneering newspaper editor. "Although not a member of the profession," his biographical notes read, "Dr. Greely is a student of the subject and is vitally interested in restoring honor to reporting."

Vice Adm. Fitzhugh Lee, retired Navy officer.

Sara McClendon, Washington columnist, the type of reporter, says her biographical sketch, "now rapidly disappearing, who follows any news lead to its end and who refuses to soften a news report for anyone, including Presidents. When she raised her arm in his press conferences President Kennedy cringed and Lyndon Johnson found her outside his managed news capabilities."

Edgar Ansell Mower, winner of a Pulitzer Prize for Overseas Reporting in 1932, now a syndicated columnist and regarded as the "Dean of American writers on foreign affairs," as his biographical item puts it.

Louie B. Nunn, Governor of Kentucky, first Republican to be elected governor of the Blue Grass State since 1943.

Ivan H. (Cy) Peterman, director of the Insurance Information Office of Pennsylvania whose newspaper career spanned 25 years of general reporting, sports writing and war and foreign correspondence.

Walter Trohan, chief Washington correspondent for the Chicago Tribune since 1947, whose career began with the Tribune in 1929.

DEATH OF LEE ALLEN

HON. ROBERT TAFT, JR.

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, May 26, 1969

Mr. TAFT. Mr. Speaker, people in Cincinnati and baseball fans across the country were saddened to hear of the untimely death of baseball historian Lee Allen who died of a heart attack in Syracuse, N.Y., on May 20. He had lived a full and active life at 54. He had suffered an earlier attack 5 years ago and had slowed down his pace somewhat, but he had such a zest for living and the pursuit of knowledge, little could be done to alter his way of life.

Lee Allen's writing, research, and speaking talents were being utilized in this year's 100th anniversary of professional baseball. He was on the centennial committee for this observance and no one was more ideally prepared for such an assignment. Having lived and worked for many years in Cincinnati, he had a special interest and capability in compiling the history of the Cincinnati Red Stockings, organized as the first professional team to play baseball in 1869. His interesting account was published in the anniversary edition of the Sporting News on April 5, 1969.

He was particularly adept at researching the early history of baseball. Tracing down the records of early players, some of whom played under assumed names, took him into strange places in different parts of the country. Finding out that one of the early major leaguers was named Harry Truman, Mr. Allen communicated this to President Truman in 1951. The Chief Executive gave the baseball historian national attention by mentioning this at a press conference on the opening day of that season.

Lee Allen was born and grew up in the Cincinnati area. He served as public relations director for the Reds and was a feature writer for the Cincinnati Enquirer. He also conducted radio and television programs in Cincinnati and Philadelphia, and wrote a weekly column for the Sporting News. For the past 10 years he was historian for the Baseball Hall of Fame at Cooperstown, N.Y. He authored a dozen books on baseball and was recognized as the leading authority on the history of the game. The Saturday Review said of him:

Lee Allen covers the field like Joe Di Maggio and follows through like Ted Williams.

On May 18, Mr. Allen was in Cincinnati to participate in ceremonies honoring the club's alltime major league team. The next day he drove to Cooperstown, but on the outskirts of Syracuse

he felt heart pains. He was helped to a hospital but died there early Tuesday morning. Funeral services and burial took place in Boca Raton, Fla., where the Allens had a winter home. Survivors include his wife, the former Adele Felix of Cincinnati, and 10-year-old twins, Roxanne and Randall.

Lee Allen will be greatly missed by the baseball community in this anniversary year. Although he never was an active player, he had a driving curiosity about the sport and a phenomenal memory for recording statistics and humorous sidelights which impressed and amused his readers and the audiences he addressed at numerous hot stove sessions. He did a great deal to stimulate interest in baseball and he did it out of a genuine love for the game.

BANK OPERATED MUTUAL FUNDS

HON. W. S. (BILL) STUCKEY

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 26, 1969

Mr. STUCKEY. Mr. Speaker, today the Senate Banking and Currency Committee passed S. 2224, a bill amending the Investment Company Act of 1940. That bill contains some salutary amendments which will update the present truth in mutual funds law, and it contains some features which I think are anti-small business and contrary to the best interests of mutual fund investors, such as the encouragement of shareholder suits against mutual funds. One of its worst features, in my judgment, is its use as a vehicle for permitting some 17,000 commercial banks to enter the mutual fund business by partial repeal of the Glass-Steagall Act without consideration by the House Banking and Currency Committee. I am not against commercial banks engaging in investment banking or the mutual fund business, as long as it does not injure the soundness of our national banking system. Chairman Wright Patman of the House Banking and Currency Committee, fears it might cause another stock market crash. He expressed his views in a letter to the Subcommittee on Commerce and Finance, of which I am a member, last year on a similar proposal. Contrarily, Chairman William McCh. Martin of the Federal Reserve System Board of Governors advised our subcommittee last year that such a proposal would not "impair the ability of commercial banks to devote themselves single-mindedly to their primary function of serving their depositors, borrowers," and so forth.

I consider repeal of the Glass-Steagall Act a major change in our national banking policy. Such a far-reaching change in our financial institutions deserves the most careful consideration by the banking experts in Congress, and should not be bootlegged, piggybacked, or smuggled into the law as an obscure paragraph in a mutual fund bill. Therefore, I am introducing a bill to authorize commercial banks to engage in the maintenance

and sale of mutual funds, and I request that it be referred to the Banking and Currency Committee, where, I hope, it will be the subject of early hearings.

WE CARE

HON. H. ALLEN SMITH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 26, 1969

Mr. SMITH of California. Mr. Speaker, Mrs. Robert Sullivan of Altadena, Calif., who is connected with the "Mothers of Servicemen" of South Pasadena, Calif., and who is a constituent of mine, has requested that I insert into the CONGRESSIONAL RECORD the very fine letter which she received from Maj. James N. Rowe. I am pleased to comply with her request and include the letter herewith:

FEBRUARY 9, 1969.

DEAR MRS. SUTHERLAND: My most sincere thanks to you and the Mothers of Servicemen for conveying the message, "We Care." With that unique intuition granted only to a mother, you have come upon the one thing which is most important to our people serving in Viet Nam, and for that matter, our people serving anywhere in the world; knowledge that there are those at home who care.

I am fortunate that in my home there exists such a closeness that even though I was physically separated from my family and friends, I never doubted that there were those who cared. At times, because of the constant deluge of propaganda by the Viet Cong concerning the campus riots, disorders, anti-war demonstrations, dissension within the government, draft card burners, and deserters, I sometimes wondered just how many people really cared and how many people actually supported our efforts in Viet Nam. The Viet Cong make maximum possible use of all U.S. news media reporting anti-war, anti-government, anti-U.S. effort in VN type news. For a POW, it is a lonely world, made more so when one hears of opposition and nonsupport from the very people for whom we were fighting.

No one hates war more than those who are face to face with the killing, the maiming, the destruction. No one has a greater desire for peace than the men who are putting their lives on the line to try to secure peace. I am sorry that there are those in the United States who take advantage of the freedoms and privileges granted under our form of government and seek to destroy that which protects them . . . offering no better alternative in return. I am certain that your efforts to assure those in combat that they are supported by the American people, that their sacrifices are not in vain, provides the moral support and strength essential in gaining victory.

There are those here in America who scoff at Faith in God. This is their privilege. You will find very few, if any, men who have faced death that do not have a deep belief that there is a Supreme Being. Perhaps it is not fully understood, perhaps the ritual of our Churches still seems unclear, but the Communion of one man and his God is stronger than any dogma. Those who have not tried to understand or have denounced Faith as a weakness confine themselves to a very small, mundane existence.

Thank you very much for considering an issue which would mention me. It will be an honor to be included in your publication.

Sincerely,

Maj. JAMES N. ROWE,
U.S. Special Forces.

A NEW DAY IN TRANSPORTATION?

HON. JERRY L. PETTIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 26, 1969

Mr. PETTIS. Mr. Speaker, I urge my colleagues in the House and the Members of the other body to seriously consider the remarks of Dr. Paul W. Cherington, Assistant Secretary of Transportation for Policy and International Affairs, which he made before the board of directors, Transport Association of America, in Washington, D.C., on May 6, 1969.

I believe Dr. Cherington has presented an excellent analysis of the difficulties which face all of us who are interested in the transportation problems of our Nation today.

The remarks follow:

REMARKS PREPARED BY PAUL W. CHERINGTON, ASSISTANT SECRETARY OF TRANSPORTATION FOR POLICY AND INTERNATIONAL AFFAIRS

The new Administration under Secretary John Volpe has already made certain highly significant organizational alterations in the Office of the Secretary of Transportation. First, my own office was a merger of two Assistant Secretaryships—Policy Development and International Affairs. We hope that this combination will enable us to transport our policies as far as our carriers.

A second step was the creation of an Assistant Secretaryship of Environment and Urban Systems. The former Mayor of Seattle, James Braman, has been appointed to this office. Though this office started with only a handful of people, the Mayor will develop a staff organization to handle the critical relationship of transportation to urban areas. This office will also consider the relationship of transportation to other urban programs of the Administration which involve the Departments of Housing and Urban Development, and Health, Education and Welfare, and the Office of Daniel P. Moynihan.

Most of us to date have been involved in firefighting operations, becoming oriented and helping Secretary Volpe to implement some of his initial ideas. We have also just about completed the work on the SST decision, a revised airport/airway program and a much expanded program for urban public transport. But we are beginning to identify some key areas which we believe need more attention, and it is two of these which I would like to discuss this noon—our relations with industry and the role of the Department in transportation planning.

The development of a healthy, responsible relationship with the transportation industry—both management and labor—is of deep concern to both President Nixon and Secretary Volpe and should be a significant part of the work of the Department of Transportation. We found that there was in the Department a good deal of suspicion of the various segments of industry. There was a certain reluctance to enter into a free dialogue with industry on their problems and policy suggestions and some tendency to move into a polarized and doctrinaire position on policy issues from which no retreat was permitted and which tended to foreclose further discussion.

I do not mean to imply that under the new Administration we will spend all of our time in reading, and heeding, industry's letters to Santa Claus. We intend to maintain a measure of skepticism, particularly when we believe that a certain amount of over-reaching is going on. But I think that you will find that we are willing to listen and to enter into a dialogue with you as to data—and I mean

hard facts—you may have and its policy implications.

As President Nixon said in his Inaugural Address, "... We cannot learn from one another until we stop shouting at one another—until we speak quietly enough so that our words can be heard as well as our voices. For its part, government will listen. . ."

It is sometimes said that in academic life, you are supposed to be "right" and that in consulting, you are supposed to be "helpful." In Government, the aim is to be both. Our motives in trying to be both are not entirely unselfish. For we believe that if Government serves as a sounding board and independent examiner for the various interest groups in industry, the chances will be greatly increased that those same interest groups will step up their own dialogue and reach reasonable compromise positions. That, I suppose, is the theory and, in fact, the practice of the TAA. It has worked in the past; it has recently worked in connection with the airport/airway bill; we hope that it will work effectively in other instances.

After all, DOT must see that our actions and policies have an orderly impact on the entire transportation economy of the nation. Indeed, I believe that the time has come for us to more closely heed the requirement placed upon the Department under our enabling act, "to facilitate the development and improvement of coordinated transportation service, to be provided by private enterprise to the maximum extent feasible." The keys to providing coordinated transportation service are two-fold: good communication with the various segments of private industry and planning. It is to our planning function that I would like to turn. And the theme that I would like to stress is that "we cannot plan without you."

Embarking on a program of realistic planning in the public sector requires recognition of the interdependence between public programs and the private sector in transportation. The growth of industrial technology in the private sector is not under the control of the public authorities. It is difficult for the government to plan for the development of air transportation when you must provide, and raise the money for, the capital equipment around which much planning must be centered. We are asked to plan for highway development when we have no say over the patterns of utilization of automobiles by each individual in this country or on the numbers that will be produced by our thriving automobile industry. We are asked to encourage sound railroad development when the only railroad we own is the Alaska Railroad. In the motor freight field, the Government regulates common carrier movement, but our regulations do not affect the large number of private and exempt carriers of highway freight. It is these interrelationships between public planning and private ownership that make transportation planning particularly complex.

Up to now with certain exceptions such as in encouraging the development of the aviation industry, the Federal Government to the extent that it has tried to accomplish planning, has more often followed a "Thou shalt not" approach by means of regulating the activities of the transportation industry in terms of routes, weights and rates. But regulation only touches a portion of the transportation activity which DOT programs must accommodate, if we are to create a balanced transportation system. Nor does it consider the kinds of things that could be done through long-range planning for transportation. It is for this reason that I come to you today to discuss with you the possibilities of joint planning. Traditionally the transportation industry has had its hands full in trying to make sure that one component does not gain a significant advantage over another mode under the regulatory

process. As a result, you have had very little time to consider the affirmative question of whether there is a role for joint public-private planning for transportation development.

It is not very popular today to say nice things about the relations between the Department of Defense and the weapons industry, but it is probably the most significant example today of encouraging joint public-private development. DOD develops military requirements based on an estimate of the world's political future and in light of available technologies. These technologies, in turn, are developed and applied through close coordination with industry. There is a continuing interchange between DOD and industry as to requirements and technology, and both industry's and Government's plans are being modified.

There is a need for a similar link between our transportation responsibilities and the industrial complex. In our two years of existence, we have only barely begun to talk to the transportation industry as a whole. We have not yet been able to seriously explore possibilities for transferring information and technological achievements from one mode to another. Just recently, for instance, I was explaining to a leading aircraft manufacturing firm the necessity for them to look into future urban transportation requirements that are on the horizon such as the expansion of VTOL and VSTOL. In order for this company to enter into this field, it would have to deal with a plethora of overlapping interests, including not only municipal, State and county governments but also small private transportation companies. This is very different from their usual customers who are well defined air transportation entities. It is in this area that my Department, through its relations with local governments and through developing its relations with the transportation industry, could provide a natural link. But to perform such a role, we must explore possibilities for new relationships between public and private planning within the transportation field. Unlike the Department of Defense, which is the principal decision making agency in the defense of our country, there is a multitude of decisions makers in our field. We must consider how we can coordinate our plans and the private plans of industry and the independent decisions of the individual consumer. It seems worthwhile then to propose to this meeting composed of representatives from different modes, their bankers and their users, to consider what they can do to create an atmosphere in which we could assist each other in planning for the overall transportation needs of the United States.

To make this effort succeed, we must first focus on what is to be moved, rather than on a particular mode. To give you an example of what I mean: In this room, for instance, are representatives of the possibilities for moving freight by air, rail, truck or water. Joint planning in your case would insure that comparable cost data and other statistical information regarding the flow of traffic are available. We in the Department are now taking a first step in that direction. Shortly, we will be advertising to request proposals for the development of a rail and a highway data information system. This system will maintain and produce current comparable information on the movements of freight. We hope that shortly thereafter we will be able to expand this system so that it will be applicable to all modes on a comparable basis. Only with the assistance of industry can we begin to accumulate the kind of data base necessary to become aware of flows of traffic and costs of handling it so that we can maximize efficiency.

The development of this data base will provide the Department with a tool which will permit us to depart from basing our decisions on the aspirations or wishing list of

each mode and instead develop more realistic criteria. Without such information, we can only continue with the kind of imbalances that can be observed in the resource allocation among the modes within the Department. If you consider that highways receive nearly 75 percent of the available funds, and aviation nearly 13 percent, it does not leave much left for other modes or for the development of urban alternatives that I mentioned earlier, and it is obvious that the basis for planning for transportation over and above the individual modal programs has not yet been established. Until we have some other ways to allocate resources, we will only be able to follow the trends implicit in these figures.

Another area in which industry and government planning must be intertwined is in the facilitation of the movement of international cargo. My office will continue to work with the export industry to reduce the paperwork requirements or to try, with your assistance, to bring them into line with the way you do business.

The need for such planning is evident. Right now, for instance, in our urban areas in which over 70 percent of our population resides, we have approximately 77 automobiles registered for each mile of urban roads and nearly half the vehicle miles of travel in the U.S. are driven on the 14 percent of our urban streets. The resulting congestion is not going to be eased by building more highways to bring in more cars. Only by means of sound transportation planning which emphasizes alternative technologies, can we assure that we are not perpetuating this congestion.

This congestion spills over to affect all modes of transportation. If each of you suboptimizes his own system as one would expect you to do, this congestion will intensify. The aviation industry suffers from urban congestion both in terms of airport access and in terms of air cargo movements. It does the aviation industry no good at all for a prospective air passenger to require a half hour travel time during peak hours between the central business district and the airport averaged over 20 major urban areas. This taken with the minimum times allowed for processing passengers indicates that for an airport-to-airport trip of up to 500 miles, about half the total trip time will be spent in ground travel, according to a recent study.

In terms of air cargo movement, the aviation industry must also be deeply concerned with the problems arising from urban congestion. Indirect costs, which include all costs incurred and moving the payload between the aircraft and its urban area destination, provide about 50 percent of the total costs of combination carriers and 35 percent of the cost for the all cargo carriers.

The truck freight system also suffers from urban congestion. The lack of efficient freight terminals in urban areas is a serious source of urban congestion. We know from visual experience that large numbers of trucks try to arrive in the same area to unload, but we do not have any reliable measurements of urban freight movement that would permit us to embark on a program to streamline urban terminals. There is no reason why, with industrial cooperation, initiatives could not be exercised to relieve this problem. The government could provide a forum for the review of requirements in the design and development of improved terminals.

Even the rail industry suffers from this congestion because it is dependent on the urban distribution system to provide loading points with freight. This brings us to the crunch of why joint planning is vital. As you know, President Richard M. Nixon is committed to restricting the Federal budget in order to stem the tide of runaway inflation. In terms of this limitation on resources, the competition for available public funds becomes all the stiffer. The Department of

Transportation cannot afford to make believe that it is above this competition. Our recent experiences with developing justifications for transportation trust funds seem to indicate that transportation may be forced to make its case along with other urgent public needs in order to feed from the general public revenues. It is for this reason that you here in this room are going to have to advise us where to put our money in terms of priorities. Given the limited funds available, you must tell us whether to choose to first improve airport capacity or access to airports and is it more critical to improve access for people or freight? You in the freight moving industry generally must tell us whether the time has come to let up on improving our highway system and instead make substantial improvements in urban distribution of freight.

It has been estimated by State highway departments in 1968 that rural and intercity highway needs would be twice as much for the post interstate (1973-1985) period as the current (1965-1972) rate of expenditure. Thus, we may have to make a choice of whether to continue to improve intercity highways on the basis of projections such as these, or to allocate additional resources to urban areas.

These are not easy choices and they are not ones that can be made unilaterally either by you or by us. Together, through joint planning, we can ascertain our priorities and so concentrate our efforts that we will be able to make a strong enough case that we will be able to receive the funds necessary for the continued expansion of a transportation system that will be balanced to the benefit of all modes.

NEW CIVIL RIGHTS BATTLEGROUND

HON. CHARLES C. DIGGS, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, May 26, 1969

Mr. DIGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Ronald Sarro, from the May 21 edition of the Washington, D.C., Star.

NEW CIVIL RIGHTS BATTLEGROUND (By Ronald Sarro)

CHARLESTON, S.C.—Mary Moultrie is a soft-spoken, almost shy black woman who is trying to move a mountain of Southern tradition and economic power.

The 27-year-old nurses' aide, a native of Charleston, where the Civil War started 108 years ago, is the leader of workers who have been striking two hospitals in this city of 80,000—half Negro, half white—since late March.

"She has always been quiet," said a fellow worker at the South Carolina Medical College Hospital. "But she was brave enough to take the leadership."

The 500 hospital workers, mostly Negro women, went on strike over union recognition, discrimination and wages. Since Miss Moultrie took them out, there have been these developments:

The Southern Christian Leadership Conference, which had other civil rights plans for the spring, has committed itself to helping the Charleston strikers indefinitely.

The AFL-CIO Executive Council last week established a Charleston Hospital Strike Fund with \$25,000, and urged all affiliates to support the strike.

United Auto Workers President Walter Reuther has given \$10,000 to the strikers as

a "down payment," and is providing \$500 a week to SCLC to aid Charleston activities.

President Nixon has sent Justice Department representatives here to apprise him of strike developments, and has called for the disputing parties to "resolve their differences in a calm atmosphere of mutual good faith."

Seventeen U.S. senators have urged Nixon to send a federal mediator to Charleston, emphasizing that the strike "is a test of the principle of nonviolence at a time when many in America are losing faith in that principle as a strategy for social change." South Carolina's two senators objected.

A Mother's Day rally and march supporting the strikers was attended by 7,000 to 10,000 persons, including union and civil rights officials from throughout the nation and five congressmen. SCLC officials said they were surprised by the number of Charleston whites who hand-signaled the "V" for victory during the march. "We've never had this in a Southern town," said the Rev. Andrew Young, executive vice president of the SCLC.

What started out essentially as a labor dispute has developed into the number one civil rights test of the year. It promises to equal Montgomery, Selma, Birmingham, and Memphis as a milestone of the movement led by SCLC.

It is a test, too, for South Carolina and Charleston, where the first shots in the Civil War were fired against Fort Sumter 108 years ago.

Charleston and South Carolina have so far escaped the major racial confrontations that have hit other areas. The city has always prided itself on its genteel heritage. Now the lines are drawn and they are hardening.

Says Gov. Robert E. McNair: "This is a test really of our whole government system as we have known it in South Carolina."

"Before we are finished," says Reuther, "we are going to have the governor of this state catch up to the twentieth century."

Although the workers have been seeking union recognition since last August, the crisis didn't develop until March 17, when 12 of them, including Miss Moultrie, were fired in a dispute with hospital officials.

As a result, about 400 janitors, kitchen workers, laundry workers, maids, nurses' aides, orderlies and practical nurses walked out of the 550-bed Medical College Hospital, largest of six in the city, on March 20. Another 100 struck Charleston County Hospital, which is the city's second largest with 150 beds, on March 28.

Both hospitals have been struggling along since with the aid of volunteers and extra duty by working employees. The College Hospital has cut back its patients by 35 percent.

The conflict boils down to this: The workers want Hospital and Nursing Home Workers local 1199B or some other agreed-upon association to represent them. The state's policy is that union recognition for any government employee is against the public interest.

Union officials say meetings with Gov. McNair are fruitless, and the latest attempt—on May 8—to get the workers and hospital trustees together disintegrated in a dispute over the presence of national union officials.

The prospect for another meeting? "We have met with Miss Moultrie before," said William Hoff, a vice president at the Medical College.

Meanwhile, Charleston's economy has been crippled by the effects of the strike.

UNIONISM AT ISSUE

There has been sporadic violence, and about 300 state highway patrolmen and 700 National Guardsmen have patrolled the city day and night since April 25, when they were sent in to curb the threat of further violence.

A curfew has been in effect since May 1.

More than 650 persons have been arrested on charges of violating the curfew of a court injunction, which first prohibited strike activities, then was modified to allow picketing.

The stakes in South Carolina are considerably bigger than those sought by the hospital workers alone. Only about 7 percent of the workers in the state are unionized, despite its growing industrial development.

Textile magnates fear the labor movement could spread in a state where cheap labor and a "right to work" law have helped attract industry. State and local government officials fear all government employees, from garbage workers to teachers, would organize once the door was opened.

The union movement, with its support from civil rights and union officials, has been severely attacked. Leaders have been accused of Communist connections, "using" poor people, and Nazi and Mafia tactics. Local newspapers and politicians have emphasized what they see as divisions in the movement.

Racial slurs from the patrolling troops—most, if not all white, and many from rural areas—are not uncommon.

But the strikers' supporters vow to stand by them to the end.

Dr. Martin Luther King's widow, Coretta, and 13 other civil rights leaders issued a public statement saying, "We view the struggle in Charleston" as "part of the largest fight in our nation . . . against all forms of degradation that result from poverty and misery."

The Rev. Ralph David Abernathy, SCLC president, told the strikers, "As long as there is life in my body, I will never desert you until you are recognized."

When asked the minimum the strikers would accept, Mary Moultrie said, "We are going to have to have some kind of recognition" even if it is only some kind of grievance committee.

WAGE RISE SOUGHT

On wages, the strikers seek an unspecified increase in their \$1.30 an hour minimum, which hospital officials say most exceed handsomely and which is scheduled to rise to \$1.45 on July 1.

Unless the dispute is settled soon, South Carolina could be in for greater economic losses and mounting tensions as the summer gets hotter.

SCLC could get serious about a boycott of stores it now describes as "half-hearted." And it is the kind of fight that could attract college students who soon will be getting out of school for the summer.

In the battle, the county government, which has a similar policy against unionizing, is letting the state government fight it out with the strikers. Most of the strikers' attacks are aimed at the governor, and the Medical College and its president, Dr. William M. McCord.

McCord is quoted as telling Business Week Magazine, "I am not about to turn a \$25 million complex over to a bunch of people who don't have a grammar school education."

Union officials say McCord has upset scheduled meetings with them, and they point to a staff memo he sent out saying:

"I have notified this union that I am sure that a majority of you would not want to get mixed up in an outfit such as this and I, of course, have no intention of meeting with this tobacco workers' union."

The parent union also represents tobacco workers.

McNair is backed by 16 statewide business and industrial groups and a resolution of the state Legislature.

In addition to state policy, the governor's office also points to the scheduled increase in the hospital workers pay, saying the strikers' demand for bargaining would upset plans to equalize pay for similar jobs.

The scene of the dispute is a quiet Southern city which boasts the traditions of the Old South. It is noted for its magnolia, cypress and azalea gardens and old plantation

mansions. The Cooper and Ashley Rivers flow by the city into Charleston Bay, where Fort Sumter is located on an island.

Miss Moultrie went to Burke High School in Charleston and has lived in the same area all of her life except for five years in New York City. She has been a nurses' aide for three years at College Hospital.

Her movement to organize workers there started in January 1968, after three practical nurses and two nurses' aides were fired, then reinstated.

Workers started discussing a union and meeting weekly with organizers, Miss Moultrie said, and in August, a letter was sent Dr. McCord asking for an initial meeting to discuss a union. Other meetings—with the governor, citizens groups, "anyone who could help us"—followed.

A key session was set for 10 a.m. on March 17 which led to the strike.

UNION FOES AT TALK

McCord brought eight workers all "definitely against the union," Miss Moultrie said, and she and her committee of seven objected.

And, because she had informed her membership of the meeting, some 265 on-duty personnel also showed up. McCord called off the session, the workers staged a sit-in, police were called and they returned to work by noon.

At quitting time, Miss Moultrie and the 11 others who worked on the same floor with her were dismissed because of the incident—for abandoning patients on an entire floor.

Miss Moultrie said she then asked for help from the SCLC. "There was no other group we could think of, and then do it in a non-violent way," she said.

But as strike activities increased, with marches and rallies and scattered violence, tension in the city rose, and Gov. McNair first sent in the patrolmen and Guard, then on May 1 put into effect a 9 p.m. to 5 a.m. curfew.

The parking lot of the Francis Marion Hotel on Calhoun Square looks like a used car lot for police cruisers. In the lobby, where there is a display of Civil War antiques including a rebel flag, police gather and trade stories and eat.

But "we wouldn't have any business at all if the highway patrol wasn't staying here," said the owner of the hotel, reflecting the bitter complaints of other hotelmen, cab drivers and bar owners about the way business has fallen off.

F. William Broome, executive director of the Charleston Chamber of Commerce, minimized the effect of the strike on the city's business in general and its \$34-million-a-year tourist trade. "Only four or five conventions actually cancelled," he said, although he acknowledged a heavier impact on night-time business.

PRESSURE DISCOUNTED

He maintained that business in Charleston was not putting on pressure for a settlement. Businessmen are more concerned with principle than economics, he said.

On May 12, McNair shortened the curfew hours to 11 p.m. to 5 a.m. Wayne Seal, his press secretary, said:

"Businessmen have been suffering pretty badly financially. We want to keep the economy moving."

SCLC officials say the situation ultimately is going to have to be settled by the businessmen.

"It is only when you create the same kind of a crisis in the life of the community as you have in the lives of the workers that the community will give in," Young said.

The official center for this community's business, the city hall, is, like many buildings here, historic. It was built in 1801 as a bank, with solid brick walls. The city council chamber doubles as a gallery for portraits of Southern heroes.

Presiding as mayor the past 10 years has

been J. Palmer Gaillard Jr. A Democrat, he supported Republican Richard M. Nixon for president last year. He is a longtime friend of the area's congressman, conservative Democrat L. Mendel Rivers.

On the strike—an issue between the state and its workers—Gaillard is a man in the middle in a racially split city where political futures could be decided by a man's stance during the dispute.

Asked where he stands, he said hospital officials and the state "made it abundantly clear they will not recognize the union." What will eventually happen, he said, is that the workers and administrators will get together and talk it out.

STREETS CLEARED

Gaillard set up a special committee, not to recommend a solution, but "to get the problem off the streets and onto the conference table." But it failed in its attempt to get the two sides to a meeting.

Despite the businesses losses, the curfew and troops "did the trick," he said. "It cleared the streets and got the troublemakers off the streets."

The chief of Charleston's police, John F. Conroy, agrees the troops have prevented violence from erupting.

"I don't question their sincerity in not wanting violence," he said of the SCLC. "I question their ability to prevent it."

Conroy, a native of New York State who was a Marine for 22 years and studied criminology at Florida State University, is in his rookie year as chief of the 150-man department which includes 22 blacks.

He and the SCLC have one big thing in common—they find each other easy to work with, as he puts the emphasis on restraint.

He has used plainclothesmen to hold down vandalism and small fires, instead of more provocative uniformed men in cars with flashing lights. He did not make arrests when stragglers in the Mothers Day march technically violated the 9 p.m. curfew.

Over-all, he said, "We are trying to avoid the racial aspect of the thing and keep it in the labor context—a dispute between the workers and the hospitals."

The labor headquarters for the strikers is the Retail, Wholesale and Department Store Union's hall at 655 East Bay St.

NEW YORK MINIMUM

The local, 1199B, is named after another arm of the RWDSU, Local 1199 in New York City, which was formed 18 months ago to represent hospital workers ranging from janitors to research technicians. Last July it negotiated a \$100 a week minimum covering 30,000 workers in private New York City hospitals.

The rundown union hall here—a former VFW building which has several bullet holes in the walls, apparently from some of the livelier dances—is the scene of constant activity and daily meetings.

Many of the strikers start coming in around 6 a.m. They help process contributions and handle a growing number of union applications coming in from other parts of the state.

The strikers are allowed two meals a day, plus snacks, and \$15 a week in benefits. Churches and members of the community help keep them in food.

There are outdoor rallies at churches and almost daily marches led by SCLC officials along King Street, a main business street where the featured attraction at the Lincoln Theater last week was "Uncle Tom's Cabin."

At one union meeting, in February, Mrs. King said, "My husband always used to say that 1199 was his favorite union because 1199 is always out front, always in the lead in our battle for justice . . . You see a nation in which two million hospital and nursing home workers earn as little as \$50 or \$60 a week and you want them to do better . . ."

Beyond Charleston, there is the prospect

of organizing the more than 2 million similar hospital workers throughout the nation—many of them blacks, Puerto Ricans and poor whites—who constitute the largest bloc of unorganized workers in the nation.

As one of the signs carried in the Mother's Day march said: "The world is watching 1199 B."

LAW DAY ADDRESS OF HON. ROBERT E. JONES OF ALABAMA

HON. WALTER FLOWERS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 26, 1969

Mr. FLOWERS. Mr. Speaker, a colleague, Hon. ROBERT E. JONES of Alabama, delivered the annual Law Day address to the Huntsville and Madison County, Ala., Bar Association earlier this month.

His remarks trace the contributions of the legal profession to the development of political thought in our Nation. He included the great contributions of the legal profession of Madison County to the development of the State of Alabama and our Nation in his comments.

So that all of my colleagues will have a chance to read Congressman JONES' remarks, I submit them for inclusion in the RECORD as a part of my remarks:

REMARKS OF REPRESENTATIVE BOB JONES TO THE BAR ASSOCIATION OF HUNTSVILLE AND FEDERAL BAR ASSOCIATION, HUNTSVILLE, ALA.

I am honored to be with you tonight for the 12th annual observance of Law Day.

It is a pleasure to visit with you at any time.

I agree with the philosophy often expressed by Harrison Tweed, one of the wise leaders of the American Bar, who has been quoted as saying that lawyers are more fun to do business with, to talk with, to dine and to drink with than any other people on earth.

The reason lawyers are more fun to be around than any other people on earth is the vital and significant role they have taken in politics, that is, in the conception and implementation of institutional forms embracing the changing economic, social and legal thought which is the foundation of our progress and prosperity today.

This has been true from the earliest days of our country.

Lawyers and the law were important to the early colonists who left the cities of Europe for the wilderness of the new world.

Lawyers gave immortal eloquence to the resentment of the English colonists against the denial of their rights by the British Crown. Lawyers channelled and directed the passionate protest which led to independence. The wisdom of lawyers hammered out what Gladstone described as "the most wonderful work ever struck off at a given time by the brain and purpose of man"—our Constitution.

Even laymen today recall with respect the names from those early days—John Adams, Robert Treat Paine, Thomas Cushing, Thomas Jefferson, Patrick Henry, James Madison, Richard Henry Lee, John Jay, John Marshall and others.

This formative period has been called the "Golden Age" of American law and the American legal profession. The creative legal accomplishments of this period are favorably compared with the legal achievements of any epoch in Western history.

This was a period concerned with the application of traditional legal materials to the

specific American circumstances. The lawyers argued, displayed, and determined what was applicable and what was not applicable to the new and unique American social scene.

They created an apparatus of rules and precepts equal to the early American life. Thus, the young legal profession helped the courts in developing and stabilizing a body of laws and in so doing rose to unprecedented heights of professional excellence and accomplishments.

Later, the legal profession displayed extraordinary ingenuity in devising the legal forms and concepts—corporate arrangements, common and preferred stocks, bonds secured by corporate mortgages, and unsecured debentures—that brought together the aggregations of men, money, and machines which produced our high standard of living and throbbing economic power.

In Madison County the contributions of the legal profession to the development of our nation and our state have been many. Undoubtedly, the record of Madison County attorneys exceeds that of any other area in our state.

The brilliant record extends all the way to the U.S. Supreme Court. From 1837 to 1852, John McKinley was a Justice of the High Court. Judge McKinley had practiced law and served in public office from Madison County before election to the Congress and to the Senate.

The first Chief Justice of the Alabama Supreme Court was from Madison County. The Honorable Clement C. Clay, who also served as Governor of this state, United States Senator and Member of Congress.

Madison County's history for providing outstanding lawyers to the United States Senate is remarkable. In addition to Judges McKinley and Clay, Clement C. Clay, Jr., John W. Walker, Jeremiah Clements, Lewis E. Parsons, and of course, John J. Sparkman, have all served in the United States Senate.

Five Governors have practiced law in Madison County: Clement C. Clay, Reuben Chapman, Henry Collier, Lewis E. Parsons and David P. Lewis.

There have been a number of Madison County attorneys who have served on the Courts of the State and Nation: Judges John W. Walker, D. D. Shelby and Richard W. Walker were Members of the United States Circuit Court of Appeals.

Alabama Supreme Court Justices from Madison County number eleven, the last of which was Judge Robert C. Brickell.

Members of Congress who were practicing attorneys in Madison County were John McKinley, Clement C. Clay, Reuben Chapman, William W. Garth, William M. Lowe, William B. Bankhead, who was also Speaker of the House of Representatives, and John J. Sparkman.

Madison County attorneys were leaders during the War Between the States, and worthy of particular mention was Leroy Pope Walker, who was Secretary of War of the Confederate States of America.

The first commissioner of Agriculture for the State of Alabama was a Madison County native and prominent attorney, Edward C. Betts.

Madison County has had seven Presidents of the Alabama Bar Association, beginning with Milton Humes, who served twice, and followed by Daniel Coleman, John D. Brandon, D. D. Shelby, W. L. Clay, Lawrence Cooper, and now Patrick W. Richardson.

In more recent years, outstanding Madison County attorneys and leaders of the State Bar included Tancred Betts, General Edward C. Betts, Earl Smith, Paul Speake, Robert E. Spragins, James H. Pride, David A. Grayson, George P. Cooper, Schuyler H. Richardson, Milton H. Lanier, Addison White, M. U. Griffin, Douglas Taylor, Edward D. Johnston, Clarence L. Watts, Robert K. Bell, John R. Thomas, Elbert H. Parsons, and Walter J. Price.

By training, by temperament and by practice, we, as lawyers, evidence and excell in the same qualities characteristic of those who created the instruments which give order to our lives.

We are persistently concerned with the resolution of disputes and the organization of human endeavors in ways that enable a society to achieve its goals with a minimum of force and a maximum of reason.

In this regard, I would like to commend the President for his balanced approach to the most disgusting situation in our country today—the violence and destruction on college campuses. The President has called on college officials to meet student dissent with flexibility and student violence with backbone.

In each case of student turmoil, the aim of student violence has been to take by force that which cannot be gained by reason.

The terror of the violent few must be matched by firmness and reason on the part of college officials.

Neither educational institutions nor any other element of our society can long function under the violence and force of a disorderly mob. Nor can it compromise with criminal offenders.

Whether we deal in constitutional issues, advice to corporations, collective labor agreements, or wills and domestic relations, we are concerned with the rules and forms of human organization—helping people live together not by power but by what reason tells them is just.

As lawyers, we are trained in expression, experienced in the formulation of ideas and in the draftsmanship of documents of public and private interest.

We have the ability to step back from a problem and take an independent and unemotional view. From this stance, we can engage our experience and training and speak to the issue unfettered by the self-interest which is sometimes attributed, often unjustly, to other groups and professions.

In view of the traditions and the vast reservoir of talent and ability in the legal profession, can we, as individuals or as a group, find the acclaim today that was accorded the lawyer in earlier times?

We face a challenge which exceeds the day-to-day demands of the business of practicing law. It is also part of our job as lawyers to guide political thought and political response to the vast public issues of our day. To do less would be a disassociation to the cause of our profession.

Requirements for progress with public order and reason lead us, as a profession, to be architects of public endeavors. This has been true in the past. We dare not abandon this role now. We must participate in public issues to fashion the future design of our Republic.

I am aware of the trends toward specialization with the legal profession. The cause of the trends, the increasing complexity in modern life, makes it even more incumbent on lawyers, legislators, doctors, and every other segment of our society to devote more attention to the politics of the community.

The building of our nation did not stop with this ratification of the Constitution or the addition of the 50th state. In our area, we have hardly begun to realize the potentials which can be ours.

Huntsville has always been one of the strong centers of the legal profession in Alabama as well as a center of commercial activity.

Thoughtful consideration of the advantages in our area leads to the conclusion that we have more reason than most to realize an increasingly greater share of our nation's future growth.

We have the people, intelligent, industrious, and eager;
the land, in quantity and in quality;
the power, economical and in great supply;

the transportation facilities, varied and well-connected;

the rising personal wealth, increasing at a greater rate than the national average; and, perhaps most important, the water tamed, of superior quality, and amazing quantity.

We also have a three-pronged scientific base which anchors our claim for an even larger share of the future.

At the forefront of world technology in their respective fields are the George C. Marshall Space Flight Center here in Huntsville with vast accumulations of scientific talent; the TVA's Browns Ferry nuclear power plant a few miles to the west, which introduces a new technology and power into the Valley; and the TVA's National Fertilizer Development Center at Muscle Shoals, which is advancing the science, engineering, and economics of food and fiber production.

The foundations of our area are so firm, the prospects so great, that we can only be deterred by drastic upheaval or a concerted effort to hold back progress.

As lawyers, you will share in this improved standard of living and increased prosperity.

Because of this, and especially because lawyers, by training, temperament, and practice, have leadership qualities found in no other group, there is an obligation, to self and to the community, to see that the changes which will and must take place are timely and based in reason, order, and justice.

There is a middle ground between the strict practice of law and full-time public service as a judge, legislator, educator, or government official. It is the middle ground where each of you can use your special talents with benefit to others and to yourself.

Many of you are called on to serve on the boards of schools, colleges, hospitals and charitable organizations. Here your qualifications bring about more orderly administration of the work of the institution itself and a better relationship with other individuals, organizations, and governmental bodies.

Many of you devote part of your time to the vital work of your bar associations. The importance of this work which involves the public interest will gain in public acclaim through improvement of the law and the courts and advancement of justice under changing conditions.

Changes will take place in the institutions of our nation and our community with the increasing population; greater urbanization; more concentrated use of rural areas of production, recreation and residence; increased industrial development; heavier demands on natural resources, and greater levels of affluence.

Lawyers, probably more than any other group, realize that men living in close proximity must rely on the rule of law to bring orderly process into a society.

Changes of this nature present a great challenge to your vision and to your skills as a lawyer in devising the instruments of government and commerce which fall into a political framework acceptable to the people. The challenge is as diverse as the many social, economic, and legal problems which face our citizens.

The opportunities are equally diverse for engagement of the special vision and skills of lawyers to bring orderly conduct in the affairs of the community.

By speaking out and helping to clarify the fundamental issues of our period, lawyers can lessen the sense of despair which seems to grip many individuals in the face of major social and economic trends.

As lawyers, we bring unique advantages to the public forum in background, training, practice and tradition of dedication to the public interest.

These unique characteristics can be engaged to muster public understanding and support for solutions to the problems which will be superior to those now facing our nation.

There has never been a time when we could put our skills to such productive good in helping channel the vital forces at work in the community along the lines of reason and justice.

In addition to helping clarify the issues, lawyers have unique opportunities to play a vital role in the development of programs essential to orderly public growth. This involves developing and updating the requirements of our society in keeping our communities habitable and, hopefully, even more attractive, pleasant, and enjoyable.

This may deal with such every-day things as adequate housing, water supplies, or proper disposition of wastes. The changing conditions may call for fashioning of new institutional forms or the adaptation of the old to meet the new needs. It involves the very basic problem of making government in a free society the effective servant of the people.

A fitting challenge to public service was issued by a legal scholar of a century ago, Horace Binney. He observed: "If a lawyer confines himself to the profession and refuses public life, though it is best for his own happiness, it makes sad work with his biography. You might almost as well undertake to write the biography of a mill-horse. It is at best a succession of concentric circles, widening a little perhaps from year to year, but never, when most enlarged, getting away from the original center. The life of the best practical lawyer that ever lived, if confined to the history of his practice, would in general be truly summed up as the biography of a mill-horse."

Breaking from the unending circles of the mill-horse is not the task of the lawyer alone. The lawyer, however, is best prepared by tradition, training, and practices to chart new and exciting courses for the community with reason and order.

I urge you to maintain the leadership of the profession in originating and developing the political framework which will assure the realization of the greatest potential.

INDEPENDENCE DAY OF THE REPUBLIC OF GUYANA

HON. ADAM C. POWELL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 26, 1969

Mr. POWELL. Mr. Speaker, we take this opportunity to send warm felicitations to the Prime Minister, Forbes Burnham of the Republic of Guyana; and Guyana's Ambassador to the United States, Sir John Carter, on the occasion of the third anniversary of Guyana's independence.

On May 26, the Republic of Guyana celebrates the third anniversary of its independence. I would like to take this opportunity to extend my best wishes to Prime Minister Forbes Burnham and all cities of Guyana on this important day.

Guyana, formerly a British colony, is located on the northeastern coast of South America. Originally discovered by Columbus, Guyana has been ruled in turn by the Dutch, the French, and the British.

This English-speaking country of Latin America has a population of 700,000. In

composition, the country is 50 percent of East Indian descent, and 30 percent of African descent, a division which has led to many years of racial strife and difficulties. The topography of the country has forced the vast majority of the population to live along the coastal plain. It is also on this coastal plain that the major agricultural exports—sugar and rice—are grown, and the major mineral exports—bauxite and manganese—are mined.

For many years progress in Guyana has been stifled by unrest. Since gaining its independence in 1966, Guyana has been barraged with both internal and external threats to its nationhood. Border disputes with neighboring nations, internal secession attempts, and racial unrest have all threatened the stability and progress of this developing nation.

The task of Prime Minister Burnham since he first came to office in 1964 has been to reduce the tension between the two major racial groups. In his victory in the elections of this past December, Prime Minister Burnham was able to gain support from both major racial groups, and all three major political parties. This unified his country for the first time behind his goal of "peace and economic progress."

The potential for progress is great indeed. Guyana now cultivates only 1 percent of the total land area. Ninety percent of the Guyanese live on 5 percent of the land. Recently, attempts have been made to open more land to agricultural production. The many rivers of Guyana are a potential source of hydroelectric power. Preliminary exploration of the interior undeveloped area indicates great mineral deposits.

In addition to these natural resources, Guyana has great wealth in human resources. Recent figures state that Guyana has a literacy rate of 86 percent. The gross national product is \$300 per capita, well above that of most developing countries.

Clearly, Guyana has both the human and the natural resources necessary to become a stable and prosperous nation. We wish the Guyanese great success in the work begun by Prime Minister Burnham and his people in 1966. May the goal of "peace and economic progress" espoused by the president in his recent campaign soon be attained.

FARGO SENIORS HEAR INSPIRING MESSAGE

HON. ED EDMONDSON

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 26, 1969

Mr. EDMONDSON. Mr. Speaker, I recently had the opportunity to read an unusually fine and inspiring commencement address delivered at exercises for the graduating seniors of Fargo High School, in Fargo, Okla.

The address, delivered by Mrs. Margaret M. Larason, is rich in common-sense and love of country.

I believe my colleagues and many others will enjoy reading it, and will thank Divine Providence that such a message is being delivered to young Americans in this year of 1969.

The text of Mrs. Larason's fine speech follows:

COMMENCEMENT SPEECH TO FARGO SENIORS
May 13, 1969

(By Margaret M. Larason)

I hope all of you know how pleased I am to be a part of this important day in your lives, a day to which you have looked forward during twelve years of school.

I understand that all of you are planning to enter college this fall. This is unusual even in these days when a high percentage of graduates continue their education, even unusual for this school which has always exceeded state and national percentages in the number of our students who continue their education. This fact says a great deal for you, your parents, for this school and this community.

Tonight all of you are concerned about the future, not some far-off future, but the future that has arrived . . . the tomorrow that has suddenly become today. You are thinking about how you will make a living, and you are thinking seriously about the kind of life you want to build for yourselves and the family you expect to have. This future is what I want to talk to you about. We can not move backward; we must go forward. There is no exit but the future, and it will be the kind of future you make it.

First, how will you make a living? I think you probably realize tonight that the diploma you will be handed is a piece of paper with little intrinsic value. What is important is what you have learned, what you can do. To an even greater degree is this true of college training. You must use these next few years to learn a skill or prepare for a profession. I have no doubt that all of you will find a productive place in society. However, I want to urge you to consider career choices that serve a useful purpose, that serve mankind in a broad sense. Man's work, to be worthwhile, to be significant, must do more than provide a livelihood.

The immediate future consists of your years on a college campus. I could not speak tonight and dodge the painful question of what is happening on the campuses of our nation. It is imperative that we look at this situation, not only because of its effect on you during the next four years, but also because this activity has implications far beyond the college campus; it has a direct bearing on the life you will make for yourself and your family, a direct bearing on the world in which we all must live.

Let's look at the causes of the student unrest, at the groups involved in the disturbances, at what they want . . . or say they want . . . and then consider what should be done about it.

The present worldwide wave of student rebellion started in the United States several years ago, partly as a demand for more freedom and power of decision on campuses. It was stimulated, and complicated, by two larger emotional issues—Viet Nam and civil rights. To gain a proper perspective, we must separate the groups that are agitating for changes and reforms, and who have, in the process, engaged in violence and unlawful procedures.

First, we have the Afro-American group which has brought force to the campus. This racial issue is a part of the greater struggle by this minority group for civil rights. Next, we have a very small but radical group, generally belonging to one of the far-out, far-left, student organizations. Some of these people are self-avowed revolutionaries, dedicated to destroying institutions and democratic procedures. Then we have groups of

students who are asking for specific changes in specific institutions; many of their proposals are legitimate requests. Finally, we have a group of idealistic students who perceive a great gulf between their concept of the world as it should be and the world as it is. These students dream of a society in which there is no poverty, no war, no injustice or inequalities. They look at our world and find it lacking in all these areas. We look at the same world, from our vantage point of experience, and say it is a better world than that of fifty years ago, or forty or thirty years ago. We have progressed far since the days of the depression. We have seen the change from a root-hog-or-die social concept to one where we take the responsibility, as a nation, for the welfare of the poor, the disadvantaged, the crippled, the handicapped. We have watched the growth of labor movements that have provided legislation to protect our working people. We have watched the growth of civil rights legislation that is designed to protect the rights of our minority groups and to give them equal rights under the law. We can look back on our work and say it is good. Youth looks at our work and says it is not good enough.

Idealism and reform movements are perfectly normal and desirable. But the danger lies in the fact that these idealistic youngsters are being pulled into the whirlpool of disorderly procedures and unlawful acts by the radical elements.

It is one thing to recognize and face the troubles that beset our society. But these ills are not insoluble; they are not direct threats to the very existence of the nation. They can and will be solved by the people of this nation, by the youth of this nation, through orderly processes of civilized law and order.

We must not completely disregard these voices of protest or the student wish to be a part of policy making, to be heard. Student participation can be beneficial; student involvement in politics should be encouraged . . . but student abuse of the democratic processes must be resisted.

What do these students want? Here again the demands vary from one institution to another. Some people attempt to compare the student power movement with the civil rights movement. But there is one important difference: students will not always be students, but the Negro will always be black. What these militant students want, what they think, not only are the issues involved on campuses today, but also are the issues they will take with them into the adult world when they cease to be students. Some of these demands strike directly at the foundation of our educational system. Some students demand no entrance requirements, no rules, no grades . . . someone said what they were looking for was not a university but a honky-tonk. Other students are protesting the draft system, demanding elimination of ROTC on campuses, and openly defying all recognized authority. These issues strike at the very foundation of our nation.

There is an all-important difference between student advice and student control, a difference between legitimate requests and civil disobedience, a difference between petitions and riot, a difference between protest and guns. We must restore order on our campuses.

I ask you, what would have happened after Pearl Harbor without this great reserve of trained civilian soldiers, trained through ROTC courses in our colleges and universities. I ask you, what would have happened after Pearl Harbor without this great army of patriotic young men who quietly closed their textbooks and walked to the nearest recruiting center. From colleges and universities, from high schools all over the country, from this high school, fine young men walked through those doors and down those steps to join in defense of their country. What would

happen if we had a Pearl Harbor tomorrow, with our universities infiltrated with revolutionaries who feel no responsibility to their country, who defile the flag and burn draft cards publicly. These students by their acts repudiate their heritage and ridicule all those who served in that fight for survival as a nation.

I quote from a speech given last week by a young public official at the 50th anniversary of the founding of the American Legion in Oklahoma: "I do not want to put my stamp of approval on war. But I am not for peace at any price. If you can't fight for this country, at least serve it. And if you can't love it, leave it."

What has all this to do with us, you ask. It has this to do with you—you are going to have to get involved in this struggle, on the side of law and order, or the life you want to build will bear little resemblance to the reality.

Never before has it been so clear—that the decision and responsibility for the future rests squarely on the shoulders of the new generations. You can not dodge, you can not evade the decisions: There is no exit but the future. The kind of future is up to you . . . and you are the ones who will have to live in it.

Let me tell you a story; you've probably heard it before, but it makes my point. There was once an old hermit who was known far and wide for his wisdom. One day a youth decided to test that wisdom, so he approached the hermit with a bird held in his hands behind his back. "Tell me, old man, what is it I have in my hands behind my back?" "A bird," the hermit replied. "It is alive or dead?" asked the youth. The old man thought for a moment, for he realized that if he said the bird was alive, the boy would crush it to death; but, if he replied that it was dead, the boy would allow it to be free. Finally he answered, "It is as you would have it." It is as you would have it.

Approximately four million high school seniors are graduating tonight. Almost two million of these will go on to college next fall. This is a terrific force, for good or evil; a tremendous power if used for order or for disorder. It is as you would have it.

People like us, from rural areas like this, give stability to existing institutions, to government itself. We have always been the counter-balance against excess.

Middle class people like us—rural people like us—people who respect the heritage of the family, people who have a firm belief in God, people who honor their country, people who have to work for a living—these are the people who have given stability to our nation. You youngsters with your innate respect for authority, with your love for family and country, I say you are the ones who can and will continue to give stability to our land. Areas like this community are the true pockets of hope for our nation. It is as you would have it.

Students from communities such as this far outnumber the rebellious minority. For the one person who rejects his national heritage by burning his draft card, communities like this will supply hundreds who are willing to accept their responsibility to their country. For the one person who resorts to civil disobedience and destruction of property, communities like this will supply hundreds to bring order out of disorder. For the one person who demands privileges beyond those rightfully his, we will supply people who will correct injustices through established procedures.

Under the Constitution of the United States, no man is above or below the law. Because as a nation we believe in the principle of liberty and justice for all, it becomes increasingly important for us to remember that whatever is done in the name of progress must operate within the framework of the law. Respect for the law and obedience

to it must be an inexorable rule. We, as a nation, cannot survive otherwise. He who seeks respect and protection from the law must give the law loyalty and respect in equal measure. It is as you would have it.

We live in a great nation, the envy of the world. We believe in the rights of the individual to have freedom of religion, freedom of speech, freedom to own property, and freedom to change existing social evils through the ballot box. We believe in the rights of free men everywhere. We enjoy freedom unequalled in any other place in the world. But freedom is not license to overthrow existing institutions; liberty is not a mandate to destroy. Freedom is a sacred trust that carries with it responsibilities and duties. Freedom exists only so long as someone assumes the responsibilities that make such freedom possible.

How much responsibility are you willing to take? How much are you willing to sacrifice? Are you willing to pay the price necessary to maintain our heritage, to keep what is good, and build a better world for tomorrow?

What price are you willing to pay? There are five essentials that you must provide. First is involvement. It is vitally important that you be involved in shaping those forces which govern your life. Get involved—get involved in student and campus affairs and make your voice heard—the voice of moderation, the voice of orderly procedures. And after college, get involved in civic affairs—yes, even in politics. Our system of education, programs for health and welfare, economic policy, . . . our own government and the governments of the world—all these are subject to change and control through individual action with collective purpose. Get involved. All too often the only voices heard are those of the radical.

The next essential is the element of responsibility. If you believe in the system of government under which you live, you have the responsibility to preserve it. This means not only action but responsible action. Two recent events serve to illustrate both kinds of action, responsible and destructive: the Democratic convention in Chicago in June and then in January the inauguration of a new President. We all watched TV with unbelieving eyes as groups attempted to disrupt orderly procedures of government, orderly changes. What we saw on the screen was like a nightmare; it was something that couldn't happen here—but it did happen here. It did happen here. We must take responsible action to preserve our form of government. It is as you would have it.

The third essential is principle. What do you believe in, what principles guide your actions in areas of political thought, moral issues, problems of understanding between different racial and religious groups. These principles of behavior are the ideas and attitudes that have become a part of you. Basically you absorb these values from parents, teachers, church, and community. Be able to say: This is the way I was taught; I believe this is right.

You must have the fourth element, courage, to maintain your principles once they have been established; courage to stand up for what is right, courage to fight down an action that is irresponsible, one not in conformity with accepted procedures, courage to stand up and be counted whether you are in the minority or the majority. Don't be apologetic about coming from a small community, from a small school. Sound ideas and moral principles need no apology.

We now have four of the five keys to the price you must pay to maintain freedom: principles, responsibility, involvement, and courage. The last essential is energy. Here you have a distinct advantage over those of us on the wrong side of the generation gap. As we grow older we tend to put up with things

as they are rather than go through the upheaval of change. But youth has always been willing to accept a challenge. Use this abundant energy in constructive ways to build a better future.

Take the first letter of each of the five essentials and you spell PRICE: P for principles, R for responsibility, I for involvement, C for courage, and E for energy. Those elements truly are the price of living in a free society and preserving that society for your children and your children's children.

It is as you would have it. Such is the power that your generation has over the world. You can crush freedom, you can destroy democracy. . . . or you can let it live: you can take the wings of the morning and soar to new heights of civilization. The decision, the responsibility is yours. This is the price you have to pay for being a new generation of Americans.

In closing, I want to repeat the American's Creed, the creed of an American citizen. I hope this creed becomes a part of you and that you can truly echo these words in your hearts:

I believe in the United States of America as a government of the people, by the people, for the people, whose just powers are derived from the consent of the governed; a democracy in a republic; a sovereign nation of many sovereign states; a perfect union, one and inseparable, established upon those principles of freedom, equality, justice, and humanity for which American patriots sacrificed their lives and fortunes.

I therefore believe it is my duty to my country to love it, to support its Constitution, to obey its laws, to respect its flag, and to defend it against all enemies.

There is no exit but the future. It is as you would have it.

MICHIGAN WEEK

HON. GARRY BROWN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, May 26, 1969

Mr. BROWN of Michigan. Mr. Speaker, in the CONGRESSIONAL RECORD of May 20 I called the attention of my colleagues to the celebration of Michigan Week. Pursuant to my remarks, I am submitting the last two of a series of articles appearing in the latest issue of Michigan Challenge. These articles are one by Leroy Augenstein entitled "Broad View of Education"; and one by Ralph C. Fuller entitled "Tourism Means Fun, Business."

The articles follow:

[From Michigan Challenge, April 1969]

BROAD VIEW OF EDUCATION

(By Leroy Augenstein, Michigan State Board of Education)

Perhaps the greatest attribute of Michigan education is the balance we have achieved between the various levels. That is, we not only have the usual kindergarten through high school programs in all communities, but an almost state-wide community college program, 66 colleges and universities, plus extensive special, vocational, and adult education programs.

This balance is also reflected in the proportion of funds which are allocated at the various levels. For example, Michigan ranks 10th among the states in total income per person, with per capita earnings 110 per cent of the national average. Consistent with this standing, our total expenditure of \$1.7 billion for all educational purposes is 121 per cent of the national average, and our overall expenditure of more than \$600 per pupil (both state

and local) for K-12 programs is 102 per cent of the national average.

Although we have some rough spots, a strong basic framework exists. Both local units and the state government have made an ongoing commitment to develop a broadly-based, well-balanced educational system to serve the needs of people from about five years of age on up.

Even at the K-12 level our almost 2.5 million pupils have a choice of where they can attend. While 86 per cent of our youngsters are educated in the public schools, the other 14 per cent attend the more than 1,000 schools run either by a private corporation or church group. (About 85 per cent of the latter attend schools operated by the Catholic Church.)

The determination of operating philosophy and details in the K-12 program resides at a number of levels. The State Board of Education has the constitutional responsibility for overall leadership of education from pre-school up through the grades, on into college and professional training. The Department of Education then administers the policies established by the State Board. Because of the overall administrative structure, and the fact that approximately 50 per cent of the support for K-12 education is provided locally, most of the major decisions are made by the individual local school boards.

Extensive re-organization and consolidation have been undertaken in the last 25 years to make certain that the local districts can carry out their proper functions. In 1945 there were almost 6,000 independent school districts. In 1948 this number was still more than 5,000, but in the next 10 years this was reduced to 2,300. Today there are only 644 independent school districts, of which 531 operate a full K-12 program.

Interspersed between the state and the local units are 60 intermediate school districts. Administratively this area needs the greatest attention at the moment because some of these units provide extensive services whereas others have little to offer.

Complementing this broadly based program for elementary and secondary education is a very extensive higher education network serving about 350,000 students. Of the 11 public colleges and universities (plus four branch campuses), six have enrollments of 14,000 or greater. Michigan State is the largest with 43,000 students. The character of these outstanding schools differs appreciably.

The University of Michigan, one of the oldest universities in the nation, has a very diverse program with great emphasis on professional training in medicine and law.

Michigan State, which has always devoted considerable effort to extension programs to get information out to the public, has increasingly emphasized research and graduate training in recent years.

Wayne State University, too, is unique in character. It is a major urban university.

Western Michigan, Eastern Michigan and Central Michigan Universities are just now deciding their general character as they determine what areas they should emphasize at the graduate level.

A number of Michigan's colleges have found it necessary to limit out-of-state enrollments. Compared to Michigan a number of other states have put far more of their funds in the K-12 level than in their college programs. This has resulted in their students seeking higher education in Michigan.

In addition to these colleges and universities, funded and operated by the public, there are 51 private colleges and universities. All of Michigan's colleges and universities place great emphasis on teacher training. The state ranked 5th in the nation last year with its production of 13,000 new teachers. Actually six of the Michigan institutions are in the top 16 producers of teachers in the whole country. Michigan State ranked first and Western Michigan second.

In addition to these schools, many students seeking higher education in Michigan are served by our very extensive system of community colleges. There are 28 community colleges now operating around the state, and a total of 32 districts are projected to be in operation soon. In general, there is reasonable coverage except for worrisome gaps in Detroit, portions of the Upper Peninsula, and the Thumb.

Currently, close to one half of the freshman students entering public institutions are enrolling in the community colleges. Of all the students in higher education, approximately one-fourth are enrolled in the community colleges.

Efforts to expand and upgrade the level of vocational education throughout the state are continuing. To coordinate this program with community colleges, the boundaries of most vocational education areas will be co-terminus with those of the community college districts. Of the 531 K-12 school districts, 456 currently operate vocational education programs. In addition, some of the community colleges have vocational programs available either at the secondary or at an advanced level. In addition to these facilities, 152 trade schools have been recognized and licensed by the State Board of Education.

Considerable expansion of adult education programs is needed throughout Michigan, since most workers must be retained three or four times during their lifetime if they are to remain truly productive. Fortunately, 230 K-12 school districts already have adult education programs serving 388,000 people. In addition to this resource, a number of the colleges and universities have extension programs at various campuses and centers. Ten of the community colleges have adult education programs for their communities.

In trying to achieve thorough educational coverage, Michigan has also devoted considerable resources to special education. Approximately 450 of the 531 K-12 school districts have some form of special educational program. In general, this provides approximately 50 per cent of the services needed. However, only 25 per cent of those who receive special education at the elementary grades ever get into a secondary program. Although this must be corrected, it still is considerably better than the national average where this number is less than 6 per cent. Michigan's expenditure on special education is about 4 per cent of the total budget.

Perhaps the most worrisome feature of our present educational structure is that along with other local revenues, the funding for K-12 programs is derived very heavily from the property tax. Many taxpayers, "fed up" with taxes at the federal and state level, find that the local educational millage is the only tax which they can vote against. Thus, last year we lost one third of our millage votes. To further complicate the situation some districts approve high millages but cannot provide proper educational opportunities for their children simply because they do not have an adequate financial base. (The actual dollars behind each child varies by about a factor of 30 from the richest to the poorest district.) As a consequence, 74 of our school districts were in debt at the end of last year. Additional ones will be in debt this year (Detroit may go in the red \$5-30 million) and so approximately 20 per cent of our youngsters are on either half-day sessions or greatly curtailed schedules.

A number of proposals have been made to change this funding pattern. Although the present scheme has drawbacks, one of its very important virtues is local control, since approximately 50 percent of the funds come from the local districts.

The State Board of Education is also wrestling hard to establish methods for

assessing whether or not our elementary and secondary students are receiving the education which they need in today's complex, technological world. And whether the taxpayers are getting their dollar's worth.

Like all states having large cities, the educational attainment of our ghetto youngsters is far below what we desire and what they need to compete in society. Unfortunately, many of the students graduating from our inner-city high schools—like those throughout the country—have an average competence level of only 7-9 grade. It is no wonder so few of them are able to get good jobs or go to college. Hopefully, with more adequate funding of special programs for disadvantaged youngsters and the establishment of needed community college facilities in Detroit, we will be able to break the vicious cycle of ignorance breeding ignorance and incompetence perpetuating incompetence.

There are some additional yardsticks which indicate that we need to upgrade our quality of education in other K-12 areas. For example, recently Michigan has ranked low in terms of the number of merit scholar semifinalists, and the number of Westinghouse science talent search finalists which we have each year. Also, while our youngsters are just slightly above the national average in terms of securing advanced placement when they go on to college, still only one-fifth as many of our students secure this advantage as is the case for students from the ten best states in this regard. Also, far more of our young men are flunking the pre-induction mental tests given by the Armed Forces than is the case for some neighboring states.

It is our hope that within the next year or two we can develop an assessment system which will not place the local districts in an unwarranted strait jacket, but will begin to give indicators to people in many walks of life as to whether education is doing its job, and if not, what can be done to correct the situation.

In summary, Michigan has striven for broad, in-depth coverage by making education readily available to practically all of its interested citizens. While there are some rough spots in our various programs, we are aware of these. Hopefully, within the next year or two, real inroads can be made in re-vamping our funding schemes, and also in assessing and improving the overall quality. Basically, education in Michigan is a very healthy patient, which needs an enrichment of diet and a few vitamin pills to bring it up to the pink of condition which we all desire.

TOURISM MEANS FUN, BUSINESS

(By Ralph C. Fuller, chairman, Michigan Tourist Council)

During the past decade, spending by visitors bent on recreational travel in Michigan has almost doubled, reaching an all-time high in 1968 of \$1.17 billion. Of this, more than \$75 million was returned directly to the state treasury in the form of tourist-generated tax dollars.

Concurrent with this, from 1958 to 1968, the annual budget of the Michigan Tourist Council invested to advertise and promote Michigan's vacation opportunities was increased from \$416,000 to \$1 million.

The volume of dollar return in relation to dollar investment is part of the Council's amazing success story and reflects an actual net profit of \$74 for every dollar put to work. Unique in state government, it is a dollar-producing agency that helps to support important state agencies such as mental health, education and other vital programs serving the public needs.

Historically, the investment of money in the promotion of Michigan tourism has always produced enormous profits. As early as 1950 the Council's budget of \$250,000 produced \$400 million, a generous amount of

which was turned back to the state in collected taxes.

Much of the success of the Council programs can be traced back to strong, well-planned, aggressive promotion and to the system which makes it work.

Currently, \$240,000 of the Council's budget is distributed among the four regional tourist associations on a matching-fund basis. The \$60,000 each association receives annually is tagged for promotional and advertising purposes only and cannot be touched for overhead costs or any other administrative expenditures.

Dovetailing with the financial and promotional arrangement, each of the secretaries-managers of the associations, who are elected to that position by their individual association memberships, become permanent members of the nine-man policy making Michigan Tourist Council. The remaining five members are appointed by the Governor to rotating five-year terms. Senate confirmation is necessary.

The remainder of the budget is spread among the various Council programs which include advertising, publicity, field promotion and administration. The lion's share, of course, is allocated to advertising which is the backbone of the Council's efforts. Administration receives the least.

The advertising budget is spent primarily for magazine insertions at national and regional levels, supplemented by a strong television and radio level, announcement schedule placed in midwest markets.

The Council's publicity section produces news features and releases about Michigan's vacation facilities and attractions, and distributes them nationwide. A staff photographer moves around the state 12 months of the year, assigned to capture on film all of the Michigan flavor designed to attract vacationers and tourists.

In addition to these basic duties, the publicity section serves a huge volume of requests for editorial information and photographs from editors, publishers and freelance writers from all over the world. Michigan Tourist Council photographs frequently appear on magazine covers and as illustrations for editorial content of prominent national publications.

Prints of Council-produced motion pictures are made available for loan to civic groups, sportsmen's clubs and other organizations as well as to television stations. Six million persons viewed at least one Council motion picture during 1968.

Unique in concept, the field promotion program concentrates on direct mail approaches and face-to-face contacts with persons in positions to open doors for mass exposure of Michigan's vacation opportunities. Under the program, two Council field representatives make direct personal contacts with travel agencies, industrial firms, sporting goods stores and other influential groups and persons in the 13-state area immediately surrounding Michigan. Literature packs, counter posters and inquiry cards are placed with the contacts for display and for distribution to employees and customers.

One of the main objectives of advertising, publicity, and field promotion is to whet the interest of prospective vacationers enough to inquire for Michigan vacation literature.

Backing up the advertising and promotional efforts is a comprehensive literature production and distribution system geared to furnish the appropriate general and seasonal literature to individuals responding to whatever of the Council's programs has motivated them.

Included in all of the literature sent out to each individual is a sheet of four postcards, each pre-addressed to each of the four regional tourist associations. The prospective vacationer may then send any or all of the postcards to the association in the region in which he is interested for additional and more detailed information.

Tourist industry leaders view the immediate years ahead with cautious optimism, based on expectations that economic factors will continue their established trends, that negative influences will keep minimal, and that these factors will be the basis on which to build stronger and still more aggressive advertising and promotional campaigns.

Tourism is becoming more dynamic in its economic importance, not only nationwide, but internationally.

Michigan must maintain a strong position to meet the new challenges which are partners to a bright future.

A MODERATE STUDENT SPEAKS OUT

HON. W. E. (BILL) BROCK

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, May 26, 1969

Mr. BROCK. Mr. Speaker, in reading the May 13 issue of the University of Tennessee Daily Beacon, I came across a forceful, articulate article written by one of the university's many responsible students. I feel that it speaks to the real source of many of the difficulties we are witnessing on campuses throughout the country.

Mr. Speaker, you will also be glad to know that this article was written by Jim Duncan, the son of our distinguished colleague, JOHN DUNCAN of Tennessee. I commend it to the attention of the Members of the House as a firsthand source of information on contemporary campus conditions.

The article referred to follows:

LIBERALS HAVE NO MONOPOLY ON TRUTH
(By Jim Duncan)

The demands made by the black students here last week were certainly not surprising. Similar demands have been made at almost every other large university in the nation.

What was interesting, though, was that the students said they were being discriminated against in the classroom. This is one charge that has not been made too many places (and it was probably not justified here either), because most college professors are so "liberal" that they go out of their way to be kind to Negroes.

Harvey Hukari, a graduate student in Communications at Stanford and a columnist for the student newspaper there, put it a little more bluntly in an article he wrote a few months ago.

His column came about after Johnnie Scott, a Stanford black militant, began a column of his own. Scott immediately charged that Stanford was a racist institution and that it was committing cultural genocide against black people.

Hukari countered by writing: "Listen Johnnie Scott, as far as Stanford is concerned, you are one of the chosen few. Those liberal white administrators and professors are going to do everything they can to make life beautiful for you. They're going to give scholarships to your black brothers and sisters, offer them employment, listen to your complaints and demands, and point to you proudly as fine examples of how liberal they really are. And the only thing you have to do is make them feel guilty."

"No thought is given to the possibility," he added, "that the real discrimination which exists at this university is against creativity, free thinking, and those who refuse to accept the intellectual dictums handed down by a liberal academic establishment."

Hukari then branched out: "You Johnnie Scott, may be sick of all those stereotyped visions in which black people eat watermelons, lust after white women, tap dance, and pick cotton. Well, I'm sick of all those stereotypes of conservatives in which they are portrayed as greedy, sexually obsessed businessman, puritanical little old ladies with hair growing out of their ears, and trigger-happy Army generals who are paranoid about communism."

"You're sick of racism," he continued, "and I'm sick of having to be exposed to the intellectual hypocrisy vomited forth daily in classrooms all around the Quad by professors who make snide references to Ronald Reagan, misrepresent the meaning of conservatism, allow their teacher assistants to make appeals for the Peace and Freedom party in class, and treat students who may profess a certain affinity for free enterprise and individual responsibility with the condescending attitude which one reserves for the mentally retarded."

Hukari also noted that Richard Nixon was called a racist for choosing Spiro Agnew as his vice president but that Adlai Stevenson was never called one for taking John Sparkman of Alabama as his running mate in 1952.

He also wrote that he was "tired of professors who speak strongly about academic freedom and then assign a reading list which does not contain one author whose political philosophy is to the right of *Ramparts* magazine."

The Stanford student said that while black students complain about the scarcity of Negroes in the faculty, he doubted there were any Republicans in the political science department.

"You think having a black skin is some kind of a drawback here?" Hukari asked. "Try wearing a Nixon button to class. If you try to point out that Barry Goldwater had some valid programs for ending the draft and curtailing the growth of government power, your fellow students smile and shake their heads in mock pity. If you acknowledge in class that you are a conservative, immediately you are marked as a Bircher, a racist, an advocate of nuclear bombing, and as a fundamental Baptist."

Hukari commented appropriately: "You think that black people are the only ones who have trouble with discrimination and stereotypes in an academic community. Pass that watermelon over this way, Johnnie."

This was a hard-hitting column, to say the least, and Hukari got hit hard in return. He had attacked some of the most sacred of the sacred cows, and the wrath of the liberals was immediately cast down upon him. In their minds, for some reason, criticizing black people is like falling asleep in church. It's just unholy, and it's not to be tolerated.

But Hukari's column was not a blatant attempt to smear black people, as some people thought. No, the point of his column was that many people have a very distorted view of conservatives, just as many do of Negroes. To these people, it is just not possible to be both conservative and intelligent. As Hukari put it: "The niggers at Stanford are no longer black students, they're conservatives." And this could be said of almost any school in the country.

Here, for instance, many conservative students are afraid to speak out in class for fear of getting in bad with their teacher. Speakers programs are generally overbalanced to the left. Professors frequently present only one side in the classroom. And one would have to search far and wide to find a book by a conservative author on any reading list.

It is almost enough to make one think that today's "liberals" are afraid of something. Perhaps they fear a confrontation of ideas because they're afraid they would come out on the losing side. (Maybe this is why the SDS believes in revolution rather than reason.) Perhaps, deep inside, liberals realize

they do not actually have a monopoly on the truth. Someday they might even admit it. However, it would not be wise to hold your breath waiting for that day.

TRIBUTE TO MRS. LILIUOKALANI KAWANANAKOA MORRIS

HON. PATSY T. MINK

OF HAWAII

IN THE HOUSE OF REPRESENTATIVES

Monday, May 26, 1969

Mrs. MINK. Mr. Speaker, today I wish to pay tribute and honor to a great lady of my State who died this May 19 at her home in Hawaii. She is Mrs. Liliuokalani Kawananaokoa Morris, a descendant of the ancient kings of Hawaii, and the niece of Prince Jonah Kūhiō Kalanianaʻole, who served in this body from 1902 until 1922 as Hawaii's second delegate to the U.S. Congress.

Mrs. Morris devoted much of her life to the interests of the Hawaiian people, and her last years were spent working on the restoration of Iolani Palace in Honolulu, the only royal palace in the United States, and the palace from which she might well have ruled as Queen, had fate so decreed, since her father, Prince Kawananaokoa, was in the direct line of succession to the throne of King Kalakaua.

Mrs. Morris was active in the Hawaiian civic clubs and also served on the Hawaiian Homes Commission, which oversees the Hawaiian homestead lands. She was a regent of the Hale O Na Alii and a lifetime member of the Kaahumanu Society and the Daughters of Hawaii.

In 1965, Gov. John A. Burns appointed Mrs. Morris to take charge of the restoration of Iolani Palace, the work to which she devoted the remainder of her life.

Her death is deeply mourned by the sons and daughters of Hawaii.

At this point, I submit an article on Mrs. Liliuokalani Kawananaokoa Morris, which appeared in the Honolulu Advertiser of May 21, 1969, as follows:

LILIUOKALANI MORRIS DIES; DESCENDANT

OF ISLE KINGS

(By Gene Hunter)

Mrs. Liliuokalani Kawananaokoa Morris, who spent her last years overseeing the restoration of the palace where she might have ruled as queen of Hawaii, is dead at the age of 63.

The stately, regal Mrs. Morris—known to many Hawaiians as Princess Liliuokalani in spite of the fact that officially there are no royal titles in the United States—died of cancer at 11 p.m. Monday at her home at 935 Waiholo St., Waiālae.

At her request, her funeral will be conducted with none of the pomp and ceremony which once surrounded the rites of a member of Hawaiian royalty.

Simple graveside services will be held at 11 a.m. tomorrow at Nuuanu Memorial Park, with Williams Mortuary in charge of arrangements.

In lieu of flowers the family has requested that donations be made in Mrs. Morris' memory to the Friends of Iolani Palace, of which she was president.

Mrs. Morris is survived by her husband, Charles E. Morris; a daughter, Abigail Kin-oiki Kekaulike Kawananaokoa; two aunts, Mrs. Alice Kamokila Campbell of Ewa and

Mrs. Francis Wrigley of California; two nieces, Poomai Kalani Kawanakoa of Honolulu and the Marchesa Kapiolani Marignoll of Rome, and a nephew, Edward Keliiahonui Kawanakoa of Honolulu.

Mrs. Morris was born July 22, 1906, and was the last surviving child of Prince David Kawanakoa and the former Abigail Wahikaahuu Campbell. The other children were Mrs. Kapiolani Field and David Kalakaua Kawanakoa.

Mrs. Morris was descended from the ancient line of Keawe, once king of the Big Island, and from Kaunualii, last king of Kauai.

Her parental grandmother was a niaupio—a descendant of two high chiefs, the highest possible rank in Hawaiian genealogy.

Her father was a second cousin of King Kalakaua and a nephew of Kalakaua's consort, Queen Kapiolani. Her father's brother was Prince Jonah Kuhio Kalaniana'ole, Hawaii's second delegate to Congress.

King Kalakaua, who was childless, was elected to the throne in 1874. Wishing to assure that there would be no more elected kings and that the throne would remain always with his family, he named four ali'i to succeed him.

They were his younger brother, Leleihoku; his sister, Lydia; his niece, the beautiful Princess Kalulani, and his cousin, Prince Kawanakoa, Mrs. Morris' father.

Leleihoku died while Kalakaua was king. At Kalakaua's death in 1891 he was succeeded by his sister, who ruled for two years as Queen Liliuokalani until she was overthrown in 1893, when Hawaii became a republic.

Princess Kalulani, to whom Prince Kawanakoa, was betrothed, died in 1899 at the age of 24. In 1902 the prince, the direct heir to the throne, married Abigail Campbell.

Mrs. Morris was named Lydia Kamakaeha Liliuokalani after her royal relative. In recent years Mrs. Morris, as president of the Friends of Iolani Palace, frequently guided distinguished visitors through the Palace built by Kalakaua, where she would have lived had the monarchy continued.

Mrs. Morris was married four times. Her first marriage was in 1925, when she was 19, to automobile salesman William J. Ellerbrook. They were divorced in 1927.

Mrs. Morris' only daughter was from this marriage. The child was adopted by Mrs. Morris' mother, Princess Kawanakoa, and dropped the Ellerbrook name.

In 1936 Mrs. Morris met newspaperman Clark G. Lee, who came to Honolulu that year as Associated Press bureau chief. He was transferred to Tokyo in 1938, as war spread in the Far East.

Mrs. Morris joined him in the Orient and they were married in Hong Kong in 1938. They lived in Tokyo and in Shanghai until she returned here in August, 1941. Lee, covering the Far East and the South Pacific for Associated Press and later for International News Service, became one of the most famed correspondents of World War II.

He was the author of several best-selling books about the war. His first, "They Call It Pacific," was dedicated to his wife and to her daughter.

The Lees moved to Pebble Beach, Calif., in 1946. He died there of a heart attack in 1953 and his widow returned to Hawaii.

The following year she married Charles E. Morris Jr. of Kona. They were divorced in 1959 and were remarried last year.

As one of the heirs to the Campbell Estate founded by her mother's father, Mrs. Morris enjoyed a large annual income. But in spite of her affluence, she was deeply interested in the welfare of her less fortunate fellow Hawaiians.

While they realized that the title "princess" was only honorary in the Islands of today, many Hawaiians looked up to Mrs. Morris as their mentor, seeking her guidance and counsel in their affairs.

Although her uncle, Prince Kuhio, was a long-time politician and a leader of the Republican party and her mother was a power behind the scenes in the GOP, Mrs. Morris took no part in politics.

She once told an interviewer: "I would prefer to stay out of partisan politics. I would never presume to tell any Hawaiians how to vote nor in any way dictate their politics."

Mrs. Morris was active in the Hawaiian Civic Clubs, founded by her uncle, and had served on the Hawaiian Homes Commission, which oversees Hawaiian homestead lands. She was a regent of the Hale O Na Alii and a life member of the Kaahumanu Society and of the Daughters of Hawaii.

Mrs. Morris—known as Liliu, the diminutive of Liliuokalani, to her closest friends—lived surrounded by mementos of her royal heritage. These included beautifully bound volumes from the library of Queen Kapiolani and gifts to King Kalakaua from Emperor Meiji of Japan.

In 1965 Gov. John A. Burns named Mrs. Morris to head the restoration of Iolani Palace, which is to become a museum now that the State government has moved across the street into the new Capitol.

Two years ago doctors informed Mrs. Morris that she was suffering from cancer and had but a short time to live.

She continued active in the palace restoration project, although she spent much of last summer in critical condition at the Queen's Medical Center.

The 11th annual convention of the Association of Hawaiian Civic Clubs held in Kailua-Kona in February was dedicated to Mrs. Morris. She was able to attend the convention and accepted the dedication plaque.

Also in February, Mrs. Morris was re-elected president of the Friends of Iolani Palace.

During her last years, when health permitted, she spent much of her time at the palace where her father was groomed to become king, planning its conversion into a museum.

FINANCIAL DISCLOSURE

HON. GEORGE BUSH

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 26, 1969

Mr. BUSH. Mr. Speaker, in keeping with previously adopted policy of disclosure, I am at this time making public a statement of receipts and expenditures of the supplementary expense fund raised for newsletter, unreimbursed travel, and office expenses. As I stated in my disclosure last year, there is no provision under the law for any reporting, but I feel it is best to do so.

Last year, the Senate officially sanctioned arrangements to supplement legitimate office expenses, clearly raising the objection to any personal use of these moneys by a Member of that body. I feel the House should take such affirmative action but should definitely include full disclosure.

The disclosure follows:

Statement for fiscal year 1968

Balance, beginning Jan. 1, 1968—	\$5,552.65
Total contributions, 1968—	12,666.06
Subtotal—	18,218.71
Expenditures, 1968—	12,036.05
Ending balance, Dec. 31, 1968—	6,182.66

Statement for fiscal year 1968—Continued

ITEMIZED EXPENSES	
Newsletter—	\$6,182.56
Unreimbursed travel expense—	5,553.49
Salary, summer program for securing jobs for underprivileged—	500.00
Total expenses—	12,236.05

STATEMENT WITH RESPECT TO H.R. 10344, NATIONAL TIMBER SUPPLY ACT OF 1969

HON. BYRON G. ROGERS

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Monday, May 26, 1969

Mr. ROGERS of Colorado. Mr. Speaker, the Colorado Open Space Coordinating Council, Inc., of Denver, Colo., is interested in the National Timber Supply Act of 1969, as embodied in H.R. 10344, and I am pleased to place for the consideration of the House the statement of Mr. E. R. Weiner, president of the Colorado Open Space Coordinating Council, Inc., as follows:

The Colorado Open Space Coordinating Council, Inc., a Colorado corporation not-for-profit, serves as a coordinating structure for currently twenty-four recreational conservation organizations throughout the State of Colorado, with cumulative memberships of approximately 25,000 citizens. The purpose of COSC is to "work for the preservation, wise use and appreciation of scenic, historic, open space, wilderness and outdoor recreational resources . . . for the cultural, educational, physical, health, spiritual and economic benefit" of the citizens of Colorado and the nation.

COSC is not submitting this statement to register outright opposition to H.R. 10344. COSC believes in good timber management, according to sound ecological principles, and in the scientific practice of forestry; it has so stated on many occasions. COSC, and responsible conservationists everywhere, recognize the nation's needs for timber; COSC is not against people or jobs or housing. However, COSC cannot give support to H.R. 10344 unless certain revisions in the bill are made. We would like to comment as follows:

"Sec. 2—This section presumes, mostly on the evidence submitted by the timber industry itself, that the nation's wood products supply is going to be met primarily by increased yields from the national forests. We would strike the words 'the timber yield from national forest commercial timberlands in order to increase' so as to refrain from giving this prejudicial and arguable presumption the status of an Act of Congress."

"Various timber experts have estimated that half of the nation's timber lands are in small, poorly managed tracts which, with proper management, could increase their production by a factor of 5! But Senator Sparkman (Cong. Rec. April 18, 1969, S. 3803) stated: 'Industry witnesses were unanimous in pointing out that since privately owned forest lands are now operated at peak capacities, the necessary increase must come from the great timber reservoir of the Federal forests . . . Such testimony is highly arguable if not outright false. It should be obvious that some private timber companies would prefer that the federal government and the taxpayers bear the cost of intensified timber management, thus decreasing the investments they should be making on private lands.'

"Without providing some incentives, federal assistance and even partial subsidies to

finance better timber management practices on private lands, this proposed Act goes only part of the way. Either this bill or companion legislation should mitigate this glaring deficiency. We would favor tax incentives to private producers, federal agricultural assistance programs, and in particular federal assistance for state departments of forestry, such as we have in Colorado.

"Further, as this bill is deficient in not providing incentives for intensified management on private lands, it is also deficient in not attempting to control exports. Without such controls, we are asking the American taxpayers to invest more money in timber management and harvesting necessitated in part by the ability of private industry to reap a greater profit in Japan than elsewhere. Admittedly, we do not have all the facts on exports but an export volume of 2.2 billion board feet in 1968 must have some relationship to the 'timber shortage.' And is exportation from U.S. Forest Service lands even legal under various Acts of Congress?

"Sec. 3—The definition of 'commercial timberlands' is much, much too broad and gives the Forest Service, under constant and unrelenting pressure from the industry, extremely broad discretionary powers. The commercial timberlands to be covered by the Act should be spelled out in detail, right down to naming the actual forests or portions thereof. Also, the Fund should be made to apply only to Site I, II and III lands—those of highest production capability. Certainly, the Forest Service has available data on the forests that really need intensified management. No 'special study' should be necessary to gather this information.

"Many areas of the national forests are not productive, particularly in the Rocky Mountain region, the least productive of all the nation's timber lands (see 'Timber Trends in the United States,' Forest Service, USDA, Report No. 17, Feb. 1965). The Forest Service has classified many marginal lands as 'commercial' under 16 U.S.C. 581. These are site IV and V lands, with lowest production potential. Under the Act as written, these marginal lands—where most 'wilderness' is situated, for example—would be included.

"Sec. 4—There are always dangers inherent in earmarking funds for any purpose. Forest Service timber sale receipts are now earmarked in part—25% reimbursement (in lieu payments) to the states and 10% for roads and trails. This bill would have the effect of earmarking the vast majority of timber sale receipts for timber production—65%. Even though the funds have to be appropriated under Sec. 5, can we be certain that the Forest Service will place as much emphasis on planning, research and development for watershed, recreation, wildlife, wilderness, grazing and other multiple uses which are not blessed with earmarked funds? We think there is evidence that some regions of the Forest Service place such great emphasis on road construction because they feel they can rely on the 10% kitty set aside for the purpose.

"Has the Forest Service established a 'case' to justify their need for all of the remaining 65% for timber management? Can they do the job for 25% or even 50%? And why must the Act run until 1994 (which means forever)? Why not 10 years, instead of 25, a reasonable time in which to test the Act's effectiveness? These are hard questions that should be answered.

"Sec. 6—It seems to us that authorizing expenditures from the Fund for any particular forest only in the proportion that said forest has contributed to the Fund would serve only to make poor land poorer and rich land richer, in terms of timber management. Timber management practices as outlined in Section 6 obviously do not cost the same for every acre of timber land regardless of where located. The necessary timber management investment varies considerably

from place to place. Has the Forest Service carefully examined this section?

"Sub-section (6) provides for funding of more road construction, in addition to the 10% allowed for roads and trails under 16 U.S.C. 501. We submit that of all the timber management devices listed in Sec. 6, road building will receive the greatest immediate emphasis, particularly in the West where 'lack of access' is almost always equated with lack of supply. To meet the 'emergency' that it is contended exists (and which control of exports from Alaska and elsewhere could greatly alleviate), the industry and the Forest Service will cry 'cut!' And to do this they will need roads to bring out the harvest. Unless some legislative brakes are put on Sec. 6(6), many wilderness-type in the West is likely to be threatened with a new road invasion, with the blessing of the Congress. We think a limitation should be put on the amount of the fund that can be expended for road building—say, another 10%."

COSC has reason to believe that this bill will be cited frequently by wilderness opponents. If it is not used as a rationale for asking Congressional permission to invade existing primitive areas, it will certainly make it more difficult to include qualifying wilderness lands adjacent primitive areas in the National Wilderness Preservation System.

Certain portions of S. 1832 mistakenly recognize the cries of "timber shortage" that the timber industry has long wanted to have validated.

We are reluctant to give the Forest Service and the timber industry the "carte blanche" for logging they have asked for all these years, with no strings attached, on the very tenuous grounds that there is some sort of national timber "emergency."

AMERICAN AGRICULTURE

HON. BILL D. BURLISON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, May 26, 1969

Mr. BURLISON of Missouri. Mr. Speaker, if the United States of America were a primitive, isolated village of 20 persons, and if one of those 20 produced all of the food—and much of the fiber for clothing—consumed by the other 19, that one man would be hailed by his fellows as the preeminent contributor to the commonweal. For they would see clearly—in these simple circumstances—that they depended on this single individual for the most basic necessities of life itself.

This great Nation is not, of course, a primitive village—far from it. Yet one American on the farm does, in fact, produce nearly all of the food and fiber consumed by 19 of his fellow citizens.

Not only is this fact little understood today by the 94.4 percent of our people who live in cities and towns, but the whole vast scope of our amazingly productive agricultural economy is a foreign subject to tens of millions of our citizens:

Many of our children undoubtedly think milk originates in cartons;

They may believe that meat and poultry begin their trip to market wrapped in plastic;

They are probably not aware that a woolen suit or cotton shirt did not just grow that way.

These children's parents would not make these mistakes, of course, but they,

too, are likely to be unaware of conditions on the farm today, and of the fact that agriculture is still the very cornerstone of our modern way of life.

It has been pointed out in many reports of the Committee on Appropriations that the economic welfare of the Nation's economy is dependent on the economic strength of each segment thereof. Time has proved that labor and industry can be prosperous only to the extent that the agricultural economy is strong and healthy.

Agriculture is the principal source of new wealth. It is the main provider of basic raw materials which support all segments of business and industry. Reliable estimates indicate that each dollar of wealth taken from the soil generates \$7 of income throughout the rest of the economy.

Agriculture is our largest industry. Its assets exceed those of any of the next 10 largest industries. It employs more workers than any other major industry. It employs seven times the number of people in the mining industry, 23 times the number in the oil and coal industry, and five times the number in the automobile industry. In addition, it supports directly another 10 percent of our non-farm population which supplies the farmer with his needs and processes and markets his products.

Agriculture is one of the major markets for the products of labor and industry. It spends more for equipment than any of the other large industries. Agriculture uses more steel in a year than is used for a year's output of passenger cars. It uses more petroleum products than any other industry in the country. It uses more rubber each year than is required to produce tires for 6 million automobiles. Its inventory of machinery and equipment exceeds the assets of the steel industry and is five times that of the automobile industry.

But over the years, in spite of Government farm programs, industry and labor's share of the consumer's food dollar has risen substantially. Compared with 1950, retail food prices were up almost 40 percent by 1968. But during that same period, prices received by farmers, while fluctuating from year to year, remained unchanged in the aggregate.

In 1950, the farmer's share of the retail food dollar was 47 cents. By 1968, it was down to 39 cents. Taking several specific examples:

The farmer receives only 3.3 cents of the retail cost of a loaf of bread, which averaged 22.4 cents in 1968.

In the same year, he received only 23 cents of the \$4.60 retail price of a cotton business shirt.

The farmer's component of the 87-cent-per-pound average retail price of beef was only 52 cents per pound.

One of the important contributions of American agriculture to the national economy has been its contribution to our balance of payments abroad.

Total agricultural exports increased from \$4.5 billion in 1960 to \$6.3 billion in 1968. Exports for dollars rose from \$3.2 to \$4.7 billion during this period. During the calendar year 1967, agricultural exports for dollars exceeded agricultural imports by \$585 million. This more than

offset the trade deficit for commercial trade of \$400 million in 1967.

From 1961 through 1968, agricultural exports contributed over \$32 billion to our balance of payments. Even though only about 22 percent of total exports are agricultural commodities, they account for over 50 percent of our favorable trade balance.

The efficiency and productivity of U.S. agriculture has made this country the world's largest exporter of food to the many nations of the world. In recent years the export of U.S. agricultural commodities has increased to the point where production from 1 out of each 4 acres is sold abroad. In addition to supplying much needed foreign exchange, this has contributed to the domestic economy by providing about 1 million jobs in the agribusiness fields.

American agriculture continues to make a major contribution to the national welfare through the production of bountiful supplies of high-quality and low-cost foods for the Nation's consumers. Food is one of today's best bargains.

This is apparent at the supermarkets, where city consumers can choose from thousands of safe, wholesome, and delicious foods—products of the farms of our 50 States. Using only 17 percent of their income, American consumers can select foods with a knowledge of nutrition and balanced diets that makes this a Nation of healthy and well-fed people. Many people in the world spend half or more of their available income on food. In underdeveloped areas people spend most of their time grubbing a living from the earth.

In 1929, 23.4 percent of consumer income in the United States went for food. This decreased to 22.2 percent in 1950, 20 percent in 1960, and 17 percent last year. This steady decrease has occurred despite the increasing portion of food costs which go for marketing and related services. If the 1960 level of 20 percent had continued through 1968, U.S. consumers would have had \$18 billion less to spend for the products of industry and labor.

Mr. Speaker, the above has been emphasized by the committee as some compelling reasons why it is realistic to expect our Government to help agriculture, because to help agriculture is to help our entire Nation. I subscribe to this philosophy. The bill—H.R. 11612—does not provide as much as some of us would like. However, we must remember that our Nation faces many pressing priorities. When this is kept in mind, the proposal constitutes sound farm legislation.

THE METRO SYSTEM

HON. GILBERT GUDE

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, May 26, 1969

Mr. GUDE. Mr. Speaker, the League of Women Voters has been a prime mover of the concept and development of a rapid rail transit system for the metropolitan Washington region. As a Repre-

sentative from this metropolitan area, I have consistently supported the development of this metro system as well as all other aspects of our long-planned regional transportation system. The league, in their continuing efforts to see the implementation of this system, has directed to the Vice President and the Speaker its expression of urgent need for the appropriations of construction moneys for the metro system.

Mr. Speaker, I commend to my colleagues the expressions of concern of the league as set forth in this communication which follows:

LEAGUE OF WOMEN VOTERS,
METROPOLITAN WASHINGTON COUNCIL,
May 19, 1969.

The Honorable SPEAKER OF THE HOUSE OF REPRESENTATIVES,
House Office Building,
Washington, D.C.

DEAR SPEAKER MCCORMACK: This letter is written in this manner to bring to the attention of all members of the Senate and the House of Representatives the urgent concern of the League of Women Voters of Metropolitan Washington because of the continued delay of the release of construction monies for the Regional Rapid Rail Transit System.

We hear daily that each day's delay impairs the carefully worked out financing of the rapid rail transit system because of escalating costs.

We experience daily the frustrations of automobile-clogged streets for which there is no foreseeable relief. The only existing system of mass public transportation (buses) is delayed on the same traffic-jammed streets.

The voters of the Washington Metropolitan Area on November 5, 1968, indicated by an overwhelming affirmative vote their desire to have construction of a regional rapid rail transit system begin immediately. These same voters even indicated their willingness to be taxed locally to achieve this goal.

The League of Women Voters of Metropolitan Washington must then ask these questions:

Why, if the contracts are ready to be let, and why, if the voters say yes, has not the Congress responded to the will of the people? Sincerely,

Mrs. JOHN H. BEIDLER, *Chairman.*

MEMBERS

Alexandria, Virginia: Mrs. George Weber.
Arlington County, Virginia: Mrs. Robert F. Cocklin.

Fairfax County, Virginia: Mrs. John Lindberg.

Falls Church, Virginia: Mrs. Jerome Blystone.

District of Columbia: Mrs. Philip G. Fortune.

Montgomery County, Maryland: Mrs. Ernest L. Heimann.

Prince George's County, Maryland: Mrs. Charles Cunningham.

PAN AMERICAN AIR FARE REDUCTIONS

HON. RICHARD L. OTTINGER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 26, 1969

Mr. OTTINGER. Mr. Speaker, with every American feeling the increasing pinch of higher and higher prices, it is refreshing to see any effort to hold the line or achieve reductions.

It is with that in mind that I call attention to steps taken by Pan American

World Airways to reduce fares this summer for passengers traveling between the United States and Europe on weekend flights.

The new fares, approved by the Civil Aeronautics Board, will reduce the cost of weekend travel from \$399 to \$360 roundtrip between New York and London, for example, during normal travel periods. The weekend fare reductions have been accomplished by extending the 14- to 21-day excursion fares, now in effect, to cover weekends and certain other peak summer travel periods previously excluded.

I understand that in addition to weekend travel, passengers may now use the 14- to 21-day excursion fares during the peak travel periods of June 9 through July 3 and between August 4 through August 21 for travel originating in the United States, and from June 2 through June 19 and August 18 through 24 for travel originating in Europe.

Pan Am, I am told, plans to further lower fares between the United States and Europe when it introduced bulk inclusive tour fares on November 1.

Mr. Speaker, there have been occasions on which I found it necessary to criticize the action—or inaction—of the airlines. But I feel any effort to bring fares within the reach of the average American traveler deserves appropriate recognition.

PITTSBURGH'S OPPORTUNITY SCHOOL

HON. WILLIAM S. MOORHEAD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 26, 1969

Mr. MOORHEAD. Mr. Speaker, I never heard of a school where poor attendance records and trouble with the police were prerequisites for admission, but such is the case in Pittsburgh's newest youth project, Opportunity School, located on the North Side.

This is an exciting and innovative effort to reach young truants and engage them in a meaningful program, before they arrive at the point of becoming full dropouts.

The Christian Science Monitor of May 10 carried the full story, citing already-realized major achievements of this 3-month project.

I include the article for the attention of my colleagues at this point in the RECORD:

PITTSBURGH YOUTH PROJECT PRAISED

PITTSBURGH.—They call it Opportunity School.

The enrollment is small—just 30 boys—but to get in, the youth must be sentenced by a Juvenile Court judge.

So far, this pilot program to give boys who have poor school-attendance records and have been in trouble with the police, is creating quite a name for itself. Just the other day, State Attorney General William Sennett, in Pittsburgh for a speaking engagement, went out of his way to view the program.

The success of the school, located in a YMCA in the city's North Side area, is mirrored in the attendance records of the 30 boys.

And although the school has been in operation for just three months, Juvenile Court Judge Richard T. Wentley already sees these results:

Youths saying for the first time in their lives that they look forward to Monday so they can go back to school.

A real possibility that two of the students may be admitted to college.

Half of the youths volunteering to attend a summer-school extension of the program.

No behavioral problems.

Preparation now to readmit several youths to their old schools.

The school was established by the Pittsburgh Public School Board on the recommendation of Judge Maurice B. Cohill Jr. and Judge Wentley.

A cab picks up each student at his home every morning at 8:30 and drops him off at his home every evening at 8:30.

Each student gets 2½ hours daily of individualized academic instruction.

NO SCHOOL RECORD

During the remainder of each school day, the student receives counseling; engages in a cultural program including music, art, and arts and crafts; and takes part in an athletic program.

Although the enrollee must be sentenced to the school by the two Juvenile Court judges, no record will show the student was ever enrolled there. Instead, the boy will be classified as a transfer student at a nearby public high school.

The success of the program has led Judge Wentley to say he is anxious to see the program expanded to five or six such schools throughout the city.

Moreover, he says, "I think they [school officials] are as excited about it as I am and will put as much money into it as they can get their hands on."

Attorney General Sennett remarked after his tour of the school, "Certain state and federal funds can be made available to continue these projects all over the state. Through projects such as this we can put boys back into an educational setting."

DECLARATION FOR PEACE IN THE MIDDLE EAST ON OCCASION OF ISRAEL'S 21ST BIRTHDAY

HON. BOB CASEY

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 26, 1969

Mr. CASEY. Mr. Speaker, on April 28, our distinguished colleague from New York, Representative EMANUEL CELLER, placed into the RECORD the text of a declaration for peace in the Middle East signed by 226 Members of Congress on the occasion of Israel's 21st birthday.

Through an oversight, I missed the opportunity to be recorded as one of those in support of this declaration, which I wish to rectify at this point.

The points enumerated in this declaration are wise, and could be the cornerstones of lasting peace in the Middle East if complied with by the Arab nations and by the United Nations. The valiant people of Israel have had my full support in the past, and I shall continue to direct my endeavors in Congress in support of those proposals leading to a just and lasting peace for the Middle East, with full sovereignty for the nation of Israel.

I wish to associate myself with the remarks of the gentleman from New York (Mr. CELLER) and concur fully with his statement.

PROJECT CONCERN

HON. BOB WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 26, 1969

Mr. BOB WILSON. Mr. Speaker, "love" is one of the most misused and maligned words in the language of our time. Today, however, JOHN BRADEMAS and I are introducing a resolution to honor a man and an organization that truly exemplify the meaning of the word "love" in its deepest sense. We ask Congress to proclaim February 1970 as "Project Concern Month" in recognition of the humanitarian and unselfish service of this nonprofit, nonsectarian medical relief organization and its founder, Dr. James W. Turpin.

A decade ago Jim Turpin was a bright young doctor with a well-established, lucrative private practice in Coronado, one of San Diego County's finest cities. He and his wife, Martha, volunteered their services on a once-a-week basis in a medical clinic in the poverty-stricken sections of the nearby Mexican border town of Tijuana. The Turpins found this work so meaningful that they decided to devote themselves entirely to medical relief for the underprivileged and helpless of the world. Dr. Turpin conceived the idea of "Project Concern," which he hoped would generate a response from others who feel a personal desire to help the world's needy directly. Today, Project Concern is helping to bring a better way of life to people in Hong Kong, Mexico, South Vietnam, and Appalachia. One example of those Project Concern has helped is the "boat people" of Hong Kong. With a staggering housing shortage, dating back to World War II and greatly aggravated by the continued influx of refugees from Red China, Hong Kong is unable to provide decent housing for many of its people. Mainland housing is so scarce that several hundred thousand people live in disease and squalor on sampans and junks with no medical assistance whatsoever. Many have lived their entire lives on these boats and are too poor or too superstitious to go ashore for medical care when available. Dr. Turpin's typically simple approach was to bring in a specially designed Chinese junk, to move among the people and minister to their medical needs.

In recent years our world has witnessed more than its share of heartlessness and brutality. Yet we all strive to leave our children a legacy of peace, not war, and I think it is most fitting to pay tribute to Dr. Turpin and Project Concern for their selfless efforts toward this goal. In closing, I would like to share with my colleagues Dr. Turpin's opening prayer in the Senate on January 6 of this year, for these words express far better than I can the meaning and depth of Project Concern and I ask my colleagues to join us in supporting this resolution:

PROJECT CONCERN: OPENING PRAYER OF U.S. SENATE, JANUARY 6, 1969

(By James W. Turpin, M.D.)

Our Father, Creator of an expanding universe, Lord of a shrinking planet, we acknowl-

edge more fully your awesome love, patience and forgiveness.

Teach us that our world has now grown too small for anything less than brotherhood; that life has become too precious for anything less than peace; that human relations have become too critical for anything less than love.

Give us a sense of family. Make us realize that in our struggle for greatness it is not so much how deep in space we can go, but how far we can reach in solving the immediate problems of Your beloved earth's people. Help us to know, that until a hollow-eyed, emaciated, pot-bellied child of the Montagnard, Ibo or American Indian becomes "our child," we have not yet achieved our national purpose.

Give us a sense of peace. Teach us to wage peace as eagerly and enthusiastically as we have waged war. Make us to experience no real satisfaction if we win a war and lose a people. May peace become not just the static absence of fighting and dying, but the imaginative, dynamic situation where every man is at peace with himself because his family has enough.

And, Father, give us a sense of love. As the world's hungry, poor and sick ask, "Do you understand? Is it possible that you can feel our feelings?" Let this be our reply: "Love you? I am you!"

While others doubt, even scoff, let us direct our vast resources toward a world where every child eats enough, every woman is adequately attended in childbirth, and every man knows the dignity of supporting his own.

May this be our glorious quest. Amen.

ADDRESS OF JAMES REYNOLDS AT BALTIMORE PROPELLER CLUB MARITIME DAY LUNCHEON

HON. EDWARD A. GARMATZ

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, May 26, 1969

Mr. GARMATZ. Mr. Speaker, because the port of Baltimore and its many activities are of such tremendous value to the State of Maryland, the Propeller Club of Baltimore makes special efforts to obtain the best possible speakers for their Maritime Day luncheons.

This year they were extremely fortunate in being able to hear from Jim Reynolds, the president of the newly formed American Institute of Merchant Shipping, known as AIMS.

AIMS is the strongest organization of American shipowners ever joined together and represents an impressive total of more than 540 American-flag ships, which is more than half of the active American merchant fleet. Therefore, as president, he is the principal management spokesman and his remarks are of special interest to us at this time when our merchant fleet is in such critical condition.

In the belief that all of you will be eager to learn what he had to say at that Maritime Day luncheon, I am including his remarks in the RECORD for your perusal:

MARITIME DAY ADDRESS BY JAMES J. REYNOLDS, PRESIDENT, AMERICAN INSTITUTE OF MERCHANT SHIPPING, PROPELLER CLUB, BALTIMORE, MD., MAY 22, 1969

You kind people of the Propeller Club could not have done me a nicer favor than to invite me to Baltimore on Maritime Day, 1969. I know of no city where the special

atmosphere of seaports in more pervasive, or where interest in the Merchant Marine is more intense and constructive.

The Port of Baltimore has three characteristics relevant to what I want to say to you today. It is ancient, which means, really, that nature intended it to be a port. It is modern, which means that its people have insisted upon keeping up with change. And it has before it an ever-brighter future because you and your fellow Baltimoreans are not simply waiting for that future to be delivered—neatly containerized—but are going after it.

I want the United States merchant marine to go after its own future with the same kind of energy and imagination.

Our merchant marine, too, is ancient. It, too, has kept up with change, although perhaps not always in perfect synchronization with the opportunity and the need. But today it has got to move and move fast to seize the future.

I think we will do it. I find myself spouting optimistic utterance about the merchant marine during Maritime Week. I guess the news in that is not that I'm saying it, but that I say it with real conviction.

My intensive orientation course as president of the American Institute of Merchant Shipping has made me optimistic. I sense on all sides a new spirit, a can-do spirit, a will-do spirit, among those who desire a bright new era for the merchant marine.

I find this in Congress. There, your own Congressman Edward A. Garmatz, chairman of the House Merchant Marine Committee, has just registered an extraordinary exploit of leadership. He has won committee approval and House approval of an authorization bill for construction and operating subsidies, and other merchant marine needs, which is the highest in a decade. And he calls it only a stopgap.

I find this new spirit in the Executive branch as well. President Nixon is preparing a comprehensive program to give effect to his campaign pledges—which he has reaffirmed since entering the White House—to “vastly improve the state of the American merchant marine.”

The new Maritime Administrator, Andrew E. Gibson, has declared: “I joined the Nixon team and went to Washington for a single purpose—to put our merchant marine back on the map of the world.” And Secretary of Commerce Maurice Stans is preparing an all-out program to increase United States participation in the liner trades—“Ship American,” trade expansion, a solid increase of American cargoes in American ships.

In the industry itself there is evident an exciting spirit of adventure, just at a moment when technology is ready to make those adventures successful. The Naval Architects and Marine Engineers are breaking molds literally centuries old and giving their creative imaginations free rein. The operators are ordering the results, and the yards are building them—right now.

Not least important is a new sense of unity, of rapport, among those concerned with our merchant ships and their style of existence. In the industry, this has produced, in this year 1969, the formation of the organization I head, the American Institute of Merchant Shipping. The merchant marine is profiting from cooperation between the industry and the government.

I might express the hope that the same spirit of constructive unity would find expression in the ranks of labor. No labor union leaders have done more for their members than the leaders of the maritime unions. I know. In 1924 I shipped out as a deck boy on the America. I saw the conditions under which crews lived in those days—floating slums. I drew the kind of pay they drew.

The union leaders have accomplished wonders. If they would now only show the same tenacity and determination in the task of achieving a ceasefire among themselves, and

reasonable relations with management, a major obstacle to the realization of today's great promise for the merchant marine would be removed.

My conviction that the merchant marine will seize its future has as its partner the conviction that it can. To paraphrase the title of a song from not too far back, technology is bustin' out all over, in the merchant marine, and that one fact is a cornucopia of good auspices.

The basic meaning of this technological offensive is that the U.S. merchant fleet is going to become vastly more efficient. Greater efficiency means greater prosperity, not only for the ships but for all the other components of the system into which they fit—such as ports. Experience shows, I'm glad to note, that prosperity breeds prosperity.

To help speed this advance in efficiency, AIMS only a fortnight ago, as one of its first major actions, set in motion the organization of a Research Committee. We attach great importance to this. It is contemplated that the Committee will work closely in conjunction with the Office of Research and Development of the Maritime Administration in the Department of Commerce.

The new Maritime Administrator, Andrew Gibson—whose appointment was another of those encouraging auguries I have mentioned—is anxious that Marad's experts should join with our people in the broad field of research now demanding exploration.

The special areas have been pretty well marked out, and to define them is one way of defining the promises of technology.

The Marad research program in shipbuilding looks for ways to reduce the cost of building in U.S. yards and thereby decrease the construction differential subsidy. Jointly we will seek new breakthroughs in more efficient hull configuration—counter revolving and reversible propellers—more effective on board cargo handling equipment, etc.

A joint research program, by decreasing the magnitude of ship operating costs at sea, will hopefully make U.S. ships more competitive, and reduce operating differential subsidy.

The port research program seeks to increase productivity in port operations and thereby, decrease the total cost of transportation.

Let me pause for a parenthesis, touching on a vital matter. I would like to emphasize that the search for technological efficiency does not contemplate the elimination of human beings and their livelihood from the merchant marine.

Research on ship operations, for example, specifically undertakes to determine the optimum combination of hardware and manpower over the life of a ship. In this connection, attention is given to a definition and understanding of the problems, needs, and requirements of labor as well as of management and regulatory bodies. That language is largely the official language of Marad.

Technology and automation do present problems in adjustment for labor. I can say, because I know, that the industry not only fully recognizes this, but is completely committed to devising, with the people who work aboard American ships, the means of meeting the concerns of labor in making that adjustment. I am confident that the period of adjustment is one of transition, and that on the other side of the transition, technology and automation will produce an increase in maritime employment, not a decrease.

I fitted the parenthesis in where I did because the first three areas of research I mentioned—shipbuilding, ship operations, and port operations—bear most directly on employment, and do so right now. An affirmation of the industry's interest in the welfare of its workers seemed called for, and I am glad to give it.

Other areas of research in which we are intensely interested have to do with advanced ships—for example, nuclear ships and surface effect ships.

As you know, individual companies in the maritime industry conduct their own research programs, some of them extensive, and often extremely fruitful. What we are seeing today is a joining of the imaginations and skills of marine designers and engineers with resourcefulness of builders and the adventurous instincts inherent in the free enterprise of operators. Containerships and barge ships are a prime example of the results.

Let me note, also, as a sign of Congressional interest in this particular field, that the House authorization bill I have mentioned doubled, to \$15 million, the amount asked for merchant marine research and development. Another salute is due Congressman Garmatz for that.

The cooperation between the AIMS R & D Committee and the Marad R & D people is the kind of teamwork that pays off.

One of the circumstances which makes the need for technological audacity in shipping so great at this moment is that this country, thank heaven, is still expanding its frontiers and developing new terrain which must be served in new ways.

Who could fail to be fascinated by what is happening on the Alaskan North Slope? Some of you may have attended the recent Tanker Conference of the American Petroleum Institute up in the Poconos. One of its highlights was a talk by a Canadian expert on the Arctic, Commodore O.C.S. Robertson.

The movement of petroleum from the new fields on the North Slope and the Canadian Yukon will require, he said, a new type of ship and new kinds of men. He used new phrases—“ice knowledgeable scientists,” “ice-competent shipmasters,” and “ice-able ships.” The three phrases sum up a great new challenge to maritime technology and human intelligence. Success in meeting the challenge will mean fulfillment of a centuries-old dream of seafarers, the safe and regular—perhaps even almost continuous navigation of the Northwest Passage. That would be a triumph of turning mythology into reality.

American participation in this vast, novel, and complex enterprise provides as good an example as you could want of that bold acceptance of challenge which is part of the new spirit I have been talking about in the American merchant marine.

There was one passage in Commodore Robertson's remarks which I'm going to quote just for the fun of it, because it combines so neatly in one package both the reality and the romance of shipping. They don't always go well together.

Of the mariners who must deal with that forbidding part of the world, he said:

“These men do not have adventures. Adventures are wasteful, inefficient, costly and dangerous. They have no place in the Arctic.”

I would not differ with him. I would only call your attention to a further meaning of his words which is that the adventures must nevertheless be undertaken, though somewhere short of the Arctic. They must take place on the drawing boards, the shipyards, in the minds and nerves of seafaring men, and, yes, in the board rooms of the enterprises which buy and operate ships, and—yes, again—in government offices over in Washington.

Apart from the special challenges of the Arctic, change is presenting new challenges and new opportunities for the American merchant marine in its traditional trade around the world.

The fruits of technology, in regular trade, are much higher levels of capability in vital areas of merchant ship performance. These include rapid cargo handling, very fast turnaround, speed on voyages port-to-port, and a versatility in serving ports from the most sophisticated to the most primitive.

For example, container ships can't be beat for serving container ports. At present, not all ports are equipped to take advantage of

the container revolution. Eventually, one may suppose, all major ports will be so equipped. In the meantime, there are parts of the world where ports which are the coronary valves of struggling national economies still depend upon lighterage to move their cargoes in and out.

Even in some of the so-called more advanced countries, great vessels tie up alongside quays built in antiquity, and must depend upon the sheer muscle of the local cargo gangs to load and discharge. For such ports, barge ships provide an innovative means of sustaining service during the transition to modernity, and yet are capable of performing as container vessels when the ports are ready.

The process is one of progressive realization of the promise of technology. As one of our leading ship operators said recently, "When a vessel can go into a port and load or unload cargo in one day instead of five or 10 or even 15 days, the ship operator can gain as much as 70 percent in the number of new voyages." And since containers and barges are interchangeable from one ship to another in a fraction of the time traditionally required for trans-shipment, there exists the solid prospect of developing new intercontinental trade routes not economically practicable in other days, using old methods.

We at the American Institute of Merchant Shipping have studies which show that with ultra-modern vessels, half the number of cargo liners now under the U.S. merchant flag could carry twice the present amount of liner cargo.

To put it another way, only 69 vessels of the revolutionary container and ocean-going barge-ship types now being built could completely replace the annual lift capacity of the 322 ships in the present U.S. subsidized liner fleet. Those 69 ships would have a lift capacity equal to 260 ships of a type we now call fast and modern—the C-4s.

But technological brilliance falls short of realizing its full potential unless it is translated into ships. We need ships, and the ships need cargo.

I prefer not to talk in terms of building enough ships to equal present performance. I like to talk about carrying a lot more cargo.

President Nixon has suggested that the U.S. flag fleet should carry at least 30 percent of U.S. ocean-borne cargo. I know of no reason why we should not shoot for a figure of 50 percent.

The ship operators are ready to expand and modernize their fleets. AIMS found in a recent canvass that 19 companies—subsidized and unsubsidized—have an urgent need for 82 vessels—containerships, bulk carriers, LASH (Lighter Aboard Ship) barge carriers, a tanker, and a number of major conversions.

It is not my intention to suggest that the whole hefty shopping list of the merchant marine can be checked off in one trip to the store. But I do feel that we are closer to making a good beginning on it than we have been for a long time.

As a preparatory step before receiving the promised new Nixon merchant marine program, the House authorization bill Congressman Garmatz did so much to shape would, if the appropriation followed suit, provide \$145 million in new money for merchant marine construction subsidies instead of the \$15 million asked in the final Johnson budget proposal. Together with funds previously approved but not spent, the new figure would bring the total available to \$246 million. And the authorization bill proposes \$212 million for operating subsidies, up to \$17 million from the budget request.

Without counting chickens before they're hatched, it is possible to expect that we are, indeed, going to get more money for ships than we have been getting.

I'd like now to be a bit more parochial for a minute. I've been dealing with the mer-

chant marine from a national standpoint. I certainly have not lost sight of the importance of Baltimore and that huge part of Maryland's life and the nation's life which ties in to your port.

We are counting on Baltimore to take advantage of these developing opportunities for its own sake, and to help us at AIMS to make the most of them. Your record to date makes us look to Baltimore as a sort of powerful auxiliary of AIMS.

The merchant marine cannot forget that from spontaneous beginnings in colonial times, even before there was a Baltimore, this two-way relay point between America and the world has grown to be the nation's fifth largest port. Every year more than 40 million tons of cargo cross its piers inbound and outbound, supplying industry and commerce with their needs and providing markets the world over.

Anyone even casually familiar with the Baltimore story knows that most of this happened because you were determined that it should. You boosted Baltimore to its present ranking against stiff competition from other ports up and down the coast. Alert port management, superb service, vigorous selling in the United States and abroad, making the most of what you had, building what you needed, have made this a magnificent example of how a port can thrive, and what a thriving port can return in benefits to the environment in which it exists.

An historically-minded friend tells me that Rolling Road, on the outskirts of your city, got its name from the practice of rolling hogheads of tobacco along its path to ships loading in the Patapsco River—a very early form of containerization. So, the timely introduction and rapid development of modern container facilities in the Port of Baltimore are only the latest example of a process which as nearly as I can gather will go on as long as the channels of the Chesapeake Bay and the canal to the Delaware are even slightly moist.

The American merchant marine can profit immeasurably from your ideas and your exertions. As the port of Baltimore prospers, so does the merchant marine, and as the merchant marine prospers, so does Baltimore. I can't think of a sounder basis for a long and happy life together.

DEFENSE ON THE DEFENSIVE

HON. GEORGE E. BROWN, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 26, 1969

Mr. BROWN of California. Mr. Speaker, last week's colloquy here on the House floor between the chairmen of the Armed Services and Appropriations Committees obviously is receiving much attention not because of what was said, but because of who said it.

Indeed, that heralded verbal exchange may not go down in the annals as one of Congress' "great debates," yet I find it significant that criticism of the Military Establishment now seems to be coming from all directions—not just from a small grouping of continual critics of the military.

And, with this new criticism, we also see a much deeper analysis of overall national direction and priority. Hopefully, all of this can—and soon will—be converted into a true reordering of this Nation's goals and objectives, with the emphasis on a free, just, and equitable society open to all men.

Last Friday's Wall Street Journal carries an editorial commenting upon the Mahon-Rivers dialog and upon the various implications arising from this new criticism of the military complex. I would now like to insert the editorial, entitled "Defense on the Defensive" into the Record at this point:

DEFENSE ON THE DEFENSIVE

If there was any question that the Pentagon faced a new atmosphere in Congress, Rep. Mahon dispelled the doubts the other day. The Texas Democrat, who heads both the Appropriations Committee and its Defense subcommittee, long has been one of the staunchest supporters of military spending. Yet he rose on the House floor to protest that the Pentagon was impairing public confidence with its "many mistakes."

Indeed it is. Perhaps the timing was only coincidental, but in the past few days the public has heard charges that a fleet of Air Force cargo planes will cost \$1.2 billion (or is it \$2 billion?) more than estimated; it has read that the Army may lose \$200 million or so on a big helicopter; it has noted the sinking of a \$50 million Navy submarine at its construction dock.

In the circumstances it does nothing to bolster public confidence to hear Rep. Rivers, chairman of the House Armed Services Committee and still a Pentagon champion, "explain" that there really have been no cost "overruns"—merely some "inaccurate" estimates of cost.

Like most Americans, Congressmen always have firmly believed that the nation should have an adequate defense. Like most people, too, the lawmakers have assumed that military men are likely to know more about military matter than ordinary citizens do.

From these two valid premises, Congress leaped to an invalid conclusion: That the legislators should give the Pentagon whatever it wanted. More than that, Congress often has pushed on the Defense Department even more money than it sought.

In doing so the lawmakers abdicated their proper role. Sure, they should give heavy weight to the Pentagon's views on defense, just as they should mull the Agriculture Department's ideas on farming and the Transportation Department's thoughts on highways and railroads. But Congress has an obligation to consider critically the whole Government, and whether money is being allocated wisely and is likely to be well-spent.

Part of the problem is that the Government, and especially the Defense Department has grown so large that it's difficult for Congress to survey it properly. Even that doesn't excuse the lawmakers, though, since they could have been doing a far better job if they had overhauled their own antiquated appropriations procedures—and then mustered the will to use them.

The current Congressional criticism stems from several sources. For some lawmakers, the main incentive is their distaste for the Vietnam War; they eye with special care any money to be spent on it. Many in Congress were rightfully disturbed by apparent Johnson Administration efforts to conceal rising outlays in Southeast Asia.

A lot of Congressmen also are quite correctly concerned about inflation. Spending priorities and avoidance of waste, always important, are now even more so.

For the most part the Pentagon's recent difficulties had their origins years ago, and so can't be laid to the current Administration. In Deputy Secretary Packard, the Defense Department now has an able administrator who can, if he chooses, improve the Pentagon's own housekeeping. In Secretary Laird, the Department has a Congressional veterans who can, if he chooses, encourage the process of legislative review.

Rep. Rivers seems to think that Rep. Mahon and other critics of the Pentagon are "playing into the hands of the enemies of the military," and there may be a chance that the attacks will go too far. We would like to believe, however, that the new atmosphere will only help encourage Congress to do what it should have been doing all along: Keeping a close watch on all Federal spending.

Whatever the "enemies" of the military think about that, a lot of us would consider it a welcome development.

SUBSIDIZED SEDITION

HON. JOHN R. RARICK

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 26, 1969

Mr. RARICK. Mr. Speaker, the taxpayers, very much against their will, are being forced to subsidize Marxist rebellion in which the poor exploited Negroes are nothing but misled cannon fodder.

Last November the taxpayers thought they had delivered a plain message to the new administration that they wanted no more federally subsidized violence—only now they learn that the present administration prefers not to alter the former administration's policies.

The most recent revulsion to American taxpayers is today's announcement by the OEO of a grant of nearly \$1 million to finance black capitalism by a band of self-declared insurrectionists at Durham, N.C.

A clipping from the New Hampshire Sunday News of March 23, 1969, and from the Evening Star of May 26, 1969, follow:

[From the Manchester (N.H.) Sunday News, Mar. 23, 1969]

REACHING LEVEL OF NATIONAL SECURITY
THREAT: REVEAL MANY BLACK REBELS ON
FEDERAL PAYROLL

(By Vera Glaser)

WASHINGTON, March 22.—The White House has received disturbing intelligence that the black revolutionary movement is spreading so rapidly among negro youth that it has reached the level of a national security threat.

A hard core of urban guerrillas is being trained by hate-filled racists to lie, cheat, steal and burn—in short, to destroy American society as it exists today. Their handiwork is help to foment current U.S. campus explosions and slum violence.

To make matters worse, many of the revolutionaries are supported by federal funds. Some are on the payroll of the Office of Economic Opportunity (OEO) as local anti-poverty workers. Others are "separatist" college faculty members drawing federal grants.

Although congressional probes and newspaper exposes have linked local OEO Community Action groups with black militants, the full extent of the corruption is only now being conveyed to the administration. A forthcoming report on the OEO by the General Accounting Office is said to contain "hair-raising" revelations of local mismanagement and swindling.

Two clashing viewpoints on how to deal with the situation exist among the President's top advisers.

MOYNIHAN AND CO.

Presidential assistant Daniel "Pat" Moynihan and his group of urban specialists are aware of the "takeover" of some OEO programs by racial firebrands and overly per-

missive local officials, but favor keeping the agency essentially as is, perhaps adding tougher accounting and monitoring measures.

They are working currently on guidelines for a broad federal welfare approach.

Other presidential advisers, however, are alarmed at the inroads the militants are making in the negro community.

They advocate a two-pronged attack. They would continue the traditional effort to wipe out the roots of poverty with education, jobs and welfare.

But they would simultaneously wage a tough campaign to quell black violence.

They do not want to telegraph their punches but appear to be thinking in terms of sophisticated counter-intelligence aimed at rooting out subversives from federally-funded programs. The activity, according to one proposal, would head up to a secret White House command post.

The latter group, of which counsel John Ehrlichman is said to belong, believes it has the President's ear. Mr. Nixon is described as disappointed with the failure of Moynihan's people thus far to develop really new approaches to urban problems.

Much of the intelligence now reaching the administration is drawn from sizzling reports in the files of OEO which have hitherto been pushed under the rug or leaked back to militants. Now they are being leaked to the White House.

While U.S. Ambassador to France, R. Sargent Shriver was chief of OEO, programs were funded too fast in many cases to check local personnel. "Black Panthers" and other violence-prone militants were hired.

Gerson Green, director of research and development in OEO's Community Action Program, worked closely with Shriver to authorize the programs. Their philosophy was highly permissive, favoring "payoffs" to militants to keep them from rioting.

Green is now a top-level consultant to Health, Education, and Welfare Secretary Robert Finch.

The Shriver-Green coalition permitted hard core revolutionaries to siphon off poverty funds in Philadelphia, Los Angeles, Chicago, San Francisco and other cities.

BRIBES

Some U.S. mayors openly describe OEO's youth programs as "bribes" to keep young negroes from rioting, but are eager nevertheless to keep receiving the money for whatever insurance it may provide against disturbances.

Messrs. Shriver and Green approved funding for a Los Angeles Community Action Program which hired Ron Karenga (formerly Ron Everett), a notorious advocate of violence.

Karenga drew a federal salary as a full-time "tutor" last summer while heading a gang known as "US." Other militants headed rival gangs, among them Billy Tidwell ("Sons of Watts"), Ronald Leroy Crook ("Community Alert Patrol"), Bo Simmons ("Young Men for Total Democracy"), and Tommy Jacquette ("Self-Leadership for All Nationalities Today," known as "Slant").

Karenga's employment was discovered, but quickly hushed up, about the time Mr. Shriver was due to visit the annual summer festival at Watts.

ADVOCATES OF VIOLENCE

Jacquette, who advocated "burning all of America down," was employed as a field worker-counselor at the Westminster Project, the biggest and best-known anti-poverty activity in Watts, which received more than a million dollars of federal money in 1967.

In San Francisco, a group of Hunters Point negro youths employed in the local summer program, accompanied by their boss Charles Sizemore, entered the office of area director George Jackson, held a knife to his throat,

and demanded a month's extension of their salaries.

Sizemore, Arnold Perkins and George Murray, other local poverty workers, used their positions to encourage virulent black racism among negro youths.

In Washington, D.C., federal funds pay the salary of James Garrett, a black racist on the faculty of Federal City College, who earlier helped foment violence on the campus of San Francisco State College. He was one of a group referred to by acting president S. I. Hayakawa before a House Sub-Committee as "dedicated revolutionaries."

Recently, Garrett lectured students at the University of Oregon on techniques of making firebombs and hand grenades.

MURDERERS ON PAYROLL

Evaluations last summer of the Woodlawn Project in Chicago showed criminals in top positions. Five murders were committed by people in the project while it was under discussion at OEO.

In San Francisco, Black Panther Bobby Seale told youth employment program participants to "get guns, get organized, and shoot it out." In that area, local poverty leaders had purposely hired as summer program coordinators in five target areas "articulate radicals," "gang leaders," and "real hard core, anti-establishment people."

The realization appears to be growing that it is a mistake to assume only the white community has the solution to racial problems and negroes are only passive witnesses to the riots and crime emanating from their communities.

One possible approach might be to require security clearance for all those hired in federally-funded programs to make certain they are, first of all, loyal to the United States.

[From the Washington (D.C.) Evening Star, May 26, 1969]

OEO GRANT TO DURHAM NEGROES IS PROTESTED
(By Richard Critchfield)

White North Carolina Republicans are protesting a \$900,000 Office of Economic Opportunity grant to a Negro foundation in Durham which they say is a spawning ground for revolution-bent guerrillas.

The grant, announced April 24, is catching the Nixon administration in the middle.

President Nixon's choice to head OEO, Donald Rumsfeld, was not sworn as the new director of the federal anti-poverty agency until today and holdover Johnson administration aides have been making most of the policy decisions.

The grant is now nearing the end of a 30-day processing period and "the money will be dispersed" soon, OEO said in a statement.

The White House apparently does not want to overturn the commitment, but a Nixon aide said the foundation will be watched closely to make sure that no OEO funds are misused.

The grant, funded under OEO's Special Impact program, is important both as the Nixon administration's first big pilot project in minority business enterprise and because it illustrates the problem of trying to separate the federal war on poverty from the Negro revolt against poverty.

It represents the first of \$10 million in OEO grants to be allocated before June 30 to businesses owned by minority groups. In his 1970 budget request, President Nixon has asked the program be expanded next year to \$46 million.

BLACKS BUY STOCK

The controversial project would establish a black-owned supermarket, jam and preserves factory, and an enterprise to produce coffins. They would be run by a new business, United Durham, Inc., and would be expected to produce about \$3 million in gross sales and create jobs initially for 125 people and later on for 3,000.

Durham's black community is proud of the project and has already bought \$46,000 of stock in the supermarket in mostly \$5 shares.

The problem, as many of Durham's white leaders see it, is that the money will first be channeled through the town's 15-month-old Foundation for Community Development, whose black staff includes militants some whites say were involved in campus riots and fire-bombings this spring.

Jim Holshouser, chairman of the North Carolina Republican party, has urged federal funds "not be used to feed the fires of unrest which cross North Carolina today." He has appealed to Rumsfeld to hold up the grant until he has time to investigate the foundation.

The Republican chairman's chief objection, shared apparently by many whites in Durham, was the role of the foundation's militant "training director," Howard Fuller, in campus disorders this spring at the University of North Carolina, Duke and Belmont Abbey.

Fuller was arrested April 29 on the Belmont Abbey campus on a trespassing charge after black students seized a college building just after hearing him deliver a speech. Last month five Negro youths, riding in a car belonging to the foundation and registered in Fuller's name, were arrested and charged with throwing fire-bombs into Duke University woodlands.

JUST RHETORIC

Earlier this year Fuller was instrumental in helping black students from Duke establish a makeshift "Malcolm X. Liberation University" in downtown Durham. At the dedication ceremony, Fuller said, "We will teach here why we must destroy capitalism."

At a national conference of community action agency directors here at the Shoreham Hotel March 10, Fuller told a cheering audience it must destroy OEO's antipoverty program "either from within or without." He also called integration "a flop," saying, "If you get ready to fight a war you do not bring your enemy into your discussions of strategy."

"It's just rhetoric," said Edward Stewart, an official of OEO's successful Project Outreach in Durham, which promotes small Negro businesses. "Howard's not a nut. He knows how to keep the kids in check."

But Durham's white community is more inclined to take Fuller's words at face value.

Ed Martin, assistant city editor of the Durham Herald, who has just completed a series of investigative articles on Fuller and the Foundation for Community Development voiced the suspicion the foundation may be just a facade for Fuller's activities to organize and radicalize North Carolina's black students.

GRANT QUESTIONED

Martin also said he was "appalled by OEO's investigation before making the grant." He said, "They didn't check with more than four or five people in town here before making what is almost a million-dollar grant."

Interviewed in Washington, Geoffrey Faux, chief of OEO's development branch, said: "Fuller's relationship with the foundation is really irrelevant to what we're doing. We envision no role for Mr. Fuller and he is not to be paid out of Special Impact project funds."

Faux produced a list of those interviewed in Durham during the investigation. It included the president of Durham's black bank and its first Negro county commissioner as well as one of two Negro city councilmen. The others were either officials of the recipient foundation itself or members of Durham's community action agency. The only outside white person contacted was Jack J. Priss, a Duke University sociology professor defeated in a city council election last week who has been active in campus demonstrations.

One white newspaper editor said "radical tension and an almost constant threat of disruption" had gripped Durham since Fuller began operating there and that a number of Negro families were opposed to his militant activities but were afraid to speak out. He said the towns-people were "incensed" over the grant.

In contrast, Negro leaders praised Nathan T. Garrett, the foundation's executive director, Fuller and the foundation, saying the OEO grant would bring real benefit to the black community of Durham. Said one: "Fuller has organized the black community here. All he's giving the whites is the same thing the black man in Durham has experienced so long a time."

In a letter to OEO, Garrett pledged Fuller would have "no policy responsibilities" in administering the \$900,000 grant. He described Fuller's role as heading a staff "devoted to training neighborhood workers and leadership for the poor . . . and with nonacademic employe groups in colleges and universities throughout the state so that these persons can seek better working conditions."

ALL CITIZENS SHOULD FOLLOW THE ESTABLISHED PROCEDURE BY WHICH A CITIZEN CAN FILE A FORMAL COMPLAINT

HON. JOEL T. BROYHILL

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 26, 1969

Mr. BROYHILL of Virginia. Mr. Speaker, once again the militant leader of Pride, Inc., the Labor Department's pet make-work program in the District of Columbia, has made headlines by assaulting a police officer.

Once again Mr. Barry has, by bringing his teenage gang of hoodlums into the District building, forced Commissioner Washington into hysterical action—in this case appointment of a "top priority investigation" of the police officer's conduct by the policeman's boss, the Public Safety Director, assisted by the District of Columbia Human Relations Commission and the militant Mr. Barry's attorneys.

Mr. Speaker, Carl W. Beatty, president of the Policemen's Association of the District of Columbia, has written an open letter to Commissioner Washington expressing the grave concern of his organization over the District Building hysteria which followed Mr. Barry's antics. I believe his comments should be studied carefully by all our colleagues, in whom the Constitution has vested final responsibility of maintaining law and order in the District of Columbia.

Mr. Beatty's letter reads as follows:

POLICEMAN'S ASSOCIATION OF THE DISTRICT OF COLUMBIA,
Washington D.C., May 15, 1969.

Open letter to:
Mayor WALTER E. WASHINGTON,
District Building,
Washington, D.C.

DEAR MAYOR WASHINGTON: I am writing as president of the Policemen's Association of the District of Columbia, whose membership is comprised of over 4,700 active and retired policemen. On behalf of the men on the force, and to express their strong feelings, I write to protest the manner in which the investigation of the arrest of Marlon Barry is being handled.

If a policeman on the Metropolitan Police force has allegedly engaged in misconduct, there is a procedure established by which a citizen can file a formal complaint, which will be processed in an orderly, established manner, which will result in an investigation and a report. We on the force do not understand why a complaint by Mr. Barry is handled any differently or why you, as the Mayor, must order a top priority investigation by the Public Safety Director, assisted by the District of Columbia Human Relations Commission and Mr. Barry's lawyers, as was reported in the daily papers. It has been publicly announced by one of Mr. Barry's lawyers that he intends to file a civil action for damages. I suppose this will involve the individual policeman and the District of Columbia government. To the men on the force who are on the streets day in and day out, trying to maintain law and order, it is difficult to understand why the Public Safety Director, who is their boss, is working with the attorneys for a person who intends to sue the policeman and the District.

In this day and age, and in the atmosphere in the District created by people like Mr. Barry, who makes public pronouncements that police are like mad dogs, a policeman tried before a jury in this jurisdiction is at a complete disadvantage. When this is compounded by the Public Safety Director and the Human Relations Commission being directed to work with attorneys representing Mr. Barry, then the police office is indeed in a sad way.

We do not understand how Mr. Duncan, as Safety Director, can personally conduct an investigation of a police officer, since ultimately, he must be the judge of the police officer's conduct following investigation. Since a police officer has neither the means nor the opportunity to conduct his own investigation, it seems that the only proper procedure is to have such investigation conducted by a totally and completely impartial, disinterested Board. Upon complaint, properly filed, Mr. Barry would have the right to present his case to the Citizen Complaint Review Board, who would determine if there is sufficient evidence upon which to bring charges before a Trial Board. This is the only function of an investigation by officials of the District of Columbia. It is not, and cannot be, to assist a complainant's attorneys in gathering evidence for a civil suit.

We members of the force would also like to know, once and for all, whether we are supposed to enforce the law as it is written. The law includes within it traffic regulations and other provisions which to many people seem to be inconsequential. We would like to know, Mr. Mayor, what we are supposed to do if every person we gave a ticket to tore it up and threw it in our faces. If Mr. Barry can do it, why can't every citizen do it? And if every citizen can do it, what is our function? We feel that we should have the right to enforce the law with the full and complete support of you and the Public Safety Director, as well as the Chief of Police. If improper action by a police officer has been taken in enforcing the law, the courts are there to protect the citizen. We on the force do not feel that we must justify our decisions and our judgment on the public streets, for to be required to do so would, in fact, create innumerable disturbances and ill will. It seems to us, therefore, that the District government should strongly support us in doing a job which we are paid to do, and to which we are dedicated. To be confronted by a "top priority investigation" every time we enforce the law against someone like Mr. Barry is to destroy the morale of the men who can very properly say: "Why make an arrest? Why enforce the law? Let's put in our eight hours and pick up our check." If this is what you want, and I am sure it is not, just tell us.

We sincerely trust that the men on the force, in enforcing the law, will have your

full and complete support. We also hope that procedures established by law will be followed in judging the complaint of Mr. Barry, as it would be in any other case.

Respectfully,

CARL W. BEATTY,
President.

A 10-POINT PROGRAM FOR SENIOR CITIZENS

HON. CLAUDE PEPPER

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 26, 1969

Mr. PEPPER. Mr. Speaker, in an eloquent address before an audience in the Douglas Gardens Jewish Home for the Aged in Miami, the former Secretary of Health, Education, and Welfare, the Honorable Wilbur J. Cohen, urged enactment of a 10-point program for senior citizens.

It is with pleasure and an honor for me to have the distinction of inserting Mr. Cohen's speech in the RECORD:

A 10-POINT PROGRAM FOR SENIOR CITIZENS*

(By Wilbur J. Cohen, former Secretary of Health, Education, and Welfare, professor of education, the University of Michigan)

It is a pleasure to meet today with my senior citizen friends in Miami. I welcomed your invitation because it gives me the opportunity to discuss with you the policies that I believe our Nation should pursue to achieve the goal of a better and more meaningful life for the Older American. I believe that this is the time when we can take additional steps to bring us closer to that goal.

A 10-POINT PROGRAM FOR SENIOR CITIZENS

I intend to work for:

1. The Right to Adequate Retirement Income.

Raise social security benefits by 50 percent, and the minimum to at least \$100 a month. Make the levels of benefits "inflation-proof" by automatic increases in line with increased living costs.

2. The Right to Comprehensive Health Care.

Broaden Medicare to protect against the heavy costs of prescription drugs and to include preventive services.

Finance medical as well as hospital insurance under Medicare through contributions from employers, employees, and the Federal Government.

Expand comprehensive out-of-institution health services for the elderly.

3. The Right to Decent Housing.

Establish and maintain standards for health and safety in rental housing.

Expand rent-supplement programs for low-income elderly.

Expand long-term insured and direct housing loan programs at rates within the means of the elderly.

4. The Right to Rehabilitative Services.

Provide special rehabilitation services for older Americans, including training, counseling, placement, and follow-up.

Expand homemaker, home health, and other services to enable older people to remain at home if they so desire.

5. The Right to Meaningful Employment Opportunities.

Eliminate arbitrary age discrimination in employment.

Expand work opportunities, and education and training programs for older workers.

6. The Right to Comprehensive Community Services.

Develop a full range of community services, such as friendly visitors, legal and protective services, nutritional service, information and referral services—conveniently located and accessible in the neighborhood.

7. The Right to Life-long Learning.

Encourage learning as a life-long pursuit. Devise special adult education programs to prepare for new careers in the retirement years.

8. The Right to Full Participation.

Assure the elderly a role in the recreational and cultural life of the community. Expand senior centers, opportunities for volunteer services, and recreational and cultural programs.

9. The Right to Services Based on New Knowledge.

Expand health research, particularly in the chronic and degenerative diseases.

Expand research in social services, retirement counseling, and leisure time activities.

10. The Right to Choose Freely.

Assure older people a wide range of choices—in jobs, in housing, in family and community life—in a dynamic and improving society.

Recent progress

We can and we must continue the progress that has been made in the past few years to advance the well-being of our senior citizens. During this decade we have begun to take the steps which are necessary to solve some of the problems of the aged and to take advantage of the opportunities that the older population represents. What has been accomplished because of the concern and increased awareness, which your group did so much to highlight, is something unique in our history.

There has been more legislation enacted in the past 4 years to meet the needs of the aged than was enacted in the past 40 years:

The 1967 Amendments to the Social Security Act provided the largest social security benefit increase in history.

The 30 year fight for health insurance for the aged was won.

The Older Americans Act is bringing new and expanded services to older people in their own communities.

The Economic Opportunity Act has widened the attack on poverty.

The regional medical program is attacking heart disease, stroke, and cancer—diseases which cause 70 percent of deaths of older people.

The Comprehensive Health Planning Act is coordinating community health facilities and services to meet health needs including those of the elderly.

Amendments to the Manpower Development and Training Act provides services to meet the special problems of older workers.

Amendments to the Vocational Rehabilitation Act aid in the rehabilitation of physically and mentally handicapped individuals including the aged handicapped.

Legislation expanding library services will bring increased opportunities for meaningful living to older people.

The Department of Housing and Urban Development has initiated the "Model Cities," neighborhood facilities, home rehabilitation, and rent supplement programs—all of which will benefit the older person.

The Age Discrimination in Employment Act of 1967 has outlawed age discrimination in employment by employers, employment agencies and labor unions.

Yes, much progress has been made in identifying the needs of the older population and in the development of programs and services to meet them. But the job has just begun.

Social Security

We cannot relax our efforts when 30 percent of our older population—5 million

people—still live in poverty. Their incomes, which are too meager to live on decently, must be raised.

We must continue to improve the social security program—the biggest anti-poverty program in the United States. Social Security benefits right now are keeping 10 million persons out of poverty. By increasing the minimum monthly benefits to \$80 for an individual and to \$120 for a couple, 1 million more persons, including 800,000 persons 65 and over, would be immediately moved out of poverty. We must increase the minimum benefit to \$100 a month over a period of time.

In as prosperous a country as the United States, where the Gross National Product has been increasing at an average annual rate of 5 percent, there is no reason why social security beneficiaries should not share in the expanding prosperity. I think we can and we must steadily improve the social security program to keep pace with the Nation's economic growth.

Public assistance

For most people, additional improvements in the social security program would be sufficient to help them out of poverty. But it must be recognized that there are people who may, for one reason or another, require public assistance. And today their needs are not being met adequately. In addition to inadequate payments, residence and other restrictive eligibility requirements are barriers to meeting their needs.

No one is happy with the present welfare system. The President's Commission on Income Maintenance is studying ways to overhaul the system and to deal with the gaps which exist. We do not know yet what the recommendations of the Commission will be. But while we are waiting for a longer-run solution we must make some radical changes in the scope of coverage, in the adequacy of payments, in the way welfare payments are administered and in building incentives to independence.

One way to accomplish this is to establish a Federal system of income payments with eligibility, the amount of payments and appeals determined on a national basis. This would overcome many of the problems of inequity and State variations and fiscal inadequacy which plague the present welfare system. I suggest this proposal for further consideration.

Adequate income

Our goal must be to enable all retired people to command a purchasing power related to their needs. We must assure them a basic income which permits them to participate fully in family and community life without being required to work and without the stigma of charity. But those who are able and wish to supplement their basic retirement incomes through earnings must be helped to do so. Society needs their continued services.

Health insurance

Another area that demands our attention is the health needs of the aged. While Medicare has reduced the financial barriers to medical care that previously existed for many older persons, serious health problems still confront the aged. We must continue our pursuit of the American goal of a later life free from illness, disability and suffering. The extension of health insurance protection to cover preventive services such as periodic health examinations and disease detection services might be one means of reducing the incidence of serious disabling diseases in old age.

But certainly we must find ways of combatting the rising cost of medical care, including the mounting costs of drugs that drain the budgets of many elderly people.

*Presented at Douglas Gardens, Miami, Florida.

Currently elderly people spend 5 times as much on medicines as do younger persons.

Two proposals would help us eventually combat this problem: the Medicare-Medicaid Drug Cost Determination bill, which would establish a reasonable cost range for drugs supplied under the Medicare-Medicaid and child health programs; and the United States Drug Compendium Bill, which would authorize the Secretary of Health, Education, and Welfare to publish a complete and up-to-date compendium of lawfully available drugs together with all pertinent prescribing information for use by physicians, pharmacists, and the general public.

Housing

The aged also must have adequate housing at prices they can afford and a wide variety of alternative living arrangements.

Too many of them today live in one room walkups, shabby hotels, old lodging houses, or isolated farmhouses. Much of this housing is unsafe, unhealthy, and rat infested. Rents take about one-third of the income of the aged. Much more must be done to improve the housing situation of the aged.

One step that could be taken, would be to require States, as a condition for the Federal approval of a State old-age assistance plan, to establish and designate a State agency to be responsible for maintaining standards of health and safety in housing rented to old-age assistance recipients. Such a requirement would provide an essential safeguard for the living arrangements of a highly vulnerable group—the needy aged.

But the aged, no matter what their income, need more housing options. Their needs and desires are as varied as any other age group and no single type of housing can be expected to satisfy all the aged. Some may wish to stay in their own homes, others may wish to move into high rise apartments. Some may want to enter a church home, others to live in a retirement village. All these options must be available.

Work and retirement

Alternative and new combinations must also be available with respect to work and retirement. Some people want to retire at 60, others never. Some want to work full-time, others part-time. For those who retire, meaningful retirement activities must be available to them.

Social services

The development of appropriate social services would greatly increase the freedom of choice in living arrangements. Homemaking services, home health services and protective services for the aged in sufficient supply would give many older persons who must now live in institutions a chance to remain in their homes if they so desire.

The expansion of senior centers, the development of adult education programs and increasing opportunities for volunteer services would also give older people greater freedom of choice.

CONCLUSION

Bold new imaginative approaches are needed if we are to meet our obligation to the generations who have contributed so much to this nation's progress. And just as important is that they continue their contributions to the fabric of the economy they helped so much to shape.

Working together we can continue to keep the spotlight on the urgent needs of the Older American. We must continue to urge programs that will meet their needs. Based on our past experience, I am confident that great strides can be made in 1969, 1970, and the years ahead. I intend to give all I have—my energy, my mind, and my heart—to putting into action the ten-point program I have outlined today.

I ask your help and your dedication in this great effort.

PESTICIDES—LET US SPRAY?

HON. RICHARD L. OTTINGER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 26, 1969

Mr. OTTINGER. Mr. Speaker, last month WCBS-TV, New York, presented an alarming and courageous documentary showing the effect that DDT and related pesticides are having on Atlantic coastal fisheries. The program entitled "DDT/SOS" was produced by Osborne Segerberg, Jr. and narrated by CBS-TV science editor, Earl Ubell. It was presented as a part of the award-winning public service series, "Eye on New York."

I was privileged to be able to arrange to have this important program viewed by a distinguished conservationist, Supreme Court Justice William O. Douglas, and by such congressional conservation leaders as Senators PHILIP A. HART and GAYLORD NELSON and Congressmen JOHN D. DINGELL and WILLIAM F. RYAN. CBS-TV was so impressed by the reaction of these leaders that it broadcasts their comments in separate programs.

The dangers that DDT and related nonbiodegradable pesticides pose for our environment are very grave. I am pleased to be able to reprint in the RECORD at this time the entire CBS program and the comments of Justice Douglas and my colleagues dealing with one very important facet of this problem:

"DDT/SOS" A SPECIAL REPORT BY WCBS-TV NEWS

UBELL. By 10 o'clock in the morning, most of the work is done here at the Fulton Fish Market. The stalls are empty. The fish have been sold and carted away.

But one day this market and these stalls might be empty for another reason. There might be no fish to sell. The mackerel, the tuna, the bass, the snapper might be reduced to such small numbers that fishing might not pay.

Why? Well, we are pouring new chemicals into the oceans, chemicals that reduce the fertility of fish to such a low level that they could indeed disappear.

The Challenger out of Sandy Hook, New Jersey. A research vessel of the Federal Bureau of Sport Fisheries and Wildlife . . . hunting down the threats to sea life—combinations of acids, DDT and sewage sludge that drive fish away. Already, fishermen report that fluke, porgy, weakfish and seabass have all but disappeared from New York waters.

The Challenger's divers have discovered a dead sea 20 miles from New York. It is a wide area where the city dumps its sewage. Nothing lives here. But DDT reaches beyond local waters, and millions of pounds of it wash down from farms to the sea each year. And it stays for ten years or more near the mouths of rivers—the estuaries—where fish are born. Diver-biologist Bob Wicklund:

WICKLUND. DDT, of course, is being introduced into our environment, especially in the estuarine areas where it's very important to young fish—is a nursery grounds for young fish—these fish are taking up this DDT and the bigger predators are feeding on the smaller fish and they are actually taking in DDT in small quantities and it's actually building up in these species.

The combination of all these chemicals and dumping of chemicals and sewage and so on certainly will build up into a problem

eventually. I think it's a problem right now, as a matter of fact.

UBELL. Dr. Charles Wurster, biochemist at the State University at Stony Brook, told correspondent Jim Kincaid of his investigation of the impact of DDT on the sea and its life.

KINCAID. Doctor, we ordinarily think of DDT as being a purely agricultural product, something that is dropped on crops or is spread in various ways to control insects. How does it get here?

WURSTER. Well, unfortunately, it doesn't stay on a farm where we put it. It moves from the farm by a number of mechanisms. It can either get into the air as a gas or as a particle and fly around the world in the normal circulation patterns of the atmosphere and come down in the precipitation or it can move downstream in the watershed and by river systems drain into the ocean.

So by these mechanisms, most of the DDT that is applied to the land areas of the world are eventually going to be transferred into the ocean.

KINCAID. How does it hurt the ocean?

WURSTER. Well, it hurts it in a number of ways. It affects it—it affects the food chains at various levels. It can affect the phytoplankton at the base. It can affect birds and fish at the top.

The phytoplankton replace the carbon dioxide that the world's animals exhale with oxygen and they also generate nutrients that become the food supply in the ocean. So this is an essential part of life on earth.

KINCAID. Without the phytoplankton, we're nowhere.

WURSTER. Uh, yes. Absolutely. We've had it.

KINCAID. Okay, what happens—what happens on up the line? You're talking about food chains. Something eats the phytoplankton and it moves up. How does this affect us?

WURSTER. Well, the DDT has a tendency to concentrate as it works up the food chain, so that at each level in the food chain it becomes more concentrated than it was at a lower level.

Now this means that the carnivorous birds and fish at the tops of these food chains are often the hardest hit.

KINCAID. How would some of these birds and fish be . . . primarily . . .

WURSTER. Well, fish like . . .

KINCAID. Since we're talking about pollution now.

WURSTER. Tuna, swordfish, mackerel, the various important fish of the world's marine fisheries.

KINCAID. And would they be dwindling in numbers already?

WURSTER. We don't know. We can't really tell. We don't have the data to tell. But we do know that the DDT that they carry endangers them, because DDT accumulates in the yolk sack of the eggs, and when the eggs hatch this DDT often kills the fry. And so we're . . .

KINCAID. I see.

WURSTER. The DDT in the ocean directly threatens the marine fisheries of the world.

UBELL. Dr. Wurster now wants to know how DDT affects pigeons . . . how it cuts down the young bird. The lethal biology may be similar to that of fish. Many birds lose their reproductive power after contact with DDT. Dr. Wurster is sure of one thing: DDT has wiped out the peregrine falcon east of the Rockies. It did its work by interfering with calcium metabolism so that the falcon's eggs were too fragile to survive. Biologists know that if a chemical can wipe out one species, it can wipe out another.

That other species may be fish which are born in marshes like this one at Brookhaven on Long Island's south shore. A decade of DDT spraying for mosquitoes has all but wiped out animal life here. Dr. George Woodwell, chief ecologist at the Brookhaven National Laboratory, has convinced local

authorities to stop spraying, and life is coming back. Dr. Woodwell points out that DDT's action may not be obvious:

WOODWELL. In some instances when DDT is applied in large quantities, it kills birds and fish by acute exposure, killing them outright at that moment. More often, however, it reduces their reproductive potential, reduces their rate of reproduction and so over a period of years they simply disappear. The loss is not a spectacular loss, such as we have when we have a kill of fish following an application of pesticide.

UBELL. Well, the amount of DDT needed to reduce reproductive potential as you call it, or rather have the animals have fewer babies each generation. How much is needed to do that?

WOODWELL. Well, this can be a very small quantity as long as it's present on a continuing basis. In the case of oysters, for instance, some hundreds of a part per million of DDT residues is sufficient to reduce the reproductive potential of oysters to zero.

UBELL. Well, would you say that there exists now because of the persistence of DDT in the environment a real danger to the food fisheries of the world?

WOODWELL. Oh that is certainly true. This is one of the greatest hazards of DDT—that we will swap our oceanic fisheries for the use of DDT in the production of food on land for the convenience of its use in other applications. Certainly the persistence of DDT residues for ten years, perhaps even much longer than that, is sufficient to produce a very serious threat to oceanic fisheries.

UBELL. Every expert I talked to told me the same thing: we don't know how much DDT will make a species of fish vanish. In short, a multi-billion dollar industry is in danger, a danger born of ignorance.

At the Coney Island Aquarium, Dr. Ross Nigrelli, the director, agrees that there is a danger:

NIGRELLI. My personal feeling, Earl, is that it is a real threat. And particularly in fisheries that are within the continental shelf where most fisheries occur. The pollution, I think, is increasing every year. There's more DDT coming into the environment.

UBELL. Well, aren't you concerned about the levels, though?

NIGRELLI. I am. I am concerned. Not only from the health point of view, but from a conservation point of view. I think that some of our important food fishes may actually become depleted in time. It may be beyond our time, but I'm certain that if this continues indefinitely, without some regulation as to the use and the amounts that are put into the sea and the ocean, we're going to be into trouble in the future.

UBELL. In 1962, Rachel Carson warned in her book, *Silent Spring*, that the insecticides could make the fish disappear from the oceans. At the time, many pooh-poohed her speculations as reckless. But now many fish scientists believe that her prediction may come true.

DDT, alone or in combinations with the other deprivations that man is wreaking on the oceans, could make the fish disappear.

It is ironic that it comes at a time when many look toward the oceans as a new resource to feed an ever-expanding population. And the loss of that fish could be a major catastrophe.

And for those of us who eat fish for health or for pleasure, that loss could be tragic.

INTERVIEW WITH HON. WILLIAM O. DOUGLAS

INTERVIEWER. Mr. Douglas, constructing this broadcast on the impact of DDT on fish, what is your impression now?

Justice WILLIAM O. DOUGLAS. Well, that's a terrific film. It should upset any rational person and make him want to do something about it. It's a terrifying thing. The unseen subtle way in which DDT used on the farm

works its way down through irrigation ditches into a river and, eventually, into the ocean. And how one billionth part of DDT per unit of water can sensitize an oyster—and oysters have a capacity to accumulate a tremendous amount of this.

Other fish do, too. What's happening off New York is a great disclosure, a great eye-opener on the Atlantic. We're greatly concerned out West. I wish you could do one on the Pacific. We have a tremendous problem there in the Pacific off my coast—that's the coast of Washington—it's very, very rich in plankton and we're beginning to realize now that plankton is getting highly infected with DDT.

And plankton is, of course, the anchor food for all the chain of things that are dependent on . . .

INTERVIEWER. The wheat of the sea . . . Justice DOUGLAS. Yes, the wheat of the sea. And we're beginning to realize that the tremendous output of DDT endangers many foods, with the best of intentions we have financed DDT plants and they are extensive and are ruining the Pacific. I don't mean just overnight. I'm speaking now in terms of decades.

We may be wiping out many different species of fish at the present time very important in food for human beings.

INTERVIEWER. Tell me, what do you think should be done right away?

Justice DOUGLAS. Well, I would think that this should be on every television station in the United States. I would think that, after television gets through showing it, there should be reruns. I think they should show it at schools. I think this should go to the conservation societies. This should be shown everywhere—wherever there's adult education.

INTERVIEWER. Do you think it's time we banned DDT completely—what's your impression?

Justice DOUGLAS. Well, I think—I was much interested in what Sweden did and much interested in what Michigan did. I've been proposing this—I'm not a scientist but everything I've read indicates that we're dealing here with a killer. I came at it largely through my interest in the birds and through the work with the Audubon Society and with the World Wild Life group.

I have been watching the disappearance, the gradual disappearance of the bald eagle and the shocking effect on the reproduction of the Bermuda Petrel due to the taking in of large quantities of DDT. I hadn't realized until I saw this film of the tremendous impact upon fish.

And also, eventually, there is man. We eat fish, we get DDT from the fish and we store it. How much DDT can a man store? A woman? A child? What effect will it have on health? These are unanswered questions, perhaps unanswerable. But it's this kind of film that will pose the questions and set people to thinking. Eventually, the thing will be banned, should be banned everywhere.

INTERVIEWER. Up till now, we've had to wait for legislation in order to accomplish some control over noxious chemicals in the—in our society. Isn't there some right which I would have as an individual to get manufacturers to demonstrate safety conclusively before there is a nuisance . . .

Justice DOUGLAS. Well, we're on the periphery of the development of new laws. That is very involved and there are a lot of aspects to it. Perhaps, the most constructive thing that's happening at the present time here on the Hill in Washington, D.C. are some bills being drafted by Congressmen and Senators that would set up some kind of scientific control, some kind of a clearinghouse where nothing can be shipped in interstate commerce unless it's cleared by this scientific committee and that can be cleared only by proof of no harm or very remote chances of harm.

The chemical companies are turning these things out at I don't know how many dozens a year and no tests made. The federal agencies in their spraying programs use herbicides without having control patches to learn what a particular poison will actually do. I know the forest services use sprays. I don't know precisely what is in the sprays but they're herbicides and the service doesn't know beforehand what it will do eventually to the species that they're spraying. Come with me to Wyoming and I can show you stuff that they sprayed ten years ago and it's still pretty much of a desert.

INTERVIEWER. What I'm asking, really, is there something in our current law which could make it incumbent, upon the manufacturer before he even distributes it, to demonstrate that there would be no long-term effects upon individuals and upon the environment?

Justice DOUGLAS. No, there's nothing—nothing has as yet developed. Letting it develop just by individual litigation is a slow process. We couldn't afford to wait. We have to have some overall dramatic scientific controls and there have been more and more people thinking that way and I think it'll come. I think it should come very fast.

Not only with respect to DDT but all these other pesticides and poisons that are being used to control all sorts of things that grow. These things must be controlled. We must know—you know, just like doctors before they start operating know and we must know before we ruin the earth any more than we have done now and the waters and the air.

INTERVIEWER. Thank you.

INTERVIEW WITH HON. PHILIP A. HART

INTERVIEWER. Senator, you've just seen our broadcast on DDT and its impact on the fish. What's your impression?

Senator PHILIP A. HART. I profess that coming from the Great Lakes basin, I didn't realize that the sea water—the oceans—were under the gun. We know perfectly well in Michigan that DDT can raise hods. But I didn't realize that it reached out into the oceans of the world. Maybe that will generate the kind of interest that will be required if we're going to do anything about it.

And the first thing to do is find out presently what damage does occur. A very disturbing study of the Cancer Institute shows that eleven of the popularly used pesticides have caused a very shocking number of cancerous tumors in laboratory mice.

Well, I want to know whether pesticides will do that to me, too. And in the case of the fresh water fish, the Great Lakes basin is entitled to hear Congress say "wait a minute, let's find out just what does happen here." And let's find out how to control this damage. And that's the kind of hearings that we're going to have.

INTERVIEWER. Are you planning hearings on that?

Senator HART. Yes, on May 19th we're going to take a look at the specific situation that occurred in Michigan. We're going to ask the Secretary of H.E.W. and others on what basis they made the decision that this was dangerous. To what extent can it be controlled? What should we do?

Now this is something, of course, that we should have been doing ten or fifteen years ago. I remember when DDT first was unveiled. It was the greatest thing since we invented the wheel. Well, apparently it's got some squeaks in it, if not, some very real hazards.

And that's exactly what this hearing will try to identify.

INTERVIEWER. The hearings that you're planning, do you plan to extend them to questions of ocean life as well?

Senator HART. If we're needed to. I'm going to suggest that the institute of health attempt to identify not just the damage to

marine life, but humans as well. Because we're the end of that food chain that you were talking about on that film that was so interesting. We're the animal life that I'm most concerned about. You and me.

INTERVIEWER. Well, could you tell me exactly what you're going to do in these hearings, aside from having the Secretary and . . . ?

Senator HART. Secretary and experts? What can you do? I'm a Greek and history fellow. I wouldn't know a chemical composition if you stuck it in my eye, but I want to find from the fellows who are supposed to know, precisely what it is that we should do.

INTERVIEWER. Well, what sorts of legislation would you be looking toward?

Senator HART. Well, in the case of fresh water fisheries, what are the cost factors? What substitutes? Clearly, agricultural interests are benefitted by the use of some of these pesticides. But what are the costs? And if the damage that DDT does exceeds the benefits, what substitute, what alternative may there be?

When we begin a hearing like this, you don't know what the answer is. And even if you think you do, you shouldn't say so because it will make somebody mad.

INTERVIEW WITH HON. GAYLORD NELSON

INTERVIEWER. Senator, you've just seen our broadcast on DDT and its impact on the fish. What's your impression?

Senator GAYLORD NELSON. I thought it was very well done. It points up something that ecologists, biologists, botanists, scientists have been warning us about for more than a quarter of a century. The indiscriminate introduction into the atmosphere of slow degrading pesticides can and will create an environmental disaster, and that's what's happening—disaster that threatens all living creatures, from insects and worms to fish and birds and human beings themselves.

INTERVIEWER. What do you think ought to be done about this?

Senator NELSON. Well I've been trying for several years to make it illegal to use DDT in this country without success. In fact I haven't been able to get a hearing on the bill. I think the long term approach has to be that we create a National Pesticide Commission of distinguished scientists, to evaluate all the pesticides, recommend those that ought to be removed from the market place entirely and recommend the limitations on the use of these pesticides. My own view is that all slow degrading pesticides ought to be eliminated from the market place entirely.

We ought to establish a procedure for qualifying the use of these pesticides in the same way that a drug manufacturer has to qualify the use of his drug—come in with proof as to what its effect is. If we don't we're going to destroy a fair share of all the living creatures on earth.

INTERVIEWER. Does this report that we've given incline you to make a greater effort at this point, do you think?

Senator NELSON. No it doesn't, simply because I have been alarmed about the catastrophic situation that's been developing for a good many years, and have spoken on this issue in about twenty-six states across the nation in the last six or seven years. I'm very pleased to see this kind of a report being made to the public. I hope it gets nationwide recognition and notice because until the public becomes aroused to the situation that's developing, we won't be able to get any legislation passed. And if we don't, I assure you that there's no question we'll destroy a major portion of the living creatures on the face of the earth in a handful of years.

INTERVIEWER. Michigan and Arizona have banned DDT. What about some other states? Do you know of any others? Say, your own?

Senator NELSON. Well, there are some hearings going on in Wisconsin to consider a state ban on DDT. Conservationists have advocated for several years that we entirely stop the use of DDT in our state, and, of course, this ought to be applied to a whole series of other hard pesticides that are being indiscriminately used. And I hope there will be a large number of states that will follow. I would wish that we would have the leadership of the national level to stop the use right now and to establish standards and protect our environment before it's too late. And I don't think that time is very far away.

INTERVIEW WITH HON. JOHN D. DINGELL

INTERVIEWER. Now that you've seen our broadcast, Congressman Dingell, what's your reaction to the accusation that the DDT may make the fish disappear from our waters?

Congressman JOHN D. DINGELL. Well, I think this is the first time that I've seen a radio or a television station that had the courage and wisdom to put on this kind of a program. I personally think that this is but a small part of the total problem we have with hard pesticides being applied by the thousands and thousands of tons, these different kinds of pollutions emanating from air and water sources of different kinds, and the many other kinds of destructive impacts that we're imposing on our ecology.

INTERVIEWER. Well, what sort of action do you think should be taken right now with respect to DDT in the ocean?

Congressman DINGELL. I have every reason to believe that we probably will have to either rigorously curtail or actually prohibit the use of DDT and certain other hard pesticides for many, many purposes; to limit the times of applications; to reduce the amounts; and to take other steps necessary to control the almost runaway pace of pesticide pollution of our environment.

INTERVIEWER. Well, do you anticipate some sort of legislation?

Congressman DINGELL. I will shortly be conducting hearings in my Subcommittee on Fisheries and Wildlife Conservation on this very matter. We must do something about the problem of understanding, first of all, what our resources are; what we are doing to them; the practical effect of pollution from pesticides from industrial-municipal sources into the water and the air; the problem of herbicides and reach out at fertilizers and all the other things that are going into the destruction of our environment which is now taking place. We must begin to establish a program for orderly use of resources—not overuse—wise use, and not prohibitionary use.

Action must be taken so that we can minimize the hazards and provide the greatest benefit to the largest number of people through the wise use of our resources.

INTERVIEWER. Would you agree that DDT ought to be banned as it's been banned in Michigan and Arizona?

Congressman DINGELL. I think that there are many areas where DDT will probably have to be banned. I'm not prepared at this particular moment to make a flat statement it should be banned in all instances but it certainly should become subject to the most rigorous controls. We prohibit the use of DDT in foods, yet, we allow persons to assimilate such pesticides in even greater amounts through spraying, through leeching the substance into municipal water supplies, and things of this kind. As a result it is getting into foods such as meat and fish where—although there may be a prohibition against its use—there is actually no way of effectively preventing it under these circumstances.

INTERVIEW WITH HON. RICHARD L. OTTINGER

INTERVIEWER. Congressman Ottinger, what is your reaction to the program we presented, particularly with reference to DDT?

Congressman RICHARD L. OTTINGER. Well, this was a real public service in my view because people generally don't appreciate what a tremendous danger these non-degradable pesticides present to human life.

You know, we talk about endangered species and we are even having hearings in Washington on them. It's ironic: the most endangered species of all is likely to be the fellows that are holding the hearings—man.

INTERVIEWER. Now what happens if something isn't done about DDT and quite soon?

Congressman OTTINGER. Well, these pesticides are dumped into the ocean—I believe I've seen a figure of a hundred and thirty-three million tons a year around the globe and they keep destroying the life of the ocean, particularly the plant life of the ocean which feeds the fish we eat and creates the oxygen that we breathe. DDT kills them and, since it doesn't break down, it keeps on killing. That's the real long-range danger.

There are pesticides that you can get that will break down, will dissolve and disappear and their effect will disappear but these particular pesticides keep destroying.

INTERVIEWER. Do you contemplate introducing any legislation?

Congressman OTTINGER. Yes. I feel very strongly that these pesticides ought to be outlawed altogether, the non-degradable pesticides. We'll have to act at the Federal level, but we could start right here in New York State, several other states have.

There are hearings going on now in Wisconsin and Minnesota and a couple of other states have acted already. I think it's not only a national problem but a matter of international survival. We shouldn't be contributing this very dangerous substance to our environment. The danger is, of course, that one day, without knowing it, we may just tip the balance of nature and there just won't be enough oxygen produced out of the ocean to outbalance the number of people and animals and plants that are absorbing oxygen and we'll find ourselves on an irreversible path to destruction.

INTERVIEWER. Congressman Ottinger, getting to the general fact that we are polluting our environment every day—we're polluting it not only with non-degradable pesticides but with plastic products, for example, that will not go back to the soil. We're polluting it with smoke into the air and all sorts of pollution is going into our water.

Do you think this is something that is going to have to be handled on a federal level, that is to say, the cooperation between the states and between individual regions just doesn't seem to work?

Congressman OTTINGER. Certainly, we're going to have to have federal standards. The states may be permitted to handle this to the extent that they do so adequately. But, as in many other fields in which we've been working of late, I think the federal government is going to have to set down minimal standards and it will have to step in where the states fail to act. We better do it soon, because we're running out of time. For instance, the Water Resources Council says that by the year 2010 our total available supply of water will be matched by our consumption. To meet our needs we'll have to practice sound conservation.

Within a much lesser time, we're going to have these inversions of air pollution being precipitated out over our metropolitan areas and we are going to strangle thousands of people. Unfortunately, in our society, too frequently, we wait for catastrophes to strike until we act.

In Santa Barbara we've already seen what happens when we fail to protect resources. But with the kind of situation that we are dealing with now, the results of failure may be too terrible. It's incumbent upon us to act before catastrophe strikes.

INTERVIEW WITH HON. WILLIAM FITZ RYAN

INTERVIEWER. Well, Congressman Ryan, now that you've seen our broadcast on the impact of DDT on the ocean fisheries, what's your reaction?

Congressman WILLIAM FITZ RYAN. The CBS documentary, "DDT—SOS" vividly illustrates the problem which must confront everyone concerned with preserving our environment. You have done an excellent job of bringing to public attention the effect of DDT and other pesticides and particularly the effect and impact on the world fish supply.

As the world population continues to expand despite whatever efforts there are at population control, we know that we must look in future years to the sea for food to feed our population, and what you have done is to starkly point out that there may be no food for feeding the future generations of mankind unless steps are taken to overcome the effects of pesticides and DDT on the reproduction of fish.

INTERVIEWER. What would you say about the banning of DDT?

Congressman RYAN. In some states, I understand this has already been done, and it should be done wherever possible in conjunction with other regulations.

In other words, we don't want to ban DDT and then have some other similar pesticide substituted for it. It seems to me there should be strict regulation of all pesticides. This should be done not only at the state level, but also through federal regulations, setting standards for states such as we are now moving toward in air pollution control and water pollution control. There really ought to be thought given to setting up an Environmental Control Commission in the United States which would have overall jurisdiction over all pollution including the effect of DDT and pesticides upon our environment.

INTERVIEWER. Well, what action would you like to see taken right now?

Congressman RYAN. I would like to see the Congress move towards establishing an environmental control commission with broad regulatory authority. I say move toward it because I recognize how difficult it is to bring legislators to regulate vested interests and industries which have the power that the pesticide industry obviously has.

There should be legislative hearings to look into this question; there should be preliminary legislation adopted; and there should be as much possible public attention focused on this problem as possible. And that's why CBS is entitled to great credit and you yourself, Earl Ubell, for having brought this to public attention and having focused on a very serious problem, particularly one which affects New Yorkers.

Because, as you point out, the flow of pesticides and sludge and all of the conditions which are created by this in the New York Harbor area really affect New York as a port into which comes seafood which is part of the livelihood of many, many thousands of New Yorkers.

ROCKEFELLER: OIL DIPLOMAT

HON. JOHN R. RARICK

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 26, 1969

Mr. RARICK. Mr. Speaker, the decision to send Nelson Rockefeller to Peru

as this country's representative was ill-advised and insensitive. His international reputation as the Standard Oil multimillionaire could only have fueled the fires of hate and provided credence to the anti-American propagandists.

What was Mr. Rockefeller's mission to Peru that he wanted the cover of protection afforded as an official of the U.S. Government? If his presence in Peru as a private citizen was regarded as dangerous to him personally, how could our administration have believed that he would be acceptable to Peru as an envoy?

The properties seized are the investment of private citizens. The U.S. Government does not own fishing boats or oil wells. Just who did own the oil wells of International Petroleum Co.—a subsidiary of Standard of New Jersey—seized in Peru?

Under unanimous consent I submit an AP release and the Latin America Report for February 1969 for inclusion in the CONGRESSIONAL RECORD, as follows:

[From Washington (D.C.) Sunday Star, May 25, 1969]

UNITED STATES TO WITHDRAW MISSIONS IN PERU

Bowing to Peruvian demands, the United States announced with "profound regrets" yesterday a planned pullout of U.S. military missions from Lima and cancellation of a scheduled visit there by Gov. Nelson A. Rockefeller of New York.

"The Department of State profoundly regrets the decision of the Peruvian government confirming that it will not receive the visit of Governor Rockefeller and that it would require the withdrawal of the U.S. military missions in Peru," the department said in a statement issued by press officer Carl Barch.

But despite continuing serious difficulties with Peru, Barch added, the U.S. Government "intends for its part to continue . . . the search for practical solutions to existing problems . . . in good faith and with good will."

Barch also said he does not foresee at this time any prospective break in diplomatic relations between Washington and Lima.

The department's statement climaxed a new surge in the difficulties between the United States and Peru which have ranged from arguments over Peruvian seizures of U.S. fishing boats to Lima's takeover of large U.S. oil holdings.

Rockefeller, on a series of fact-finding trips to Latin America for President Nixon had intended to visit Peru the last couple days in May.

However, the military-controlled Peruvian regime indicated last week that a Rockefeller visit would be unwelcome and that the U.S. military missions ought to leave. It contended that the United States had cut off arms sales to Peru in violation of an arms agreement between the two countries.

[From the Latin America Report, February 1969]

PERU FACES HICKENLOOPER AMENDMENT

On October 3, last year, Peruvian troops overthrew the liberal administration of President Fernando Belaunde Terry. In announcing the coup, the military cited it as "transcendental, historic, marking the start of the definitive emancipation of our country." Since then, leader of the military junta, General Juan Velasco Alvarado, has proved that his is no ordinary right-wing military government. He voided the oil rights of the International Petroleum Company, a subsidiary of Standard Oil of New Jersey, and has opened diplomatic and trade relations

with the Soviet Union and other Communist countries.

The immediate cause given for deposing President Belaunde was his agreement with the IPC to drop a \$140 million "debt" which the government alleged was owed by the oil company.

In return, IPC gave up its oil fields, but received permission to expand its refinery at Talara. It received no additional properties or land concessions. Upon taking power, the junta voided the agreement made with President Belaunde. General Velasco insisted that the company owed the \$140 million, and spoke of "powerful economic forces, national and foreign, that frustrated popular basic reforms," but overlooked the fact that IPC paid its taxes (a phenomenon in Latin America) and contributed about \$26 million a year to Peru's economy.

The trouble started in 1963, when Peru declared that the 1911, 1922 and 1924 treaties and titles to the La Brea y Parinas oil fields to be null *ipso jure*, in other words that they never existed. This meant that the fields had to be turned over to the nation. But the Belaunde administration compounded the problem by saying that profits accruing to IPC were illicit and illegal and demanded that the \$140 million accrued during this period be refunded to Peru. It was this club that forced IPC to give up its fields in return for the Peruvian government's waiver of claims to the \$140 million.

MILITARY CONFISCATES PROPERTY

The military junta waived nothing. Indeed, it claims that it will accept only clear property, and charged IPC with "indebtedness." On October 9, the oil fields were occupied by troops and the legal-diplomatic fight was on. Some observers believe that the growing internal fight between the military and President Belaunde finally forced the former to use the IPC matter as a pretext for taking over, but that the whole matter got out of hand. And beneath the generals are operating a large group of young, ambitious colonels whose precise ideological orientation is far from clear. It was they, observers believe, who got General Velasco and the junta to open trade and diplomatic relations with a large chunk of the Communist block of nations. It is assumed that the Soviet Union will offer to supply "technicians" to operate the nationalized oil fields.

Finance Minister, General Angel Valdivia Moriberon, next accused the United States of "exerting futile pressures on Peru, and all of Latin America is watching." Latin America is indeed watching, and if the United States does nothing to secure payment for the confiscated oil equipment and other properties, the shimmering idea that the United States is a "paper tiger" (witness Castro's expropriation of nearly \$2 billion in U.S. properties) may become a concrete conviction.

There is a definite tendency in Latin America to compare Peru's present situation with that of Cuba in 1960, when Fidel Castro established diplomatic relations with the Soviet bloc and stepped-up systematic seizure of U.S.-owned properties. And there is a fear in the United States that Venezuela's and Colombia's oil may slip away from the free world if something is not done by the United States to protect its investments overseas—a fear heightened when, on February 6, Peru upped IPC's "indebtedness" to \$690.5 million.

THE HICKENLOOPER AMENDMENT

It was precisely this fear that led ex-Senator Bourke Hickenlooper to amend foreign aid laws. The amendment holds that all U.S. aid to a foreign country will automatically cease within six months if that country has not paid for the expropriated properties or started "meaningful negotia-

tions" within that period of time. The military junta has jingoized the Hickenlooper Amendment and whipped up a considerable amount of popular support against what it terms "an inadmissible imperialistic menace which would injure Peru's sovereignty."

The United States is likely to move carefully. As of 1967, other U.S. business interests in Peru totalled around \$605 million, and a strong stand taken on the IPC issue, many fear, will automatically trigger confiscation of those investments. Yet, there are those who believe that unless the United States does take a stand, it will only be a matter of time before not only the \$605 million will be seized but other U.S. holdings in Latin America as well.

Perhaps some lessons have been learned from failing to protect U.S. investments in Cuba back in 1960. Perhaps not. In any event, the Hickenlooper Amendment is law and unless something breaks must be applied. Meanwhile, the Soviets exacerbate the situation. On January 8, Moscow Radio's "Peace and Progress" program, beamed in Spanish to Latin America, said that "the CIA is increasing its activities in Peru to discredit those members of the Peruvian military junta who consistently defend their national sovereignty." So we have the spectacle of the United States being backed into a corner by a military junta which is receiving the support of the Soviet Union.

FREE CAPITOL TOURS OPPOSED

HON. ANCHER NELSEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 26, 1969

Mr. NELSEN. Mr. Speaker, Ray Tschimperle of the Weekly Valley Herald, Chaska, Minn., has come out strongly against legislation that would eliminate the nominal fee that is charged for a tour of the U.S. Capitol building. I include his commentary at this point in my remarks:

GUIDED TOURS

If you should go to Washington, D.C., this year, you may be in for quite a treat. Several legislators have introduced bills to eliminate the nominal fee for a tour of the U.S. Capitol building. The last time we heard, the fee for a guided tour of the building was a quarter per person.

The guides currently derive their salary from the fee charged for the tour service. It's a pleasant experience to visit the chambers of the two legislative branches of our government. The guides are courteous and well informed. They point out the statues of favorite sons sponsored by the various states. They demonstrate the unusual acoustics in what was once the old House meeting room. Here it is possible to hear a whispered conversation across the room if you stand in a certain spot.

Indeed, the tour is a real bargain at the present cost, or even double that. The intent of the Congressional proposals is to place the guides on the Federal payroll, thus granting them certain fringe benefits to which they are not currently entitled, such as sick leave and hospitalization. They would also be eligible for retirement benefits, instead of social security, as at present. We see no reason for the guides to remain in the ranks of the forgotten. They are entitled to a day's pay in return for a day's work. We wonder, though, if the elimination of the fee is the best answer. It might be better to up the rate slightly. Why should those who cannot af-

ford a trip to the Nation's Capital be forced to pay, through their taxes, for those who can afford to make the trip and therefore at least theoretically, enjoy these "free" tours? Here is another case in which Congress is being asked to subsidize the more fortunate.

This may seem petty, but we are both weary and leery of anything the government moves into where our money is concerned. These things always have a way of getting out of hand.

INHUMANE TREATMENT OF U.S. PRISONERS

HON. BOB WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 26, 1969

Mr. BOB WILSON. Mr. Speaker, last week, Secretary of Defense Melvin Laird brought up a most important subject concerning the Vietnam war. That is the subject of the inhumane treatment of U.S. prisoners of war by North Vietnam. Mr. Laird made an unusual and most commendable public plea to North Vietnam. He asked for a list of all U.S. prisoners and for the release of those who were sick and wounded. He also urged North Vietnam to permit impartial inspection of POW facilities and regular flow of mail to prisoners. I know we all share the Secretary's shock and disappointment over North Vietnam's negative response to this humanitarian request.

North Vietnam's persistent refusal to reveal the names of U.S. prisoners causes needless heartbreak and anxiety for thousands of American families. There are approximately 1,300 American servicemen who are listed as prisoners of war or missing in action—more than 200 have been in this status for more than 3½ years. This is longer than any U.S. serviceman was held prisoner during World War II.

As one who represents a district that is the Navy's largest homeport, I have had occasion to meet with the wives of these prisoners of war. Many of them have not heard from their husbands for months because North Vietnam and the Vietcong have refused to allow a free exchange of mail between prisoners and their families. Their anxieties are further aggravated by reports and pictures of U.S. prisoners who have been released that revealed poor diets and the lack of medical care in the North Vietnamese and Vietcong prison camps.

I urge my colleagues to lend their support to Secretary Laird's efforts to win the release of our American servicemen who are now held captive by North Vietnam and the Vietcong. This is a subject that has been overlooked too long. We must not permit the American POW's and their families to become the forgotten people of this war.

So that my colleagues can share with me Mr. Laird's statements on this matter, I include them in the RECORD:

STATEMENT BY SECRETARY OF DEFENSE
MELVIN R. LAIRD

On numerous occasions I have expressed my deep concern for the welfare of our American servicemen who are prisoners of war or missing in action. In this regard, I

have directed Assistant Secretary of Defense (ISA) Warren G. Nutter, who has been named chairman of the Department of Defense Prisoner of War Policy Committee, to insure that the families of these servicemen are receiving all assistance to which they are entitled.

The North Vietnamese have claimed that they are treating our men humanely. I am distressed by the fact that there is clear evidence that this is not the case.

The United States Government has urged that the enemy respect the requirements of the Geneva Convention. This they have refused to do.

The North Vietnamese and the Viet Cong have never identified the names of all the U.S. prisoners whom they hold. For the most part, information on some of these Americans has come in the form of scattered, and often distorted, propaganda films and photographs which the North Vietnamese have chosen to sell or release.

We know that at least several U.S. prisoners were injured at the time of their capture and we are concerned about the medical care they are receiving.

The Geneva Convention requires a free exchange of mail between the prisoners and their families and yet very little mail has been received from only a few prisoners in the past five years.

As of next month, more than 200 American servicemen will have been listed either as prisoners of war or as missing in action for more than three and one-half years. This period of time is longer than any U.S. serviceman was held prisoner during World War II.

The Department of Defense continues to hope for meaningful progress on the matter of prisoner release in the Paris discussions. In the meantime, we appeal to North Vietnam and the Viet Cong to respect the humane rights of those whom they hold prisoners of war.

Specifically, we call for adherence to the Geneva Convention which requires:

1. Release of names of prisoners held.
2. Immediate release of sick and wounded prisoners.
3. Impartial inspections of prisoner of war facilities.
4. Proper treatment of all prisoners.
5. Regular flow of mail.

Most importantly, we seek the prompt release of all American prisoners.

BRIEFING ON U.S. PRISONERS OF WAR AND MISSING IN ACTION PERSONNEL

The U.S. Government and the Government of the Republic of Vietnam have placed great emphasis on proper treatment of enemy prisoners of war held in South Vietnam. We have recognized the requirements of the Geneva Convention relative to the treatment of prisoners of war.

At the same time we repeatedly have expressed our desire that the enemy honor its obligations under the Convention and that it properly treat U.S. personnel captured by them.

North Vietnamese and Viet Cong forces captured in South Vietnam are detained by the Government of the Republic of Vietnam in PW camps which are inspected regularly by the International Committee of the Red Cross.

In accordance with the Geneva Convention, sick and wounded prisoners have been released and repatriated to North Vietnam. We have provided such treatment not only because it is required by the Convention but also because it is the humane thing to do.

We have hoped that our adversaries would reciprocate. Regrettably, the North Vietnamese and the Viet Cong have not followed our example. There is clear evidence that the enemy is treating the U.S. prisoners it holds inhumanely.

On numerous occasions, the United States

has appealed to the enemy to respect the requirements of the Geneva Convention which North Vietnam endorsed in 1957.

The purpose of this briefing is to express Secretary Laird's continuing and deep concern regarding treatment of U.S. servicemen listed as prisoners or missing in action in Southeast Asia.

Today, there are more than 1300 U.S. servicemen classified by the Services as either prisoners of war or missing in action.

Of the more than 1300, nearly 800 were downed over North Vietnam. Most are pilots and we believe a substantial percentage of the missing may be prisoners.

The families of these hundreds of servicemen have lived for months and years under the continuing anxiety and pressure of uncertainty as to the status and well-being of their loved ones.

Despite repeated attempts by the U.S. Government and neutral organizations, the North Vietnamese and the Viet Cong have consistently refused to release the names of those U.S. prisoners whom they hold.

Secretary Laird is deeply concerned by Hanoi's continued refusal to identify the U.S. prisoners whom it holds. On several occasions, he has expressed his respect for the magnificent patience and courage shown by the hundreds of wives, children and parents who for so long have hoped to learn about the status of their loved ones.

The magnitude of this unnecessary inhumanity has increased with each passing month. There now are more than 200 U.S. servicemen listed as prisoners or missing in action in Southeast Asia who have been in those categories for more than three and one-half years. This is longer than any U.S. serviceman was held a prisoner during World War II.

We now have more than 500 American servicemen who have been listed as PWs or missing for more than two years. The first U.S. pilot, whom we believe is still a prisoner, was captured in August 1964.

The North Vietnamese authorities have made statements, both publicly and privately, to the effect that American prisoners of war were being treated humanely. However, it has been impossible to verify such claims because North Vietnam adamantly has refused neutral inspections of the places of detention.

Hanoi's claims of proper treatment and its controlled visits with a handful of selected news people are not adequate substitutes for complete and impartial inspections.

Most information regarding the status of American prisoners has come in the form of propaganda films and photographs which the North Vietnamese have sold or made available to various news sources throughout the world. It is regrettable that we must rely on such often distorted information to determine the status of U.S. prisoners.

Many of these films and photographs have implied that our prisoners were being well treated, that they were permitted to communicate freely with each other, that they were allowed to correspond freely with their families, and that they were receiving proper medical treatment. Examination of this information, however, raises serious questions as to whether such has been the case. In fact, our analysis indicates that this is not the case, and that the provisions of the Geneva Convention are being disregarded.

In some instances, North Vietnamese propaganda has generated false hopes among American families because the identity of the prisoners shown could not be clearly determined. In one case, 20 different wives believed that a prisoner shown in a propaganda photo was her husband. The prisoner remains unidentified.

It now has been more than six months since the bombing of North Vietnam was halted. During that time we have had no releases and almost no information on Ameri-

can prisoners. In the past five years, North Vietnam has chosen to release only six pilots. All six had been held for relatively short periods of time, ranging from three to seven and one-half months.

Three of the six returned had been listed as missing in action and, thus, the announcement by Hanoi of their prospective release was the first indication that they were even alive.

Some of the propaganda photos made available have shown U.S. pilots alive on the ground after capture by the enemy. Regrettably, no information has been received since their initial captivity, again causing severe and unnecessary anguish to the families involved. Commander A. C. Brady and Major W. S. Gideon are two such cases.

Another example is Major J. H. Kasler who was shown as injured when captured but has not been heard from since.

One propaganda film showed a display of 18 ID cards of pilots. This is an unacceptable substitute for determining the status of U.S. prisoners.

There have been indications that American prisoners in North Vietnam have been mistreated physically. In 1965 and 1966, captured U.S. prisoners were paraded through the streets of Hanoi. Some were seriously injured, as in the case of Lt. D. G. Rehmann, who suffered serious burns when downed in December 1966.

In addition, we believe that the great majority of American prisoners have been isolated from contact with the outside world.

Several propaganda photographs released have shown U.S. prisoners in such solitary confinement. All six pilots released by North Vietnam in 1968 confirmed that they had been held in isolation for varying periods of time.

Such isolation can have serious adverse effects on the long-term welfare of those detained under such circumstances.

North Vietnam released films also raise serious questions as to whether the prisoners are receiving proper medical care. Recent photographs show that some prisoners are continuing to suffer from injuries incurred at the time they were downed.

For example, several prisoners have been shown still using crutches after many months of captivity. Lcdr H. A. Stafford injured his left arm and shoulder when shot down in August 1967. Today, his left arm appears to be noticeably smaller raising questions as to what medical treatment was offered.

One photo shows Lcdr J. S. McCain, III, shortly after capture in October 1967. He was pictured in extensive casts because of both arms and his right leg were broken. Hanoi has not indicated what his present condition is, and thus we are concerned about what treatment Commander McCain has received in the past 18 months.

One recent film included an elaborate spread of food which only two prisoners are shown carrying. Neither is shown actually eating the suspiciously large portions.

Recently, an Italian journalist met Lt. Robert Frishman, who was captured in October 1967. In the interview, published in L'Europeo a few weeks ago, Frishman stated that his right arm is significantly shorter than his left. He also stated that he had lost a substantial amount of weight since his capture. He, too, confirmed that he had been held in isolation by indicating that the reporter was the first person he had spoken to in almost a year and a half.

Weight loss by other prisoners has also been confirmed in propaganda films. One such case is Seaman D. B. Hegdahl who weighed over 200 pounds at the time of capture and obviously has lost considerable weight in the past 18 months. We observe similar indications in photographs of Lt. J. Crecca, Jr., and Colonel R. Risner.

In viewing the propaganda information which the North Vietnamese have chosen to release from time to time, the same few prisoners appear in the pictures. This raises the obvious question as to the status of the vast majority who are not paraded before the cameras.

We welcome any information concerning U.S. prisoners regardless of the source. However, we want to reiterate that these propaganda films are no substitute for the information and impartial inspections required by the Geneva Convention.

Propaganda films and photographs are misleading. One example was the distorted information released by North Korea during the captivity of the Pueblo crew. North Korean propaganda stated that the Pueblo crew was well fed, that they were permitted to exercise regularly, and that they could communicate frequently with each other and with their families.

We now know that these photos were staged and that, for the most part, the portrayed benefits occurred only when the photographs were actually taken.

We have seen similar "staged" photographs such as this scene of a purported capture of a U.S. pilot in North Vietnam. Other photographs have implied that our prisoners were permitted to attend religious services. However, recent photographs show only a handful of prisoners actually present for such services. And, it is noted that they are carefully separated which suggests either that Hanoi wants the room to appear full or that the men are kept apart so that they cannot communicate.

Another film attempted to indicate that the prisoners were enjoying recreational activities by playing table tennis, but the facial expressions and lack of animation are positive indications that it is a staged event.

Regular exchange of mail between prisoners and their families is a guaranteed provision of the Geneva Convention. Such a flow of mail simply has not been permitted by the North Vietnamese.

In the past five years, less than 100 prisoners have been allowed to write to their families. Even at that, the frequency of writing for this limited number of prisoners averaged less than two letters per year.

If these few writers had been allowed to write the number of letters and cards as permitted under the Geneva Convention, their next of kin would have received 18,000 letters and cards. Thus far, they have received less than 600.

We have no indication that any letters were received by families from September 1968 until late April 1969. Since then, some dated in late 1968 were received by families.

A recent North Vietnamese propaganda film suggested that U.S. prisoners had received Christmas mail and were permitted to celebrate the Christmas season. In the first place, the film shows only a handful of prisoners.

Secondly, the film purports to show prisoners opening Christmas mail when, in fact, they are reading letters dated in March, April and July of 1968. In two cases, the film indicated that the prisoners were opening Christmas cards when, in fact, the mail shown were Easter cards sent months before.

In December 1968, U.S. next of kin forwarded more than 714 Christmas packages. We have no confirmation of whether any were actually received by the American prisoners.

As part of the Secretary of Defense's concern for these men, he has directed a thorough review of the benefits available to the families involved. It is his intention that the military services and the Office of the Secretary of Defense must do all that is possible for the next of kin.

On several occasions, Defense Department

officials have met with groups of wives and parents whose husbands and sons are listed as prisoners or missing in action. We can attest to the bravery and personal courage of these dedicated American families.

Secretary Laird and the Department of Defense continue to hope for meaningful progress in the Paris discussions and progress leading to the release of all American prisoners.

In the meantime, however, we appeal to North Vietnam and to the Viet Cong to respect the rights of prisoners of war and to comply with the Geneva Convention.

Specifically, we urge them to take the following humanitarian actions:

1. Release all U.S. prisoners whom they hold. The seriously sick and wounded should be returned immediately.
2. Assure that all prisoners receive proper medical care and adequate food.
3. Permit regular impartial inspections of prisoner of war facilities.
4. Allow a free flow of mail between the prisoners and their families.

OUR CURRENT INTERNATIONAL TRADE POSITION

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, May 26, 1969

Mr. RODINO. Mr. Speaker, recently the president of the Synthetic Organic Chemical Manufacturers Association, Mr. Thomas P. Turchan, addressed the Dry Color Manufacturers Association in New York City. His remarks concerning our current international trade position and recommendations for the future are timely and warrant, I believe, serious attention at this time.

I include Mr. Turchan's speech as follows:

SPEECH BY THOMAS P. TURCHAN,
APRIL 18, 1969

I am extremely happy to have been invited to be here today, not just because the trade problems of SOCOMA and DCMA are so similar, but also because I believe there are some things which have gone too long unsaid with respect to the international trade policies of this nation.

SOCMA is undoubtedly well known to all of you for its defense of the American Selling Price system, but I do not intend to spend much time today on the merits of ASP or the reasons our industry believes it must be maintained. The problems facing the nation and the American chemical industry at this critical point in our history are far broader than ASP. They involve issues which affect the economic strength of our country, our relations with other free world nations and the entire international monetary system.

Ever since the end of World War II, the United States has mainly followed an uncoordinated and day-to-day policy whereby decisions in the trade area have been strongly influenced—in some cases even determined—by political or humanitarian considerations. This was acceptable, and even necessary, immediately following the war when our objective was to pump dollars into the devastated economies of Western Europe and the Far East. We gave more than we received and it helped rebuild the free world. Unfortunately, there are many today who cannot or will not recognize that the world of 1969 is far different than the world of 1946, and who appear unable to accept the obvious fact that this country is in serious trouble if it does not develop and carry out a realistic

long range trade policy for the decade of the 1970's. This policy must encompass the entire U.S. economy and must have as its central objective the attainment and maintenance of competitive equality in the world marketplace for the United States vis-a-vis its trading partners.

It is more than a bit disheartening to view our present international trade situation—or what I should more properly call our present international trade dilemma. Last year, our government reported the nation had its worst trade performance since the depression year of 1937. Official Commerce Department statistics showed a reported trade surplus of only about \$700 million. Actually, if one excludes from these figures all of the military assistance programs, purchases made with A.I.D. funds and agricultural commodities given away under P.L. 480, our commercial trade showed a deficit of about \$2½ billion. Indeed, if we computed our balance of trade as most other countries do—on a c.i.f. basis—our deficit was about \$5 billion. Just four years ago, we had a commercial trade surplus by our method of reckoning of more than \$3½ billion—a surplus that has gone downhill ever since that point in 1964.

The most immediate result of the deterioration in our trade account has been a dangerous weakening of this country's international balance of payments position. I am sure you will remember the serious dollar crisis we had a year ago. This was caused primarily by our \$3½-billion payments deficit of 1967, which followed years of previous deficits. On the surface, things were a little better last year with the nation showing a slight payments surplus. But there remains a considerable amount of "dry rot" if one probes a little beneath these surface figures.

There were two principal factors which bailed out our balance of payments last year and kept the dollar afloat and neither is anything on which a nation can safely base the future stability of its currency. One was the billion dollars of Treasury bonds our government was able to sell to Canada and West Germany and the other was the unprecedented billions which poured into the United States stock market during 1968. To the extent that this record is not matched in 1969, our balance of payments situation will show a sharp deterioration. Even more threatening, if economic conditions should change so that the foreign money now in the market is withdrawn in any significant amounts, we will have a payments crisis of serious proportions. I believe these factors are what Secretary of Commerce Maurice Stans had in mind recently when he predicted a balance of payments deficit this year "in the billions of dollars." It is clear the long term problems of the dollar are not only still with us but, if anything, have actually worsened since the crisis a year ago. These problems cannot be solved until and unless we find some way of restoring our once healthy international trade balance.

Our industry—the American chemical industry—has a vital stake in the policies our government adopts in an effort to reverse this trade deterioration. We had exports in 1968 of over three billion dollars, yet our share of world markets has been steadily declining for the past few years and even the record-breaking export performance last year barely got us back to the share we had in early 1966. In order to effectively compete in foreign markets, our industry makes direct capital investments abroad of some half billion dollars a year and we already have well over seven billion dollars invested in foreign facilities. The repatriated earnings from these investments have made a dependable and ever increasing contribution to our balance of payments position. The curb placed on these investments in the last few years is, in our opinion, a good example of treating the symptoms rather than the basic disease. It is heartening to see the present Administration

at least make a start toward the complete removal of this clearly self-defeating policy.

On the domestic side, chemical imports have continued their annual growth of more than 14%. They passed the billion dollar mark for the first time last year and their presence is beginning to be felt in many segments of the industry which have never before faced serious competitive pressures from abroad. What is done—or is not done—with respect to trade policy will have an important effect on exports, imports, capital investment plans, employment and earnings—on virtually all aspects of our industry.

We are already faced with some hard decisions as a result of the unreciprocal Kennedy Round Agreement signed two years ago. It is important to keep in mind that we are scheduled to get no further tariff reductions from the United Kingdom and the Common Market nations. They have made their full 20% cuts. Meanwhile, this country has reduced its tariffs so far by less than half of the scheduled 50% agreed to by our negotiators. Even worse, our tariffs will continue to go down over the next three years although many of our major trading partners abroad have already taken back, through increased border taxes, even more than the small tariff concessions they made in the Kennedy Round. Is it any wonder then that SOCOMA has opposed and will continue to oppose with all its resources the unreciprocal separate package agreement which calls for the removal of the American Selling Price system of valuation in return for some further slight-of-hand tariff reductions. Is it any wonder that the necessary implementing legislation is so strongly opposed by the industry and workers which it claims to benefit and by leading members of Congress from both sides of the aisle.

I believe it unfortunate that many mistakenly consider our Association to be "protectionist" when what we are really seeking is fair trade—the same access to foreign markets that we have given our trading partners, and the same general ground rules for this competition. We have a strong, efficient industry and we are willing to take on anyone, but it is made extremely difficult when we must compete with the government-sponsored cartels of Japan, the tax rebates given by European governments to encourage exports, the ever higher border taxes and the increased use of quota systems and import deposit and licensing schemes which have proliferated abroad in recent years. I find it difficult to understand how our government has permitted so many foreign nations to preach free trade, while practicing the protectionist policy of making sure, in each instance, that their national interest always comes first. The time is long past when our country can afford any more of this.

Border taxes are probably the best single example of the way many foreign governments use non-tariff barriers to support domestic industry. What has happened in the two years since the Kennedy Round in this one area alone underlines the seriousness of the problem. Germany, embarrassed by its massive accumulation of foreign currencies, attempted to slow its mounting trade surplus—almost \$5-billion last year—by dropping its border tax from 11% to 7% in December. Yet this remaining 7% is still almost double the 4% rate in effect just 12 months earlier. We are not even back to the pre-Kennedy Round competitive conditions of 1967—and the German situation is not unique. The Netherlands hiked its border tax to 10% last year and then to 12% in January. Norway's import tax is expected to go from about 13% now to 20% at the end of the year. Belgium also plans to raise its border taxes next January, and Mexico expects to adopt such a system in October. Brazil's border tax is up to 30% and Denmark is applying its tax to many new categories, including pharmaceuticals. I could

go on for some time just listing the countries making increased use of border taxes and export rebates. Even the British are studying the possibility of adopting an internal TVA tax system with matching border taxes and export rebates.

It was well before the Kennedy Round bargaining first began that representatives of the chemical industry saw the handwriting on the wall and called the attention of the government officials to the growing danger to our trade posed by the border tax situation. At that time, and for several years thereafter, U.S. trade officials refused to even admit there was a problem—much less attempt to do anything about it. Now that the Kennedy Round is over and the situation has gone from bad to worse, their attitude has changed dramatically—if a little too late. Treasury Department officials in the past year have suggested that the United States establish a border tax system based on our present level of indirect taxes. One Assistant Secretary proposed that border taxes and export rebates be used to improve our nation's balance of payments situation as, I might add, other nations have done. The President's Export Expansion Council has called for tax incentives to spur exports and for a study to investigate the advantage of a TVA tax system in the United States. The Tax Foundation has proposed that the GATT rules with respect to border taxes be revised. Even the former U.S. Special Trade Representative has come out for a major change in the U.S. tax system in order to take advantage of the corresponding border taxes and export rebates—an advantage he denied even existed while he had the power to do something about it.

Our trading partners have been quite willing to discuss the border tax problem. In fact, they have been discussing it with us in GATT and the OECD since 1963 and I am sure they would be happy to continue discussing it this year and next year and the year after. They would like nothing better than to talk it to death. Unfortunately, the disadvantage to this country's trade caused by border taxes and export rebates had become so serious that we *must* find a solution during 1969. I am happy to report that the United States appears to be taking a harder line in recent months with respect to this issue. There is growing recognition by many in this country that unless Europe agrees to action this year, to let us play under the same rules they do, our government must and will take whatever steps are necessary to provide practical equivalence.

The inherent problems caused by the increasing use of border taxes and export rebates go beyond just the effect on United States trade with the countries involved. Certainly, they cut down our foreign sales by raising the price of American exports and they give foreign producers a significant edge in the United States market through rebates. But just as important is the competitive advantage they provide in third country markets throughout the world. As exports rebates go up, this competitive advantage increases even further, thus weakening America's entire trade picture. The effects are too far-reaching for us to ignore any longer.

The situation facing the American chemical industry during the next few years is a difficult one. We have opened our market wide to producers in both Europe and the Far East, and we have little doubt they will take advantage of this new opportunity. They are already doing so. By contrast, we find little, if any, meaningful new access to their markets as a result of the Kennedy Round. If you have any real doubts as to who gained and who lost in that historic bargaining, let me assure you that it was those nations who utilized their professional business talent and single-mindedly adhered to their goal of taking care of their national interest first and foremost while concurrently calling upon our delegation to make further concessions in

the interests of "free trade." They had a plan, they did their homework well and, not surprisingly, they came out better in the negotiations.

The effects of this unreciprocal deal are already being felt in many product lines where import competition was not a major factor in past years. Many small companies whose principal sales are in these areas will be in real trouble in the years ahead and even the large U.S. producers will find that the changing trade patterns will show up in a significant way on their profit and loss statements.

We find it hard to believe that this result is in the best interests of either the chemical industry or the United States and we can only hope that the effect of the Kennedy Round on this nation's balance of trade and payments will be mitigated by intelligent, forceful actions in the very near future.

Some people look at our industry's present \$2-billion trade surplus and find it hard to believe that we are seriously worried. I can only point to the example of the American steel industry, which had a more than two-to-one trade surplus as recently as 1961. Seven years later, imports had more than tripled while exports had declined precipitously. That two-to-one surplus had turned into a three-to-one trade deficit with foreign producers last year capturing about 17% of the American market. The cost to the nation's balance of trade is about \$2-billion a year.

These are serious problems and they will not be solved by adopting the pet phrases of either the free traders or the protectionists. They require this country to take a more realistic attitude towards trade bargaining to insure we get at least as much as we give. In addition, we must demand—not ask—that the ground rules of international competition be made the same for all. A good example of the way there is one rule for the United States and a different one for virtually every other country is provided by the textile industry's present efforts to achieve an international agreement covering wool and man-made fibers. Foreign governments have threatened retaliation and accused us of harboring all types of dastardly "protectionist" sentiments because the new Administration has come out in favor of such an agreement. Yet, as Assistant Secretary of Commerce Stanley Nehmer recently noted, the United Kingdom has restrictions on wool and man-made fiber products from Japan. Italy has similar quotas on Japanese imports and France restricts imports from not only Japan but Hong Kong as well. West Germany has restrictions against Japan, Hong Kong, India and Pakistan and the Benelux countries have a bi-lateral agreement setting quotas on Japanese textiles and apparel. Canada has similar agreements with Japan, Korea, and Hong Kong and Denmark uses licenses to regulate textile imports from Japan, Korea and Taiwan. In fact, even Japan itself sets quotas on imports of woolen fabrics from France, Italy and the United Kingdom. Yet when an American industry finds itself in trouble and proposes that this country consider reciprocal action, the noise and threats from abroad are awesome.

While I am on the subject of retaliation, I must admit some difficulty in understanding why so many in this country allow themselves to be frightened into inaction by foreign threats of retaliation. The very countries making these threats have much more to lose than do we. Our exports are only about 4% of our gross national product—their are two or three times as much. Furthermore, world production costs are such that the U.S. generally is the largest and most profitable single market for foreign exporters, while our sales to them are frequently the least profitable portion of our business. I simply cannot see them starting a trade war which would risk their partici-

pation in the American market. It would not be in their best interests.

Some of you may have heard the remarks by Senator Herman Talmadge at last month's SOCMA luncheon meeting. I would like to conclude by quoting a few of his comments. The Senator, who is an influential member of both the Senate Finance Committee and the Joint Economic Committee of the Congress and served as a Congressional delegate to the Kennedy Round negotiations, pointed out it is time for this country to "become more hard-headed in its commercial relations with other countries. The Uncle Sugar attitude of the past has resulted in a severe balance of payments problem . . . We must look beyond tariffs to the real barriers which interfere with the exchange of goods and services and reciprocity must be the keystone of our commercial relations . . . Out of economic necessity our policy must become more hard-headed and realistic. We can no longer afford to accept adverse economic repercussions for the sake of vague political objectives. European unity should not be purchased at the cost of draining U.S. farmers' income, U.S. gold or U.S. jobs."

MINNESOTA EDITORS SPEAK OUT ON CAMPUS DISORDERS

HON. ANCHER NELSEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 26, 1969

Mr. NELSEN. Mr. Speaker, Americans are increasingly alarmed by campus disorders that not only threaten the loss of lives and property, but are undermining academic freedom and destroying individual rights. I include at this point a variety of editorials from the press in the Second Congressional District which indicate rather general attitudes about this serious problem:

[From the Montgomery (Minn.) Messenger]
JUSTICE BLACK MAKES SENSE

The experience of history indicates that those who condone or support the violence on American campuses and the disruption of educational routine on the grounds of preserving a necessary atmosphere of freedom in institutions of higher learning may be off on the wrong foot. Anarchy on the campus has virtually destroyed higher education in Latin America. The decline began in 1918 when students in Argentina were given a voice in running the universities.

The governments of Latin American countries have been trying to reverse the trend, but, in the meantime, standards have sunk so low that a Mexican professor was compelled to admit, "We produce bad doctors, but they displace witch doctors. We produce bad lawyers, but they are going to be clerks anyway, with some legal training. Our brilliant students we send abroad."

In the U.S., before the meaning of education dissolves in chaos, it might be well to heed the words of Supreme Court Justice Hugo L. Black who recently said, "I have always had the idea that the schools were to educate the children and not children to educate teachers."

[From the Pipestone County (Minn.) Star]

WHAT CAN WE EXPECT FROM THEM?

This week a majority of 800 delegates attending a convention of professors criticized President Nixon's get tough statement with campus rioters. They claim his remarks are a threat to academic freedom.

What they are really telling the world is many professors are way off base and have

caused much of the unrest on the campus. Anyone that has attended a university can look back on some of the nutty professors—most of them are tops but there are plenty professors that have been misnamed. They have had too much freedom.

We agree with President Nixon. It is time the university officials let the students know who is running the campus and especially who is paying the bills—the tax payer. They should kick out all students that participate in rioting or taking over public property. Jail them if they have to but call a halt to campus disorder.

Students should be reminded that they are there to learn, not to teach.

[From the Murray County (Minn.) Herald]
BIGGER, BETTER POLICE FORCES

If disruptive students at universities and colleges throughout the nation achieve nothing else, they may well bring about bigger, better and more adequately trained and equipped campus police forces.

Over the weekend, black students took over a student center at Cornell University. At the same time, trustees of Atlanta University Center in Georgia were held behind chained doors for nearly 29 hours by predominantly Negro students.

We don't much care whether the students involved were white or black. The point is that they will never achieve their ends by utilizing means such as this. The American people, and we mean those of all races and creeds, will eventually themselves rebel and the result will be a return of order to educational institutions.

Dissent and protest are now generally recognized as the rights of students. But when they hold respectable and well-meaning private citizens as prisoners in public buildings, and when they destroy thousands of dollars worth of public property, they have gone beyond the limits of tolerance.

Let the student, white or black, carry his signs. Let him march, demonstrate and protest. All of this is fine. But when, in so doing, he infringes upon the rights of others who may or may not think differently he is only hurting his cause.

[From the Jordan (Minn.) Independent]
PRICE OF ANARCHY

Campus dissenters whose chief aim is disruption of university operation may be succeeding in a way they had not foreseen. In the last election, many bond issues and tax proposals having to do with education went down to defeat. In California, \$250 million in bonds for construction in the State's troubled universities and colleges were turned down by the voters. Campus riots at Berkeley were given as one reason for the rejection. Tax increases to meet school needs were also defeated in many areas over the nation.

Evidently voters resent the use of tax-supported educational institutions as a breeding ground for riots and violence. The slowing down of the flow of tax funds to education is part of the price that everyone must pay when permissiveness becomes anarchy. And outright anarchy is what some of the recent action has been and it should be dealt with as such.

[From the Windom (Minn.) Citizen]
CHAOS ON THE CAMPUS

Two learned Negroes have spoken out in the last few days against the militant blacks who, along with militant whites, are making a shambles of the nation's colleges and universities.

Justice Thurgood Marshall, first Negro member of the Supreme Court, put it bluntly when he said, "Anarchy is anarchy and it makes no difference who practices it. Nothing will be settled with guns, fire bombs or rocks."

Bayard H. Rustin, a Negro civil rights leader, said that educators should stop capitulating to demands of black students.

"What are soul courses worth in the real world?" Rustin asks. "In the real world they want to know if you can do mathematics and write a correct sentence."

It is encouraging to hear responsible Negroes taking a stand for law and order. Too little is being said these days of the need to respect and abide by our laws.

Unless a firm stand is taken soon, we will be graduating from our colleges and universities a brand of students similar to the German youth gangs who terrorized much of Germany during Hitler's rise to power.

We think a majority of the American people are getting fed up with the campus militants who have created a minority tyranny that threatens not only our colleges, but the life of our nation.

It is time to prosecute the violent-prone militants to the fullest extent of the very laws they refuse to recognize.

American citizens are running out of patience and our nation is running out of time.

IDENTO-TAG IS MORE THAN CHARITY

HON. W. E. (BILL) BROCK

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, May 26, 1969

Mr. BROCK. Mr. Speaker, in this age of "gimmickry" in fundraising, I was delighted to learn of a useful, effective item employed by the Disabled American Veterans. The following article by Sally Latham in the April 7 issue of the Chattanooga Post provides some useful information on the idento-tag program which affords employment for many disabled veterans and widows of servicemen. I include it in the RECORD:

VETS RETURN LOST KEYS

(By Sally Latham)

It might not have happened to anyone without her direct pipeline to the source, but Gladycie Branton is convinced she's been blessed with a minor miracle, with the Disabled American Veterans as the intermediary.

Gladycie, secretary to Father William Morgan at St. Stephen's Catholic Church, is a key keeper of the keys for the religious establishment. On her key ring are those to the church, the office, the storeroom, along with her own car and house keys.

During the Christmas-New Year holiday, she tells me, she made a flying trip to Minneapolis, Minn. And when you're on a vacation, you don't pay much attention to the tools of your trade back home.

It was only after she arrived back in Chattanooga that she discovered to her horror her whole collection of keys was missing.

And anyone who has ever lost his keys knows what complications the loss leads to. Everything becomes inconvenient if not downright impossible. Too, there's always the naggingly uncomfortable feeling that someone else is in possession of ready access to all you own.

Gladycie's loss happened somewhere, sometime, on Dec. 31.

"They had to be either on the Northwest or Delta Airlines or at the hotel where I stayed," Gladycie said. "I dropped them all notes, but I didn't hear from them. They must find thousands of keys, so they probably pitch them out."

The key ring was that of a gasoline company, so she wrote them too—with no success.

But she had something else on that ring—something she had given very little thought to—which proved to be the magic amulet.

It was the little Ident-o-tag she's received in the mail from the DAV.

"I'd been getting them for years," Gladycie told me, "but I thought they were just a gimmick to make money."

She'd put them on the chain with her keys, anyway, without any idea of their significance.

She had given up all hope of ever getting her key ring back when a couple of weeks ago, she received a bulky letter in the mail. It was her long-lost keys.

Accompanying her valued possession was a lengthy letter from a DAV official, explaining that whoever found them had mailed them to the DAV's Cincinnati address on the tag. In turn, the veterans' organization had sent inquiries to the Tennessee license department and had found out through that channel to whom the keys belonged.

"They said they return over two million sets of keys every year," Gladycie reported. "The Ident-o-tag is sort of like insurance—you never know what it means to you until something happens."

The little tag gives up to 15 months of protection, Gladycie was informed, even though you get a new license. The DAV will trace as long as records are available.

And donations made in return for the little gimmicks go to help some 240,000 disabled American veterans.

My eyes are now properly opened. Next time I get Ident-o-tags through the mail, they'll go on my keyring post haste. And with proper remuneration to say thanks in advance for the service.

TAKE CARE OF DEPENDENT CHILDREN

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 26, 1969

Mr. PHILBIN. Mr. Speaker, as we all know, many States are under great pressure of maintaining and paying the high costs of State governments, and most of them are not in any position to substitute State funds for Federal funds to take care of some 800,000 AFDC recipients, who, unless the freeze is lifted, will have to be taken care of without Federal matching funds.

It is estimated that under the freeze the States will lose something like \$300 million in Federal grants and this large sum may even be higher.

As a result, very many new State revenues would have to be devised, in the event aid to dependent children were to be indefinitely frozen or substantially decreased.

Some have advocated postponement of the freeze, but this is not a satisfactory answer. It avoids the real issue of providing adequate grants.

The States have a right to know what they may expect, by way of matching funds from the U.S. Government for the very important programs that involve care of and assistance for helpless, dependent children, and I believe that our Ways and Means Committee should take prompt action to repeal the statutory provision limiting Federal grants for dependent children programs which are to become effective on July 1 of this year.

I strongly urge the Ways and Means Committee to take this action and urgently hope that it will do so because this country cannot leave itself in a position of rejecting adequate help and support of young children, who may be in dire need of food, sustenance, and the elementary needs of life.

The Ways and Means Committee has a great responsibility in the social areas which deal with the urgent needs of deprived, indigent, and needy human beings as well as in other profoundly critical, fiscal, financial, tax, and economic matters and I trust it will demonstrate a vital forward-looking role in enlightened social action, as well as assert an independent, realistic policy toward taxes and fiscal matters that is oriented toward the real interests of the rank and file of the American people as it moves to cope with budgetary deficits and balance the national budget.

BY THEIR COMPANY

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 26, 1969

Mr. DERWINSKI. Mr. Speaker, while there has been extensive press coverage of the turmoil that SDS and other radical left groups have brought to college campuses, we must not overlook the similar problems that have developed at some high schools.

Lyons Township High School in La Grange, Ill., has been the scene of small-scale activities by a handful of students who have come under the influence of the radical conspiracy and I was pleased to note the *Suburban Life*, a publication serving the communities of West Cook County, in its issue Thursday, May 22, directed attention to this matter in a very effective fashion:

BY THEIR COMPANY

When are we going to realize that the Students for a Democratic Society is nothing but a rabble-rousing organization bent on destruction, violence and the break-up of this nation?

"On Tuesday, May 13, we will march to demand that state's attorney Hanrahan jail this pig and indict him for murder." That's a boxed in indictment on the facing page of a leaflet circulated at a meeting of the student forum at Lyons Township High School last week.

The leaflet further urges that a gathering be held at the corner of Halsted and Armitage in Chicago to rally with speakers from the Young Lords, Young Patriots, Black Panthers Party and SDS. It was.

It inflames the youngsters with the statement, "On Sunday, May 4, our brother Manuel Ramos, a member of the Young Lords Organization, was murdered by an 'off duty' pig."

On the second page of the leaflet is a paragraph carrying the head, "People Demand Justice." It reads, "On May 13 the people will march to the 18th District pig station to demand that state's attorney Hanrahan uphold the American justice that he and his pig friends claim exists. The people will demand that the killer of Manuel Ramos, pig Robert Lamb, be indicted for murder in the

first degree. If Hanrahan refuses to do this he will also be indicted as an accomplice to the murder. Come to the rally, bring the real criminals to justice."

So the SDS seeks justice. Yet the organization overlooks that the accused is entitled to due process of law, just as its leaders scream and protest that they are being denied, which in itself is a fallacy and a smokescreen.

The SDS laces its inflammatory publicity with words like "pig" and "pig power" which are designed to create hate and bigotry, the very things it claims to be opposing.

The SDS writers know no more about what happened in the killing of the Ramos boy than anyone else, but they are quick to assume and pass on to whatever readers they have that the "pig," a police officer, was wrong. And they proceed to convict him in print before the man has had his day in court.

Supposing the shoe were on the other foot? Would they be as quick to accuse and convict?

Do the dissenters call attention to their tactics? Does the SDS mention that members of the organization take over college campuses and deprive other students of the right to attend classes? Do the righteous writers mention that property has been destroyed, files demolished?

Do they mention that state and federal troopers, plus local police, called to the scene cost the taxpayers a lot of hard earned cash? The answer to the foregoing is, No.

The answers given are that the police, troopers, officials and college and high school administrators are "pigs." In fact, everyone who disagrees with them is a "pig."

The SDS is nothing but a national conspiracy. Its leaders know and plan when the next disturbance will take place. It's high time that the leaders of this organization be brought before the courts of law, and if found guilty of disturbing the public peace, be given the full measure of punishment the law provides.

Giving them the rights of the courts is mandatory; they're entitled to it under the Constitution. It may be a mistake to grant them their rights because they don't recognize the rights of others. Nevertheless, right is right and regardless of how we may feel they are entitled to their rights.

And when justice prevails we'll see just who the "pigs" are.

RESOLUTIONS BY THE COMMONWEALTH OF MASSACHUSETTS

HON. SILVIO O. CONTE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 26, 1969

Mr. CONTE. Mr. Speaker, under permission to revise and extend my remarks, I hereby include for the RECORD the following resolutions by the Commonwealth of Massachusetts.

The first resolution concerns the seaward boundary of Massachusetts and requests congressional recognition of a 100-mile limit.

The second resolution supports the concept of revenue-sharing as one way to aid State and local governments.

The third resolution urges the President to nominate Dr. John H. Knowles as Assistant Secretary of Health, Education, and Welfare and the Senate to confirm such appointment.

I include the resolutions as follows:

RESOLUTION 1

Memorializing the Congress of the United States to recognize the 100-mile seaward boundary of the Commonwealth of Massachusetts

Whereas, The Commonwealth of Massachusetts was granted a seaward boundary to one hundred (100) miles offshore by the First Virginia Charter in the year 1606 and by the Council Charter in the year 1620; and

Whereas, The Federal Submerged Lands Act of 1953, Subchapter I, expresses federal recognition of state seaward boundaries claimed prior to their entering the Union, "(A)nd to the boundary line of each such state where in any case such boundary as it existed at the time such state became a member of the Union . . ."; and

Whereas, The First Virginia Charter of 1606 and the Council Charter of 1620 grant a seaward boundary of one-hundred miles to the Commonwealth of Massachusetts prior to its entering the Union in 1789; and

Whereas, The Federal Submerged Lands Act presently favors only two Gulf of Mexico states and confines all other coastal states to a three-mile seaward limit; and

Whereas, The Commonwealth of Massachusetts appears to have a strong historic claim to a seaward jurisdiction beyond three miles, which has not been considered by Congress or adjudicated by the courts; and

Whereas, There is no evidence of Massachusetts surrendering this extensive seaward jurisdiction upon entering the Union; now, therefore, be it

Resolved, That the Massachusetts General Court respectfully urges the Congress of the United States to recognize and to honor, the one-hundred mile seaward boundary of the Commonwealth of Massachusetts; and be it further

Resolved, That copies of these resolutions be transmitted forthwith by the Secretary of the Commonwealth to the President of the United States, to the Secretary of Interior, to the presiding officers of each branch of the Congress and to the members thereof from the Commonwealth.

RESOLUTION 2

Memorializing the Congress of the United States to enact legislation providing for general aid to state and local governments through the sharing of Federal income taxes

Whereas, There is legislation pending before the Congress of the United States which provides for the sharing of a fixed percentage of revenues from the individual federal income tax with state and local governments for purposes determined by them; therefore be it

Resolved, That the General Court of Massachusetts hereby respectfully urges the Congress of the United States to enact pending legislation providing for the sharing of a fixed percentage of revenues from the individual federal income tax with state and local governments; and be it further

Resolved; That copies of these resolutions be transmitted forthwith by the Secretary of the Commonwealth to each Senator and Representative in Congress from the Commonwealth.

RESOLUTION 3

Memorializing the President of the United States to nominate Dr. John H. Knowles as Assistant Secretary of Health, Education and Welfare and the United States Senate to confirm said appointment

Whereas, Dr. John H. Knowles, the distinguished and able General Director of the Massachusetts General Hospital is being mentioned as Assistant Secretary of Health, Education and Welfare; and

Whereas, Dr. Knowles as General Director of the Massachusetts General Hospital, which in 1967 was rated number one in a list of ten of America's best hospitals, is a recognized expert in hospital supervision, medical affairs, health planning and scientific research, all fields which come under the supervision of the Assistant Secretary of Health, Education and Welfare; now, therefore, be it

Resolved, That the Massachusetts Senate respectfully urges the President of the United States to nominate Dr. John H. Knowles as Assistant Secretary of Health, Education and Welfare; and be it further

Resolved, That the Massachusetts Senate respectfully urges the Senate of the United States to confirm said appointment; and be it further

Resolved, That copies of these resolutions be sent forthwith by the Secretary of the Commonwealth to the President of the United States, to the presiding officer of the United States Senate and to the members thereof from the Commonwealth.

REALTOR WEEK

HON. THOMAS N. DOWNING

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 26, 1969

Mr. DOWNING. Mr. Speaker, last week Mr. John J. Reed delivered a great and timely speech at the annual civic luncheon of Realtor Week in the Tidewater area in Norfolk, Va.

He was introduced by our friend and former colleague Porter Hardy, Jr. Many of you will remember Mr. Reed as the former Deputy Assistant Secretary, Family Housing, Department of Defense.

It was a timely speech, because everything we hear these days seems to be highly critical of our Military Establishment. It was a great speech, because the speaker was knowledgeable—with no axes to grind—and he brought some people's blurred vision on this subject back into clearer focus. He told his audience, "In view of all this criticism about what is bad about the military, maybe we need to start talking about what's good about the military." He does just that.

Mr. Speaker, I include this speech in the Extensions of Remarks of the Record:

ADDRESS BY JOHN J. REED AT THE ANNUAL CIVIC LUNCHEON OF REALTOR WEEK IN THE TIDEWATER AREA, NORFOLK, VA., MAY 21, 1969

Distinguished guests, ladies and gentlemen, it is indeed a pleasure to be back in Tidewater country. This part of our State holds many pleasant memories for an old VPI boy, who spent many summer-student days on nearby Virginia Beach. Those days are remembered both with pleasure and a bit of nostalgia.

Your courtesy in inviting me to meet with you today and to share a few thoughts, is very much appreciated. First, I wish to congratulate your industry; you realtors have done a great deal in the area of community service and establishing professional standards and ethics and you are to be commended. Groups such as these epitomize the local civic spirit which exists throughout our Country and which makes such significant contributions to improving our way of life. You are the community leaders and I believe

your active participation is the key to the continuation of our valued traditions.

I'm very grateful for the kind introduction by my friend, the Honorable Porter Hardy, Jr. I know that it's difficult to get Porter to come away from his retirement activities for public events, so I particularly appreciate his taking the time to be here today. I'd like to say that his departure from the Congress was a loss to Virginia and to the Nation. I'd like to suggest to this group that in special appreciation for his 22 years of dedicated service in the United States Congress, we give him an extra ovation now.

Speaking of Porter, I'd like to share with you one anecdote from his congressional days. You are, I know, aware of his reputation and talents as an interrogator. Let me tell you, when a witness appeared it was always with a cold, clammy sense of apprehension. One day, I happened to be in the witness chair and I was being ripped up one side and down the other by the famous Hardy question technique, and I apparently wasn't doing a very good job of being responsive in my answers. When the session ended, Porter came down to the witness table, and we were chatting while I figuratively bled from my wounds, then his committee colleague, Eddie Hébert from New Orleans, came by, put a hand on each of our shoulders and said, "John, it's a dam good thing he's a friend of yours, otherwise he would have killed you." So friend, or foe alike, we always approached that committee with profound respect and a large measure of apprehension.

Today, I would like to discuss with you, two subjects which I feel are perhaps an appropriate reflection of the facts that this meeting is known as the Civic Luncheon—the highlight of Realtor's Week here in the Tidewater area—and that the theme of Realtor's Week this year is Home Ownership. With regard to these two subjects, one is something I know a great about because of my prior Pentagon assignment—that is the military family housing program. The other, is one I'd like to discuss because I feel very strongly about it—that is the increasing anti-military attitude which seems to be sweeping through the Country.

Your theme for Realtor's Week 1969, "Home Ownership—Foundation of the Nation"—is a great one, and I think we might reflect and say, "How could this be applied to military families? Could this concept become an attainable objective for most military families?" Here, in the Tidewater area, you have a unique situation regarding your military neighbors in your communities. As an example, there are some 92,000 military here, assigned to bases and ships. Of these, about 39,000 are married personnel, representing all the Services. Of the married personnel, about 17,000 are renting homes and apartments throughout your area. In addition, and I found this to be of particular interest, almost 10,000 of these military families own their own homes here in Tidewater Virginia. This, I think, proves that there is a strong desire on the part of many of the military to own their own property. Contrasted with these statistics is the fact that there are some 4,100 Government-owned units which are made available for use by military families. From these statistics, you can see that the Tidewater areas as to military housing represents a balanced picture of private ownership, Government-owned units, and rental units. The policy of the Defense Department regarding the housing of its military families has been that it prefers that they live in the communities surrounding the military installations, where this can be achieved without personal or financial hardship. The Department's position on military ownership of private homes has been that it would neither be discouraged nor encouraged. The reason for the latter view is that with the frequent

transfer of personnel, from one duty assignment to another on an average of something less than 3 years, home ownership can become a significant problem in certain parts of the Country. Our studies, when I was with Defense, showed that in many areas of the Country, sales of properties presented no problems of any consequence and that it was often to the financial advantage of the military man to purchase a home during his tour of duty. Yet, in other parts of the Country, service men were often unable to sell their houses quickly and reasonably when they were transferred, or in some cases where military bases were significantly reduced or even closed there was no market and the properties had to be foreclosed.

Because of these types of problems, the Defense Department decided that it would primarily depend upon the available rental units in the communities surrounding these bases to meet the needs of the families of military personnel. But, also, that it would not prohibit or restrict service men from exercising their free choice in acquiring their own homes, and they were financially able to do so. My challenge to you in this group this afternoon would be this: Are there steps which your industry, the Realtors of America, could take, perhaps in conjunction with the financial institutions, to find ways to assist even more military personnel to come into home ownership and yet not run a great risk of financial catastrophe upon their transfer because of inability to resell their property? How could these people be helped to do this? How could your theme of Home Ownership be implemented on an even greater degree with the military families involved? These are difficult questions, I realize, but I challenge you to use the talents, which are represented collectively here today by the fine people who are members of this profession—are there ways—can you devise systems—if there are practical ways which could be worked out, then I submit that you would be doing the military families a great favor and you of course would be helping your own industry to grow and to prosper. Right here in the Tidewater area, the military represent a significant potential market for home ownership if these problems could be resolved. Certainly, a solution might even conceivably involve legislation which the Congress might enact to help achieve this objective. They've enacted laws in the past to assist other members of our citizenry to achieve home ownership. Again, fair and equitable proposals which could be advanced towards achieving this objective would, I am sure, receive careful consideration by those in the military and those in the Congress. Ladies and gentlemen, I would like to think that on this point, the ball is back in your court.

Next, with your indulgence, I would like to share with you some thoughts and observations of a strictly personal nature now that I am a private citizen again. I would like to talk about public service and I would like to speak out against the current wave of anti-militarism that appears to be sweeping this Country.

At the outset, let me make it clear: Military men do make mistakes, realtors make mistakes, even lawyers make mistakes; however, this does not go to the motivation and integrity of these people. This thought was well stated recently by Secretary of Defense Melvin Laird in a speech to a group of newspaper editors when he said, Quote:

"Another type of criticism that gives me concern is that directed at the military profession and at the character of the career military man. Some of the critics seem to be in search of a scapegoat. The frequently expressed concerns about the military-industrial complex raise some valid issues, but it is utter nonsense to question the motivation of our military leaders. Our military leaders

are dedicated men of the highest competence whose purpose is peace." Unquote.

We sitting in this room today would not have to go very far to be reminded of great personal military leadership in the cause of peace. Certainly, General Douglas MacArthur, by his forceful personal leadership and integrity, established a strong economy and a democratic society in Japan following World War II and in this way made a staunch ally out of a former enemy.

Also, we Virginians proudly claim our son, George Catlett Marshall, as we should, and, certainly, the strong leadership which he exhibited as a Statesman, and which emanated from a background of many years of military service, was of vital help to our Country. His leadership revitalized the economy of continental Europe and assured that those countries would continue as democratic societies, and remain in the Western camp of nations. It occurs to me that, perhaps, some contemporary critics are a little short on a sense of history.

Every day it appears, we see headlines in our papers about protest against ROTC on college campuses; we read of military recruiters being abused and physically detained by small groups of students and others; we hear and read of students, and of some faculty members, protesting accomplishment of military research and development work on campus; we read of some members of the clergy breaking into and vandalizing the administrative offices of a corporation which produces a product needed by the military; and we read newspaper articles implying that high Pentagon officials—men whom I knew personally and knew to have the highest integrity—were dupes of certain private corporations. I, like many others, am sick of it. I think we all need to begin to speak out against this kind of philosophical nonsense and to recognize our need for a strong, competent military organization in today's world. In view of all of this criticism about what is bad about the military, maybe we need to start talking about what's good about the military. In the words of the old Johnny Mercer hit song, "Let's accentuate the positive and eliminate the negative."

First, let's talk about the ROTC program. It would be my opinion that if the military is going to retain its democratic roots, then it seems vital that we continue to have the quality level and the broad base of career officers which the ROTC helps to provide. Certainly, by inputting into our officer corps qualified individuals from many diverse backgrounds and colleges we are assuring the continuation of the proper relationship of the military within our democratic society.

Let's go on to research and development on defense problems by universities. I would say this is very important to the defense effort and to stimulating the growth of basic knowledge. Where does such R&D effort leads us? Certainly, it helps to provide the weapons that we may need at future times. But, what else does it provide? Let's explore the computer field. Our entire economy has prospered because of this area of technology. Where did it begin? With Naval gun requirements for ballistic tables. Years back, 1944, Dr. Howard Aiken of Harvard designed and built a new computer on a "go-no go" electric relay basis in order to help calculate ballistic tables. This machine filled a whole building up at Dahlgren, Virginia, and was the beginning of modern computer technology. Later came the NORC—the Naval Ordnance Research Calculator. This was about 1955. It was an early electronic computer produced under a Navy contract with the IBM Corporation as a follow-on to research at universities. This effort, on the NORC, and the parallel military-sponsored effort on transistors, pushed us over the threshold in the com-

puter field and has led us into the current technological era. Are we to believe that this is an undesirable by-product of inherently evil research? I think not. If by short-sightedness, or perhaps for even more devious motives, we are asked to class research and develop effort sponsored by the taxpayers throughout the Defense Department as a bad thing, then are we not stopping the progress of the technical side of our Defense effort and deferring the advance of basic knowledge? If in the frustration over the Vietnam war and other problems in our society, we take such action to damage the basic fabric of our National makeup, then I think we all need to do some serious thinking as to what the objectives of this American society truly are. And most disturbing to this observer is the lack of leadership on the part of some university administrators and faculty members in not retaining a true perspective of what is good for this Country, and of giving in to a current screaming mob rather than preaching out in terms of ultimate objectives and desires.

Last Saturday was Armed Forces Day, and, perhaps that is an appropriate milestone date that we can each use to start turning this thing around. I don't know how "military" got to be a dirty word, but, I for one, and I am sure I also speak for the majority of the people present today, believe that there is much good in our current Defense establishment. I don't fear a military-industrial complex will take over our Government. As a matter of fact, I think it provides strength for our Nation. It needs to be monitored, yes; and there are those in the Congress and in the Executive Branch who do monitor it with a sense of integrity and a sense of duty. A strong military establishment has kept the peace—such as it is—since the end of World War II. What really is the power of the United States as a Nation? Is it our gross national product, our mineral wealth, our productive capability? To our adversaries, I submit, it is that B-52 crew that's now aloft; it's the men submerged in a Polaris submarine somewhere off the European continent; it's the kids down in a silo in one of our western states monitoring their dials and electronic equipment; it's the GI along the 38th parallel over in Korea; and, above all, it's the men in Vietnam.

This is the point of the dagger as they say and this is the power of the United States that is respected in today's world. Perhaps, what I am trying to say is best summed up by the motto of our elite SAC forces—"Peace is our Profession."

Thank you.

HON. WILLIAM V. ROTH

HON. LOUIS C. WYMAN

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 22, 1969

Mr. WYMAN. Mr. Speaker, I am pleased to join my colleagues in paying tribute to my very able friend from Delaware, Congressman BILL ROTH. I was disappointed to learn that he will be creating a great void in the House by leaving for the other body, but happy to find that he will continue his dedicated and tireless service in the Congress of the United States.

Ever since he entered these Chambers, BILL ROTH has shown not only a rare aptitude for his job, but a rare concern for the people who sent him here. He has combined an outstanding academic, military, and legal background with a natu-

ral involvement in community and world problems to establish himself as an outstanding leader in the State of Delaware, and as an outstanding Congressman here in Washington.

It is this record of accomplishment that he has been writing since joining us here that deserves a special tribute by his colleagues. Amidst the talk and worry about our growing bureaucracy and the potential dangers and inadequacies of big Government, BILL ROTH struck out on his own to do something. He attacked the complexities head on, pointed up the need for and then gave direction to a design that will help make at least one area of government more comprehensible and more workable. Responding to inquiries by his constituents on just what our Federal Government was capable of doing and what, in fact, it did do with its Federal-aid programs, he set out to let them—and us—know.

By first uncovering, through his extensive inquiries and tabulations, the many inadequacies and areas of duplication and waste which exist, and then proposing two original major pieces of legislation to alter those inadequacies during his first year in Congress, he has displayed the kind of leadership and initiative that we can expect from him.

It seems appropriate, Mr. Speaker, to say a few words about the seat which our eminent colleague will be seeking. It is the seat of the very distinguished Senator JOHN J. WILLIAMS, who this year announced to the disappointment of all concerned citizens and officials everywhere that he would not seek reelection at the end of his term in 1970. Although his decision is regrettable from the standpoint that his services will not be continued here in Washington, we can find comfort in his assertion that he looks upon it as an announcement of his candidacy for the highest honor that can be conferred upon any man, which he maintains is to be "a constructive and useful private citizen of the State and country to which I owe so much."

There has been some question as to whether or not Senator WILLIAMS can be replaced, and whether the public interests will ever again be protected as they have been since he took office.

It is my feeling, and the feeling of many others in this body, that BILL ROTH has already displayed the same kind of concern for the people he represents, and the same dedication to the removal of waste and inefficiency in Government. I am confident that if he is given the opportunity, he will bring to the Senate the same honor, energy, integrity, and brilliance which he has shown us here in the House.

We wish him well.

THE PRICE IS RIGHT

HON. BENJAMIN S. ROSENTHAL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 26, 1969

Mr. ROSENTHAL. Mr. Speaker, today I testified before the New York City

Department of Consumer Affairs on a proposal to require unit pricing to the nearest 10th of a cent on certain commodities. The purpose of the proposal is to enable shoppers to make successful price comparisons, now an impossible task.

Senator NELSON of Wisconsin and I have introduced legislation which would amend the Fair Packaging and Labeling Act by requiring the price per unit to be placed on consumer commodities. The New York City proposal and the legislation we have introduced are parallel measures to eliminate the price and packaging confusion that is so pervasive in the marketplace. With their passage, consumers would finally be able to determine what really is a good buy.

My statement follows:

STATEMENT OF REPRESENTATIVE BENJAMIN S. ROSENTHAL

Three years ago the Fair Packaging and Labeling Act, designed to promote informed choice in the marketplace, was enacted into law. But the housewife in 1969 as in 1966, still stands bewildered in the supermarket aisles.

Faced with endless varieties of packages, labels, and prices for a multiplicity of brands of the same product, the housewife hardly resembles the sophisticated consumer on which our free enterprise economy is based—one equipped with sufficient information about products and prices to make rational choices. The result is that American consumers are shopping blindfolded, with the scales of marketplace justice rarely balanced in their favor.

The Fair Packaging and Labeling Act has failed to give consumers parity with producers in the free enterprise arena. It was neither intended to, nor did it in fact, resolve all the informational needs and problems confronting consumers. Even if the Act were being vigorously enforced, which is not the case, consumers would still be left in the dark when it comes to identifying the "best buy".

Admittedly the Act, has in some cases, reversed the wild proliferation of package sizes. The National Bureau of Standards, pursuant to the Fair Packaging and Labeling Act, is presently involved in resolving package proliferation problems. To date, 27 product categories (such as crackers, coffee, detergents, toothpaste) have had weight standards established, thus reducing the variety of package sizes. 39 additional consumer commodities are currently under study.

But reducing package proliferation, in itself, will not provide consumers with the most elementary information necessary to make economically wise purchases: how much does a standard unit, an ounce, for example, cost for the various brands and sizes available within a given product category?

It is clear to me that consumers need three basic kinds of information about packaged products:

- (1) a true statement of net weight and the percentage of ingredients;
- (2) the quality or grade of ingredients;
- (3) the unit price for competing sizes and brands.

The first type of information is dependent upon a labeling system that indicates the actual net contents. For example, declarations of net weight for fruit and vegetables packed in syrups, brines or other liquids which do not differentiate between the product and the liquid, hardly are valid indications of contents.

The second type of information is dependent upon a comprehensive and accurate quality grading program—a vast improvement over the limited and ineffective grading pro-

gram the Department of Agriculture now administers.

Finally, there is no existing system for identifying the unit costs of packaged products; this information gap would be closed by the adoption of your proposal at the local level and bills to achieve the same purpose pending at the federal level.

What kind of anti-consumer practices would enactment of your proposal remedy? First and most obviously, it would give consumers the basic kind of economic information necessary to make cost-value comparisons. Secondly, it would negate the widespread practice, now engaged in by food and toilet goods manufacturers, of subtly shrinking package contents without reducing prices.

Hearings to be held next week by my Special Consumer Inquiry will show that hundreds and probably thousands of packaged food and toiletry products have experienced such subtle weight decreases, thus causing "hidden" price increases to consumers: did you know, for example, that the package of Betty Crocker Country Corn Flakes that contained 11 ounces in 1965 now contains 10 ounces; that the Franco-American spaghetti that used to be 27 ounces is now 26½ ounces; that the 8 ounce can of Libby's chili is now 7½ ounces? Prices go up and contents go down.

Are you aware that the Jergens Lotion that was 12½ ounces is now 10½ ounces; that the 8 ounce can of Breck Hair Set Mist is now 7 ounces; that the 12½ ounce family size Halo Shampoo has shrunk by one ounce; that the 21 ounce package of Serutan is now only 18 ounces?

Obviously, if the price per unit were recorded on packages, manufacturers would not be able to conceal price increases by shrinking the contents of their packaged products.

Your proposal requiring unit pricing to the nearest tenth of a cent on certain commodities which cause the greatest confusion is a sound approach to refocusing attention on the absence of fair packaging and labeling. The example set by New York City will, hopefully, provide the model for other cities to follow. And it could provide the impetus for the enactment of similar federal legislation.

Senator Gaylord Nelson of Wisconsin and I have introduced legislation which would amend the Fair Packaging and Labeling Act by requiring the price per unit to be placed on consumer commodities, including food, household goods, drugs, and cosmetics. The retail outlet would be responsible for posting the actual price per unit of contents based on the actual sales price.

I think we should not be intimidated by manufacturers and sellers who claim that the cost of unit marking would result in higher prices. It is obvious that unit pricing charts could be made available to retailers and that they can stamp the unit cost and total cost on each package or container as easily as they now stamp the price on these items.

I want to commend you for taking the initiative in this matter and thank you for providing me with an opportunity to appear before you today to discuss this important proposal.

APOLLO 10

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 26, 1969

Mr. TEAGUE of Texas. Mr. Speaker, Astronauts Eugene A. Cernan, Thomas P. Stafford, and John Young have circled the moon, a feat accomplished only once before, and took a new gigantic step toward a lunar landing when they de-

scended to within 50,000 feet of the lunar surface. As Americans, we are proud of their achievement and the achievement of the many people who, throughout the country, have worked on the development of the Apollo equipment. As Americans we are proud of three fine young men who have taken another step in challenging the unknown. By their efforts we are learning more about the world we live in.

As we mark this achievement as the prelude to a lunar landing we should remember that this is a beginning. It is a beginning not only of an exploration but the beginning of the opening of a new era of utilization of space. The road along this route of exploration will be long and difficult. Success will not always come easily and at times the sacrifices will be large. However, I believe that with the leadership of such men as Astronauts Cernan, Stafford, and Young we will be prepared to continue to challenge the unknown for new knowledge and the benefit of all mankind.

We welcome the astronauts back to earth and wish them a speedy reunion with their families and friends. They truly are pioneers of their times.

HOUSING HOAX

HON. WILLIAM (BILL) CLAY

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, May 26, 1969

Mr. CLAY. Mr. Speaker, in 1949, Members of Congress passed the National Housing Act which committed this Government to the construction of 810,000 public housing units for low- and moderate-income citizens to be completed in the ensuing 6 years. Today, 20 years later, we still fall 10,000 units short of that goal. It has, indeed, been a "housing hoax" particularly in view of the current conservative estimate of a need for low-income housing by 7.8 million persons who presently cannot afford to compete for housing on the open market.

I commend to the attention of my colleagues this portrayal of the situation by Michael Harrington whose column was carried in the May 20 edition of the Washington Evening Star:

THE GREAT AMERICAN HOUSING HOAX

Our longest running official lie, approved by five Presidents and ten sessions of Congress, has just opened the new season under George Romney. It is the Great American Housing Hoax.

Romney's announcement of his Model Cities policy was designed with all the art of a cigarette commercial. For anyone who believes a brand can be so low in tar and nicotine that it is almost pure air and simultaneously is the most flavorful smoke around, will also be persuaded that, by cutting the Model Cities funds by \$75 million and extending the program to more neighborhoods, it is being made more effective.

After this optimistic contradiction, the secretary of housing and urban development went on to reveal his "breakthrough" plan. In this scheme, there is to be such innovation in construction techniques that the one-half of American families now unable to bid for decent housing on the private

market will suddenly become effective consumers.

This is a marvelously painless solution to a crisis for it would not cost much federal money and it would make big private profits. The only problem is—and Romney could check it out by reading the analysis of Paul Douglas' National Commission on Urban Problems of a few months back—that it will not work. But even making the outlandish assumption that such an approach is going to produce six million units of low cost housing in ten years, there is no hint of the aesthetic, racial and social design of all these homes.

Will they take the form of suburban sprawl, of gilded ghettos—or of new towns and refurbished old cities? It should be obvious by now that such momentous questions are not going to be solved by the invisible hand of Adam Smith acting through the private market but will require creative government planning—and spending—at every level of the society.

But then it is unfair to single out George Romney for blame since he is simply, and probably sincerely, acting in the tradition of institutionalized hypocrisy which has characterized housing policy for a generation.

The Great American Housing Hoax began in 1949 with a Republican conservative, Robert A. Taft, on the side of the angels. Taft, who knew then what Romney has yet to learn, declared that the private market obviously could not satisfy the housing needs of poor people.

On the basis of free enterprise principle, he declared this was an area in which the government had to intervene. And as he helped pass the 1949 Housing Act, he said that Washington had to finance 135,000 units of low-cost housing a year for six years.

It is now 20 years since the nation solemnly accepted this housing goal—and we have yet to fulfill four years of Taft's target. Moreover, in the intervening period urban renewal and federal highway programs were actually destroying more low-income housing than Washington was building and cheap interest and handsome tax deductions were helping to construct more than 10 million units of middle income and wealthy housing.

So it is that one comes to the magnificent irony that the stated purpose of the 1968 housing legislation was to fulfill the stated purpose of the 1949 act.

But no one should fear that the 1968 oath to the poor will be honored. This year, when we were supposed to be taking the first giant stride toward creating six million units of low-cost housing in ten years, we are doing practically nothing. Because of inflation, even the normal rate of private construction will be down; and with a conservative Congress and a passive President, there is no real chance that Washington will broaden the public sector.

But even though one cannot thus charge Secretary Romney for a unique dereliction, the particular way he evades the issue is worthy of some comment. For it is becoming clearer every day that the domestic social thinking of the Nixon administration is dominated by a central myth: that Lyndon Johnson tried to do too much. The policy conclusion is that what is therefore needed is not new programs or, God help us, new money, but a more efficient administration of the old structures and a greater reliance upon voluntary groups and the private sector.

But, as the Great American Housing Hoax demonstrates, the poor in the slums have suffered for a generation from too little, not from too much. In all probability, Romney's cigarette commercials for the new, cut back and improved, Model Cities program is just one more of those retreats from social commitment caused by Vietnam and inflation, one more instance of burdening the poor to stabilize the dollars of the affluent. But the

idyll about the painless, almost moneyless creation of a private low-income housing market is a serious, reactionary attempt to ignore one of the nation's most desperate needs.

STUDENT'S LETTER ON VIETNAM INTRODUCED BY MR. MOORHEAD

HON. WILLIAM S. MOORHEAD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 26, 1969

Mr. MOORHEAD. Mr. Speaker, a Congressman's office is literally bombarded with thousands of pieces of mail every week—as you gentlemen well know.

The correspondence range from the congratulatory to the vituperative and all the stages in between.

Occasionally one receives a personal letter which so clearly demonstrates the writer's sincerity and concern that one must give it special treatment.

I received the following letter from Miss Elizabeth Morrison, a student at the University of Pittsburgh.

Like so many millions of Americans, myself included, Miss Morrison is disturbed and agitated over the continued fighting in Vietnam and the toll in lives, patience, and morale that this horrible conflict is taking.

So much has been said about the young people in this country who are protesting our Vietnam adventures that we sometimes forget the honesty and depth of their feelings.

I defy anyone to read Miss Morrison's letter and pass off her plea as that of a misdirected youth yelling merely to make herself heard.

I think the words of this young lady represent the best qualities that the young people of America possess and reflect those characteristics that eventually will make this country strong and united once again.

The letter follows:

PITTSBURGH, PA.

April 2, 1969.

DEAR CONGRESSMAN MOORHEAD: Today your newsletter arrived and it couldn't have come at a better time. Vietnam has alienated me in a sense from our political system. This alienation is a rather difficult thing for me to accept because as a political science major at Pitt, I've always felt somehow involved with politics and the government.

The thing that bothers me about Vietnam is that it hurts so much. Having had several courses concerned with our political involvement in SouthEast Asia I can understand the commitment we have there. What I can't understand is how people with family members in the armed services stationed in Vietnam can live for a year with all of the anxieties brought on by guerilla warfare. How can they say good-bye to their sons and husbands, knowing that they may never see them again? I've said that I can understand our commitment there, and I can. I've never actively protested it and I don't admire draft resisters. I just can't tolerate the thought of all those young men dying every day. They're so very young and they have to die, having had no taste of life.

I'm not writing to say that I have a solution to the war because I haven't. I am writing to you because I admire you and I'm certain that I'll receive some kind of letter from your office. Perhaps that will make me feel

a more integral part of our country. Please, please, please work with your fellow congressmen to urge Nixon (perhaps I should have said President Nixon but having been an active Humphrey supporter it's difficult) to make the end of the war in Vietnam a top priority. It's so unspeakably awful. You're so very fortunate to be in a position to be heard. I'm not. In fact the closest I'll come to being heard is when one of your staff members reads this letter. Please do something active to stop the deaths of American men in Vietnam. I know how very hard I would work towards that end if I were in your position.

Even when the war is over, nothing in the world can fill the void in America created by the deaths of the soldiers fighting in Vietnam. What can compensate for the loss of vision or limbs in those returning home?? Surely not a disability pension. Give every American a chance to a life here, not just widows and children. If something isn't done soon, there may be a tremendous decrease in the number of children in the United States. Wars hurt Rome and this war is killing America.

Congressman Moorhead please do something now before the scars can never heal. As a member of the Pitt Young Democrats I had the opportunity to hear you speak to our club shortly before the election. I was impressed by your sincerity. Please don't let me or any other citizen down. Use your good position to contribute to America's salvation.

Sincerely,

ELIZABETH A. MORRISON.

LAW DAY, 1969

HON. ORVAL HANSEN

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Monday, May 26, 1969

Mr. HANSEN of Idaho. Mr. Speaker, at a recent luncheon meeting in observance of Law Day, members of the Denver Bar Association were privileged to hear an address by Mr. Charles W. Poe, Jr., associated director of Denver Opportunity. Before being appointed to his present position, Mr. Poe served with great distinction and ability as a member of the legal staff of the Idaho operations office at the Atomic Energy Commission at Idaho Falls.

In his Law Day address, Mr. Poe reveals a deep insight into some of the social problems facing America. He points out that the law should serve as an instrument of social change and that the role of lawyers and jurists should be that of actors in this process rather than reactors.

I include Mr. Poe's address as a part of my remarks:

LAW DAY, 1969

(By Charles W. Poe, Jr.)

Governor Love, Judge Finesilver, and other distinguished guests:

During the preparation for my brief presentation, I gave a great deal of consideration to the prospective audience and to its composition. As you are aware, lawyers and those in related fields of endeavor are of a peculiar breed in terms of being somewhat cynical and unsuited by rhetoric, since cynicism and rhetoric are a way of life. As a result, I decided that there was little I could say in the time available which would make a lasting impression upon you.

In my presentation therefore, I shall try to share with you my experience, and my concern. It may depart somewhat from an outline you may have seen. Within the guidelines of our luncheon subject, "What the Framework of American Law Means to Me," it shall focus upon the following areas:

1. A concept of law;
2. The impact of the law upon my life;
3. The need for change and action; and
4. A necessary coalition.

I deplore those, who because of their position in a community, automatically attribute to themselves the accoutrements of leadership, and are so received. What you shall hear are not the opinions of a self-styled leader, but rather, the opinions of one man, a black man.

When one views the present and continuing reassessment of all of our values, our traditions and customs, there is no sound basis for such reassessments to exclude the law itself. Samuel Johnson has defined the law as: "the last resort of human wisdom acting upon human experience for the public good." I would modify that definition to read, "The law should not be the last resort of human wisdom acting upon human experience for the public good."

The law, and you as lawyers and jurists, should be in the vanguard of social change, not as reactors, but rather as actors.

My concept of the law and its impact upon me cannot be segregated from my self-concept as a colored man, a Negro, and now as a black man in a racist society. There is no law without justice, and justice continues to be a commodity which, for the most part, black people and other people of color—the long disenfranchised, disadvantaged, and frequently poor, have not been able to purchase with the same degree of quality and quantity as their white counterparts. Many black people have translated the cry for "Law and Order" into "Keep the niggers in their place." It is not my purpose to turn this into a sociological commentary, but I would be less than candid if I did not voice my concern and my commitment at a time when the nation and the community I love continue to avoid making those hard decisions which must be made if the moralization identified in the Kerner Report is to no longer remain ignored and unchecked.

I say "racist society" not with the condemnatory fervor with which that phrase is ordinarily accompanied. I say "racist society" as one who is aware that the effort, if made, to purge our nation of the debilitating effects of discrimination and prejudice, will be a long and painful one. However, neither the burden of pain nor the burden of time should further delay either the incision or the surgery.

What has been the import of the law upon my life and how is this related to my preceding comments? For the sake of clarity, let us use 1954 as the year for the "before" and "after" considerations which follow. The law before 1954 had established that "separate but equal schools" were bona-fide, state-supported institutions, largely based upon *Plessy v. Ferguson*, an 1896 Supreme Court decision. In that decision 73 years ago, the dissenting voice stated, "The Constitution is color blind." But should it be? We have all heard the cliché, "We are a nation of laws, and not of men." But are we? I believe that we are a nation of men who have the power, and hopefully, the will, to change laws to meet newly identified, mid-20th century needs. Prior to 1954, the law in all of its infinite wisdom, helped to give you, white America, an over-assessment of your true worth, and concomitantly caused a corresponding under-assessment of a black man's value.

As Baratz stated in a recent American Speech and Hearing Association article:

"Even when the abolitionists were most vociferous in their insistence upon eliminat-

ing slavery in the United States (some 200 years after the initial importation of Negro slaves) they were not disputing the thought that the Negro was genetically inferior to the white man, but simply insisting that slavery was an immoral institution, even if those held in bondage were inferior individuals."

American history as it is still taught in many schools conceals the extent of the contribution of black people. Were you aware:

1. That 30 black people were with Balboa when he discovered the Pacific Ocean;
2. That a black man was a navigator and captain of one of the three ships accompanying Columbus;
3. That black men accompanied George Washington when he crossed the Delaware;
4. That a black engineer, Benjamin Banneker, assisted in laying out the design for Washington, D.C.;
5. That the basic blood transfusion techniques were developed by a black man, Dr. Charles Drew, who, by the way, died from loss of blood as the ambulance took him from the white hospital which initially rejected him, to one which would accept him;
6. That a black man, Dr. William Hale, performed the first open heart surgery in America; and
7. That the first American to lose his life in the Revolutionary War, on Boston Commons, was a black man, Crispus Attucks.

How does all of this relate to the law, to today's ceremonies?

During my life, I've gone from the back of the bus to the front; from the balcony seat in the theatre to front row center; from driving all night because we were unable to find accommodations except by the side of the road, to staying at a Holiday Inn. These changes are due to changes in the law. Contrary to popular belief, black people have long been some of the most law-abiding people in this land. For example, the law required segregated housing, and black people did not try to buy outside designated areas. Law-abiding black people for years used their designated drinking fountains and rest rooms. Black people were denied full access to public accommodations, and for years, black people were law-abiding and did not seek to confront this issue openly and directly, until a black domestic with tired feet refused to move to the back of the bus in Montgomery, Alabama in 1955, and in 1962 several black men refused to move from lunch counters in Greensboro, North Carolina.

Such a law-supported system helped to destroy manhood, a sense of worth and dignity, and contributed to the inaccurate assessments mentioned before.

We are all aware of the recent spate of Federal laws which purport to remove the legal effect of such racial distinctions. Many black people, myself included, in view of these new laws, wonder how well white Americans will obey them.

And of black power—black militants or black power advocates have made positive contributions. They have made black people talk less about love and more about power. Power can compel action, where reason fails. As Andrew Hatcher, a black man, elected Mayor of Gary, Indiana, stated:

"Black power advocates have taught us a fundamental lesson; that black people must learn to exercise their power to their own advantage, to demonstrate their unity, use their vote, their numbers to achieve their objectives . . . black power has reminded us that fear can be an important ingredient for change; that fear reaches its zenith where black people choose not to play by the rules of the game—rules they never made and the powerful never obeyed."

I am fearful. I am fearful that the sands in our time clock are running out. I am fearful that those in positions of power in our

community do not and will not see the need for action; I am fearful that the prodding to remove the last anachronism of the applicability of the Bill of Rights to all state action will be either circumvented or subverted. I am fearful that those who tell me that our society does not have the inherent flexibility to incorporate people of color in a meaningful way are correct, that change—lasting change—cannot be done in a peaceful, non-violent manner. I am fearful that the opportunity to make "this nation, under God, indivisible," will pass us by. Moreover, there is a higher law—a law often addressed by Martin Luther King, espoused by Gandhi—the moral law of "rightness." But both Gandhi and King are dead, and the voices you now hear are not the voices of moderation. Without action taken because it is right and just, and not action delayed because it does not neatly fit into a legal pigeonhole, the voices of moderation will not only be muted, but silenced.

Black people are not a monolithic group. They are as diverse and different in attitude and performance as they differ in coloration. Similarly, the reactions to Denver's current school crisis vary significantly. In watching the Denver School Board struggle with an issue that should have been confronted years ago—quality education for all children—and in watching and hearing the protestations, often sincere, of white parents, the real issues become obscured. The real issues, as I view them, are an integrated school system versus a segregated school system. In light of the mass of data accumulated by the U.S. Civil Rights Commission, an integrated education in today's social milieu has a better chance to supply a quality education to all children. Integration, to be meaningful, must be based upon the enlightened self-interest of all parties.

Those of you who protest bussing your children to achieve school integration, with what are you concerned—the bus ride, or what is at the end of the ride? If it is the former, almost sixteen million children are bussed to school daily in these United States; if it is the latter, then your concern is well-founded and you should assure yourself that a quality education is available for every child, in every school in Denver.

In other words, if you are not a part of the solution—a quality education—you are part of the problem.

Needed changes in the law, and more importantly, in its application to the non-white, the non-wealthy, and a re-structuring of our national and local priorities can only come from an active coalition of all committed people, black, white, brown, yellow, red—all hues. There are no real alternatives. The time for fence-sitting, for non-involvement, is over for all of us. No lasting change can occur until apathy is replaced by action. Black people are no longer asking, but demanding their just due from a society which long has denied them accommodation, and in so doing, we are proudly crying out for all to hear what Martin Luther King quoted so movingly:

"Free at last;

"Free at last;

"Thank God Almighty, I'm free at last!"

HEARINGS ON INTERGOVERNMENTAL COOPERATION ACT AND GRANT CONSOLIDATION ACT

HON. L. H. FOUNTAIN

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 26, 1969

Mr. FOUNTAIN. Mr. Speaker, I wish to announce that the Intergovernmental Relations Subcommittee has scheduled

hearings the mornings of June 4 and 5 to take testimony from Members of Congress on H.R. 7366—Intergovernmental Cooperation Act of 1969—and H.R. 10954—Grant Consolidation Act of 1969.

The subcommittee would be pleased to receive the views of all interested Members on either or both of these related bills. Members wishing to testify on June 4 or 5, or to submit statements for inclusion in the hearing record, are requested to contact Dr. D. C. Goldberg at the subcommittee office.

Mr. Speaker, I include the texts of H.R. 7366 and H.R. 10954 at this point in the RECORD for the information of the Members:

H.R. 7366

A bill to improve the financial management of Federal assistance programs, to facilitate the consolidation of such programs, to provide temporary authority to expedite the processing of project applications drawing upon one Federal assistance program to strengthen further congressional review of Federal grants-in-aid, and to extend and amend the law relating to intergovernmental cooperation.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act be cited as the "Intergovernmental Cooperation Act of 1969."

TITLE—DEFINITIONS

SEC. 101. Title I of the Intergovernmental Cooperation Act of 1968 (82 Stat. 1098; Public Law 90-577) is amended by adding at the end thereof the following new sections:

"FEDERAL ASSISTANCE CONSOLIDATION PLAN

"SEC. 111. The term 'Federal assistance consolidation plan' means any plan involving a fusion of two or more Federal assistance programs in the same or closely related functional area(s) and with separate statutory authorizations.

"JOINT PROJECT

"SEC. 112. 'Joint project' means any undertaking which includes components proposed or approved for aid under more than one Federal assistance program or appropriation or one or more Federal assistance programs or appropriations and one or more State programs, if each of those components contributes materially to the accomplishment of a single purpose or closely related purposes."

TITLE II—ACCOUNTING, AUDITING, AND REPORTING OF FEDERAL ASSISTANCE FUNDS

SEC. 201. Such Act is further amended by adding at the end thereof a new title as follows:

"TITLE VII—ACCOUNTING, AUDITING, AND REPORTING OF FEDERAL ASSISTANCE FUNDS

"STATEMENT OF PURPOSE

"SEC. 701. It is the purpose of this title to encourage simplification and standardization of financial reporting requirements of Federal assistance programs, to promote among Federal agencies administering such programs accounting and auditing policies that rely on State and local financial management control systems meeting certain standards, and to authorize the Comptroller General of the United States to prescribe rules and regulations for use of audits of States and political subdivisions in meeting the responsibilities of the General Accounting Office with respect to such programs.

"MORE UNIFORM FINANCIAL REPORTING

"SEC. 702. Notwithstanding any other provision of law, the President shall have au-

thority to promulgate rules and regulations simplifying and, to the extent feasible, making uniform the financial reporting requirements of Federal assistance programs.

"FEDERAL AGENCIES' RELIANCE ON THE FINANCIAL MANAGEMENT CONTROL SYSTEMS OF STATES AND THEIR POLITICAL SUBDIVISIONS

"SEC. 703. (a) Federal agencies administering Federal assistance programs shall adopt accounting and auditing policies that rely, to the maximum extent feasible, on internal or independent accounting and audits of such programs performed by or for States and units of local government.

"(b) Heads of such agencies shall determine the adequacy of the internal financial management control systems employed by recipient jurisdictions, including but not restricted to a determination of (i) whether accounting records are maintained, and reports are prepared, in accordance with generally accepted accounting principles; (ii) whether audits are carried out in accordance with generally accepted auditing standards; and (iii) whether the auditing function is performed on a timely basis by a qualified staff which is sufficiently independent of program operations to permit a comprehensive and objective auditing performance.

"(c) Where such control systems are found to be acceptable, heads of such agencies shall, in the absence of substantial reasons to the contrary, authorize agency acceptance of audits performed under such systems in lieu of audits which otherwise would be required to be performed by such agencies.

"(d) Periodic sample testing of the standards of such control systems shall be undertaken by such agencies to verify the continuing reliability of the systems for the purposes of section 703(c).

"(e) Each Federal agency administering Federal assistance programs shall foster greater cooperation with the personnel operating the internal financial management control systems of recipient jurisdictions by maintaining continuous liaison with such personnel, including the interchange of audit standards and objectives and collaboration in the development of audit schedules.

"(f) Each such agency administering more than one Federal assistance program shall, to the extent feasible and permitted by law, coordinate and make uniform the auditing requirements of such programs.

"(g) Federal agencies administering one or more Federal assistance programs shall, to the extent feasible, establish cross-serving arrangements under which one such agency would conduct the audits for another.

"(h) The Bureau of the Budget or such other agency as may be designated by the President is hereby authorized to prescribe such rules and regulations as are deemed appropriate for the effective administration of this section.

"ACCEPTANCE BY THE GENERAL ACCOUNTING OFFICE OF AUDITS OF STATES AND THEIR POLITICAL SUBDIVISIONS

"SEC. 704. (a) The Comptroller General of the United States is hereby authorized to prescribe rules and regulations whereby the General Accounting Office may accept for purposes of its auditing of Federal assistance programs the auditing performed by States and political subdivisions receiving Federal assistance, when such auditing is performed under internal financial management control systems whose procedures meet generally accepted auditing standards and whose personnel are qualified and in a position sufficiently independent of program operations to perform a comprehensive and objective audit.

"(b) Periodic sample testing of the standards of such control systems will be undertaken by the General Accounting Office to verify the continuing reliability of the systems for the purposes of section 704(a).

"(c) The Comptroller General shall make a report to Congress on the operations of this section at the end of each fiscal year, beginning with the first full fiscal year following the date of enactment of the Intergovernmental Cooperation Act of 1969."

TITLE III—CONSOLIDATION OF FEDERAL ASSISTANCE PROGRAMS

SEC. 301. Such Act is further amended by adding after title VII, as added by section 201 of this Act, the following new title:

"TITLE VIII—CONSOLIDATION OF FEDERAL ASSISTANCE PROGRAMS

"STATEMENT OF PURPOSE

"SEC. 801. (a) The President shall from time to time examine the various programs of Federal assistance provided by law and shall determine what consolidations are necessary or desirable—

"(1) to promote the better execution and efficient management of individual Federal assistance programs within the same functional areas;

"(2) to provide better coordination among individual assistance programs within the same functional areas; or

"(3) to promote more efficient planning and use by the recipients of Federal assistance under programs within the same functional areas.

"(b) The Congress declares that the public interest demands the carrying out of the purposes of subsection (a) and that such purposes may be accomplished in great measure by proceeding under this title, and can be accomplished more speedily thereby than by the enactment of specific legislation.

"PREPARATION AND TRANSMITTAL OF PLAN

"SEC. 802. (a) When the President, after investigation, finds that a consolidation of individual Federal assistance programs within the same functional area is necessary or desirable to accomplish one or more of the purposes set forth in section 801(a), he shall prepare a Federal assistance consolidation plan for the making of such consolidation, and shall transmit such plan (bearing an identification number) to the Congress, together with a declaration that with respect to each individual program consolidated under such plan, he has found that the consolidation is necessary or desirable to accomplish one or more of the purposes set forth in section 801(a). Each such consolidation plan so transmitted—

"(1) shall place responsibility in a single Federal agency for administration of the consolidated program;

"(2) shall specify in detail the matching formula and, where relevant, the apportionment formula for rendering Federal assistance under the consolidated program and such other relevant conditions and requirements for rendering such assistance, including planning and eligibility requirements, as may be indicated by one or more of the statutes establishing the individual programs consolidated under the plan;

"(3) shall set forth the differences between such formulas, conditions, and requirements and the corresponding provisions of the statutes of each of the individual Federal assistance programs consolidated under such plan;

"(4) shall provide for the transfer or other disposition of the records, property, and personnel of individual Federal assistance programs affected by a consolidation;

"(5) shall provide for the transfer of such unexpended balances of appropriations, and of other funds, available for use in connection with such programs as are involved in the consolidation, as the President considers necessary by reason of the consolidation for use in connection with the functions of the consolidated program, except that unexpended balances so transferred may be used only for the purposes for which the appropriation was originally made; and

"(6) shall provide for terminating the affairs of an agency or administrative unit whose programs have been transferred as a consequence of the consolidation.

"(b) Each Federal assistance consolidation plan shall provide for only one consolidation of individual assistance programs.

"(c) The President shall have a Federal assistance consolidation plan delivered to both Houses on the same day and to each House while it is in session.

"CONGRESSIONAL CONSIDERATION

"SEC. 803. (a) Except as otherwise provided in subsection (c) of this section, a Federal assistance consolidation plan shall become effective at the end of the first period of ninety calendar days of continuous session of the Congress after the date on which the plan is transmitted to it unless, between the date of transmittal and the end of the ninety-day period, either House passes a resolution stating in substance that the House does not favor the Federal assistance consolidation plan.

"(b) For purposes of subsection (a) of this section—

"(1) continuity of session is broken only by an adjournment of the Congress sine die; and

"(2) the days on which either House is not in session because of an adjournment of more than three days to a day certain shall be excluded in the computation of the ninety-day period.

"(c) Under provisions contained in a Federal assistance consolidation plan, a provision of the plan may be effective at a time later than the date on which the plan otherwise is effective.

"(d) A Federal assistance consolidation plan which is effective shall be printed (1) in the Statutes at Large in the same volume as the public laws and (2) in the Federal Register.

"SEC. 804. (a) This section is enacted by the Congress—

"(1) as an exercise of the rulemaking power of the Senate and the House of Representatives, respectively, and as such it is deemed a part of the rules of each House, respectively, but applicable only with respect to the procedure to be followed in that House, in the case of a resolution introduced in either House stating in substance that the House does not favor a Federal assistance consolidation plan transmitted by the President in accordance with this title; and it supersedes other rules only to the extent that it is inconsistent therewith; and

"(2) with full recognition of the constitutional right of either House to change the rules (so far as relating to the procedure of that House) at any time, in the same manner and to the same extent as in the case of any other rule of that House.

"(b) The following provisions shall apply with respect to a Federal assistance consolidation plan:

"(1) A resolution with respect to a Federal assistance consolidation plan shall be referred to a committee (and all resolutions with respect to the same plan shall be referred to the same committee) by the President of the Senate or the Speaker of the House of Representatives, as the case may be.

"(2) (A) If the committee to which a resolution with respect to a Federal assistance consolidation plan has been referred has not reported it at the end of ten calendar days after its introduction, it is in order to move either to discharge the committee from further consideration of the resolution or to discharge the committee from further consideration of any other resolution with respect to the Federal assistance consolidation plan which has been referred to the committee.

"(B) A motion to discharge may be made only by an individual favoring the resolution, is highly privileged (except that it may not be made after the committee has re-

ported a resolution with respect to the same Federal assistance consolidation plan), and debate thereon shall be limited to not more than one hour, to be divided equally between those favoring and those opposing the resolution. An amendment to the motion is not in order, and it is not in order to move to reconsider the vote by which the motion is agreed to or disagreed to.

"(C) If the motion to discharge is agreed to or disagreed to, the motion may not be renewed, nor may another motion to discharge the committee be made with respect to any other resolution with respect to the same Federal assistance consolidation plan.

"(3) (A) When the committee has reported, or has been discharged from further consideration of, a resolution with respect to a Federal assistance consolidation plan, it is at any time thereafter in order (even though a previous motion to the same effect has been disagreed to) to move to proceed to the consideration of the resolution. The motion is highly privileged and is not debatable. An amendment to the motion is not in order, and it is not in order to move to reconsider the vote by which the motion is agreed to or disagreed to.

"(B) Debate on the resolution shall be limited to not more than ten hours, which shall be divided equally between those favoring and those opposing the resolution. A motion further to limit debate is not debatable. An amendment to, or motion to recommit, the resolution is not in order, and it is not in order to move to reconsider the vote by which the resolution is agreed to or disagreed to.

"(4) (A) Motions to postpone, made with respect to the discharge from committee, or the consideration of, a resolution with respect to a Federal assistance consolidation plan, and motions to proceed to the consideration of other business, shall be decided without debate.

"(B) Appeals from the decisions of the Chair relating to the application of the rules of the Senate or the House of Representatives, as the case may be, to the procedure relating to a resolution with respect to a Federal assistance consolidation plan shall be decided without debate.

"EXPIRATION DATE

"SEC. 805. The authority of the President under section 802 to transmit Federal assistance consolidation plans shall expire three years after the date of the enactment of the Intergovernmental Cooperation Act of 1969."

TITLE IV—JOINT FUNDING SIMPLIFICATION

SEC. 401. Such Act is further amended by adding after title VIII, as added by section 301 of this Act, the following new title:

"TITLE IX—JOINT FUNDING SIMPLIFICATION

"SEC. 901. The purpose of this title is to enable States and their political subdivisions to use Federal assistance programs more effectively and efficiently, to adapt such programs more readily to their particular needs through the wider use of joint projects drawing upon resources available from more than one Federal program, appropriation, or agency and to acquire experience which would lead to the development of legislative proposals respecting the consolidation, simplification, and coordination of Federal assistance programs. It is further the purpose of this title to facilitate the development of joint project and joint funding arrangements at the national level by giving primary emphasis to those arrangements involving intradepartmental actions and by placing interdepartmental joint projects and management funds on an experimental and limited demonstration basis.

"INTRADEPARTMENTAL JOINT PROJECTS

"SEC. 902. (a) The head of every Federal department and agency administering two

or more Federal assistance programs is authorized to approve combined applications for joint projects requiring funding from two or more such programs administered by his department or agency.

"(b) To develop the necessary departmental or agency capability to achieve the purposes of section 901, the head of such department or agency, among other actions, shall—

"(1) identify related programs within his department or agency likely to be particularly suitable or appropriate for providing combined support for specific kinds of joint projects;

"(2) develop and promulgate guidelines, model or illustrative joint projects, common application forms, and other materials of guidance to assist in the planning and development of joint projects drawing support from different Federal assistance programs;

"(3) review program requirements established administratively within his department or agency in order to determine which of those requirements may impede combined support of joint projects and the extent to which these may be appropriately modified, and make modifications accordingly;

"(4) establish common technical or administrative rules among related Federal assistance programs administered by his department or agency to assist in the support of specific joint projects or classes of joint projects;

"(5) create joint or common application processing and project supervision procedures or mechanisms including procedures for designating a lead office or unit to be responsible for processing of applications and supervising joint projects approved by him; and

"(6) develop common accounting, auditing, and financial reporting procedures that will facilitate establishment of fiscal and program accountability with respect to joint projects aided by Federal assistance programs administered by his department or agency.

"(c) Where appropriate to further the purposes of this title, and subject to the conditions prescribed under subsection (f) of this section, the head of every Federal department and agency administering two or more Federal assistance programs may adopt uniform provisions respecting—

"(1) inconsistent or conflicting departmental or agency requirements relating to financial administration, including accounting, auditing, and fiscal reporting, but only to the extent consistent with the provisions of clauses (2), (3), (4), and (5) of subsection (d);

"(2) inconsistent or conflicting departmental or agency requirements relating to the timing of Federal payments where a single or combined schedule is to be established for the joint project as a whole;

"(3) inconsistent or conflicting departmental or agency requirements that assistance be extended in the form of a grant rather than a contract, or a contract rather than a grant;

"(4) inconsistent or conflicting departmental or agency requirements for merit personnel systems, but only to the extent that the joint project contemplated would cause those requirements to be applied to programs or projects administered by recipient agencies not otherwise subject to such requirements;

"(5) inconsistent or conflicting departmental or agency requirements relating to accountability for, or the disposition of, property or structures acquired or constructed with Federal assistance where common rules are to be established for the joint project as a whole; and

"(6) other inconsistent or conflicting departmental or agency requirements of an administrative or technical nature as defined

in regulations authorized by subsection (f) of this section.

"(d) To further carry out the purposes of this title, the head of every Federal department and agency administering two or more Federal assistance programs—

"(1) may provide for review of combined applications for joint projects to his department or agency by a single panel, board, or committee in lieu of review by separate panels, boards, or committees when such review would otherwise be required by law;

"(2) may prescribe rules and regulations for the establishment of joint management funds with respect to joint projects approved by him so that the total amount approved by any such project may be accounted for through a joint management fund as if the funds had been derived from a single Federal assistance program or appropriation; and such rules and regulations shall provide that there will be advanced to the joint management fund from each affected appropriation its proportionate share of amounts needed for payment to the grantee and amounts remaining in the hands of the grantee at the completion of the joint project shall be returned to the joint management fund;

"(3) may prescribe rules and regulations governing the financial reporting of joint projects financed through joint management funds established pursuant to this section; and such reports shall, as a minimum, fully disclose the amount and disposition of Federal assistance received by recipient States and local governments, the total cost of the joint project in connection with which such Federal assistance was given or used, the amount of that portion of the cost of the joint project supplied by other sources, and such other records as will facilitate an effective joint project audit;

"(4) shall have access for the purpose of audit and examination to any books, documents, papers, and records of recipient State and local governments that are pertinent to the moneys received from joint management funds authorized by him; and

"(5) may establish a single non-Federal share for any joint project, authorized by him and covered in a joint management fund, according to the Federal share ratios applicable to the several Federal assistance programs involved and the proportion of funds transferred to the joint project account from each of those programs.

"(e) Subject to such regulations as may be established pursuant to subsection (f) of this section, the head of every Federal department or agency administering two or more Federal assistance programs may enter into agreements with States or appropriate State agencies to extend the benefits of this title to joint projects involving assistance from his department or agency and one or more State agencies. These agreements may include arrangements for the processing of requests for, or the administration of, assistance to such projects on a joint basis. They may also include provisions involving the establishment of uniform technical or administrative requirements, as authorized by this section. Such agreements ordinarily will focus on those program areas wherein Federal assistance is normally channeled through the States.

"(f) In order to provide for the more effective administration of funds drawn from more than one Federal assistance program or authorization in support of intradepartmental joint projects authorized under this section and to assure energetic and more uniform departmental and agency administration of the functions authorized by this section, the President may prescribe such rules and regulations as he deems necessary to achieve these purposes.

"(g) This section shall become effective one hundred and twenty days following the date of enactment of the Intergovernmental Cooperation Act of 1969.

"INTERDEPARTMENTAL DEMONSTRATION JOINT PROJECTS"

"Sec. 903. (a) In order to extend selectively the benefits of joint projects and joint management funding on a Government-wide basis and in recognition of the administrative difficulties involved in this undertaking, the President is authorized to approve on a demonstration basis combined applications for joint projects requiring funding from two or more Federal assistance programs administered by more than one Federal department or agency.

"(b) In order to develop the necessary capability in the Executive Office of the President for achieving the purposes of this section, the President shall have authority to exercise with reference to interdepartmental demonstration joint projects the same responsibilities and authorities assigned to heads of Federal departments and agencies with reference to intradepartmental joint projects under subsections (b), (c), (d), and (e) of section 902.

"(c) To facilitate the expeditious processing of applications for interdepartmental demonstration joint projects or their effective administration, the President is authorized to establish rules and regulations requiring the delegation by heads of Federal departments and agencies to other such departments and agencies of any powers relating to approval, under this section, of programs or classes of programs under an interdepartmental demonstration joint project, if such delegation will promote the purposes of such project. Such rules and regulations may also provide for the delegation to other Federal departments and agencies of powers relating to the supervision of administration of Federal assistance, or stipulate other arrangements for other departments or agencies to perform such activities, with respect to programs or classes of programs subject to this section. Delegations authorized by such rules and regulations shall be made only on such conditions as may be appropriate to assure that the powers and functions delegated are exercised in full conformity with applicable statutory provisions or policies.

"(d) To facilitate the establishment of joint management funds on an interdepartmental basis, any account in a joint management fund involving money derived from two or more Federal assistance programs administered by more than one Federal department or agency shall be subject to such rules and regulations, not inconsistent with other applicable law, as the President may establish with respect to the discharge of the responsibilities of affected departments and agencies. Such rules and regulations shall assure the availability of necessary information, including requisite accounting and auditing information, to those departments and agencies, to the Congress, and to the Executive Office of the President. They shall also provide that the department or agency administering a joint management fund shall be responsible and accountable for the total amount provided for the purposes of each account established in the fund, and shall adhere to accounting and auditing policies consistent with title VII of this Act. They may include procedures for determining, from time to time, whether amounts in the account are in excess of the amounts required, for returning that excess to participating Federal departments and agencies in accordance with a formula providing an equitable distribution, and for effecting returns accordingly to the applicable appropriations, subject to fiscal year limitations. Excess amounts applicable to expired appropriations will be lapsed from that fund.

"(e) During the seventh month after the end of each fiscal year, starting with the first full fiscal year after the effective date of this section, the President shall submit to the Congress an evaluation of progress in accomplishing the purposes of this title.

"(f) Demonstration joint projects initiated under the authority conferred by this section shall not exceed one hundred in any one fiscal year, and shall not exceed two hundred and fifty during the period of three years during which this section is effective.

"(g) This section shall become effective one hundred and twenty days following the date of enactment of the Intergovernmental Cooperation Act of 1969 and shall expire three years after it becomes effective, but its expiration shall not affect the administration of joint projects previously approved.

"AUXILIARY PROVISIONS"

"Sec. 904. (a) Appropriations available to any Federal assistance program for technical assistance or the training of personnel may be made available for the provision of technical assistance and training in connection with projects approved for joint or common funding involving that program and any other Federal assistance program.

"(b) Personnel of any Federal agency may be detailed from time to time to other agencies as necessary or appropriate to facilitate the processing of applications under this title or the administration of approved projects.

"AUTHORITY OF THE COMPTROLLER GENERAL OF THE UNITED STATES"

"Sec. 905. For the purpose of audit and examination, the Comptroller General of the United States shall have access to any books, documents, papers, and records of recipients of interdepartmental and intradepartmental joint projects that are pertinent to the moneys received from joint management funds established for such projects."

TITLE V—CONGRESSIONAL AND EXECUTIVE OVERSIGHT OF FEDERAL ASSISTANCE PROGRAMS

Sec. 501. Section 601 of such Act is amended by adding at the end thereof the following new subsection:

"(c) If any Act of Congress enacted on or after January 3, 1971, authorizes the making of grants-in-aid over a period of three or more years, then during the period beginning not later than the twelve months immediately preceding the date on which such authority is to expire, the committees of the House and Senate to which legislation extending such authority would be referred shall, separately or jointly, conduct studies of the program under which such grants-in-aid are made and advise their respective Houses of the results of their findings with special reference to the considerations cited in clauses (1), (2), (3), and (4) of section 601(a). Each such committee shall report the results of its investigation and study to its respective House not later than one hundred and twenty days before such authority is due to expire."

Sec. 502. Title VI of such Act is amended—

(1) by redesignating section 604 as section 606; and

(2) by inserting immediately after section 603 the following new sections:

"CONGRESSIONAL REVIEW SPECIALISTS"

"Sec. 604. Each standing committee of the Senate and House of Representatives which is responsible for the review and study on a continuing basis, of the application, operation, administration, and execution of two or more grant-in-aid programs is entitled to employ a review specialist as a member of the professional staff of such committee in addition to the number of such professional staff to which such committee otherwise is entitled. Such specialist shall be selected and appointed by the chairman of such committee, with the prior approval of the ranking minority member, on a permanent basis, without regard to political affiliation, and solely on the basis of fitness to perform the duties of the position. Such specialist shall, under the joint direction and supervision of the chairman and the ranking minority

member, assist the committee in the performance of its review functions under this title.

"REPORTS BY FEDERAL AGENCIES"

"SEC. 605. (a) Heads of Federal agencies administering one or more Federal assistance programs shall make a report to the President and the Congress on the operations of such programs at the end of each fiscal year beginning with the first full fiscal year following the date of enactment of the Intergovernmental Cooperation Act of 1969. Such reports shall, among other things, describe—

"(1) the overall progress and effectiveness of administrative efforts to carry out each program's statutory goals;

"(2) the consultative procedures employed under each program to afford recipient jurisdictions an opportunity to review and comment on proposed new administrative regulations, and basic program changes;

"(3) intradepartmental and interdepartmental arrangements to assure proper coordination at headquarters and in the field with other related Federal assistance programs;

"(4) efforts to simplify and make more uniform (i) application forms and procedures and (ii) financial reporting and auditing requirements and procedures;

"(5) the feasibility of consolidating individual Federal assistance programs with others in the same functional areas, where such exist;

"(6) the practicability of delegating more administrative discretion, including application approval authority, to field offices;

"(7) whether changes in the purpose, direction, or administration of such Federal assistance programs, or in procedures and requirements applicable thereto, should be made; and

"(8) the extent to which such programs are adequate to meet the growing and changing needs which they were designed to support.

"(b) The President shall transmit a summary report on Federal assistance activities to Congress not later than January 31 of each year subsequent to the first fiscal year following the date of enactment of the Intergovernmental Cooperation Act of 1969. Such a report, among other things, shall (1) summarize and analyze the findings of department and agency reports provided in section 605(a); and (2) set forth such recommendations as he may deem appropriate to convert the existing system of Federal assistance programs into a more effective vehicle for intergovernmental cooperation."

H.R. 10954

A bill to amend title 5, United States Code, to authorize consolidation of Federal assistance programs, and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Grant Consolidation Act of 1969".

SEC. 2. Title 5, United States Code, is amended by inserting the following immediately after chapter 9 of said title 5:

"CHAPTER 10.—FEDERAL ASSISTANCE PROGRAM CONSOLIDATION"

"Sec.

"1001. Purpose.

"1002. Definitions.

"1003. Federal assistance program consolidation plans.

"1004. Limitations on powers.

"1005. Effective date and publication of consolidation plans.

"1006. Effect on other laws and regulations.

"1007. Rules of Senate and House of Representatives on consolidation plans.

"§ 1001. PURPOSE

"(a) The President shall from time to time examine the various Federal assistance programs provided by law and shall determine

what consolidations of such programs are necessary or desirable to accomplish the following purposes: (1) any of the purposes set forth in section 901(a) of this title, or (2) the purpose of making the programs or aspects thereof more consistent.

"(b) The Congress declares that the public interest demands the carrying out of the purposes of subsection (a) of this section and that the purposes may be accomplished in great measure by proceeding under this chapter, and can be accomplished more rapidly thereby than by the enactment of specific legislation.

"§ 1002. DEFINITIONS.

"For the purpose of this chapter—

"(1) 'agency' means—

"(A) an Executive agency or part thereof; and

"(B) an office or officer in the executive branch;

"(2) 'officer' is not limited by section 2104 of this title;

"(3) 'Federal assistance' or 'Federal assistance program' means any assistance provided by an agency in the form of grants, loans, loan guarantees, property, shared revenues, payments of taxes, payments in lieu of taxes, repayable advances, contracts, or technical assistance, whether the recipients are a State or local government, their agencies, including school or other special districts created by or pursuant to State law, or public, quasi-public or private institutions, associations, corporations, individuals, or other persons; and

"(4) 'consolidation' means any action described in section 1003(b) of this title.

"§ 1003. FEDERAL ASSISTANCE PROGRAM CONSOLIDATION PLANS

"(a) When the President, after investigation, finds that a consolidation of Federal assistance programs is necessary or desirable to accomplish one or more of the purposes of section 1001(a) of this title, he shall prepare a Federal assistance program consolidation plan (hereafter in this chapter referred to as 'consolidation plan') for the making of the consolidations as to which he has made findings and which he includes in the plan, and transmit the plan (bearing an identification number) to Congress, together with a declaration that, with respect to each consolidation included in the consolidation plan, he has found that the consolidation is necessary to accomplish one or more of the purposes of section 1001(a) of this title, and a declaration as to how each program included in the plan is functionally related.

"(b) Each consolidation plan so transmitted—

"(1) may include, with respect to the Federal assistance programs included in the consolidation plan and with respect to the affected agency or agencies, any reorganization or measure incidental thereto as provided for in chapter 9 of this title;

"(2) may alter the terms and conditions provided by law under which the Federal assistance programs included in the consolidation plan shall be administered, including, but not limited to matching, apportionment and other formulas, interest rates, and planning, eligibility, and other requirements: *Provided, however*, That any changes in such terms and conditions shall be limited to those necessary to achieve the purposes of the plan: *Provided further*, That the President shall, in selecting applicable terms and conditions, be limited by the range of terms and conditions for the provision of Federal assistance already included in the Federal assistance programs included in the plan: *And provided further*, That the President shall set forth in his message transmitting the consolidation plan to the Congress his reasons for selecting the said terms and conditions; and

"(3) may abolish any one or more of the terms and conditions of any Federal assistance program.

"(c) The President shall have a consolidation plan delivered to both Houses on the same day and to each House while it is in session.

"§ 1004. LIMITATIONS ON POWERS

"(a) A consolidation plan may not provide for, and may not have the effect of: (1) continuing any Federal assistance program or part thereof beyond the period authorized by law for its existence or beyond the time when it would have terminated if the consolidation plan did not take effect; (2) consolidating any Federal assistance programs which are not in the same functional area or closely related functional areas; (3) providing any type of Federal assistance included in such a consolidation plan to any recipient who was not eligible for Federal assistance under any of the programs included in the consolidation plan; or (4) vesting responsibility for the administration of the program or programs contained in a consolidation plan in any agency, office, or officer who was not responsible for the administration of one or more such programs prior to the taking effect of the consolidation plan.

"(b) A provision contained in a consolidation plan may take effect only if the plan is transmitted to Congress before April 1, 1971. Section 905(b) of this title shall not operate to limit any consolidation plan prepared under this chapter.

"§ 1005. EFFECTIVE DATE AND PUBLICATION OF CONSOLIDATION PLANS

"(a) Except as otherwise provided in subsection (c), a grant consolidation plan shall become effective at the end of the first period of sixty calendar days of continuous session of the Congress after the date on which the plan is transmitted to it unless, between the date of transmittal and the end of the sixty-day period, either House passes a resolution stating in substance that the House does not favor the consolidation plan.

"(b) For purposes of subsection (a)—

"(1) continuity of session is broken only by an adjournment of the Congress sine die, and

"(2) the days on which either House is not in session because of an adjournment of more than three days to a day certain shall be excluded in the computation of the sixty-day period.

"(c) Under provisions contained in a grant consolidation plan, a provision of the plan may become effective at a time later than the date on which such plan otherwise is effective.

"(d) A consolidation plan which becomes effective shall be printed (1) in the Statutes at Large in the same volume as the public laws and (2) in the Federal Register.

"§ 1006. EFFECT ON OTHER LAWS AND REGULATIONS

"(a) To the extent that any provision of a consolidation plan which becomes effective under this chapter is inconsistent with any provision of any statute enacted prior to the taking effect of the consolidation plan, the provision of the consolidation plan shall control.

"(b) Any regulation, rule, order, policy, determination, directive, authorization, permit, privilege, requirement, or other action made, prescribed, issued, granted, or performed in respect of any matter affected by a consolidated plan which becomes effective under this chapter shall be deemed to be modified to the extent of any inconsistency thereof with the consolidation plan but shall otherwise continue in effect.

"(c) A suit, action, or other proceeding lawfully commenced by or against the head of any agency or other officer of the United States, in his official capacity or in relation to the discharge of his official duties, does not abate by reason of the taking effect of a consolidation plan under this chapter. On motion or supplemental petition filed at any time within twelve months after the consolidation plan takes effect, showing a neces-

sity for a survival of the suit, action, or other proceeding to obtain a settlement of the questions involved, the court may allow the suit, action, or other proceeding to be maintained by or against the successor of the head or officer under the consolidation plan or, if there is no successor, against such agency or officer as the President designates.

"(d) The appropriations or portions of appropriations unexpended by reason of the operation of this chapter may not be used for any purpose, but shall revert to the Treasury.

"§ 1007. RULES OF SENATE AND HOUSE OF REPRESENTATIVES ON CONSOLIDATION PLANS

"(a) This section is enacted by the Congress—

"(1) as an exercise of the rulemaking power of the Senate and the House of Representatives, respectively, and as such it is deemed a part of the rules of each House, respectively, but applicable only with respect to the procedure to be followed in that House in the case of resolutions described in subsection (b); and it supersedes other rules only to the extent that it is inconsistent therewith; and

"(2) with full recognition of the constitutional right of either House to change the rules (so far as relating to the procedure of that House) at any time, in the same manner and to the same extent as in the case of any other rule of that House.

"(b) The provisions of sections 910 through 913 of title 5 of the United States Code shall apply with respect to a consolidation plan and, for such purposes—

"(1) all references in such sections to a 'reorganization plan' shall be treated as referring to a 'Federal assistance program consolidation plan', and

"(2) all references in such sections to 'resolution' shall be treated as referring to a resolution of either House of the Congress, the matter after the resolving clause of which is as follows: 'That the ----- does not favor the Federal assistance program consolidation plan numbered ----- transmitted to the Congress by the President on -----, 19--', the first blank therein being filled with the name of the resolving House and the other blank spaces therein being appropriately filled."

PRIDE FOR OUR FLAG

HON. PHILIP E. RUPPE

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, May 26, 1969

Mr. RUPPE. Mr. Speaker, one of the leading daily newspapers in my district, the Menominee Herald-Leader, of Menominee, Mich., has begun a campaign to reinstall a sense of pride and patriotism in the Nation and in our flag. Efforts to promote flag flying on Memorial Day have resulted in a rash of responses from area citizens. Residents have been purchasing flags at a record pace, and this Memorial Day promises to be a special one for Menominee.

Mr. Speaker, it is refreshing and inspiring to see such an overwhelming response and to know that among shrill voices of dissension and cynicism, plain old-fashioned patriotism is still prevalent. Old Glory can still evoke a sense of pride and national purpose. Those of us in Congress and in the Government who must deal daily with the monumental problems facing the Nation should be reminded that there are millions and

millions of Americans who believe that the Nation and its leaders will prevail in the face of all adversity.

I would like to commend the Menominee Herald-Leader and its fine editor, Mr. Roger Williams. What better way to honor those who have fallen in defense of the Nation than to help regenerate a sense of national purpose and pride, and to promote the use of the Stars and Stripes.

OBJECTIVITY IN DEFENSES

HON. GLENARD P. LIPSCOMB

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 26, 1969

Mr. LIPSCOMB. Mr. Speaker, current discussions of the ABM Safeguard system should center on the critical issue: Does the proposed ABM system offer the best possible defense system for the expenditure involved?

Too often, the current attacks on the ABM Safeguard system are overly concerned about provoking Russia into nuclear attack. And too often the fact that the Russians already have a limited ABM defense system is conveniently disregarded. The Post-Advocate, of Alhambra, Calif., includes a thoughtful discussion of the ABM question in its May 13 editorial, "Objectivity in Defenses."

Because of its contribution to the ABM discussion, I am inserting the entire editorial in the CONGRESSIONAL RECORD:

OBJECTIVITY IN DEFENSES

Everyone who follows international affairs with reasonable regularity is aware that there are complex issues which demand rational settlement.

Unfortunately, the atmosphere in which reasonable conclusions might be drawn is rare, and evidently becoming rarer by the day.

Those in public life who seem to worry excessively about "provoking" Russia are almost wailing in their attacks on the President's ABM Safeguard plan. This is true despite the obvious fact that Soviet Russia seems less concerned than the dovish elements in our own country.

Most of the shrill clamor against the ABM seems based on fear, distrust and even hatred of the American military. Add to this the favorite whipping boy called the "military-industrial complex" and the emotional binge seems unlimited.

It would seem that thoughtful, rational debate would be centered on the issue, which is: Does the proposed ABM system offer the best possible defense system for the expenditure involved?

Hand-wringing about provocation of Russia and "touching off" a nuclear conflict is illogical and scarcely fits the circumstances with which the Russians are confronted.

They have, in the first place, no reason to be apprehensive of our constructing a limited ABM defense system. They have one of their own and presumably are aware of their own relative position. Beyond passing along the usual party line propaganda, which is to be taken for granted, the Russians have not gone into a frenzy of fear and anxiety over the American proposal.

The reason could be that they take a more practical approach to these international problems than the emotional "doves" of Congress and elsewhere. The Soviets, for one thing, can hardly ignore the brewing fracas with their comrades under the skin, the Red

Chinese. They also have stubborn Czechs to contend with in Eastern Europe.

Could it be that the men in the Kremlin recognize the importance under such circumstances of relaxing tensions between East and West? Present indications are that they do, as evidenced by their concern, also, over ominous developments in the Middle East.

They aren't likely to mind the uproar created by the anti-military, anti-establishment forces who are so consistently vocal in the United States of America. But neither are they rushing at full speed into frenzied preparations for war, simply because the President proposed a modified defense plan in our country.

We suspect that the Soviets would be pleased if the ABM plan is defeated. Again, they are pragmatists and any advantage they gain will be welcomed in Moscow.

Primarily, though, it is in the United States that a strange coalition has been assembled for the fear-laden all out attack on our vitally needed defense boost. And defense of the nation, it should be observed, is one of the policy duties with which the President of the United States is charged.

Much of the anti-ABM lobby resorts to emotional appeals that have no bearing on the merit of the President's recommendation.

Recently, for example, meetings were held in Washington, D.C., to oppose ABM. The conclusion of civil rights organizations, peace groups, students, Hippies and others who attended was that it would be "wrong" to set up a missile defense system around the nation's capital because it would interfere with construction of a planned subway system and some school improvements.

It happens that Washington is the only city designated for such protection. The capital is the center of our government and its command post in the event of disaster.

Even Washington is not included in immediate plans for the missile defense system. And it is ridiculous to bring such unfounded and irrelevant charges into the discussion of this important defense matter.

Unless this kind of frenetic and false argument is put to rest, it is possible that the well meaning, the ill-informed or the deliberately misled opponents will make it impossible for the Commander-in-Chief to provide the people with even the most elementary defenses to prevent a nuclear war.

A REAFFIRMATION OF FAITH

HON. W. E. (BILL) BROCK

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, May 26, 1969

Mr. BROCK. Mr. Speaker, during the solemn ceremonies accompanying General Eisenhower's funeral, I was struck by the great outpouring of religious feeling. A national mood of reaffirmed faith could be sensed as thousands of respectful citizens turned out to pay their last respects to a great American whose life had embodied our religious and moral ideals.

Writing in the April 4, 1969, issue of the Chattanooga Times, James Reston recaptured this mood, and, in a moving article, described our heritage of faith—a heritage that is still very much alive. I commend it to the attention of my colleagues, as follows:

FAITH OF OUR FATHERS, LIVING STILL?

(By James Reston)

NEW YORK.—It is hard to believe after the reverent public response to the Eisenhower

funeral services that America is quite as indifferent to religion as the modern prophets and publicists say.

You can hardly pick up a paper these days without being told by somebody that God is dead. In fact, the Pentagon has just told its chaplains in Vietnam to banish him from their lectures, which is scarcely surprising, considering the Pentagon's expansionist tendencies in all other fields.

Still, the substitute gods of the modern age don't seem to be very satisfactory. The trend toward a secular society in America is clear, but when the television demonstrates on a great occasion that it has the capacity to bring the whole nation into a common experience—almost to make us all part of a single congregation—then we find that at least the remnants of a common faith still exists.

The choir at the National Cathedral in Washington sang the old hymn. The opening line is: "Faith of our fathers, living, still," and despite all the modern denials of the point, it is probably still true. The first line of the chorus, however, is different: "Faith of our fathers, holy faith, we will be true to thee till death"—and that is clearly not true for most Americans.

Nevertheless, for believers and unbelievers alike, some facts are plain. The political life and spirit of this country were based on religious convictions. America's view of the individual was grounded on the principle, clearly expressed by the Founding Fathers, that man was a symbol of his creator, and therefore possessed certain inalienable rights which no temporal authority had the right to violate.

That this conviction helped shape our laws and sustained American men and women in their struggle to discipline themselves and conquer a continent even the most atheistic historian would defend. And this raises a question which cannot be avoided: If religion was so important in the building of the Republic, how could it be irrelevant to the maintenance of the Republic? And if it is irrelevant for the unbelievers, what will they put in its place?

"The liberties we talk about defending today," Walter Lippmann wrote in 1938, "were established by men who took their conception of man from the great central religious tradition of Western civilization, and the liberties we inherit can almost certainly not survive the abandonment of that tradition."

"The decay of decency in the modern age, the rebellion against law and good faith, the treatment of human beings as things, as mere instruments of power and ambition, is without a doubt the consequence of the decay of the belief in man as something more than an animal animated by highly conditioned reflexes and chemical reactions. For unless man is something more than that, he has no rights that anyone is bound to respect, and there are no limitations upon his conduct which he is bound to obey. This is the forgotten foundation of Democracy."

What the Eisenhower service suggested, may be ever so vaguely to some and ever so strongly to others, is that the religious foundation of our common life—no matter how much we divide over creeds and sects and their relation to the state—is not "forgotten." It may be ignored or challenged or defied, but it is not lost. We may not believe, but we believe in believing, and the reaction to the Old Soldier's death dramatized the point.

It did something else. It demonstrated how national television can bring before the people the things that touch their noblest instincts, and in the process reminded us of how seldom we use their remarkable power for this purpose.

Eisenhower, and the church, and television were unifying forces of tremendous power for good in America in these last few

tragic days. They touched some old and worthy echo in the American spirit which politics, religion, and television usually repel.

These are very old questions but they are still with us. Plato saw man's problem as that of the charioteer driving a pair of winged horses: One of them is noble and of noble breed and the other is ignoble and of ignoble breed. . . . And "the driving of them of necessity gives a great deal of trouble to the charioteer."

This is as true now as it was in Plato's time, but the Old Soldier gave us a glimpse of nobility, and through this remarkable instrument of television, the people responded to it with a solemnity and sincerity no cynic could deny.

ISSUES

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, May 26, 1969

Mr. DINGELL. Mr. Speaker, the Maryland News of Thursday, May 15, 1969, carried an interesting column entitled "Issues" which in a somewhat humorous manner points up the difficulties and inconveniences being forced upon law-abiding sportsmen who seek to purchase ammunition.

So that my colleagues may have an opportunity to read the Maryland News' article, I insert the text at this point in the CONGRESSIONAL RECORD:

ISSUES

(By Diogenes Sinopi)

Wandering into a gunshop down in Virginia the other day, we heard an interesting tale from the shop owner, a crusty old salt we'll call George.

Recently a trio of U.S. Congressmen stopped in on their way to do a little bird shooting. These distinguished legislators—who shall remain unnamed—wanted to buy a few boxes of shotgun shells.

Well, that should be simple enough—or so they thought. Therefore, they were amazed when George asked to see their driver's licenses.

Why, that's silly—all we want is a few boxes of shells, they explained, and we're kind of in a hurry.

"Sorry," said George, "the new Federal law requires it for my records."

"Aw, now, all three of us are U.S. Congressmen," they soothed, smiling.

"Yeah, and I'm Teddy Roosevelt," said George, without a smile. "No licenses, no shells."

Grumbling, the lawmakers fished through their wallets for licenses. To make what started out to be a short story long, our resolute dealer took extra special pains to ensure that all the necessary information was recorded correctly and in proper form, as required by the new law.

While the Congressmen champed at the bit, George wrote in his ledger the date, the quantity of ammunition, its manufacturer, the gauge, the first congressman's name, address, date of birth, and his 14-digit driver's license identification number. With due deliberation, he checked it all over to make sure it was right. Then he started on the second Congressman's.

"Oh, for Pete's sake," rasped the Congressman impatiently.

The dealer pointed his pencil at his irate customer. "Mister, this isn't my idea—it's yours. You guys are perfectly happy to pass all sorts of nonsensical regulation so long as you personally don't have to live with them. Now you're getting a taste of your own recipe.

"I can go to prison for five years and pay a \$5000 fine for not keeping these records properly," he continued. "Even if I make an honest mistake, I may have a lot of unpleasant explaining to do, so I'm not going to give anybody any excuse even to question." He resumed writing.

At this point, the third Congressman directed George to include his purchase on the second Congressman's entry.

George cocked an eyebrow. "Why? You prohibited from buying ammunition?" George's face darkened and he glared at the Congressman. "You're not a drug addict, are you?"

The congressman, taken aback, stammered, but George pressed: "Well, what is it—convicted of a felony? Or a mental defective?"

"That's ridiculous!" the Congressman blurted out.

"Prove you're not!" George retorted.

"We just wanted to save time," he replied indignantly. "Here's my license, now please finish so we can get out of here."

"Well, I gotta be careful, you know," said George, somewhat mollified. "It's against the law for me to sell ammunition to anybody I have reasonable cause to believe is prohibited from buying it, and if you want somebody else to buy it for you . . . well, that looks mighty suspicious."

Plaintively: "Look, we're not bank robbers. All we want is to go bird hunting."

"That's all a lot of honest people want to do," the dealer replied. "What good is all this, anyway?" He waved the ledger. "Billions of rounds are sold every year; even with these records, there's no way to trace factory ammunition back to the purchaser. And thousands of shooters handload their own. What do we gain except paperwork?"

The Congressman confessed they hadn't realized how much red tape they'd created, and now they were beginning to wonder whether it served any useful purpose. They finally left with their shells, a little chastened, perhaps, but a little wiser, too.

Now we're telling this story as we heard it, and we're not at all certain that George didn't embellish it a bit. But the moral of the story needs no apology: If a few more Congressmen were similarly educated on the practical consequences of their own legislation, some welcome changes might be forthcoming.

AH FAT LEE OF HAWAII NAMED WINNER OF A 1969 AMERICAN MOTORS CONSERVATION AWARD

HON. SPARK M. MATSUNAGA

OF HAWAII

IN THE HOUSE OF REPRESENTATIVES

Monday, May 26, 1969

Mr. MATSUNAGA. Mr. Speaker, in 1955 the Hawaii State bird, the Hawaiian Goose or Nene, was on the brink of extinction. Only a few of these magnificent creatures could then be found anywhere in the islands, but through the remarkable dedication, diligence and perseverance of an employee of Hawaii's Division of Fish and Game, Mr. Ah Fat Lee, this threat today has virtually been eliminated.

In addition to his 40-hour-a-week schedule with the State's Division of Fish and Game, Mr. Lee was able to raise successfully eight goslings during 1955 to 1956. Last season, he increased the production to 123 goslings.

For his outstanding work in saving the Nene from almost certain extinction, Mr. Lee was honored last week by being named one of ten national recipients of

the coveted American Motors Conservation Award. In announcing the award to Mr. Lee, Roy Chapin, Jr., chairman of the board, American Motors Corporation, said:

Like all business and industrial enterprises, we are indebted to the professional and citizen conservationists who work to preserve America's renewable natural resources. It is with this thought that American Motors honors those who have made outstanding contributions to conservation and who, by virtue of their achievements, have inspired others.

With what I trust will be viewed by others as understandable pride, I submit for inclusion in the CONGRESSIONAL RECORD the citation that was presented to Mr. Lee at the American Motors awards banquet on May 21, 1969:

CITATION

Because he may be, in the words of S. Dillon Ripley and in the opinion of many others, "the single most important factor in the restoration to Hawaii of the Hawaiian Goose or Nene" . . .

Because, as an employee of Hawaii's Division of Fish and Game, he applied his knowledge of poultry farming to the propagation of the Nene, then on the verge of extinction, and through remarkable personal dedication, diligence and perseverance was able to develop a combination of techniques which resulted in an increase of production from eight goslings during the 1955-56 season to 123 goslings last season . . .

Because, although a state employee under civil service, he consistently ignores his 40-hours-a-week status, once working six months without a day off at the Pohakuloa Breeding Station, and has spent untold hours of his own time in studying available literature and in searching for wild plants essential as food supplements for young birds . . .

Because his work has resulted in the release of hundreds of pen-raised geese to the wild flock, and has virtually eliminated the threat of disappearance of Hawaii's state bird . . .

Because in these and other ways he has enhanced the finest traditions of the professional conservationist in America . . .

Therefore, it is the privilege and pleasure of American Motors Corporation to present one of ten Professional Awards for 1969 to Ah Fat Lee of Kamuela, Hawaii.

ABM—WEAPON FOR PEACE

HON. GLENARD P. LIPSCOMB

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 26, 1969

Mr. LIPSCOMB. Mr. Speaker, the ABM Safeguard system could become a weapon for peace by deterring Russia and Red China from initiating a nuclear showdown with the United States.

As noted in a May 8 editorial in the San Marino Tribune, the function of the ABM Safeguard system is strictly aimed at defending our Nation and is not an offensive weapon designed for starting nuclear warfare. The editorial concludes that by protecting our capacity to retaliate and thereby deterring nuclear attack, the ABM Safeguard system can serve as a "weapon for peace."

The entire San Marino Tribune's editorial entitled "ABM—Weapon For Peace" follows:

ABM—WEAPON FOR PEACE

A recent issue of "Washington Report," a weekly newsletter of the American Security Council, brings the raging battle over the proposed ABM "Safeguard" system into the range of understanding of the average citizen.

Many of us have the notion that the ABM "Safeguard" program is another escalation of the arms race. After close reading of the Report it becomes apparent that it is not. In fact, the Safeguard system is strictly aimed at defending our nation and could not under any circumstances be used as a weapon of offense.

According to the ASC, what Secretary of Defense Laird is suggesting in the Safeguard plan is protection of our strategic nuclear weapons sites. This would serve to warn the Russians and the Red Chinese that if they launch an attack on these sites we would have the capacity to retaliate.

The Report states: "The very fact that the Russians have installed the first phase of their own ABM, while pushing for the first-strike capability, should give some critics reason to pause since the U.S. merely wants an ABM to protect its ability to retaliate—not to initiate."

"In this same context, we must consider the psychological aspects of ABM deployment. If we provide no such defense, while the Russians develop a reportedly sophisticated one, it is quite possible Moscow would be led toward over-confidence, triggering a Kremlin decision to risk a nuclear showdown with the West."

It would appear to be logical to assume, considering the history of the Russians, that they will be reluctant to launch any kind of an attack on us or our allies so long as they believe us to be strong enough to repel them and take counter measures. If we have no program for defense we would be sitting ducks and likely to face an ultimatum backed by nuclear blackmail. The Safeguard system is our indication that we will not take the part of the aggressor, but neither will we assume the posture of the ostrich. In this respect, the ABM could become a weapon for peace.

DR. J. D. HEACOCK CELEBRATES
100TH BIRTHDAY

HON. JOHN BUCHANAN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 26, 1969

Mr. BUCHANAN. Mr. Speaker, more than 70 years ago, Dr. J. D. Heacock hung out his shingle and began practicing medicine in the Jefferson County, Ala., area.

Although he is no longer a practicing physician, having retired in 1962 at age 93, Dr. Heacock is still active and today celebrates his 100th birthday.

The doctor has often said he was born in the candlelight era, progressed through the gas light and electric light stages and now is witnessing the space age—and witnessing it literally.

For space is one of Dr. Heacock's interests. As he observes his 100th birthday today he is, I understand, also observing the progress of Apollo 10 in its flight around the moon.

He began practicing medicine in the East Lake section of Birmingham in 1896, later moving to the nearby Woodlawn area.

In 1900 he moved into Birmingham

where he was named Jefferson County physician.

In 1904, Dr. Heacock moved into another era, turning in his horse for a horseless model and becoming one of the first doctors to own an automobile.

A graduate of Howard College, now Samford University, and Tulane University Medical College, the doctor has served as a trustee of Samford since 1908. In 1931 he received an honorary LL.D. degree from that school.

Last year, Samford cited him for 60 years' loyalty and service and presented him a Samford University Chair.

Dr. Heacock is the only living founder of the Alabama Tuberculosis Association of which he served as president for 2 years.

In recognition of his services to the association, that organization established "The Heacock Medal"—a gold merit award to be given laymen for outstanding work in respiratory diseases. And, although he is not a layman in the medical field, Dr. Heacock was one recipient of this award.

A past president of the Jefferson County and the State Medical Associations, Dr. Heacock has also been a member of the House of Delegates of the American Medical Association.

Dr. Heacock is the distinguished patriarch of a very fine family, which has contributed much to Birmingham and Alabama. The doctor will be celebrating his birthday today with his daughters, Mrs. James Alto Ward and Mrs. E. H. Wrenn, his son Joseph Davis Heacock, Jr., six grandchildren and 12 great grandchildren.

For all the people it is my privilege to represent, it is a pleasure to express our warmest best wishes for a happy 100th birthday to Dr. Heacock and his family, gratitude for his life and work and our hope that his second century shall be filled even more with the rich happiness he has surely earned in a century of service and of inspiration to his fellow men.

RED WATCHES IN THE UNITED
STATES

HON. JOHN R. RARICK

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 26, 1969

Mr. RARICK. Mr. Speaker, few Americans would buy a Russian-made watch—knowingly, that is.

A report from Southwestern Watchmaker and Jeweler, a trade magazine, indicates that Russia is the world's second largest supplier of watch movements—and in 1967 exploited the U.S. watch market with a gold drain of \$30,000,000—while some U.S. companies have gone broke. And if this is not alarming enough, many jewelers are selling Russian-made watches unknowingly, because the movements are unmarked as to country of origin. The report indicates that if your watch movement does not show the country of origin, chances are it was made in Russia.

How possible? By legislation in 1967

establishing a "free port" facility in the Virgin Islands which permits entry of Russian watches "duty free" as well.

Carried to a logical conclusion, the question then follows: If watch movements—what else? If so-called free ports are to be the rage of the age, then legislation is needed to notify the innocent U.S. consumer as to the country of origin of his item of purchase. Few Americans would touch a Communist-made watch or item made with slave labor—knowingly.

I am indebted to a great patriot in my district, Kenneth G. DeBessonet of Baton Rouge, who is a jeweler and watchmaker for this account from the Southwestern Watchmaker and Jeweler for April 1968 which follows:

THE RUSSIANS ARE COMING, THE RUSSIANS ARE COMING—SOVIETS ON THE MOVE (MENTS)

(Another low-down story by Pat Eskew)

Ding-a-ling!

Hello, operator? Will you ring Honest John's Jewelry Store for me? I can't seem to get his number.

(Pause). Hello, Honest John's Jewelry? This is Pat Eskew. Let me speak to John.

Hello John? Say, John, when was the last time you sold one of your customers a Russian-made watch?

"No, I'm not being smart-aleck, John. You never did, by—whom did you say? Well, all right, John, I'm proud of you. May I speak with your watchmaker, please?"

Say, buddy, this is old Pat. Did you fix any Russian-made watches last week? Last month? Last year...?

Oh, no. Please don't do that. I need all the subscribers I can get. I just wanted to... Bang!

Honey, he hung up on me. What'da ya suppose I said that made him so mad?

It sez here in *The New York Times*, Section 3, Page 2, of the Sunday, February 18, 1968 edition, that Russia sold 40 million watches last year—most of them into the United States... by way of the Virgin Islands. It says that the Department of Commerce's latest figures show the imports of Soviet movements to the Virgin Islands alone were 111,000 units, valued at \$224,313—just last November!

But you didn't sell any of 'em for Christmas presents, did you? Well, I should hope not, but—but—are you sure?

H. J. Maidenberger, the *New York Times* writer, quotes Milton M. Jacobs, a lawyer representing some disgruntled American watch importers who are trying to keep Soviet watches outside the American market. He said: "There are Americans who wouldn't touch a Russian watch, who are wearing them without knowing it."

"The Soviet timepieces are as good as any in the popular price range," he said. "They are entering this country through St. Croix, in the Virgin Islands, and from Guam, largely duty-free."

Well, you say, I always inspect my stock, and I'd never sell or service a Russian-made watch. Some other low-down skally-wag might, but not me—not Honest John!

Hoo-ray for you, Honest John! That's the spirit, Tiger! But John, the only trouble is, nobody can recognize a Russian movement. They're under popular name dials and there are no markings on them.

The law does not require the marking of movements imported from the Virgin Islands. If the movement isn't marked "Made in Switzerland," "Made in Japan," "Made in Germany," etc., chances are that it WAS "Made in Russia." Perhaps even the strap. Because Russia doesn't mark its watches. So there!

Oh, Pat, you're just an alarmist, you say. Just a damned trouble-maker stirring up

some more fuss to get us to read your rag. Admitted that there just *might* be some Soviet watches scattered around here and there, smuggled into this country by the Lord only knows who, there couldn't possibly be enough of them for us to get alarmed about. So why don't you shut up!

'Preciate your Southern hospitality, John, but would you believe the United States Tariff Commission? Who would you guess is the world's leading supplier of watch movements?

Switzerland? Right! Go to the head of the class.

Now, who is in second place? Japan? Nope. Germany? Nope. France? Nope. Want to guess some more?

The second-place supplier, John, is R-r-r-ussia! Here's the figures:

Swiss output: about 70 million pieces.

The Soviet Union: 40 million.

Japan: 16 million.

And gol-lee, who do you suppose is at the bottom of the list? American domestic output: a mere 15 million! (Which sure does sound fishy because Timex alone claims to have produced 18 million single handed in 1967.)

Well, how in the world do Russian watch movements get into the Good Old U.S.A. undetected?

Through the Virgin Islands. No markings are required, you know—but even if they were required:

"Suppose," the *New York Times* article asks, "that an air shipment arrives from Russia to say, Amsterdam. It is put into a different carton and sent to the Islands, in parts. A local girl making \$1.60 an hour puts a few screws in place and it becomes an American watch."

Now, most all of the American watch companies have installations in the Virgin Islands. They don't like the set-up any more than you do. But they are caught up in an economic vortex caused by a federal law, okayed by President Johnson, January 11, 1967 (see Feb. 1967 issue of SWJ), which permits the Island's governor to arbitrarily rule on allowing shipments to be accepted... watches assembled... and forwarded into the United States duty free! To meet the competition American companies have got to get in on the act—or starve.

"We'd like to see the assembly plants shut down in the islands," the *N.Y. Times* article quotes one American watch company official as saying. "If people should discover that they are wearing watches from Soviet lands, it could damage the industry as well as the stores selling them."

"And many stores don't know it, but they are selling Russian watches."

Out of economic necessity, caused by fierce competition, most all of the American watch companies have subsidiaries in the Virgin Islands, and presumably they are assembling some watches with Russian-made parts. They are:

Atlantic Time Products Corporation—alias Bulova Watch Company.

Standard Time Corporation—Hamilton Watch Company.

Master Time Company, Ltd.—Elgin National Watch Company.

Quality Products, Inc.—Benrus Watch Company.

And wouldn't you know, *Virgo Corporation*—United States Time Company (Timex), the world's largest watch manufacturer which, however, produces most of its home market output right here in the good old U.S. with American labor at Middlebury, Connecticut. Now what'da you think about that! Wouldn't that curl your mustache?

There are others operating from the Islands, too. But according to the article "there appears to be some doubt in the industry as to the parent concern."

Now, let's say something real good about the Swiss, since once upon a time in my

ignorance I must have said something nasty about them—so I'm told, although I can't remember when. The Swiss won't send their parts to the Virgin Islands or any place else. The Swiss only permit the export of *whole movements*, except for parts to be used for repairs. Bless 'em!

This proud and adamant stand of the Swiss has, however, put some kinks in the desires of American watch companies to use Swiss parts and movements, so popular and approved by the American public. Bulova now assembles movements on St. Croix, too. They say, however, that 90 per cent of their parts come from Japan.

Meanwhile, Russian-made watch parts are being assembled to produce "American-made watches." There's no identifying marks placed on them. The companies that assemble them under their own dial names are not telling the jewelers they are using Soviet-made parts—but they're not telling jewelers that they do not, either.

Hundreds of thousands of Soviet watches were sold in this country last year from January to November 1967. All without payment of duties (at a gold drain to us of \$30,000,000), and with no markings as to the country of origin.

But, what the hell, who cares?

What you don't know, Honest John, will never hurt you. Your watchmaker can go right on replacing Russian-made parts into Russian-made movements and be nonetheless patriotic for having done so. The jewelers can't tell they are Russian made even by looking inside.

But the American watch manufacturers and the wholesalers know. You bet.

WHAT IS YOUNG?

HON. F. BRADFORD MORSE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 26, 1969

Mr. MORSE. Mr. Speaker, our media today is keeping student activities on the front pages and has made Americans aware of the young people who are searching for answers and questioning the traditional ways of doing things. Oftentimes the reports demonstrate the deplorable confrontations that have been taking place, with no creative value to anyone.

To its distinct credit, the *Lawrence Eagle Tribune* of Lawrence, Mass., devoted an edition of the paper to "young ideas." I was especially impressed by the thoughts expressed in the poem, "What Is Young?" by Yvonne Ground, a professor of English at Merrimack College. The poem follows:

WHAT IS YOUNG?

You ask me, "What is Young?"
My first response is to repeat what Walt Whitman said to the child who asked,
"What is the grass?"

"How can I answer the child? . . .
I do not know what it is any more than he."
Still, all teachers stand on the magic bank of the river Eternal Present:

The young pass always before them. Since I have stood on that bank for nearly thirty years,

I say that above all, Young is perpetual.

Seen as a mass, the young change. Their attitudes change; their ideals change; Their goals, their dedications, their demands change. In one decade they pursue their

Own pleasure, in another social justice, and in another they seem to pursue nothing at all.

Yet seen in their individual humanity, they are remarkably constant.

For Young is a vision. Whatever world they seek—however simple or complex—

Lies beyond. They lay out their valleys, heap their mountains; build their cottages. Their skyscrapers; love their loves or arrange their utopias.

Each in a world uniquely his own. Today is merely the clumsy vehicle in which they ride

Toward tomorrow.

Young is intolerance. The young man looks with sharply critical eyes at all of the flaws

In the world he is entering. He snarls his displeasure across the generation gap At those who created the mess he inherits. Compromise is insupportable,

And moderation is for the faint of heart. His has always been the Now Generation. Cautioned to have patience, to build on the foundations of historic good,

He says like Arkadi Kirsanov, "That is not our affair . . . First, we must make a clean sweep."

Young is fear. The young man faces alone an infinity of choices, again and again

Having "to decide, forever, betwixt two things." Because he has just discovered his strength,

He must use it. He is radical because he does not dare to be conservative;

He is sometimes rude and noisy because he fears the vulnerability of gentleness. As he embarks on the creation of his new and shining world, he announces that his terms

Are not negotiable. The fear of failure is beautifully and dramatically terrifying.

But his greatest fear is of surrender.

Young is anger. The young man hates very purely. He rages against ponderous institutions.

He battles with his words, and with his fists and feet if need be, against what he currently

Calls "the power structure." He cares so painfully that no one else seems to care at all.

And ultimately, if he feels his convictions slipping, he turns his greatest anger on himself.

Young is the conviction of immortality. Life rolls away toward a horizon

So distant as to be invisible. The young man knows he can rebuild the world because he has

Plenty of time to do the job. He can swim the deep waters, climb the sheer cliffs,

Drive the fast cars, or rocket to the moon. The thickness of tissue is safety enough,

While cautious maturity shivers and wonders what the young fool thinks he is doing.

Should one of his number presume too far and be crushed too soon,

His outrage is greater than his grief. Young is pain and turbulence, but Young is also joy. You ask me, "What is Young?"

I see a memory, a boy, my student a quarter of a century ago. He was a beautiful boy

With grace of movement and proud shoulders. His Mexican ancestors had gifted him

With strong, gentle face, and his eyes were full of dreams.

On an April afternoon when the California sun already threatened summer,

I met him coming toward me along the sidewalk. He held a shallow box of green-stuff

Very carefully.

In a few weeks he would graduate from school to the army and a full grown-up war.

(You see, we were very modern a quarter century ago.)

He walked to the rhythm of music that only he could hear, and he looked away Into a world that only he could see. I had to know what treasure gave him such joy.

So I said; "Nico, what do you have there?"

He looked at me with faint surprise—that I dared intrude, I suppose—

And without ever stopping, without ever releasing his own wondrous world,

Beholding still his private, beatific vision, he replied in the happiest voice I have ever heard,

"Cabbage plants!"

And I guess that is what Young is. It is the dream and the grace and the distinct horizon.

It is the promise of plenty, the hope of fruition, and the threat of blight.

Young is a boy with cabbage plants.

YVONNE GROUND,

Professor of English.

MERRIMACK COLLEGE.

CONTROLLING RENTS UNDER FHA RULES

HON. BENJAMIN S. ROSENTHAL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 26, 1969

Mr. ROSENTHAL. Mr. Speaker, in response to an unfortunate misunderstanding in New York City, many residents there believed that the Federal Government prevented our local government from effective action in controlling rents. Mr. KOCH and I released the following statement today to clarify this situation:

STATEMENT OF CONGRESSMEN EDWARD I. KOCH AND BENJAMIN S. ROSENTHAL ON THE NEW YORK CITY RENT CONTROL LAW AND THE FHA RENT REGULATIONS, MAY 26, 1969

Fear and consternation have overwhelmed the tenant-residents of New York City since last year when thousands of apartment rents were drastically raised. The proper response by the City Council was the passage of the Rent Stabilization Law. But this remedy has raised a new problem.

Many city residents have been told, in some cases by landlords themselves, that the new city law exempts buildings covered by an FHA mortgage. We are here to say that this is not the case.

The new rent stabilization law lists, under exceptions to its coverage, buildings "aided by government insurance under any provision of the National Housing Act, to the extent this local law or any regulation or order issued thereunder is inconsistent therewith." In our judgment this is a misleading section of the local law and should be clarified or removed entirely.

We have consulted with the Federal Housing Administration both here and in Washington. It is their interpretation of this controversial sentence, and it is ours, that there is no exemption to this local law for FHA-financed buildings.

It is important to understand that FHA regulations set a maximum rental schedule for the entire insured building and not a maximum rental for each apartment. At the

other end of the scale, there is no minimum FHA rental schedule either but the mortgagee must submit financing information in the FHA application which lists his costs and provides for a fair return on his investment.

The local rent stabilization law, on the other hand, sets a maximum increase allowed over the previous rental for each individual apartment.

FHA maintains, and we confirm this interpretation, that even if, in some cases, the New York City law sets lower rents than FHA originally approved, that "this is a consequence with which an owner must deal in accordance with the appeal procedure" in the local law.

The FHA adds, and we emphatically agree, "an owner should not expect the FHA to concern itself with his affairs" except to the extent that they are controlled by the original FHA agreement with the mortgagee.

There are 93,000 FHA-insured residential rental units in New York City; therefore, this confusion on what the New York City law means is very serious. Perpetuation of this confusion by some landlords is unconscionable. This badly needed local law applies to FHA and non-FHA buildings alike.

If there are circumstances in individual cases where owners of FHA-financed buildings believe themselves aggrieved by this local law, they have appeals procedures under that law. If those appeals fail, they may seek relief in the courts. But they are bound by the law like any other landlord.

To express our concern for this problem, we are introducing in Congress today a resolution which makes absolutely clear that there is no intended or real conflict with local rent control laws from the view of the federal government.

We are confident that this will establish once and for all that the citizens of New York, acting through their local government, are able to regulate a pressing local problem without interference by the federal government.

H. CON. RES. 275

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That it is the sense of the Congress that if any State or local law or ordinance which provides for the stabilization or control of rentals charged in multifamily residential housing results in maximum rental rates lower than maximum rental rates deriving from any condition, restriction, or requirement imposed by the Federal Housing Administration (in connection with mortgage insurance for housing to which such law or ordinance applies), such law or ordinance should govern and prevail over such condition, restriction, or requirement; and that the regulations and mortgage insurance contracts of the Federal Housing Administration should be prescribed and written (or modified, in the case of existing regulations and outstanding contracts) so as to ensure that such State or local law or ordinance will be fully effective.

CRISIS POLITICS AND MONETARY REFORM

HON. WILLIAM S. MOORHEAD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 26, 1969

Mr. MOORHEAD. Mr. Speaker, back in January, commenting on recent fiscal dilemmas with the pound and the franc, I spoke of the need for monetary reform and updating the Bretton Woods agreement.

Trends in the relative strengths of the different world currencies arising from changes in growth of productivity, divergent attitudes toward inflation and full employment, differences in the composition of exports and imports, all point up the need for greater flexibility in exchange rates. Furthermore, the fact that rates are fixed gives a change of rates far more political significance than it would otherwise have, as we see now in the case of Germany's attitude toward the mark.

It would seem an appropriate time for the United States to take the lead in convening a conference of the leading nations of the free world to discuss the whole area of monetary reform, and to develop a more realistic system to facilitate international transactions, instead of coping with each crisis as it happens, often at the mercy of the internal politics of the particular country involved.

I would like to include several recent articles from the New York Times, Wall Street Journal, Business Week magazine and Christian Science Monitor in support of my remarks.

The articles follow:

[From the Christian Science Monitor, May 10, 1969]

VANISHING GOLD—BRETTON WOODS BREAKUP SEEN IN MONETARY CRISIS

(By John Allan May)

LONDON.—What we are seeing now, they are saying here in London, is the breakup of Bretton Woods.

The system of fixed exchange rates backed by the use of gold at a fixed price as the main world reserve money, which was hammered out at Bretton Woods in 1944, finally is falling apart.

Money markets in Europe have been in turmoil in advance of the weekend meeting of central bankers at Basel, Switzerland.

Dealers simply have had no doubts at all: The West German mark is bound to be revalued upward, if not now, then very soon.

The possibility of the French franc being devalued by 10 percent is also taken into account. And there is some question whether the pound sterling could stay put where it is in that case.

PRESSURE EXERTED

Pressure has therefore been exerted in all directions, toward Bonn and away from London, Paris, and New York.

Central bankers have been "recycling" the money flows, the United States Federal Reserve, for instance, selling D-marks and buying French francs and pounds sterling. But this "recycling" has in no way affected either the basic causes or the inevitable consequences of the crisis.

Once again much is made of the role of "speculators." But the flows and counterflows are not in fact produced by speculation but by the normal processes of trade and banking.

For bankers, other than central bankers, are not prime sources of flows of money. They are the channels for them. If a currency is likely to become more expensive all external sources using and needing supplies of it will inevitably buy that currency if they can. When a money is likely to be devalued, on the other hand, everybody concerned who can will quite rightly sell.

In the City of London, the longest continuously operating money market in the modern world, it is noted that no central bank in a free country has the power—or, indeed, the right—to require commercial concerns to operate against the interests of their shareholders, their employees, and their own corporate entities.

This they would do if they laid themselves open to serious losses by ignoring changes in currency values.

Bankers as a whole themselves still favor the Bretton Woods-type system of controlled stability.

Says John E. Nash, executive director of merchants bankers Samuel Montagu: "The Bretton Woods system was set up to achieve orderly adjustment of balance-of-payments deficits and surpluses among member countries, without forcing member countries [when in deficit] to adopt painful deflationary policies leading to substantial unemployment, or beggar my neighbor competitive devaluation policies designed to export their unemployment to other countries."

GOLD SHUNTED ASIDE

The international monetary system has in fact worked very well, he remarks. International trade has not ceased to grow. Prosperity in Western countries is, year by year, achieving new records. Full employment has prevailed for longer than ever before.

It is economists and some businessmen who mainly disagree.

To some economists here the current crisis has been produced by a failure to allow the Bretton Woods system to work. Absolute fixity of exchange rates has been attempted, for example, which was never intended. And the golden base has been virtually removed from the world monetary system.

The value of gold to the system, it is said, was first that it provided a nonmonetary backing to all major currencies which had worldwide acceptance as a stable unit. If gold did anything, everyone felt sure, it would increase in value, whereas every single currency in the world was, and is, bound to depreciate.

Second, gold in the past allowed balances of payments a great deal of latitude. They did not have to balance exactly in the round. Any lack of balance could be made up by the introduction into the system of newly mined gold.

SOME DOLLAR PROBLEMS

A substitute for gold which could do the same job, like the "special drawing rights" of the International Monetary Fund, has not yet been introduced. Reducing the role of gold without introducing SDR's has made the dollar less than fully convertible into gold (partly through United States pressure applied to other governments to continue holding dollars, partly through the self-interest of all not to contract international liquidity). At the same time however it has put the world on a dollar standard.

Valuable as it is to the world, the use of the American dollar as the only world money has some other disadvantages besides its inconvertibility. It is a monetary unit in daily use. Its supply is not under international control. It is not expected to maintain a stable value in terms of buying power.

Its availability to the rest of the world also depends on the United States being usually in deficit. But, without new gold coming in, global payments now have to balance. So, if there are fixed exchange rates, somebody else has to be in permanent surplus.

One effect of that is to make some countries' balance-of-payments problems virtually insoluble, certainly without very severe deflation indeed.

Another, in a world where rates of inflation vary between country and country and so currency values also vary, is to make a system of fixed exchange rates wildly impractical.

Prof. Harry G. Johnson of the London School of Economics and the University of Chicago, has a public debate with banker Nash just published here by the Institute of Economic Affairs.

He strongly urges flexible exchange rates. And his main argument is that fixed rates leave a government with an overvalued currency the alternatives only of imposing restriction on imports, or deflating the econ-

omy, or devaluing—which is taken as a political defeat.

But flexibility, he avers, removes the balance-of-payments motive for restrictions on international trade and payments. "It therefore can make an important positive contribution" to the stability of the world economy.

Certainly, it is widely agreed here, a fresh world monetary system of some kind must result from the current crisis, or from the next one, if this one is merely papered over. The old system is visibly falling apart.

The alternative to a fresh system would be not a simple monetary crisis but a world economic crisis.

[From Business Week magazine, May 17, 1969]

MONEY SYSTEM REELS OUT OF ITS SIXTH CRISIS

The world's sixth money crisis in 18 months, this one centering on the German mark, was easing this week. But across Europe—in Germany, Britain, and France—conditions seemed ripe for what could fast become crisis No. 7.

Crisis No. 6 was bad enough. It began when \$3 billion gushed into Germany in 3 days last week in anticipation of a mark revaluation. It eased once Germany made it plain it wasn't going to be pushed into raising the value of its currency.

Instead, Germany at midweek unveiled a series of alternative measures aimed at keeping the mark at its present value (roughly four to the dollar) as long as possible.

GERMAN PLANS

To deal directly with hot money flows into the country, Germany's central bank was given the power to demand that commercial banks hold 100% reserves against all their foreign deposits. Until now, the 100% reserve could be put only on new money coming into Germany.

To deal with Germany's embarrassingly large trade surplus, the border tax adjustments first imposed during last November's currency crisis, when money also poured into the country in anticipation of a mark revaluation, will be continued beyond the March, 1970, expiration date. These measures consist of a 4% penalty on exports and a 4% tax break on imports.

Apart from this, Germany also announced some measures on Wednesday aimed at cooling the country's economic boom (page 115). Some \$500-million in proposed federal expenditures, now frozen, may be killed outright. The Bonn government will put a freeze on \$600-million in boom-produced surplus tax revenues, and try to get the German states to put a comparable freeze on another \$300-million in tax revenues.

The latest monetary flare-up, to be sure, was short-lived as such crises go. Nor did the U.S. dollar, the key currency of the international monetary system, come under attack. But in the longer run, it may turn out to have been the most damaging crisis of all.

THE SYSTEM CREAKS

For instance, it proved again how hard it is for nations to change the value of their currencies, no matter how compelling the need. German Economics Minister Karl Schiller and central bank president Karl Blessing fought for revaluation; Chancellor Kurt Kiesinger and Finance Minister Franz Josef Strauss fought against it. In the end Kiesinger and Strauss won what was clearly a political, not a financial, battle. "Everywhere," moans a European official, "the monetary problem has become bogged down by internal political issues."

Similarly, there was widespread concern this week that successive crises would ensnare the world monetary system in still more trade and exchange controls—rigged up by nations to avoid changing their currency values. To one worried Continental banker: "We face a creeping paralysis of the world payments system."

And while cooperation among central bank-

ers has kept the system alive through crisis after crisis, cooperation failed a test this time. The key central bankers, meeting at Basel last weekend, took only a half-step toward agreeing on a firm plan for "recycling" speculative money flows—funneling hot money back to countries that lost it. At most, it appears, Germany has agreed to lend dollars to countries that have lost reserves, using the Bank for International Settlements as intermediary.

What the Basel meeting did produce was plenty of muttering that the Nixon Administration has been slow in assuming the leadership role of the Johnson Administration in world monetary affairs—and equally slow in producing ideas for beefing up the monetary system. "It is important," says a European central banker, "that the President of the United States take the lead in setting new policies."

In short, confidence in the world monetary system—fragile at best in recent months—was under enormous strain this week.

SWARMING SPECULATORS

Germany's May 9 pledge to hold the present value of the mark "for eternity" was greeted with cold skepticism in financial circles the world over. Some of the \$5-billion in hot money that poured into Germany between late April when France's General de Gaulle quit and May 9 was flowing back out of the country this week. A German government official estimated the outflow last Monday at \$800-million, with another \$100-million leaving the country on Tuesday. That, of course, is very modest considering all the money that poured into the country.

But international bankers, nearly to a man, still expect the mark to be revalued once Germany has held its national elections in September. And some European money market watchers still think that speculative pressure will force revaluation before that. Certainly the initial reaction among financial observers to Wednesday's German economic package wasn't very encouraging. Most people saw the proposals as far milder than expected.

Britain, too felt last week's panic, losing \$500-million to \$800-million to speculators. Then, on Tuesday, Britain announced still another trade deficit, for April. It has been 18 months since the pound was devalued, and Prime Minister Harold Wilson counted on a trade surplus this year. Instead, the average deficit in the first four months of 1969 was worse than in the final four months of 1968.

France, which hoped for a mark revaluation, must keep standing guard against speculators betting on a franc devaluation. It's most unlikely until France gets a new president. But election day is only two weeks off. Afterward speculators can be expected to swarm against the franc.

U.S. ROLE

The crisis has even slopped over to affect the U.S. by driving up the cost of Eurodollars (U.S. dollars on deposit overseas). U.S. banks borrow Eurodollars to offset tight money at home; U.S. corporations borrow them to use abroad. Since so much of last week's speculation welled up out of the Eurodollar market, most central banks will now aim to keep Eurodollar rates high, to make speculation more expensive.

The crisis did revive talk about reforming the monetary system. Since nations can't be relied on to change the value of their currencies, more and more people—including some monetary officials—are interested in ideas for making such changes more automatic.

And the Nixon Administration this week reminded world bankers it wasn't ignoring the monetary system—it simply was being deliberate, as it has been on most matters. Highest priority goes to fattening the world's stock of reserve assets by giving nations special drawing rights (SDRs) on a pool of currencies in the International Monetary Fund—

to be used in addition to gold and foreign exchange. Washington wants to get the SDRs put into use as quickly as possible. Once that is done, the Nixon people will pay greater heed to more fundamental changes in the monetary system.

Most observers hope in the short run for some multilateral realigning of currency values. The most frequently mentioned approach would be for France to devalue the franc by around 10% and Germany to revalue the mark by the same amount.

CURRENCIES BEYOND "ETERNITY"

An official Bonn spokesman has characterized West Germany's refusal to raise the value of the mark as "final" and "valid for eternity." But the speculators' odds are still weighted heavily on the side of revaluation. Of the more than \$4 to \$5 billion of foreign funds that recently poured into Germany, only about \$1 billion have thus far flowed out. The turbulence in the foreign exchange markets has abated, but the imbalance caused by the continued undervaluation of the mark remains as a constant source of future trouble.

The forces of disequilibrium in the international monetary system are being repressed by exchange controls, trade restrictions and efforts by central banks to counter currency speculation. But those retrograde devices cannot be relied upon for the long haul.

The latest defense measure is the activation of a system for the "recycling" of speculative funds. It provides that the country receiving the inflow make automatic loans to countries which are losing reserves in efforts to maintain the fixity of their exchange rates. In order to prevent sterling, for example, from falling in relation to the mark, British authorities must be able to sell With the recycling arrangement, they get those marks promptly.

But recycling is a palliative, not a cure. If the speculative switching from sterling to marks were followed by a one-for-one reflux of marks back into sterling, Britain's foreign exchange reserves would not be significantly affected. However, losses are incurred when the speculators switch to Eurodollars or another third currency, as now appears to be the case. Falling reserves, in turn, invite further speculative attacks.

What is immediately needed to set the monetary system on a more even keel is greater exchange rate flexibility. Ideally, a comprehensive monetary conference, comparable to that at Bretton Woods in 1944, ought to be convened to plan for the orderly transition to rate flexibility. But the failure of the most advanced countries to reach agreement on the realignment of a few fixed exchange rates makes the prospects for such a large undertaking dim. As a consequence, the next change in the monetary system hinges on whether "eternity" is, in fact, bounded by Germany's September election.

[From the Wall Street Journal, May 20, 1969]

THE UNSYSTEMATIC MONETARY SYSTEM

The international monetary system is proving once again its inability to cope with present economic and political realities. So far, however, there seems to be no movement toward constructive alternatives.

When the current apparatus was devised at Bretton Woods, N.H., in 1944, the apparent assumption was that all countries would zealously guard the worth of their currencies with prudent financial policies. If they actually had done so, the system of fixed exchange rates might make more sense.

For many years, though, the only major nation that had clung, consistently and firmly, to financial responsibility is West Germany, which of course was not represented at Bretton Woods. It isn't surprising, therefore,

that the German mark is the strongest of the world's principal currencies.

Under existing monetary arrangements, it doesn't much matter whether one or more currencies are substantially weaker than others or whether one or more are exceptionally strong. In either case fixed exchange rates do not reflect economic reality and there is strong pressure either for devaluation or upward revaluation—or both.

The latest in the long series of crises came last week, when most countries felt that West Germany should increase the international value of the mark. The Bonn government refused to take any such action, for reasons that it believed were good and sufficient.

Basic to the problem, after all, was not German prudence but imprudence in the U.S., Britain, France and elsewhere. Germany reasoned that other nations should at least acknowledge their culpability by devaluing at the same time the Bonn moved the mark upward—a step they were unwilling to take.

The mere fact that exchange rates are fixed gives them a political significance larger than they would otherwise possess. If the mark had been revalued upward, German businessmen and farmers would have found it somewhat harder to sell their products abroad—and they would have faced increased competition from imports. It's small wonder that the Bonn government, a few months before a national election, was unwilling to make a decision that would have angered many citizens.

What happens now? It looks as though we're going to have more of the frantic improvisation that has preceded and followed every currency crisis in the past.

Some of the speculators, who thought they saw a sure thing in mark revaluation, have given up and pulled their funds out of Germany. As long as the mark remains so exceptionally strong, however, the danger remains that an inflow of money will inflate the German economy. The Bonn government is trying to discourage the inflow by raising reserve requirements on German banks' foreign deposits.

A certain amount of the speculators' interest now has shifted to Britain where the pound, devalued only 18 months ago, looks shaky again. The London government had promised a balance-of-payments surplus for 1969, but a widening trade deficit makes that goal appear almost unattainable. The nation may be forced into yet another huge borrowing from the International Monetary Fund.

In the circumstances, it's a little ironic that British politicians are complaining that the IMF and foreign bankers are "running" British internal economic policy. As long as Britain and other nations cling to the idea of rigidly fixed exchange rates, and then insist on financial profligacy at home, there is no conceivable way to avoid external pressures on internal policies.

What it comes down to is that only two possible ways exist to restore reasonable peace and order to world monetary affairs. First, the world can live with fixed rates if all the major nations pursue wise financial policies. This does not have to mean tight money and austere government budgets all the time; the Monetary Fund's mechanism can cope with short-term imbalance. It emphatically does mean that the imbalances can be no more than short-term, quickly corrected by monetary and fiscal measures.

In the real world, unfortunately, any such development looks highly unlikely. Since some nations appear to have developed an addiction to inflationary stimulants, the best available course probably is to agree on greater flexibility of exchange rates. Inflation would produce day-to-day fluctuations in money markets, but it would pose less risk of international monetary panic.

While such a setup could produce problems of its own, they surely would be of lesser magnitude than those now existing.

There's a real question how long the monetary system can survive if it merely goes on stumbling from crisis to crisis.

PILOT GUINThER HONORED AFTER TRANSATLANTIC RACE

HON. GUS YATRON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 26, 1969

Mr. YATRON. Mr. Speaker, I should like to extend my heartiest congratulations to William M. Guinther of Kutztown, Pa., for a very thrilling and adventuresome accomplishment. Bill Guinther was recently awarded a \$12,000 prize as the meritorious achievement award for an American citizen in the London Daily Mail Transatlantic Race.

The newspaper-sponsored contest commemorated the 50th anniversary of the first transatlantic flight by Sir John Alcock and Sir Arthur Brown. Flying a borrowed single-engine Beechcraft Bonanza, Bill Guinther flew from London to New York in 22 hours, 13 minutes and from New York to London in 24 hours, 15 minutes. The measure of the task and the man is highlighted by the fact that Bill Guinther, as a Korean war veteran and flyer, had one leg amputated after an Air Force plane collision.

I submit for publication in today's CONGRESSIONAL RECORD, Mr. Speaker, articles from the Reading, Pa., Eagle and Times chronicling the occurrences that transpired as a result of Bill Guinther's participation in the great transatlantic race:

[From the Reading (Pa.) Eagle]

BERKS PILOT TO COLLECT \$12,000

William M. Guinther, Berks pilot-airplane salesman was in Philadelphia this morning with his wife, Ann, after winning an unexpected prize in the international London-New York Transatlantic flight competition. "He's on Cloud Nine and so is his wife," commented Mrs. Leonard A. Hendrickson of Martha's Vineyard, Mass., his mother-in-law who is babysitting for the Guinthers. The Berks man resides near Grimville, Kutztown R.D. 2.

Actually, Guinther is preparing to leave tonight at 7:30 with his wife by jetliner from Philadelphia to accept a \$12,000 prize as the meritorious achievement award for an American citizen in the contest. It is only \$2,400 less than the two awards for the fastest Atlantic crossing.

It is being presented by the Ziff Davis Publications, New York, based, he said, on "accuracy of flight and preparations."

The trip to Philadelphia today was to obtain a passport for his wife. "She's never been out of the country and is a native of the 'Vineyard,'" her mother said.

Guinther, who had his right leg amputated after an Air Force plane collision, had to fly to the "Vineyard" to get his mother-in-law and his wife's birth certificate. Mrs. Hendrickson commented: "It was more for the birth certificate that he flew there."

The older woman will be the baby sitter for the Guinthers who will be in London up to Sunday. She will be tending her grandchildren, Lisa, 8 and Stuart, 6.

Guinther, a native of Bally, planned extensively for the flight with the aid of several others, checking on alternate routes and exacting fuel consumption, he felt this was probably one of the reasons he took the prize.

There were many questions about his flight by persons connected with the contest in New York.

The Korean War veteran, who downed two MIGs, apparently hit every check point just right and gave the proper answers to "a third degree type of questioning," he related.

Credited with helping him, he reported, were Marion Hart, a veteran Atlantic-crossing pilot; Louis Sacchi, who owns a plane-ferrying firm, and Luther Moyer, a Kutztown glider pilot, who provided an emergency radio.

The time he recorded from London to New York was 22 hours, 13 minutes and 18.31 seconds but this was topped by Stephan Wilkinson of Florida at 20 hours and 23 minutes. Going from New York to London Guinther had a time of 24 hours, 15 minutes. The prize in this category—one of 21 sections in the contest that offered \$144,000 in prizes, was \$2,400.

Guinther will pay for his wife's flight to and from England but he will be happy about it. He appeared that way Monday when he was told he won the meritorious honor. The couple also will meet His Royal Highness, Prince Philip, Duke of Edinburgh. "I hope they get to see the queen," Mrs. Hendrickson said.

The contest sponsored by the newspaper commemorates the 50th anniversary of the first transatlantic flight by Sir John Alcock and Sir Arthur Brown. Guinther flew a borrowed Beechcraft Bonanza.

[From the Reading (Pa.) Times,
May 20, 1969]

SMASHING "FAIRYTALE"—GUINThERS FLY HIGH IN LONDON (By Ray Koehler)

The whole episode still has the gossamer aura of unreality.

A week ago, Mrs. William M. Guinther was taking the kids to the dentist.

Forty-eight hours later, the Kutztown R.D. 2 housewife and her pilot husband, an international celebrity and \$12,000 winner in the London Daily Mail Transatlantic Air Race, were:

Zooming first class in a jet to London . . . shaking hands with Britain's Prince Philip . . . dining on Eggs Benedict at the Savoy . . . viewing the Red Knights (England's answer to the U.S. Navy's Blue Angels) as guest of honor at the Biggin Air Fair . . . visiting Westminster Abbey and the Tower of London. . .

"It was a fairytale . . . unbelievable," exclaimed Mrs. Guinther, back home Monday and still waiting for the coach to turn into a pumpkin at the last stroke of midnight.

The events were put into motion May 12 when Bill Guinther, the airplane salesman who crossed the Atlantic both ways in a single-engine Beechcraft Bonanza, was awarded the "meritorious" prize for non-winning American entries in the air race.

Later, riding "coach" in a jetliner to the winners' reception in London's Royal Garden Hotel, someone began pulling strings and the couple was escorted to first-class seats.

"I watched a George Segal movie . . . Bill went to sleep and snored," the blonde housewife recalled. Her husband, she said, Monday was enroute home from his office at the Philadelphia International Airport.

London was in the midst of the soccer finals and the Bryanston Court Hotel was caught up in the national sports craze.

It was into the midst of this frenzy that Bill and Ann entered Wednesday morning—a scene that added to the air of make-believe.

"Bill was outfitted in a tux with a pleated shirt front and black tie . . . ooh, and did I ever get a gown . . . a deep blue chiffon with beading on the top and stuff. Then I got my hair done and the stylist said I looked 'smashing.' . . . and Bill looked pretty nice, too!"

The reception was scheduled for 6 p.m.—

and both the prince and the Guinthers were late.

"There was a military band in full regalia playing," said Ann, "and as we walked down this broad, carpeted staircase leading to the reception suite the band struck up 'Those Magnificent Men in Their Flying Machines.'"

"I don't know if they did it for us—but Bill sure got a kick out of it."

"All 21 winners in the London Daily Mail contest had been assembled for the reception and at 7 p.m. Prince Philip entered."

"We were at the very end of the receiving area, but Bill thought he spent more time talking to us than anyone . . . he's interested in small planes, you know."

"Prince Philip is a wonderful man . . . just as nice as he seems with a marvelous deep voice . . . I'll never wash my glove."

During their conversation, Guinther presented Prince Philip a distelfink tie clasp he purchased at Dunkelberger's in Kutztown.

"What is it?" asked the Prince, husband of Elizabeth II.

"It's a tie clip," said the one-legged solo flier. "I'm Pennsylvania Dutch and proud of it."

During the dinner the contest winners were given the same menu served 50 years earlier after the first non-stop Atlantic crossing by Alcock and Brown.

"We had Eggs Benedict . . . and Bill said he wanted me to make them for him every morning," Ann laughed.

Her ex-combat pilot husband, she added proudly, got the biggest reception of the night when he was introduced. He also got the biggest check.

The remainder of the weekend was filled with sightseeing and shopping and dining on steak and kidney pie.

We left London Sunday at noon and arrived in Philadelphia at 3 p.m., our time. Mrs. Guinther said, "We got home about 5 o'clock . . . and what a reception."

"Stuart, our 6 year old, was covered from head to toe with the chicken pox!"

THE NEW LEFT AND STUDENT UNREST

HON. JOHN M. ASHBROOK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, May 26, 1969

Mr. ASHBROOK. Mr. Speaker, on May 15, 1969, a balanced appraisal of the issue of student unrest was presented to the House Special Subcommittee on Education by Allan C. Brownfeld, editor of the New Guard, the publication of Young Americans for Freedom. As one who has addressed student groups over the last several years and as a faculty member of St. Stephen's School in Alexandria and the University of Maryland, Mr. Brownfeld is by no means a stranger to the issue of student problems and aspirations. In addition, he has authored a special study on the new left for the U.S. Senate Judiciary Committee. His articles have appeared in several law reviews including those of Yale, William and Mary, and the Texas Quarterly, as well as Modern Age, Commonweal, North American Review, Human Events, Roll Call, the New Guard, and the Washington Star. Holding a bachelor of laws degree from William and Mary, he is presently a Ph. D. candidate at the University of Maryland.

Although Mr. Brownfeld is well acquainted with the extremist operations

of the radicals on campus, he is nonetheless aware that legitimate student complaints do create contention between the school administration and student bodies. However, students, in their efforts to rectify valid grievances, should not be blinded to the nature of the New Left activists who are attempting to use them, both students and grievances, in pursuing their anarchistic ends.

I include the above-mentioned statement by Allan C. Brownfeld of Young Americans for Freedom in the RECORD at this point:

THE NEW LEFT AND STUDENT UNREST

(Statement of Allan C. Brownfeld, editor of the New Guard, the publication of Young Americans for Freedom, Inc., before the Special Subcommittee on Education, Committee on Education and Labor, U.S. House of Representatives, Washington, D.C., May 15, 1969)

Madame Chairman and members of the committee, I am Allan C. Brownfeld, editor of "The New Guard," the publication of Young Americans for Freedom, Inc., with offices at 1221 Massachusetts Avenue, N.W., Washington, D.C. I am the author of the study of the New Left for the U.S. Senate Internal Security Subcommittee and am a Ph. D. candidate at the University of Maryland where I am also a member of the Faculty of the University College.

There are many aspects to the protests and campus activism which we are now witnessing. One of the things we are seeing is a new generation of young Americans seriously questioning the values and standards of their parents, of the university, and of the society itself.

Much of this questioning is good, for many of the existing standards and values do, indeed, need to be challenged. For too long our society has accepted the idea that through government, all of our problems could be solved. Young people did not live through the optimistic days of the New Deal when it was believed by many that if you created enough government agencies, and spent enough federal money, all problems—of poverty, of social inequality, of poor housing or whatever—could be solved. They are beneficiaries only of the results.

As they see it, our government has become bureaucratically inert and unresponsive to the needs of the people. It has, beyond this, become coercive. It compels young men into military service against their will, it compels workers to pay for social security which many might choose not to have, it even compels Americans under penalty of fine and jail to answer what were previously considered to be personal questions on census forms.

Young people see that such coercion has not solved our problems but has, in many respects, compounded them. They also are concerned with the university, which is where most of them are now in the capacity of students. They have seen students become the least important commodity at the University as government and private foundations lure professors into writing and research projects which many prefer as opposed to teaching.

It must be remembered that there are many legitimate grievances with regard to the university and the educational process. Irving Kristol, writing in *Fortune* magazine for May, 1968, noted that "... in the overwhelming majority of universities liberal education is extinct." In a volume entitled, *The Academic Revolution*, Christopher Jencks and David Riesman point out that this revolution began at the end of the World War II, when the demand for higher education began to grow with explosive speed. The complexity of the mass techno-

logical society required many more university trained specialists. As a result a diploma became an almost indispensable document. The role of the academician rose in prestige, leading to a change in the nature of the university.

Harper's Magazine editor John Fischer has remarked about the nature of this change: "... the professoriat soon began to reshape the university to serve its own desires rather than those of the students or their parents. For one thing teachers today are doing less and less teaching. Jencks and Riesman note that 'until World War II even senior scholars at leading universities did a good deal of what they defined as scut work: teaching small groups of lower level students, reading papers and examinations and the like ... Today, however, few well-known scholars teach more than six hours a week, and in leading universities many bargain for less ... the routine problems of mass higher education have therefore fallen by default to graduate students.' ... Research of course is what he had better be committed to, for that alone pays off in money and reputation. It doesn't have to be significant research. Much of it, at least in the social sciences and humanities tends to resemble finger exercises for the piano. It is not concerned with answering real questions or solving real problems." What many students are disturbed about, therefore, is the fact that their own education has suffered. No longer are students considered the most vital part of a university. Mr. Fischer places much of the student restlessness in this perspective: "I believe it is the beginning of a counter-revolution by students—liberal arts undergraduates in particular—against a quiet, almost unremarked revolution which has changed the whole structure of American higher education within the last two or three decades. The main beneficiaries of that revolution were the faculty. The victims were the liberal-arts undergraduates. Only recently have these students begun to understand how they are victimized—and their protest is likely to swell until at least some of the results of the earlier revolution are reversed."

Young people are also disillusioned about democracy, and its ideology often has a hollow ring. They were careful observers of the 1964 presidential campaign. They heard Lyndon Johnson attack Barry Goldwater as an advocate of war, they heard him say that the war in Vietnam was to be fought by "Asian boys," not by Americans. They remember the television spots picturing a world destroyed by nuclear holocaust were the Republican to win.

Thinking that this was, in fact, the case, many of them supported the Democrats. Once implemented, however, the Democratic program looked much like the Republican. As the oft repeated joke had it: "I was told that if I voted for Barry Goldwater we would be at war in six months. I did. And we were."

How much faith can idealistic young people have in a political system which appears to give its highest honors to those who tell a pleasant untruth? How much faith can they have in leaders who base their appeal to the public not on what they really intend to do, but on what they know the people want them to do? For many, 1964 and the years following have been years of disillusionment with the two party system. What we have more and more is a generational credibility gap.

But we have a generation gap of another sort as well, and it is perhaps the key to understanding today's youthful rebellion. Though all of us, young, middle aged, and old live in the mid-twentieth century, only the young, those who have come of age after the conclusion of World War II, are truly of this period. Those who lived through the depression or through World War II, have been frozen by the dramatic and intense experience of those days.

The Southern writer, Walter Hines Page,

wrote this with regard to the generation which lived during the Civil War in the South: "It (the Civil War) gave everyone of them the intensest experience of his life, and ever afterwards he referred every other experience to this. Thus it stopped the thought of most of them as an earthquake stops a clock. The fierce blow of battle paralyzed the mind. Their speech was the vocabulary of war ... they were dead men, most of them, moving among the living as ghosts; and yet, as ghosts in a play, they held the stage."

Thus, the young are the only ones who are, in a sense, frozen with the dramatic and intense experience of these days. They do not relate the upheavals of today with the past, for they know no past, except through the books most of them do not read, to their great misfortune. They live in the present and wonder what kind of future they may hope for in so transient and unstable a world. If there is a generation gap it is of this nature. The generations need interpreters to understand one another, and these seem few and far between.

A young man growing up in Europe one or two hundred years ago would have faced a life situation in which the major decisions in his life were pre-ordained. More than likely, he would have been born in the same house in which his father had been born, almost surely in the same town. He would pursue the same means of earning a living as did his father. If the father was a tailor or a butcher, the son would also live his life in this manner. His marriage would be arranged. His own range of choice-making was very slight. Life was circumscribed by religious faith and communal custom. The individual was part of the community, of the group. His responsibility was more that of playing out his role than grasping life as a horseman at the reins and riding in whatever direction he willed.

Today's man's situation is far different. Today, young Americans have almost unlimited choices with regard to career, location, marriage partners, and other basic elements of life style. Certainly, there are restrictions. The draft claims two years out of the lives of many young men. Some start life in humbler surroundings than others, thereby limiting upward mobility. Yet, on the whole, the young man or woman coming of age in America at this time has perhaps a greater freedom to choose his pattern living than has any individual at any other time in history.

Freedom to choose, however, becomes a very difficult task when no one provides any knowledge or information about the basis upon which such choices may beneficially be made. At one time the family, the school, and the church spent a good deal of time pointing young people in particular directions which they considered to be valid and time-tested. Today the family is in a state of disarray, the school pursues a "value-free" curriculum, and the church doubts its own message, being swept away in the modern tide of relativism.

Not too long ago, *The New Yorker* featured a cartoon in which one priest said to another: "I would not be so presumptuous as to tell the congregation what was right and what was wrong." In one of the most important volumes advocating the new variety of Protestant theology, *The Secular City*, Professor Harvey Cox of the Harvard Divinity School, notes that man, in the modern world, is no longer concerned with what theologian Paul Tillich called the "ultimate questions," namely those concerning life, death, and meaning. Cox notes that "... they are obviously not questions which occur to everyone, or indeed to the vast majority of the people. They do not trouble the newly emergent urban-secular man very frequently. They arise, in fact, not from the structures of existence at all but from the ero-

sion of inherited world views and cultural meanings . . . We have found technopolitan man to be pragmatic and profane."

Cox urges the modern church to turn away from metaphysical questions, since these are no longer the questions which people are asking. Instead, he argues, they should enter the social and political arena: "... in secular society politics does what metaphysics once did. It brings unity and meaning to human life and thought. In today's world, we unify the various scholarly and scientific specialities by focusing them on specific human issues . . . Theology today must be that reflection-in-action by which the church finds out what this politician God is up to and moves in to work along with him. In the epoch of the secular city, politics replaces metaphysics as the language of theology."

Harvey Cox's insights into the nature of the modern world and of modern man should by no means be deprecated. He has, indeed, broken much new ground. But too much of his advice has been taken at face value. Too many churches have turned their backs upon the metaphysical questions which he says that man is no longer asking, and have delved fully into the questions of the world. It is proper to be concerned about open housing, the war in Vietnam, hunger and crime. But man also has a spiritual nature which must be nourished, and this spirituality has been virtually ignored. What many young people are searching for is a perspective about life which is no longer presented by the institutions which once seemed to perform this task. The mood of modern religion was captured by Evelyn Waugh when he wrote the following in *Brideshead Revisited*: "I had no religion. I was taken to church weekly as a child, and at school attended chapel daily, but, as though in compensation, from the time I went to my public school I was excused church on the holidays. The view implicit in my education was that the basic narrative of Christianity had long been exposed as a myth, and that opinion was now divided as to whether its ethical teaching was of present value, a division in which the main weight went against it; religion was a hobby which some people professed and others did not; at best, it was slightly ornamental, at the worst it was the province of 'complexes' and 'inhibitions'—catchwords of the decade—and of the intolerance, hypocrisy, and sheer stupidity attributed to it for centuries. No one ever suggested to me that these quaint observances expressed a coherent, philosophic system and intransigent historical claims . . ."

The New Left is asking the very "ultimate questions" to which Tillich referred and which modern theologians say have disappeared from the world. Where they will find answers to such questions in what they view as a materialistic and de-humanized age, is difficult to say. In searching for values, however, many in the student movement have taken the negative turn toward nihilism, a turn which other youthful movements at other times have also taken, much to their later regret.

There is a serious dichotomy between the leaders of the New Left—the Tom Haydens, the Jerry Rubins, the Rennie Davises—and the young people who form the core of the movement, the ones who attend protests and demonstrations, the ones who, in the privacy of their own contemplation, feel depressed and disillusioned and wonder what the future may hold.

The leaders are, in many instances, at least ten years older than the followers. More important, they are professionals. Leading protests is what they do, and it is all that they do. Many of them have the wild gleam in their eyes which indicates that for them the "revolution" is more of a personal obsession than a public necessity. They hope that, after the revolution, it is they who will be called upon to lead the new and liberated society.

We have, of course, seen this before. Revolutionary leaders have always managed to gather followers not by promising the tyranny they, in fact, had in mind, but by associating themselves with the deepest aspirations of the group they sought to use for their own purposes.

Thus, Lenin promised the Russian people bread, peace, and land, not Communism. Castro promised the Cubans constitutional democracy, not Communism. Mao Tse-tung promised the Chinese agrarian reform, not Communism. Yet, once in power, the promises were forgotten and the revolutionary leaders proceeded with their long-established blue-print. Likewise, New Left leaders promise college students alcohol and girls in their dormitory rooms, an end to the draft, and a "purpose" for life, namely the liberation of the "oppressed." It sounds good and noble, and the requisite support has been forthcoming.

The fact that young people have many valid questions to ask, does not in any way diminish the danger of many of the activities, leaders, and organizations which have, in many instances, been blindly entered into by students who were not aware of the long-run implications of their actions.

Many of the leaders of such militant organizations as Students for a Democratic Society do not hesitate to support the use of violence. A leaflet prepared in Toronto, Canada and distributed to S.D.S. chapters throughout the country contains instructions on how to make Molotov cocktails and incendiary time bombs. Urging sabotage as "the next logical step toward obstruction and disruption of the U.S. war machine," the leaflet says that it is ludicrous to think that demonstrations closing down an induction center for a few hours will really hurt Selective Service.

"On the other hand," the leaflet says, "is there anyone who doubts that a small home-made incendiary device with a timing mechanism planted in a broom closet at the Oakland induction center could result in fire and smoke damage to the entire buildings, thus making it unusable for weeks or months? One person with a fair knowledge of chemistry could build such a device easily and cheaply and could plant it with almost no chance of being detected." Steve Weissman, a student leader at Stanford University, expresses the view that time for rational discourse has ended and the time for violence has arrived: "What the University has done is to get us to think for a number of years that social problems can be solved by rational discussion . . . There's no conversation between us and the C.I.A. We're on different sides. I hope people will now see that force is a part of the world . . ."

A similar view was echoed by Steve Kindred, a member of the S.D.S. at the University of Chicago. He said that, "This university owes quite a lot of reparations. This whole society owes quite a lot of reparations. With what the university's done, and the way it's followed in the footsteps of the other major institutions of this society, it may burn some day. It doesn't deserve not to burn."

The incidents at Columbia University in the Spring of 1968 provide an excellent case in point. There were two alleged demands made by the student rebels: (1) a halt in the construction of a gymnasium in Morningside Park, and (2) termination of contracts with the Institute for Defense Analysis. But the take-over of Columbia had nothing whatever to do with these issues. Two graduate students, Dotson Rader and Craig Anderson, presented this information: "Months before, at an S.D.S. conference in Maryland, the decision had been reached to take physical control of a major American university . . . Columbia was chosen because of its liberal reputation, its situation in New York and the fact that it was an Ivy League school.

S.D.S. felt it was important at this time to disrupt a private, prestige, tactically vulnerable university . . ." The issues which were presented were simply pretexts. According to these observers "... the point of the game was power . . . It was revolution, and if it could be shown that a great university could literally be taken over in a matter of days by a well organized group of students then no university was secure . . ." Mark Rudd, the leader of the take-over, later admitted that the issues had, in fact, been mere pretexts.

Another important case in point were the riots precipitated at the Democratic National Convention in Chicago. As far back as November 16, 1967, the *Village Voice* reported the leader of the Youth International Party, Jerry Rubin, as saying: "See you next August in Chicago at the Democratic National Convention. Bring pot, fake delegates' cards, smoke bombs, costumes, blood to throw and all kinds of interesting props. Also football helmets."

Early in 1968 the National Mobilization Committee Against the War in Vietnam, headed by David Dellinger, organized a Chicago project committee and placed Rennie Davis in charge with instructions to work closely with Tom Hayden, leader of Students for a Democratic Society, and Jerry Rubin, of the Progressive Labor Party and also of the Youth International Party, more commonly known as Yippies. Dellinger and Hayden held a press conference in New York on June 29 and were quoted by the *National Guardian* as saying: "We are planning tactics of prolonged direct action to put heat on the government and its political party. We realize that it will be no picnic but responsibility for any violence that develops lies with the authorities, not the demonstrators."

Early in August, Rennie Davis appeared before a meeting of the Chicago Peace Council held at the Lawson Y.M.C.A. He displayed two large 3' by 3' maps of the area surrounding the International Amphitheatre, noting locations where police, National Guard, F.B.I., and other security forces would be situated during the proceedings. He stated that if trouble starts at the Convention, among other things, "the Loop will fall," implying demolition of the downtown Chicago area.

The violence which occurred in Chicago was predicted almost precisely by the August 9th Intelligence Division Report of the Chicago Police Department. That report concluded with this statement: "Due to the talk around the office of the National Mobilization Committee and the general attitude of Rennie Davis and Tom Hayden, the reporting investigator feels that the night of 28 August 1968 there will be wide-spread trouble through efforts of Davis and Hayden. It is felt that there will be trouble in the Loop Area and possibly on the South and West sides. This would be done in an effort to draw the Police away from the Amphitheatre." The issue of the police conduct, the fairness of the communications media, and the role of Chicago's Mayor Richard Daley will remain subject to much discussion. That the police force did over-react in many instances is clear. That this is exactly the response which extremist leaders sought to produce is also clear.

Perhaps the most important lesson to emerge from Chicago was the fact that the violence which occurred in that city was long planned by the most militant members of the New Left. It was carried out under the leadership of men such as David Dellinger, Tom Hayden, and Jerry Rubin, the same people who led the march on the Pentagon. This was no idle political demonstration to its leaders, although it was surely viewed in those terms by many of the innocent and idealistic young people who were its participants. Writing in *The New Republic*, James Ridgeway, an eye-witness observer of events in Chicago, stated the fol-

lowing: "The clashes between police and demonstrators began as calculated maneuvers by the National Mobilization Committee to End the War in Vietnam, and the Youth International Party. The strategy was to confront the police, and thereby demonstrate that America was a police state . . . Following out their scheme to promote a continuing confrontation between growing numbers of people and the police—they figured that the Chicago officials would respond by bringing in more police and troops, and so make clear to all those looking on that Chicago was an armed camp and America was a police state—the radicals talked enthusiastically about little acts of violence, like a stink bomb in the hotel, or dirty words on some walls, to provoke the police and manipulation the liberal McCarthy youths into their own ranks. In effect, the idea was to stimulate a little guerrilla war . . ."

Tom Hayden, a leader of the Mobilization Committee to End the War in Vietnam, was not satisfied with the violence he and his group had managed to provoke in Chicago. Addressing a rally in Grant Park, he urged youths to go home and create "One, two, three hundred Chicagos." Hayden cried: "If they want blood to flow from our heads, the blood will flow from a lot of other heads around this city and around this country. We must take to the streets, for the streets belong to the people . . . It may well be that the era of organized, peaceful and orderly demonstrations is coming to an end and that other methods will be needed."

Since Chicago, violence has increased on the nation's campuses. The Institute of Science and Technology at the University of Michigan was rocked by an explosion last October 14. The bombing was the thirteenth to hit the Detroit area since August and came only two weeks after extensive damage forced the closing of a semi-secret C.I.A. recruiting office in a downtown Ann Arbor office building.

Ann Arbor Police Chief Walter Krasny has claimed the series of bombings may be the work of "anti-establishment militants" at the University of Michigan, while Detroit officials blame "hippies" for the explosions. The far-left National Guardian reported that "Reaction to the bombings in the bombings in the Ann Arbor radical community has ranged from quiet amusement to fantasy to increased discussion regarding the nature and timing of revolutionary chaos and terrorism and their possible relation to politicization of young people and/or mass repression of the radical movement. While some feel that such violence will help increase the consciousness of students, others feel that the level of awareness is now so low that the bombings will do little . . ."

Violence is often proclaimed as the only means by which society can truly be cleansed. The Rev. William Sloane Coffin, convicted this summer of conspiring to violate draft laws, delivered his first sermon of the academic year at Yale University in praise of change, even if change comes in violent ways. He told 300 persons, mostly students, that "life is change, growth, love and readiness to suffer." The Rev. Coffin warned that the current condemnation of violence by political leaders may also be a condemnation of change. He stated: "Jesus, when he threw the money changers out of the temple was no more violent than (Columbia radical student leader) Mark Rudd."

Following this advice, a new publication, Mayday, has appeared. Making light of the violence which has shaken a number of campuses it led off its fourth issue with this verse: "Sabotage, This is Number One and The Fun Has Just Begun." Edited by Andrew Hopkind, James Ridgeway, and Robert Sherill, its November 8, 1968 issue included the following: "The war begun last winter on the Western front, in the rainy season. The guns of February were four Molotov

cocktails thrown at the Naval ROTC building on the Berkeley campus of the University of California . . . The first attack on the Berkeley ROTC building was followed by the burning of a similar center at Stanford. At about the same time, electric power cables strung over the Berkeley hills were cut. Then, three giant electric towers in Oakland were blown to the ground leaving 30,000 houses without power and stopping work at the Lawrence Radiation Laboratory at Berkeley. A few days after the tower was destroyed, a University of Colorado drop-out student turned himself in to publicize his "crime." "I had to do something to stop their machines—so maybe they would listen, so that this war would be stopped," he said."

The majority of those who advocate violence either to change the system or to improve its shortcomings are unaware of the historical consequences of violent upheavals. George Bernard Shaw wrote that "Revolution never lightens the burden of tyranny, it simply shifts it from one shoulder to another." That violence is the solution to our current difficulties is, observing the historical record, very unlikely.

Crusades which initially seek to throw off the fetters of an old order have, in most instances, simply replaced them with new fetters. The French Revolution led to the Reign of Terror, the Russian Revolution to Stalin, the Chinese revolution to Mao Tse-tung. The tyrannies which follow violent revolutions have been infinitely more brutal than the autocracies they replaced. The New Left's advocacy of violence is not its only danger. Its blindness to totalitarianism and its hostility to the traditional American concept of free speech is of equal significance.

Many of the New Left are intolerant of viewpoints other than their own. In his *A Critique of Pure Tolerance*, Professor Herbert Marcuse (termed the "foremost literary symbol of the New Left" by the *New York Times*) states that people who are confused about politics really don't know how to use freedom of speech correctly; they turn it into "an instrument for absolving servitude," so that "that which is radically evil now appears as good." Having established this premise, Marcuse recommends "the withdrawal of toleration of speech and assembly from groups and movements which promote aggressive policies, armament, chauvinism, racial and religious discrimination or which oppose the extension of public services." For him the correct political attitude is one of "intolerance against movements from the right and toleration of movements from the left." The practical result of such a philosophy was to be seen when former Secretary of Defense Robert McNamara had to enter a police wagon to avoid crowds at Harvard, when General Lewis Hershey was forced off the stage at Howard University, when students charged the podium at Brown University as General Earle Wheeler spoke.

A student strike at the University of California brought a significant statement from Charles Susskind, a professor of electrical engineering and a man who had seen at first hand how the nazis created "political universities" in the Germany of the 1930s. An example of the lack of concern with the totalitarian nature of communism may be found in the proceedings of *Students for a Democratic Society, largest of the New Left organizations*. This group included in its Port Huron Statement of 1962 a denunciation of "colonialism, communism, and anti-communism." In 1965 it eliminated from its constitution clauses barring "advocates and apologists of totalitarianism" and opposing "authoritarianism both of communism and of the domestic right"; such provisions, they explained, were "negative and exclusionary" and "smacked of red baiting." As a result many communists have flocked into the ranks of S.D.S. Commenting on the group's 1968 convention, the *New Republic* observed

that the Progressive Labor party—the Peking-oriented communist organization—"is heavily represented within S.D.S. because the party sees S.D.S. as a recruiting ground for new members." It noted that at the convention P.L. delegates "continually pushed the idea that students should ally with the traditional working class in a common 'struggle' against the ruling class."

The unrest on the part of students is, therefore, a difficult and complex phenomenon to adequately understand. On the one hand, there are many honest young people with valid grievances, asking important questions. On the other hand, there are false leaders, attempting to use this idealism for their own ends, many of which are totalitarian and dedicated to the destruction of the American society.

It is essential that young people be made aware of the real nature of the New Left activists who are attempting to use them. It is also essential that society show some concern for the valid grievances they have. This generation must come to grips with a complicated world, and all of us together must plan for a future in which our traditional view of the dignity of man, free speech, and orderly procedure will be maintained.

College administrators and legislators who condemn all young people for the excesses of a few simply compound the problem. Those who are willing to accept the excesses, as many college administrators seem surprisingly willing to do, are doing themselves and the society a disservice. No one should talk with those who have committed violent acts of destruction about their grievances. But no grievances about which students wish peacefully to talk should be considered out of the bonds of discussion.

Society, however, must defend itself from those who advocate the use of violence to destroy it. This is the goal of the leadership of the S.D.S. and other militant New Left groups, although it is not the goal of the majority of the rank and file members. If society will not defend itself, if the university will not defend itself, it is an indication that the revolutionaries are right, that America has lost the will to continue, that the intellectual community believes that nothing is worth preserving. We do not believe that this is the case.

"HE WHO SAVES"

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 26, 1969

Mr. DERWINSKI. Mr. Speaker, a year ago I inserted into the RECORD with introductory commentary, a review of a book by Col. Kazimierz Franek-Acmecki telling of the Polish efforts to save Jews during World War II.

In recent weeks we have had statements made on the House floor by Members who are unaware of historic facts and in effect have charged that Poles are guilty of anti-Semitism. The facts are that the Moscow-imposed government of Poland has joined the tyrants of the Kremlin in anti-Semitic propaganda and activities in conjunction with the Russian Middle East adventure.

It must be emphasized, Mr. Speaker, that the people of Poland do not subscribe to the anti-Semitic policies of the government which oppresses them.

Due to its present significance, I ask consent to place into the RECORD at this

point, my insert as it appeared May 2, 1968.

The insert follows:

"HE WHO SAVES"

(Motto: "He who saves life . . . saves as if it were the world". (Polish efforts to save Jews during the Second World War.) Author: Colonel Kazimierz Franek-Acmecki.)

LONDON, 1968.—In April, 1943, the Germans had started final liquidation of Jewish people in the Warsaw Ghetto. The Jews offered an armed resistance known as "Warsaw Ghetto Uprising". There is now the 25th Anniversary of it.

On every anniversary of the fighting in the Warsaw Ghetto all major Jewish groups pay homage to the heroes who laid down their lives in the struggle. The fighters in the Warsaw Ghetto have become a symbol of the fate of the Jews in the World War II. They were an inspiration to the troops fighting for the future of Israel in the campaigns of 1948 and 1967; victorious campaigns which may serve as an example to the most efficient and brave armies.

The hopeless fight in the Warsaw Ghetto will remain forever a symbol of the struggle for human dignity. It has also another significance. It was an act of protest to the whole world for having allowed the infliction on the Jews of unprecedented sufferings as well as irremediable biological and material losses. The protest was sealed in the West by the suicide of Szymul Zygielbojm.

How much did the Jews suffer? How high were their losses?

Statistics attempt to put into figures the number of people massacred. If the actual figures of the victims approximate to the truth—there is no established norm or measure with which to calculate or give a true picture of the enormity of the sufferings inflicted on the Jews by the Germans. This cannot be assessed in figures, nor can human imagination encompass it.

Documents surviving from this period books and memoirs describing the experiences of Jews, throw light on mere fragments, on the fate of a group, on an extermination camp, on individual bereavement. They cannot give a full picture of the sufferings, of their infinite variety of shades; the heart throbs; the agony of mothers helplessly watching the death of their children; the tragic groans of hundreds of thousands dying of starvation, cold and ill-treatment; the experiences of millions of human beings suffocated in gas chambers.

He who has not actually lived through this nightmare, or did not witness it, will never understand the depth and extent of horror facing those condemned to destruction. For a very long time the West would not believe the information relayed from land.

The extermination was taking place within sight of the Polish people; they were the direct witnesses of the horror, but by no means passive witnesses.

This book is to give testimony of the behavior of the Polish nation regarding the extermination of the Jewish people. It shows that, in addition to the spontaneous initiative of the Polish people, the Polish Underground State, although itself in the throes of a deadly struggle with the invader occupying the country, created a special extensive organization to bring assistance to the Jews.

The Illinois Division of the Polish American Congress, in conjunction with publication of this book is forming a supporting Committee in Illinois. The Committee is headed by Atty. A. A. Mazewski, President, Polish National Alliance; Hon. John C. Marcin, city clerk, city of Chicago; Hon. Judge Thad. V. Adesko of Chicago; Edward J. Derwinski, M.C., and Dr. Edward C. Rozanski, President, Polish American Congress, Illinois Division. Many outstanding members of Illinois will be invited to join this project.

NEED TO SOLVE THE ACUTE PROBLEMS OF THE SMALL SHIPPER

HON. FRED B. ROONEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 26, 1969

Mr. ROONEY of Pennsylvania. Mr. Speaker, Charles D. Roche, the executive vice president of the Freight Forwarders Institute, has made clear the position of his member freight forwarders to cooperate with other transportation modes and the Government in solving acute problems in the movement of freight. His speech on May 22 before the Federal Bar Association Council for Transportation Law and Water Carrier Law Committee pointed out the crucial problems involving small- and medium-sized businesses in sending and receiving shipments. Mr. Roche's remarks are worthy of consideration by persons interested in transportation, and I am including them in the RECORD at this time, as follows:

SPEECH BY CHARLES D. ROCHE, EXECUTIVE VICE PRESIDENT, FREIGHT FORWARDERS INSTITUTE, MAY 22, 1969

I'm pleased to see you all at this "Guess Who's Coming to Dinner" luncheon.

And, I want to especially thank Neil Garson and Herb Mutter, the dotting parents of the Council for Transportation Law and the Water Carrier Law Committee.

I really didn't know much about some kinds of discrimination until I took off my government uniform and joined the dock crew of the Freight Forwarders Institute.

But thanks for the equal time. The boys at the Federal Communications Commission must have got to you.

I've had considerable experience with the equal time law in another vineyard. And I've been toying with an executive reorganization plan that would merge the FCC and the ICC so as to maximize the inherent advantages of providing equality by intermodal regulation, and without sex and violence in the living room.

Following Mr. Perlman of Penn Central and Mr. Beardsley of ATA to your podium is like promoting the abandonment of the cigarette habit. I get one-third time and a paucity of conversions. But it's free time and for that I am most appreciative.

I am here today to launch a rescue operation to save a real competitive common carrier force in the freight transportation resources of this nation.

At this moment the Freight Forwarders Institute is confronted—

With raving and ranting opposition from long haul truckers who control the American Trucking Associations;

With a sort of "I'll hide behind the bushes" defacto opposition of the American Association of Railroads;

With an Interstate Commerce Commission that can find 9,000 problems without proposing any seemingly plausible solutions;

With a Department of Transportation that's still in its nursery years;

With a Congress that can count its "no" votes perhaps better than its "yeas"—but which is awakening to the problems;

And with a new White House administration which so far can only "thank you for your expression of interest."

Now, before your tears of sympathy flood upon me, let me suggest the possibility of having 200,000,000 allies—that's all of us who as individuals are becoming more and more experienced with increasingly lousy service and spiraling prices when sending and receiving freight—particularly small shipments.

And then there are the thousands of small businesses who fear being wiped out by prohibitive shipping costs and problems. And there are the truckers and railroads and suppliers whose services and goods we purchase.

The plain fact is that freight forwarders as common carriers are not treated equally as other regulated common carriers. There is only one real consideration and that is fair and equal treatment under law—without fairness and equality, competition goes out the window.

Right about now, I should explain what a freight forwarder is and what function he performs. In the words of the United States District Court for the Northern District of California:

"A freight forwarder is one who in the ordinary course of business assembles and consolidates small shipments into a single lot, assumes the responsibility for the transportation of such property from a point of receipt to a point of destination, utilizes the services of carriers by rail, water and motor vehicle to help accomplish the movement, breaks the consolidated shipment into its component parts, and distributes the goods to their destination point."

The transportation officials of the country are waking up to the problem of handling small shipments. It is relevant to note that the domestic freight forwarder supplies services that are used extensively by small and medium sized shippers. About 70 percent of all of the shipments handled by domestic freight forwarders weigh less than 300 pounds.

In serving the small shipper, the freight forwarder ought to be his bargaining agent with the railroads and trucking companies. There is no practical way that a small shipper can even obtain railroad freight services directly.

Although the freight forwarder is geared to help the railroads help the small shipper, he operates in a straitjacket that prevents in many instances competitive or realistic rates. I noted with interest that Mr. Alfred E. Perlman, President of the Penn Central, in his talk before you on your January 28th luncheon, stated three times that railroads cannot afford to carry some commodities at a loss and "make up the difference on high-rated commodities." I can assure you that the railroads are not losing money on freight forwarders' cargo. We are among those users of the railroads who are subsidizing the rest of the operations by providing them \$100 million profitable rail business.

Forwarders now pay the published tariff rates of the railroads and assume the expense of assembling and consolidating small shipments. After assembly and consolidation, the freight forwarder also accepts through common carrier liability for the through movement of each shipment.

The carload, less-than-carload rate structure might appear to be a viable basis for the freight forwarder to do business. There are two basic problems with it. First, carload rates are available to any one, including non-regulated associations of shippers. Second, common carrier trucking companies which utilize the services of railroads under the same circumstances as freight forwarders pay approximately 30 percent less than the freight forwarders for identical hauls.

As common carriers, freight forwarders should be able to negotiate rates with railroads in the same manner as common carrier trucking companies can do. The Interstate Commerce Act, however, denies us this right. Even though common carrier trucking companies can and do negotiate privately for space with the railroads, the American Trucking Association has successfully thwarted proposed legislation that would afford freight forwarders the same operating economies.

The domestic freight forwarding industry because of inequities in the Interstate Commerce Act is in serious trouble. Freight for-

warders are carrying less freight today than they were fifteen years ago. We have been forced out of the short haul business almost entirely because of our inability to compete with trucking companies under existing unrealistic rate structures.

Approximately 60 per cent of our business has been lost to non-common carrier shipper associations which are able to utilize railroads under rate structures that are just as favorable as those which the regulated freight forwarder can obtain. The shippers associations, I might say, are comprised largely of extremely large shippers and in themselves will not offer any real benefit to small shippers.

It is a tragedy and irreparably damaging to our national transportation policy for freight forwarders to be forced out of competing for important segments of business. Small and medium sized shippers suffer and a giant step is being taken toward making it practically impossible for small business to continue to engage in interstate commerce.

I consider it rather ironic that Mr. Peter Beardsley, the General Counsel of American Trucking Associations, in his talk at your March 20th luncheon, stated that he could not—

"Remember a single amendment to the Interstate Commerce Act in the last twenty-five years which was enacted over railroad opposition."

There could hardly be any bleeding hearts insofar as the American Trucking Associations is concerned since by any objective analysis it is perhaps the most powerful and influential lobbying group on Capitol Hill. Under these circumstances, it is not difficult to see why the freight forwarding industry, which is tiny in comparison to other common carriers, has not yet achieved parity under the Interstate Commerce Act.

Not to be outdone by the railroads as blockers, in the last fifteen years the American Trucking Associations has been responsible for defeating every legislative proposal that would have offered any material benefit to the freight forwarding industry.

In addition to the inability of the freight forwarder to enter into joint rate agreements with railroads, as common carrier trucking companies can do, the freight forwarder is at a number of other disadvantages under the Interstate Commerce Act. For example, the freight forwarder cannot acquire a short haul trucking company even though such a trucking operation in today's market might be essential to its assembling and distributing functions. The inability of a freight forwarder to acquire any other carrier under the Act is an example of the inequitable statutory treatment which the freight forwarder receives.

Under existing law, a railroad or a motor carrier or a water carrier may acquire control of any other carrier of the same or of a different kind, if the acquisition is first approved by the Interstate Commerce Commission as being in the public interest and as being in conformity with other standards set forth in the law. Any of these carriers may acquire control of a Part IV freight forwarder without any ICC approval whatsoever. A freight forwarder, however, is prohibited from acquiring control of any other carrier of any kind, although it may acquire another freight forwarder without approval. This status of the law has led to the situation where motor carriers and railroads have acquired and do own freight forwarders. Motor carriers, in fact, already own more than 25 per cent of the forwarding industry.

In order to improve their services to the public, freight forwarders obviously need the right, where economically sound, to acquire adjunctive carriers, particularly short haul motor carriers for use in the gathering and distribution of freight forwarder traffic. Freight forwarders now operate their own trucks within the terminal areas of cities, but

they cannot go outside in order to reach industries which for 20 years have been moving increasingly to suburbia. Coordination is the basic function of freight forwarding, and if given the right to buy supplemental truck lines, forwarders could materially advance transportation coordination. As in the case, however, of other legislative proposals that might have offered some benefit to the freight forwarding industry, the last legislative proposal, offered in the 88th Congress, sponsored by the Interstate Commerce Commission, which would have permitted freight forwarders under certain circumstances to acquire short haul common carrier trucking companies, was defeated through the efforts of the American Trucking Associations.

I have been around this town long enough to know that I can't beat the trucks, the railroads, the shippers associations, and the government. At least not at one time with one hand tied behind my back.

I also know that this country won't solve its transportation problems with every interest shooting at each other. The forwarders have convinced me that they will try to help solve problems, if given a fair shake. I hope you will all exert influence to bring about a cooperative effort in this direction.

SBANE'S PROPOSALS FOR CONGRESSIONAL ACTION

HON. F. BRADFORD MORSE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 26, 1969

Mr. MORSE. Mr. Speaker, on May 21, the Smaller Business Association of New England—SBANE—met with the House and Senate Small Business Committees and the New England congressional delegation to present their specific proposals on behalf of small businesses. As usual, the presentation of SBANE was imaginative, informative, and thoughtful. The subjects covered by the SBANE Washington presentation team included the Small Business Administration, private pension plans, Government procurement, labor relations, patents, transportation, and taxation.

SBANE, which was founded in 1938, is a private, nonprofit, nonpartisan association of small businessmen throughout New England. It has been effective in promoting and supporting legislation and governmental activities beneficial to small businesses. The proposals were introduced by Mr. Douglas S. Dillman, the president of SBANE and vice president of Horn Packaging & Paper Co., Cambridge, Mass. The presentation was delivered by Roland L. Sutton, Jr., chairman, Washington Presentation Committee and vice president, Maine Products Co., South Paris, Maine. I recommend these proposals to my colleagues for their careful reading and, at this point, I submit them for inclusion in the RECORD:

1969 SMALLER BUSINESS ASSOCIATION OF NEW ENGLAND, INC., PROPOSALS FOR CONGRESSIONAL ACTION

INTRODUCTION

Gentlemen: We welcome another opportunity to visit with you at our nation's Capitol and deliver our annual Washington Presentation of Proposals for Congressional Action on behalf of our nation's small businesses.

SBANE, as the only regional Association for small business in the country, is composed of a cross-section of small companies from the six-state New England area. Small businesses from Maine, New Hampshire, Vermont, Connecticut, Rhode Island and Massachusetts join our Association because they believe through joint, unified action they can fulfill many of the needs of small business.

SBANE's member firms range from the one and two employee company with total business in the thousands to employers with up to 500 on the payroll and volume in the millions. Over 50% of the 700 members are manufacturers with products that depict the versatility and ingenuity of small business. A myriad of service firms, retailers, wholesalers, distributors, etc. make a major contribution to our New England economy and compose a truly representative body of our American free enterprise system.

The various programs of this group action include conferences and seminars, often held with leading New England universities, to provide opportunities of continuing education in improving managerial skills and exploring business possibilities. Best known of the SBANE educational programs is our annual "Live-In" Seminar at the Harvard Business School which has been attended by over 1,000 small business executives in over a decade.

Legislation on the national level has been a major interest of the Association since it was founded in 1938. By making known the needs and problems of small business, we have contributed through the years to much of the legislation beneficial to small business.

The Congress has compiled an impressive record of rallying to the cause of small business and we genuinely appreciate your cooperation and support.

This Presentation is a result of several committees working long and hard to sift and sort through key issues affecting small business today. We now offer the essence that is distilled from these meetings and urge your continued attention and support to small business—the foundation of our American economy.

SMALL BUSINESS ADMINISTRATION AND SMALL BUSINESS INVESTMENT COMPANIES

The Small Business Administration Act of 1953 is by far the most significant piece of legislation passed on behalf of the nation's small business. The wording of the Act is indeed impressive and provides the general outline for preserving free and competitive enterprise for the 5½ million small companies who provide employment for 40 million or 50% of the total work force and account for some 40% of the country's gross national product. Passage of the Act finally recognized that the problems and needs of small business were different from the multi-billion dollar corporation. As an Association which has supported and studied the SBA in the past 16 years, we are impressed with the many accomplishments this small agency has recorded. However, we also believe that much more must be done to fulfill the wishes of the people and the intent of Congress.

There have been frequent irregularities in the smooth functioning of this agency through insufficient funds for the loan programs, lack of progress in developing greater procurement opportunities and irregular direction. Time and energies have been expended to defend the independent status of the SBA amid rumors that it would become part of other Federal agencies. All this, we believe, has been at the expense of building a bigger and better agency for the nation's small businesses.

1. Excessive turnover in SBA Administrators

In the 16 year history of the SBA, there have been 10 SBA Administrators and 9 in the last 10 years. SBANE believes that the SBA has had many dedicated administrators

who have made a great contribution to this agency. However, short terms of leadership make it difficult to maintain continuity of direction and purpose.

Our Association recommends that the appointment of the Administrators be for a term of four years thus giving the administration continuity in carrying out its responsibilities as authorized by the Congress.

2. Keep SBA an independent agency

This Association is increasingly concerned and alarmed by recent reports that raise doubts about the continued independence of the Small Business Administration. As recently as March 5, 1969, Secretary of Commerce, Maurice Stans, stated before the National Press Club that the SBA "by definition belongs in the Department of Commerce."

SBANE has been actively involved in advocating the independence of this agency even before its creation and views with great alarm the recurrence of rumors that persisted with some strength in 1966.

After full debate on the SBA Act of 1953 by our nation's lawmakers, it was their contention that the SBA must be completely independent to be effective. It is unfortunate that the energies of the Congress must be devoted to defending the independence of this agency rather than to building and improving on its present effectiveness.

Our Association is strongly opposed to any change in present status of the SBA and looks upon the Office of Minority Business Enterprise, newly established within the Department of Commerce, to promote and expand business ownership by minority groups as an erosion of the responsibility of the SBA since the SBA has functioned effectively within this area for some time.

We are convinced that the only reason the SBA remains an independent agency today is due to the loud vocal outcry in support of the SBA's present status not only by the members of the Senate and House Small Business Committees but by concerned Congressmen who truly care about our nation's small businesses.

Our feeling on this subject is best summarized by this quote from an SBANE member's letter to his Congressman:

"... if there were to be a consolidation of these two agencies, the SBA should take over the Department of Commerce. I make this suggestion on the grounds that the most important segment of any structure is the foundation. Small business is the foundation of the American economy."

3. Extension of SBA lease guarantee program

This Association strongly endorses the recommendation of the Small Business Advisory Council to the Senate Small Business Committee of extending the present SBA Lease Guarantee Program to include other types of leases such as those for equipment, machinery, tools and other property suitable for leasing.

The present Lease Guarantee Program empowers the SBA to assist businesses in renting space in shopping centers. With the rapidly growing popularity of the leasing business today, we believe extension of the SBA Lease Guarantee Program would help to alleviate some of the financial inadequacies in obtaining equipment and tools to keep pace with our expanding, competitive economy.

We ask your support of this recommendation of the Council.

4. SBANE supports establishment of capital bank—S. 1213

For over two decades, our Association has sought solutions to the problems faced by small businesses in need of equity capital to grow and modernize to meet competition. In 1947 the Committee for Economic Development issued its policy statement "Meeting the Special Problems of Small Business" and suggested the idea of a "capital bank" to

help meet the financial needs of small business.

SBANE immediately seized on this idea since our own surveys, as well as others including the Federal Reserve Bank in Boston, showed an ever-widening gap between the funds which a small businessman who needed financing could raise himself from family and friends and the smallest amount which would interest an underwriting company or insurance company.

From that time on SBANE pushed the Capital Bank idea publicly, privately and in its testimony before various committees in the Congress, gaining increasing interest and support as the years passed. Ultimately, in 1958, the Chairman of SBANE's "Capital Bank" Committee testified before the Senate Banking and Currency Committee strongly supporting the Johnson-Patman-Sparkman Bill which later became the Small Business Investment Act of 1958. In many of its provisions, this bill was a far cry from the one Capital Bank in each Federal Reserve Bank District which we had envisioned, but at least it was going in the right direction.

During the past 11 years, we have followed the progress of the SBIC program with great interest. Of the various changes and amendments that have been made, practically all of them have been along the lines which we originally recommended in connection with our "Capital Bank".

The Capital Bank Bill—S. 1213—was introduced earlier this year with 19 Senators as cosponsors and will be considered by Senator Sparkman and his Banking and Currency Committee.

We support this legislation, designed to give SBIC's the opportunity to do a bigger and better job.

The establishment of the Small Business Capital Bank as planned would serve as a secondary source of financing for SBIC's, and eventually lead to the elimination of all government dollars in this program. SBIC's represent a unique and productive marriage of private enterprise and government assistance to accomplish the important national goal of providing the means for the future growth and expansion of small business.

PROCUREMENT

A saying used many times by large prime contractors and Government agencies, is "It is good business to do business with small business." SBANE asks simply, "Why don't they?"

At the recommendation of the Procurement Sub-Committee of the House Select Committee on Small Business, an ad hoc Government-Industry Committee was named by SBA to study methods and procedures to preserve and strengthen the position of small business in the subcontracting field under existing and changing conditions of Government procurement. SBANE appreciated the opportunity to serve on this committee but was distressed by its upstream fight against preset unyielding convictions. We do not concur with the committee on some of their recommendations and feel that Congress, when they review the report of this committee, with their keen perception, will unveil facts that will benefit the smaller businessman.

Obstacles to small business participation in government procurement continues to include boilerplate, source qualification and accounting procedures, all of which drain profits and discourages highly qualified small companies.

The continuing decline in the percentage of small business military procurement from 21.8% in 1966, to 18.8% in fiscal 1968 and thence to 16% for July to December 1968, a total of 5.3% since 1966 indicates to SBANE the need for Congressional action.

1. Commission on Government procurement

SBANE feels strongly that a complete study of Government procurement and the

ASPR is long overdue. We, therefore, support the establishment of a Procurement Study Commission, provided small business is represented. This Commission should review the entire field of Federal Government procurement practices and regulations. Bills of this nature were not allowed out of Committee last year. We request that H.R. 10070 and H.R. 474 be reported out and that you vote favorably for this commission.

2. Disputes between prime and subcontractors

The small businessman, experienced with Government procurement subcontracting, generally feels the need for direct access to the Contracting Officer in the event of contract disputes.

SBANE has proposed for several years that the matter could be best solved through administration regulation, such as a recent suggestion that the Small Business Specialist be allowed to pass on to the Contracting Officer, claims that he felt were valid.

In view of Government agencies' reluctance to make any change and in view of many possible terminations, in the near future, needing an expeditious settlement, SBANE will request and support legislation such as H.R. 8928, which gives the subcontractor the right to sue the Government for non-payment after expiration of a reasonable period of time and SBANE would support legislation requiring compulsory and binding arbitration.

3. Small business and research and development

There is a vast reservoir of highly developed skill and scientific knowledge in numerous small firms, much of which is not being utilized under Government contracts. The Small business share of defense R & D prime contracts in 1966 was a dismal 4.4%. In 1967 the total share dropped to 3.9% and in 1968 to 3.5%. This trend must be reversed. R & D in the past has frequently enabled a small business to establish a firm position in the competitive market place. Lack of small business set-asides in this area is a matter of serious concern. Also many unrestricted procurements in this area appear to be directed toward a single technical authority.

Another area of concern which appears to be discriminatory is the procurement personnel's refusal to discuss or explain the reason for determination of non-responsive or the technical deficiency of their proposal until after an award has been made. This, of course, denies the small businessman any rights of appeal or reconsideration.

4. Right of small business to appeal

Present regulations require that a small business bidder be notified that his bid has been declared non-responsive in only two situations: (1) in the judgment of the pre-award survey team the small business lacks the necessary financial resources to complete the contract or, (2) that he lacks the production capability to meet the required delivery schedule. Other instances of possible judgments of non-responsiveness are: lack of tenacity and perseverance, lack of integrity and does not meet the requirements of applicable laws and regulations. In the first two situations the small business is notified of the rejection of his bid and then may appeal to the SBA for a Certificate of Competency. In the other cases there is no appeal from the judgment of the Contracting Officer nor is he notified that his bid is rejected nor the reasons for rejection given. We feel this is grossly unfair to the small businessman. In our opinion the right to appeal to the SBA for a Certificate of Competency should apply to all small business bids rejected as non-responsive.

TAXATION

1969 appears to be the year of the Tax Reform. Not since the Boston Tea Party has there been so much momentum created for

a more equitable system of taxation. For several years SBANE has sought tax adjustments on behalf of small business and has gained some specific measures of success. We have always weighed our tax proposals not in the selfish good of small business or at the expense of someone else, rather our concern has been that the financial conditions of a new or growing small company are very different from a large company that has reached a more mature rate of growth. We have urged for the adoption of tax programs that would be a stimulus to increased investment of internal earnings and a freeing of capital for this expansion in new facilities through liberalized rates of taxation. The end result of freeing more working capital for small business will be greater growth and fuller employment in the years ahead.

We also support the extension of the 10% surtax if measures are taken to reduce government spending.

1. Investment credit

A. SBANE urges retention of 7% investment credit

SBANE opposes the repeal of the investment credit because the loss of this credit would be an especially severe blow to small businesses which look to their after-tax profits as the prime source of funds for capital expansion. Small businesses must be encouraged to grow and to become efficient producers and it is for this reason that we urge that the credit be retained. We believe the credit must be retained as an incentive to business to modernize its plant and equipment. Efficient production will help obtain fuller employment and will keep American business competitive in the world market. We recommend that other fiscal measures be adopted to offset the credit's inflationary effects. However, in the event Congress does choose repeal, we urge that the credit be retained for the first \$50,000 of annual investment in qualified property.

B. Elimination of credit limitation for small business

Taxpayers are now entitled to claim investment credit only to the extent of their first \$25,000 of tax plus 50% of their tax in excess of \$25,000. Carryovers and carrybacks of investment credit in excess of that limitation are permitted. Many small businesses are unable to utilize investment credit in the year earned or to carry it back to a preceding taxable year. Thus, to avail themselves of that credit they must await the realization of taxable income in a future year. We recommend that small businesses be exempted from the limitation and that they be permitted to receive a refund of tax in a loss year. Since large corporations are almost always able to use all of the investment credit in the year earned, the existing limitations usually affect only small businesses. This recommendation would place small business on the same footing as larger businesses and would also cause a significant reduction in the administrative burdens necessitated by the filing of claims carrying back unused investment credit to earlier taxable years.

2. Support Interstate Taxation Act

For the past two years we have depicted the dilemma of small business when engaged in interstate business as the Jungle of Uncertainty in determining if subject to the tax and the Jungle of Mystery in trying to compute the tax.

Last year on May 22, H.R. 2158, a bill to remove the state-imposed burdensome tax collection requirements, passed the House by a 3 to 1 margin 284-89 and only one House member from New England did not vote for this bill. Since the Association has been actively involved in gathering support for H.R. 2158, we were very pleased with your vote which, coincidentally, was taken on the day of our Washington Presentation.

Since no action was taken by the Senate

another Interstate Taxation Bill is now in the House—H.R. 7906. This bill is designed to relieve small business from the inequities and onerous record-keeping duties which result from the multi-farious income apportionment rules used by the various states. We believe this is one of the most important small business bills in the 91st Congress and again urge your strong support of the Interstate Taxation Bill.

3. Repeal of accelerated estimated tax payments

SBANE recommends the repeal of those provisions of the Revenue and Expenditure Control Act of 1968 which removed the exemption from estimated income tax payments for the first \$100,000 of tax. This acceleration in tax payments has caused undue and inequitable hardship on small businesses since in many cases more tax is paid in advance than is finally determined to be due when the company's tax return is filed with the consequent drain on badly needed working capital.

4. Depreciation guidelines

In 1962 depreciation guidelines were adopted by the Treasury Department which accomplished an overall reduction in the useful lives of plant and equipment allowable for depreciation purposes. The guidelines also contained so-called objective tests which were to be the tools through which contests arising out of the determination of estimated useful lives were to be settled. These tests known as the reserve ratio test and the guideline class life test have proved to be extremely complicated and have not substantially reduced controversy. We recommend that Section 167, I.R.C., be amended to permit taxpayers to elect any or all of the lives contained in Revenue Procedure 62-21 and that the reserve ratio test and the guideline class life test be abandoned. This will permit the use of the uniform liberalized lives without the threat of protracted litigation with the Internal Revenue Service.

5. Accumulated earnings tax

A. Increase Minimum Accumulated Earnings Credit

Corporations which retain their after-tax earnings beyond the reasonable needs of the business and for the purpose of avoiding a dividend tax to their shareholders are subject to penalty taxes. The Internal Revenue Service and taxpayers often differ in their understanding as to the reasonable needs of the taxpayer's business. In 1954 Congress recognized that small businesses were frequently unable to accumulate funds for expansion because of the threat of the accumulated earnings tax. Further, the difficulties of proof and the cost of litigation frequently proved to be insurmountable obstacles to smaller companies in defending against the imposition of the penalty. For this reason Congress provided a minimum amount of \$60,000 which could be accumulated without the necessity of providing reasonable business needs. The exemption was increased to \$250,000 to permit small businesses to retain funds necessary for expansion without the constant concern that they may be subjected to a penalty tax.

B. Permit Accumulation to Pay Death Taxes

The stock of a small business is frequently the major asset of the estate of a deceased stockholder. Section 303, I.R.C., permits (within limitations) the redemption of shares from the estate in an amount equal to the estate and inheritance taxes and funeral and administration expenses without the imposition of a dividend tax. This redemption alleviates the necessity of a forced sale to outsiders to obtain the necessary cash. However, the corporation must have accumulated the funds through earnings in order to enable it to redeem the shares. The Internal Revenue Service takes the position

that the accumulation of earnings for such a purpose is not a business purpose and, absent any other business purpose, will impose the penalty tax. SBANE recommends that Section 535, I.R.C., be amended to provide that accumulations for the purpose of redeeming the shares of a stockholder to pay the taxes and expenses specified in Section 303, I.R.C., will be considered accumulations for the reasonable needs of the business.

6. Increase first year depreciation allowance

The Small Business Tax Revision Act of 1958 added Section 179 to the Internal Revenue Code permitting businesses to claim an annual deduction for 20% of the first \$10,000 of investment in machinery and equipment. This deduction was designed primarily to aid small businesses to finance the cost of new equipment. The deduction is not a grant or a subsidy to business since it merely accelerates to the first year a deduction which would otherwise be obtained over the useful life of the property.

The cost of new equipment and the needs for funds for expansion have increased substantially over the past 11 years and for these reasons, SBANE recommends that the base upon which the 20% allowance is determined be increased to \$50,000.

PATENTS

A U.S. Department of Commerce study published in 1967 reported that some \$100 billion had been spent in the past 20 years on research and development, a large share, by big business with the facilities and manpower. Despite this enormous investment, over 50% of the technical innovations in the U.S. are the creation of individual inventors and small business. For this reason during the past two years, this Association has given careful study to the recommendations of former President Johnson's Commission on Patent Reform and legislation that has been filed in the Congress as a result of this study.

We would urge your opposition to any legislation that would curb this individual and small business incentive to invent and innovate.

1. Favor "first to invent" over "first to file"

Of particular interest to small business is the proposal to change the system of priority from "first to invent" to "first to file" or various modified "first to file", rules that have been submitted to the Congress.

SBANE opposes legislation that would change the present system under which patents are issued to the first inventor.

The cost of a patent application to an inventor is from \$500 to \$1,000 and higher in complex cases. These changes in the patent laws would impose a serious financial burden on small business and the private inventor who often lacks the funds to file patent applications that have not demonstrated commercial utility. These inventors must conserve their funds to develop inventions for which there is substantial expectation of commercial use and value. Large businesses, however, can afford to file and prosecute patent applications on all likely inventions without knowing their commercial value.

The present cost to the Patent Office in conducting first invention contests and interferences is less than \$250,000 with a staff of 20 employees. This low expenditure of manpower and money to insure the patent goes to the first inventor is a good indication of the efficiency, economy and reasonableness of the present system. Furthermore, interferences are won by the inventor second to file as often as they are won by the inventor first to file. The proposed changes would encourage half-baked applications that would lead to more expensive contests and a greatly increased workload contests and a greatly increased workload on the Patent Office.

These proposed changes would preclude an inventor from contesting the priority of an

invention merely because he failed to file a patent application within a prescribed period before another who claims the same invention.

We ask that you resist any changes in the patent laws from the present first to invent system that has successfully protected and encouraged American inventiveness for so many years.

2. U.S. trademarks

A bill in the Congress, S. 766, The McClellan-Scott Bill, amends the Trademark Act of 1946. It broadens and puts more teeth in the Trademark Act. The bill is broadened to protect not just registered trademarks, but to protect against "unfair competition" which is generally defined in four categories: (1) that which is likely to cause confusion or deception as to the origin of products or services, (2) that which falsely represents goods, or misrepresents other's goods, (3) that which wrongfully discloses or misappropriates trade secrets, and, (4) that which otherwise misrepresents or misappropriates.

The Bill is strengthened by allowing recovery of profits, damages, court costs and attorneys' fees and permits the court to take possession of all violating paraphernalia.

SBANE favors the changes proposed by this bill because of the broadened protection against unfair competition and the increased recovery. The latter makes litigation less burdensome from an economic standpoint and so benefits small business.

3. U.S. Government relations to patents

A. Inventions infringed by Government Contractors (H.R. 2898—90th Congress)

It has been proposed by the American Bar Association and in H.R. 2898 that Federal agencies adopt as a policy that the government procure a patent license from the owner of any patent which will be infringed by a government procurement and that the government pay the owner a royalty no greater than the lowest commercial rate for the license. H.R. 2898 proposes that the government royalty be added to the bid of all unlicensed bidders. The ABA proposes that invalidity or non-infringement of the patent can be shown by the non-licensed being reasonably successful and does get the government decide these matters.

Small business may gain more than it loses from the general proposition of pre-procurement licenses. Small business usually bids only on government procurements for which it has particular competence, which usually means some patents. H.R. 2898 will put such a small business in a better bidding position.

NASA has practiced on a limited scale "Instant Licensing" which is similar to pre-procurement licensing for over a year. It has been reasonably successful and does get the work done.

B. NASA and AEC contracts

The contractor with these agencies gets no title to any inventions conceived or first reduced to practice in performance on the contract. The contractor can petition the agency for a waiver of title (subject to a government license) and succeeds by showing contractor's ability to promote the invention for the public's benefit. Big businesses can do this, but small businesses frequently cannot.

SBANE proposes that small business not be obliged to show the capacity to promote the invention, but only show a willingness to license others to promote the invention, in order to qualify for a waiver of title.

C. Armed Forces Contracts

The contractor with these agencies gets title subject to government license according to ASPR provisions. Clearly, these inventions are not the subject for "Instant Licensing" or pre-procurement licenses provided for in H.R. 2898.

SBANE proposes that exceptions be made

to the ASPR provisions with respect to particularly significant inventions made by the contractor. SBANE proposes that the contractor in such cases need not give a royalty free license to the government; but enable the contractor to give a license for minimum royalty similar to the pre-procurement license proposed in H.R. 2898. Thus, the contractor would be rewarded for his significant invention even though he would not be able to compete with larger businesses in the implementation of the invention for government use.

PENSION PLANS

Social Security and private pensions are the two major systems that provide a measure of financial independence to persons at time of retirement. In the few decades since the enactment of the Social Security Act, millions of people and billions of tax-dollars have come under its influence. The private pension system which is much older than Social Security, was propelled to multibillion dollar status during World War II when wage ceilings precluded salary competition among employers for scarce labor.

Deferred compensation through private pensions cover over 25 million people and have assets of about \$100 billion.

The most striking difference between the two systems is the difference between mandatory and optional; and it is this difference that makes the private pension system the more fantastic. While the private pension arises from an assortment of factors (for example, competition for good employees and collective bargaining agreements) it remains that the employer has paid over \$100 billion to promote the secure and dignified retirement of his employees all without the compulsion of legislation.

Because the money that an employer pays for a private pension plan is for the benefit of the employees, the I.R.S. has elected to treat such cost as they do salaries. There is, however, a notable difference between salaries and pension costs. The salary is paid to an individual to be used for current needs. It is a measure of past and present performance. The pension cost is also a measure of past and present performance. But more importantly, it is an encouragement for future performance. It is a method by which an employer can hire and keep a good group of employees. It is for the group of employees that an employer establishes a pension plan. It is profit produced by the group that keeps the pension plan alive; and it is the group of employees that share in the financial success of their pension fund.

The employer gets no personal advantage by putting a dollar into a pension fund instead of a pay envelope. The tax situation is the same. Indeed there are countless instances when employees would rather have the dollar in hand, and the employer is severely criticized for putting it into a pension fund.

Whether the dollar goes into the pay envelope or into the pension fund, it is lost to the employer. Even the earnings of the pension fund do not rebound to the employer, unless you say that they reduce his future deductible contributions to the pension fund. Each dollar put into the pension fund experiences the interaction of investment return, mortality, disability, turnover, etc., and finally produces many dollars for employees retiring under the pension plan—nothing for the employer.

It concerns this Association to see the present wave of proposed legislation that seeks to "protect" the employee. Private industry has been cognizant of the need to protect the employee, and has nurtured this belief with over \$100 billion. Hand-in-hand with the Internal Revenue Service, the U.S. Department of Labor and several state-level agencies, the private pension system has given backbone to the retirement dreams of millions upon millions of persons.

Each time a flaw has appeared in the pri-

vate pension system, it has been rigorously attacked by employers, attorneys, actuaries, accountants and the interested governmental agencies. Throughout its life the private pension system has been diligent in keeping its own house in order.

We agree that government has the right and the duty to protect and enhance the private pension system but legislation that restricts and penalizes needlessly is not good legislation.

The following four points are present in most of the pension legislation proposed to date, and we strongly suggest the defeat of any bill containing them:

1. Vesting at very early stages.
2. Portability.
3. Reinsurance of unfunded liabilities.
4. Minimum Funding.

1. Vesting

Vesting refers to the employee's non-forfeitable right to receive at retirement age all or a portion of his accrued pension regardless of the continuation of his participation in the plan. For employees remaining in the plan to retirement, vesting is academic. For terminating employees, it may be a valuable benefit in recognition of the long period of service with the employer. Since vesting is usually contingent upon attaining a certain minimum age, such as 45, and/or the completion of a minimum period of service, such as 15 years, not all terminating employees are entitled to vested benefits. Also, full vesting may be granted in one single step or in several steps, such as 10% per year.

There is general agreement that vesting is desirable, but the exact requirements should be determined for each plan based on the circumstances peculiar to a particular employer. The cost of vested benefits will vary depending on the age, sex, service and salary distribution of the covered group, but could add as much as 10% or more to the cost of a plan. From the point of view of controlling costs and the historical and projected turnover pattern of the particular group, each plan should be free to set its own vesting requirements to best meet the needs and objectives of the employees and the employer.

There seems to be no need for legislation making vesting compulsory, since the trend toward adopting vesting either initially or by subsequent amendment has been marked in recent years and will probably continue. Currently, over 80% of all plans contain vesting provisions and, if early retirement is taken into consideration as a form of vesting, which it is, about 95% of all employees participating in pension plans are covered for vested benefits. These statistics are from a Department of Labor study of almost 16,000 plans covering over 15½ million employees.

One might wonder why, with such extensive coverage already, we should not make vesting mandatory, thereby raising the figure to 100%? The answer is that many plans now providing vested benefits started without this feature, but added it as actuarial gains emerged and economic forces exerted pressure. Had a vesting provision been mandatory initially, it is fair to say that some of the employers would not have established a plan in the first place.

The major argument for mandatory vesting seems to be to promote labor mobility. Since the younger and shorter-service employees are the most likely to terminate and since their accrued pensions would be rather small, it would seem that vesting would have a very limited influence on the decision to terminate and move on to another job. In the absence of meaningful statistics on the interrelation of vesting and labor mobility, the very definite trend toward including vesting on an essentially voluntary basis, and the need for flexibility in setting the vesting requirements, legislation in this particular area seems to be premature at best and a

more reasonable approach would be to allow the forces of our economic system to continue to operate without compulsory federal standards.

2. Portability

Portability is nothing more or less than 100% vesting. For every year a person works for an employer, he vests in the benefit accrued. Although only two methods of portability appear in presently-proposed legislation, it could be accomplished in at least 3 ways.

A. Let the reserve for benefits earned follow the employee from employer to employer.

B. As an employee terminates each employer, the employer would send the reserve on accrued benefits to a central agency.

C. As an employee terminates, an employer would set aside a reserve for his accrued benefits, and when the employee finally retired he would get one pension check from each of the employers for whom he worked at any time.

Not only is this an extremely costly benefit, which could very definitely keep many employers out of the pension field, but it is inequitable and unworkable, since it gives preferential treatment to terminating employees and requires that a standard actuarial value be placed on accrued benefits to be applied throughout the country.

Legislation on Portability should be discarded as being too costly, unworkable, needlessly restrictive, and very detrimental to the growth of private pension plans.

3. Reinsurance

Reinsurance is the protection of vested benefits upon termination of a plan. An annual premium or charge would be paid to a central agency, based on the amount at "risk" under the plan. The amount at risk is the difference between (a) and (b):

(a) is the present value of accrued vested benefits, and

(b) is the amount of the plan assets.

The present value of accrued vested benefits is certainly a nebulous figure, as is the asset value. By the use of various actuarial assumptions the present value of accrued vested benefits can move over a rather wide range of values. So too can the value of assets, what with book values, market values, dollar-average values, values of exchange securities versus values of privately-placed securities. Indeed it is possible for an employer to use overly-liberal assumptions, thus endangering his plan, while at the same time dodging the Reinsurance premium. Thus the employer who may need the reinsurance the most, might be the one who doesn't have it. In addition to the amount at risk, the other critical element in determining the reinsurance premium should be the probability of the plan terminating. This would be impossible to determine. Also, the added cost of reinsurance would probably curtail the liberalization of vesting requirements, since this would increase the cost of vested benefits, and so increase the cost of reinsurance by increasing the present value of vested benefits. Even with time controls, plan amendments could be introduced which would liberalize vested benefits shortly before the plan terminates and thus abuse the reinsurance program.

As the general observation, the proposed legislation removes the pension plan from the category of a promise in good faith to a binding contract.

It should be noted that smaller plans generally use more conservative actuarial assumptions than the larger plans, thereby producing a proportionately greater amount at risk and a higher reinsurance premium for a given level of funding, although the smaller plan is actually more adequately funded. Also, because experience fluctuations can be rather sharp, the smaller plans normally fund at as rapid a rate as financially feasible to

build up margins against future business contingencies and this makes reinsurance much less critical an item.

From the limited information available on plan terminations, it has been estimated by an Actuary of a noted consulting firm that about one-tenth of one percent of all covered employees have been affected each year by plan terminations. Also, since assets are normally allocated on the basis of age when a plan terminates, the employees least able to replace their accrued pensions are taken care of first and the younger employees with smaller vested benefits who can more readily recover from the loss are last in line. Thus, the problem of plan termination is exceedingly small and the normal allocation method further helps to solve the problem. From conservative calculations, this Actuary concluded that less than .6 of 1% of the covered working force suffered some loss of accrued benefits. The proportion losing all or a significant amount of the accrued benefits would have been even less. The problem as it currently exists doesn't warrant the significant amount of time, effort, and cost necessary to establish and operate the reinsurance program or the cost to the plan for the additional actuarial and investment valuations necessary to determine the annual reinsurance charges.

4. Minimum funding

The feature of pension plan funding that probably has had as much as anything to do with the rapid growth of pensions is the latitude of funding permitted. P.S. 57 of the Internal Revenue Service sets a reasonable and safe minimum requirement. There is every indication that the prescribed minimum level is not only adequate, but, in combination with conservative actuarial assumptions of interest, mortality and most valuation methods, allows amortization of the past service liability.

Most employers, especially the small business employer, pay well above the minimum prescribed by P.S. 57. Indeed, many employers argue, not that the minimum is too high, but that the maximum is too low.

A wide range of permitted funding is necessary and, to the small employer, indispensable. Curtailment of this latitude of funding would needlessly restrict an employer.

Conclusion

A system so vitally important to the economic well-being of the nation is deserving of attention by the Congress. Indeed this attention has been too long in coming. It is just unfortunate that most of the proposed legislation to date has been inspired by the defects of a few of the private pension plans.

When meaningful legislation is proposed that will tend to encourage more employers to provide more benefits to more employees, SBANE will back it just as strongly as we protest poor legislation.

LABOR

1. Oppose "common situs picketing" bill

SBANE is opposed to legislation entitled the "Command Situs Picketing" Bill which would permit a union in the construction industry to picket an entire construction project in furtherance of any dispute which it might have with one of the sub-contractors at a project.

Secondary boycotts bring substantial harm to parties neutral to a labor dispute and were outlawed by the Congress in the Taft-Hartley Act and in the Landrum-Griffin Act of 1959. The proposed legislation would permit unrestricted picketing which would shut down an entire project over one dispute. This would not only be harmful to the general public, but small business contractors in particular.

We ask you to support our opposition to H.R. 100, the bill that would allow "Common Situs Picketing".

2. Establish labor courts to resolve critical labor disputes

Strikes against the public interest such as the frequent labor stoppages in the transportation field, are not only crippling to the economy, but indicate that present procedures for preventing such occurrences are outmoded and inadequate.

SBANE recommends that appropriate legislation be enacted to curtail the possibility of such strikes against the public interest, and that Federal Labor Courts be established, staffed by life tenure judges who are empowered, through legislation, to settle such problems before they reach the strike stage.

3. Require secret ballot for union recognition

In the original statute creating NLRB procedures, Congress set forth the use of the secret ballot. Since that time, their intent has been ignored as evidenced by the numbers of cases in which the NLRB has held that employers must recognize and bargain with unions based only on employee signatures union authorization cards. These signatures do not necessarily show the same results that would be obtained by use of a secret ballot.

It is the hope of many in small business that the use of secret ballots will be re-established in all cases.

TRANSPORTATION

Few areas have reflected so vividly the rapid growth of technology and progress as much as the field of transportation. Our early agrarian economy's dependence on the horse long ago gave way to the automobile, railroad, shipping, and the airline. Even within each area of transportation, progress has been vast, varied and revolutionary. Every day small business is dealing with many modes of transportation and regulations as applied by the present transportation regulatory agencies. This year we bring to your attention some of the problems encountered by small business in this area and our recommendations for legislative action.

1. Urge Congress to develop a system for settling small freight loss and damage claims

Settlement of freight loss and damage claims by carriers is not subject to ICC jurisdiction except for certain rules providing for time limits on acknowledgment and decisions on claims. There is no remedy for disputes except through the courts. The problem for small businesses is that most claims are less than \$1,000, not justifying long and costly court proceedings. As a result, carriers pass off many valid claims by just saying "no" because they have learned that small business has neither the technical knowledge nor financial resources to fight. Larger companies with professional traffic managers can fight and have established a record for winning so carriers treat their claims with more consideration.

At present, the Department of Transportation has a study under way for the purpose of defining the claims problem. Congress should place priority on consideration of the solutions which will come from the study. Among the possibilities would be a small claims court under the jurisdiction of the ICC or, preferably, a new regulatory agency with authority over all forms of transportation.

2. Urge Congress to enact legislation creating a combined transportation regulatory agency governing all modes

At present the transportation regulatory structure consists of the following agencies: Interstate Commerce Commission regulates rail, truck, bus, inland waterway, surface freight forwarders.

Federal Maritime Commission regulates merchant marine.

Civil Aeronautics Board regulates airlines, air freight forwarders.

The functions performed by each of these agencies is almost completely economic related (routes, rates, company finances and inter-relationships). The safety functions related to all modes are now consolidated in the U.S. Department of Transportation (Federal Railroad Administration, Federal Aviation Administration, Transportation Safety Board).

Because of the increasing trends toward development of new transport technologies (such as containerization) making possible intermodal transportation (truck-rail, truck-air, truck-water, rail-water, etc.), substantial conflict between the agencies has developed. For example, the CAB claims regulation over air freight including the ground trucking services. The ICC also claims regulation over ground trucking. As a result, many shippers outside commercial zones must pay high joint rates and receive inferior service because proper intermodal coordination cannot be obtained. Similar problems arise in rate and service conflicts between water (FMC regulated) and land (ICC regulated) transportation. It is apparent that three agencies cannot regulate different sectors that overlap substantially without expensive and time-consuming duplicative action before more than one body by shippers and carriers alike.

Congress should enact legislation creating one transportation economic regulatory agency. Such action would provide all shippers with more efficient transportation services and reduce their costs of representation before multiple bodies.

3. Support the Trade Simplification Act

All companies which have either sold or purchased goods in foreign markets are aware of the paperwork and transportation cost complications. The carriers and businessmen have worked together for a simplification of procedures for several years. In 1968 the U.S. Department of Transportation submitted legislation entitled, "Trade Simplification Act" which would streamline procedures and allow through bills of lading and through freight rates in international trade. Presently no one transportation company can quote through rate in international trade (except in some limited air freight applications); as a result, a shipper must contact more than one carrier and prepare rate analyses himself to determine the lowest total cost route. Separate bills of lading are also required for the land and sea (or air) portions of the trip, complicating goods ownership, insurance, tracing and record keeping.

The U.S. Department of Transportation, Office of Facilitation, has prepared and sent to Congress a bill under which through rates and bills of lading are legalized and a reduction in international documentation made possible. SBANE should urge Congress to pass the "Trade Simplification Act" this session to make participation in foreign trade easier, particularly for smaller business which cannot afford to retain traffic specialists to handle the complexities of foreign trade.

4. Urge Congress to pass legislation designed to stimulate the construction and near-term completion of ultra-high speed rail service between Boston and New York

Since the early 1960's much effort has been expended by the Federal Government and others aimed at solving Northeast Corridor intercity passenger transportation problems. Within the U.S. Department of Transportation is a section called the Office of High Speed Ground Transportation (OHSGT). This group has put substantial effort into basic and applied research of new technologies for the movement of people at high speeds and also a limited effort aimed at developing conventional type rail vehicles. The results to date would indicate that for the foreseeable future conventional rail technology is the best and most economical way to provide ground transportation at speed

in the 150 mph-200 mph range. However, OHSGT is continuing an indepth new technology research program which may produce positive results applicable to the transport systems several decades from now.

In 1968 the New England Regional Commission let a contract to Systems Analysis and Research Corporation (SARC) of Cambridge, Mass., to report on the transportation needs of New England. SARC reported that Boston-New York ultra-high speed service was of first priority to foster the sound economic development of the region. As the region's economy becomes more service-industry oriented, efficient passenger transportation to other regions is extremely important to facilitate the personal interactions necessary. The SARC study outlines a feasible plan for providing 2½ hour travel time between downtown Boston and downtown New York using conventional rail technology with a top speed of 150 mph attracting sufficient passengers at a low enough capital and operating cost to be economically viable.

Congress should pass legislation providing backing for a government guarantee loan, a capital grant if a new rail line is constructed in the best location for long range planning, certain tax concessions concerning loan amortization and a franchise to operate by a new or existing business or an interstate agency. Support and passage this year could result in service by 1974. The bonds could be amortized in 30 years, so if new and better technology were developed in the future, today's investment would be paid off in full.

CONCLUSION

This presentation is designed to provide you with specific proposals and recommendations by those who represent the foundation of the American economy rather than merely striking out at the obstacles that confront small business. We have tried to be helpful to you, the Congress, whose time and talents are in the greatest demand of any other single group in our country by sifting and sorting the problems and alternatives in the most important areas that deserve your attention.

Thank you for your interest and support of small business.

PITTSBURGH PROBLEM HANDED TO THE PEOPLE

HON. WILLIAM S. MOORHEAD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 26, 1969

Mr. MOORHEAD. Mr. Speaker, housing is one of Pittsburgh's most acute problems—some 62 percent of the housing supply is more than 45 years old, 22 percent is either deteriorating or dilapidated—and with our special problems of topography, there is a real shortage of land for new buildings, and a tremendous dilemma caused by relocation when homes are torn down to make way for urban renewal programs.

But I know of no city which has demonstrated more aggressive public leadership and new forms of private initiative than Pittsburgh, in making a real commitment to insure everyone a sense of opportunity, community, and responsibility.

The Christian Science Monitor carried a story recently describing the activities of a group known as HEART—highway emergency and relocation team—work-

ing in cooperation with city urban redevelopment authority officials. Because I think their innovative approach has great merit, I wish to include the article at this point in the RECORD for the attention of my colleagues:

PITTSBURGH PROBLEM HANDED TO THE PEOPLE

PITTSBURGH.—City officials may have found the answer to avoiding neighborhood opposition when a new housing development is announced.

The solution is to throw the ball to the residents and make them the sponsors of the new complex.

This approach is being tried now in Pittsburgh's Brighton Heights area of the North Side.

Plans call for a 300- to 400-unit housing complex to be built in a 34-acre site which is largely undeveloped. The area is composed of mostly white, middle-income families who have agreed to help develop the new housing complex. Designated as the sponsors are the Brighton Heights Citizens Federation and a group known as Highway Emergency and Relocation Team (HEART).

Both groups are citizen-oriented. The federation is composed of representatives from various groups in the Brighton Heights neighborhood. HEART, while it does not have Brighton Heights representation, is composed of residents from nearby East Street who are to be moved out of their homes by the State Highway Department to make room for Interstate 79.

CONSULTATION DESIRED

HEART has warned the state the residents want homes before they move. Otherwise, their cry has been, "No homes, no road."

Attempts by the city to get new homes built on other sites in the North Side have been dismal failures. And the main reason seems to be neighborhood opposition to "outsiders" moving in. There has also been considerable animosity against the planners who failed to discuss their programs with residents.

This newest technique may be the answer. At least William Farkas, executive director of Pittsburgh's Urban Redevelopment Authority is willing to stake the future of the development on it. So is Dr. Martin Krauss, vice-president of HEART and long a vocal critic of the State Highways Department's acquisition program and the city's failure to build new housing.

Dr. Krauss said he agreed to the Brighton Heights development only on the condition that all property be purchased amiably and that residents of the neighborhood help decide the type of housing to be built and the area needed for the overall development. Both of these conditions have been accepted by Mr. Farkas and city officials.

VARIETY OF HOUSING SOUGHT

To launch the program, the city has been asked to purchase a 13½-acre site owned by a private individual. With this land acquired, and since more than half the complex area is under public ownership, the city believes its problem of building the new housing development can be solved. At least one major industry, which has a subsidiary developing low-cost housing, has voiced an interest in serving as the developer. That decision—like nearly all others—will be made by the two citizen groups.

The plan under consideration calls for a variety of housing types, including some single-family homes, plus a small shopping community, a swimming pool, and other active and passive recreational facilities.

To help them plan, some of the residents have called on Town Consultants, a private planning firm, headed by Irv Rubenstein, onetime Urban Redevelopment Authority official. Mr. Rubenstein said the site is ideal for housing since the area is below the city's

coal seam and there is no worry about mine subsidence.

The agreement to sponsor the new housing complex came only after numerous meetings were held between the citizen groups and city officials to work out development problems. There's no question that Pittsburgh housing planners are keeping their fingers crossed that the program works. The city has too few vacant sites available for new housing, yet the cry for good housing had not stopped.

THE HOUSING CHALLENGE

HON. W. E. (BILL) BROCK

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, May 26, 1969

Mr. BROCK. Mr. Speaker, the April issue of *Business in Brief* contained a valuable examination of New York City's housing problem—a problem that reflects the difficulties faced in many other major urban areas. I believe my colleagues will find this piece most instructive and include it in the RECORD:

NEW YORK CITY HOUSING: A CASE STUDY

Of all the tasks facing the nation's cities the challenge of providing adequate housing is one of the foremost. It cuts across social and economic lines as few other urban problems do. The complexities involved are clearly illustrated by recent events in New York.

New York City is a case study of a housing market that has ceased to function properly. Private housing construction is at a virtual standstill; vacancy rates are at an 18-year low; and rent increases in the uncontrolled sector (postwar buildings and decontrolled units) averaged an estimated 9% a year in the latter part of 1968. As a result, demands for rent regulation in the uncontrolled sector intensified.

Recent large rent increases are merely an indication of underlying imbalances. At best, regulation will alleviate the symptoms; it provides no long-term cure. New York City's deeper problem—and it is shared in varying degrees by most central cities—is that it is not providing housing in quantity and quality to satisfy the needs of its diverse constituency.

In a city where three-quarters of the households are renters, and two-thirds of the rental stock is rent-controlled, discussion of housing is often emotional and politically charged. However, rent regulations, both those in effect since World War II and the more recent proposals, are only one element influencing New York housing markets. A wide range of forces—high costs, zoning, taxes, changing neighborhoods, lagging government programs—lies behind the latest housing "crisis."

THE QUANTITY AND QUALITY OF CITY HOUSING

New York City's housing picture is replete with surface paradoxes:

More than three-quarters of a million units have been built since 1946 (enough to house the city of Philadelphia). In this period, New York's population has changed little. Yet, the city seems to be running hard to stay in the same place.

Although new construction dropped drastically in 1966-1968, on average one-fifth more units were built per year in the 1960's than in the 1950's. Still, vacancy rates declined from 1.8% in 1960 to 1.2% in 1968.

At the same time that vacancy rates fell, abandonments rose. If the estimated 50,000 abandoned units were considered part of the stock, vacancy rates would be nearly

3.5%. Abandonments usually signify ease in housing markets. But in New York (and in other older cities too) abandonments partially reflect malfunctioning markets in which landlords are unable to profitably operate at rents low income tenants can afford.

Notwithstanding this mixed picture, broad conclusions can be drawn.

First, the housing inventory has risen, but the increase is much smaller than new construction because old housing is dropped from the inventory. Since 1946, 250,000 units have been demolished. In addition, many condemned or abandoned units have neither been destroyed nor returned to the inventory, rehabilitated. Inadequate data cloud the view, however. Local statistics indicate that the housing stock has risen more than 8% since 1960; U.S. Census data show a rise of under 2%.

Second, housing density has declined. Households are smaller—2.7 persons per household in 1968, compared with 2.9 in 1960. And overcrowding has been reduced—fewer than 10% of rental units have one or more persons per room against 14% in 1960.

Third, the worst units are being removed from the stock, but deterioration is a growing problem. In 1968, 81% of the city's 2.8 million units were sound and had all plumbing facilities (by U.S. Census definitions). This is a small increase over 1960 numbers. Dilapidated units and units lacking facilities declined 30% to 170,000. However, the number of deteriorating units rose by roughly 100,000 to reach 360,000.

Many factors contribute to housing deterioration. Under real estate tax law, improvements are assessed and are reflected in higher taxes. Unless the landlord can capture the added costs in higher rents, his incentive to maintain or upgrade property is reduced. In low income neighborhoods, where tenants carry a heavy rent burden (80% of tenants with incomes under \$3,000 pay 35% of income and more in rent), landlords often cannot obtain rent increases.

Rent control aggravates the situation further. Recent studies indicate that rent-controlled apartments are not particularly profitable investments. Services and maintenance tend to be reduced in efforts to hold up net income. In units with upper income tenants, it becomes worthwhile for both tenant and landlord to convert the building to tenant ownership. In the last three years, cooperatives and condominiums increased by 16,000 to reach 92,300. In low income neighborhoods, the cooperative route is not readily available. The net result is that buildings deteriorate, particularly those with absentee landlords. This process is greatly accelerated when rents can be drastically reduced if housing code violations are not eliminated. With inadequate cash to carry out repairs, the owner simply abandons the building.

Unfortunately, abandoned and deteriorating buildings are not quickly replaced. Low as the sale price may be, developers do not rush in. Private developers cannot build for low and middle income tenants without substantial subsidies, and they will not build luxury units in declining neighborhoods.

New York City's housing problem, then, is not simply the need for additional units—about 135,000 extra units would eliminate severe overcrowding and lift vacancy rates to 5%. Overshadowing these figures are the units requiring replacement or substantial rehabilitation. U.S. Census Bureau measures of quality indicate that more than 500,000 units are inadequate and should be rehabilitated or replaced. Housing experts in the city's government consider the potential renewal market to be in excess of 800,000 units. With requirements of these dimensions, the city can make progress over a reasonable time period only if:

The precipitous drop in construction of the past three years is reversed;

The rate of deterioration is slowed. Otherwise, mounting substandard units will simply offset new housing construction.

RECENT EXPERIENCE

After a bulge in construction in the early 1960's (as investors sought to build before restrictive zoning regulations became effective), new housing dropped sharply. In 1968, about 17,000 units were completed—the smallest number in 21 years. Shortages intensified throughout housing markets:

Vacancy rates dropped in all boroughs except Staten Island. Queens at 0.5%, has the city's lowest rate.

Vacancy rates declined in all rent classes. In the \$100-\$150 a month category vacancies are under 1%.

The immediate result of the tight housing market was a rash of rent increases in the uncontrolled sector. The increases were considerably larger than could be rationalized by higher costs. Rents in 400,000 units are potentially affected. (Rents in another 200,000 public and subsidized units are regulated under various statutes and adjusted for rising costs.)

In a normal market, where the forces of supply and demand operate freely, the response to spiraling rents would be an upsurge in construction. In time, the imbalance would be corrected. However, New York City is not a normal, smoothly functioning real estate market. Neighborhoods, characterized by distinct ethnic groups and income classes, set markets apart. Private luxury building, subsidized middle-income housing, and public housing serve three different sectors, and there are wide gaps between the rent ranges each caters to. Finally, rent controls split the private market into two sectors, since they do not apply to all units.

PROSPECTS FOR INCREASING CONSTRUCTION ACTIVITY

Normally, developers would have an incentive to build for those without access to units in controlled markets if new construction were free from regulation. As long as developers are not inhibited by rent regulations, some private construction will be stimulated by the current housing shortage (real estate developers typically respond with a lag, and then over-react). However, in New York's present climate, the very threat of rent controls could be enough to deter new building.

As it is, New York is becoming an increasingly difficult market for private builders to supply. Rising costs are pushing unsubsidized housing beyond reach of many upper income residents. In the 1950's, 73% of new housing was private, unsubsidized units; in recent years, the ratio has dropped below 60%. Among the changes that have occurred:

Site costs in desirable neighborhoods are estimated to have doubled in recent years. The new zoning law reduces the number of potential sites because larger sites are needed to develop property. Amassing large sites is time-consuming. Relocating statutory tenants in rent-controlled buildings takes years and adds to developers' costs.

Construction costs increased 34% between 1961 and 1968. The rise is in line with the national increase; but New York construction costs had been relatively high before the rise. Construction costs (excluding site and development costs) rose from roughly \$23,000 for a luxury unit to above \$30,000.

Financing charges have risen. In the early 1960's, apartment mortgage rates averaged 5½%; under present tight money conditions, rates are over 8%.

Real estate tax rates climbed 27% between 1961 and 1968. In addition, water and sewer taxes doubled.

Operating and maintenance costs rose substantially, probably by more than one-third.

Taking account of all of these factors, a luxury 4½ room apartment that could be built to rent for about \$300 in the early 1960's today would rent for over \$500. At rent-income ratios of 20%, an income of \$18,000 was needed in 1960 to support luxury rents; today an income of \$30,000 is required. At more typical ratios for high income families (in postwar buildings, 60% of families earning over \$15,000 paid less than 15% of income for rent in 1968), at least \$40,000 would be required. This is one reason why developers look to the "singles" market, where three or four roommates pool incomes to pay rent. Importantly, incomes are rising: in 1959, only 140,000 households had incomes of \$15,000 and over; in 1967, the number is estimated at 260,000, and of these about 55,000 had incomes of \$25,000 and over.

Thus, the pool of high income households that is the target of luxury construction is growing. The market is not big enough to support the total volume of construction required in the city, but it is important to the housing process. Postwar experience suggests that when families upgrade their units as incomes rise, their vacated units are opened to the income class below.

THE ROLE OF SUBSIDIZED HOUSING

Of course, subsidized housing plays an important role in New York. In fact, a large

part of New York's housing supply is now subsidized through rent controls. Tenants paying less than "normal" rent-income ratios in effect receive subsidies. The greatest beneficiaries are middle income families. In rent-controlled apartments, 68% of households earning \$8,000-\$15,000 pay less than 15% of their income in rent; in postwar buildings, only 16% pay this little. This is precisely why rent control is such a sensitive issue. Contrary to myth, New York is a middle income city, with 56% of its households earning \$5,000-\$15,000 a year. As vital as the middle class is to New York, subsidies distributed in this form are inequitable in their impact.

"Direct" subsidy programs are more easily identified. New York has a long history of middle income and public housing programs, and over 200,000 units have been built in the postwar period. Unfortunately for New York, subsidized housing declined just when private housing was curtailed. In part, publicly-aided programs were held back by cost limitations: rents in proposed middle-income projects are \$40-\$50 a room. The decline also reflects a revision of priorities by the city government.

Under existing circumstances, stepped-up momentum in public and assisted programs is needed if the city is to make headway in meeting its housing problems. More is required than laying out plans for 30,000 pub-

lic and assisted units per year. If the private sector is to be drawn in, housing must be produced on volume scale, the profit potential must be reasonably attractive, and time-consuming, costly delays must be minimized.

TAKING THE LONG VIEW

The city's concern for protecting tenants in the current rent crisis is understandable. However, it is also important to take a long view and focus on the primary goal of enlarging and upgrading the housing supply. The city should encourage new construction by streamlining its own housing programs, and by reviewing zoning regulations. Some way should be sought to prevent rent regulations from becoming a permanent fixture.

The problem of property deterioration should be faced realistically. This involves reviewing real estate tax laws and the operation of old-time rent controls. The problems suggested by the fact that low income tenants carry a heavy rent burden, but that property owners have difficulty maintaining their buildings should be recognized.

In resolving its housing problems, New York City—and other cities, too—can best begin by asking: who is the city for? The city cannot forget that it has a diverse constituency, represented by all income groups. A broad range of programs will be necessary to meet their needs.
